DEAR AL: Dick Frenkensteen called me today to ask that I send you a copy of the talk I gave to the Prismatic Club last year. This talk is about a year old now but, of course, contains much that is still very pertinent. I have a great deal of data on this subject collected during the last year which further substantiates many of the things I said a year ago.

You might be interested in a newspaper article that appeared a short time ago regarding the Bronson Reel Co. This article, to me, gives many of the answers to our problem.

There is one other subject that I think should have considerable investigation, and that is the matter of import duty.

I realize that we favored many of the European countries by our duty rates helping them to get reestablished after the war. Now that they have more than fully recovered and have caught up with us in many respects, I cannot see why there should be any differentiation in duty rates. I believe that straight reciprocity should be put into effect on all products where the foreign industry is well established and where they are beginning to have detrimental affect on our own corresponding industry over here.

This applies, of course, very particularly to the automobile industry. I cannot see for the life of me why at this date we should allow British cars to come into our country at 8½ percent duty while cars of our manufacture entering England must pay 30 percent. The same situation, of course, pertains in most of the automobile manufacturing countries. I think that the duty rate should be made reciprocal; either we should raise our duties to equal theirs or induce them to lower their duties to equal ours, which I think personally is the best decision.

I was in Ann Arbor at the Initiation Dinner last Sunday and had hoped to see you there, but we got the message and your wire which was read which told about the problem and, of course, we were all very much disappointed. The charge rates very high up in the first four on the campus and they have a wonderful looking group of young fellows there with high scholarship rating and high rating in activities.

Sincerely yours in the bonds.

HARRY.

[From the Detroit Free Press, Mar. 27, 1980]

JAPANESE OUTFISHED—BERT WARD AND BRONSON REEL BEAT DOWN IMPORTS

(By Ken McCormick)

Bronson.—It's always delightful to watch the home team take on a formidable opponent and knock its socks off.

That's just what the Bronson Reel Co., a division of the Higbie Manufacturing Co. of Rochester, did when Bronson squared off with the Japanese who were flooding the American market with low-price fishing reels.

And the star of the home team was Bert Ward, manager of the Bronson concern and director and vice president of the parent company.

Bert is a fellow who worked his way to the top from a humble job in the shop.

When you see him rise to say grace at the Rotary Club luncheon, you find it difficult to label him as a bare-knuckle battler in the business world.

But the Japanese are stunned and off balance. Even with their low labor costs, they have found themselves up against a Worthy opponent.

Churchgoing Bert Ward saw the fishing reel market being invaded. He was faced with two alternatives. He decided to outwit

the Japanese.

"Our executives had to make one big decision: We had to decide whether we Would send tools to Japan and have our reels manufactured there, or put out a lowprice reel that would compete.

"With 200 or more employees, all of whom have lived near here for some time, we de-

cided to compete.

"To compete, we had to have the cooperation of the employees, their labor unions, and suppliers. New designs were necessary, and automation had to be established." Design Engineer Morris Wood, a 12-year

Bronson employee, got busy and designed an enclosed spinning reel called the Dart, Which was put on the market for \$5.95.

Tool Designer Oscar George, a 30-year employee, made the reel's success possible by making better tools which eliminated costly hand work.

Suppliers were called in and told to sharpen their pencils. Material costs

dropped.

The shop committee of the American Machinist Association, AFL-CIO, agreed to permit gradual introduction of automation devices which cut labor costs 20 percent.

The sales force got into the act and in-creased sales by 12 percent. And thus the employment roll of 200 was upped by 20

"All this was accomplished," Bert says proudly, "without our people being penalized on take-home pay.

"In other words, we are getting twice the Work for half the amount of pay and nobody has suffered."

Bronson Reel means a lot to this little community on U.S. 12, between Sturgis and Coldwater. It's payroll is in excess of \$750,000.

Bert won't talk profits, but he lets you know that several hundred thousand Dart reels were sold and that the clamor for the

Dart reel is still growing.

Bronson builds 20 different models, in-cluding several of the low-price bait-casting Bert says a second way of attack on the Japanese trade will be to bring out new models often enough to keep the Japanese copyers off balance.

"One reason our reels are favored over the Japanese," he says, "is the fact that we stand

behind ours."

Bert Ward promised that Bronson is not going to stand still, even were the Japs to go back in the corner and lie down.

In a way, though, he probably secretly hopes they come up with a new gimmick. Competition hasn't hurt Bronson a bit.

"THE ECONOMIC CHALLENGE TO THE UNITED STATES IN THE COMING DECADE"-PRESENTED TO THE PRISMATIC CLUB OF DETROIT, MAY 9, 1959, BY HARRY H. WHITTINGHAM, REVISED TO JULY 22, 1959

You will forgive me, I am sure, for raising the ugly head of commercialism before this enlightened body. I am convinced that none of us—no matter how sheltered we may be dare any longer bury our heads in the sand while momentous events, which will seriously and critically affect the lives of each of us, are taking place in the world.

The United States, in the span of only 176 years, has developed from a small group of colonies on the edge of a wilderness with about 2 million people into the tremendous Nation it is today. It is one of the most dramatic performances in the social and economic history of mankind. Today we have reached a pinnacle of leadership to be held,

or, from which we may be toppled into oblivion. The most dramatic of changes in world history are happening today at a breathtaking pace.

Gentlemen, the main idea that I want to drive home tonight is that our own overly inflated labor scales in the United States may well spell our undoing unless we bring about a more realistic relation between wage raises and productivity.

We are presently engaged in the most gigantic war of all time. It will go on for years to come. It is called a cold war but a lot of people are getting killed and a lot more are getting hurt. We think of the cold war as the East versus the West. That defines the conflict that exists between the two dominant ideologies; namely, capitalism versus communism. As a critical part of this conflict there is also a devastating commercial struggle taking place between the "haves" and the "have-nots." As the leader of the "haves," the United States is the primary target of all the rest of the world. material wealth we in the United States enjoy practically half of all the world produces. This, I think, is the basic reason why we are not popular anywhere in the world. People are simply jealous and envious of us.

My talk tonight must necessarily be very

restricted and I have chosen the area of the economic threats we are facing in the next 10 years as a result of this vast revolution in which the entire world is seething. Nothing so vast has ever taken place before and the action is at a breathtaking pace. I fear that too few of us here comprehend the mael-

strom in which they are living.

These two exhibits will help to dramatize

my subject.

1. On this table is a teapot or an electric teakettle. In using this, you pour in four cups of water and plug it in. In just 1 minute you have boiling water. I have asked a lot of people what they thought this ar-The answer has ranged from \$2.50 ticle cost. to \$10. Actually it cost \$1 including tax. It was bought at Cut Rate Sam's. I Sam doesn't sell anything for less than a 35-percent markup, so his cost was about \$1, less 3-cent tax, less 35 percent, or 62 cents. Now this teapot was transported 6,500 miles and had to be carefully packed so it would not get broken, and hence it was probably purchased in Japan for about 50 cents. The chap who manufactured it must have made a profit; so it probably cost less than 40 cents to make.

2. Here are two loaves of bread, both bought in Detroit. One, baked in Detroit, cost 24 cents, and the other, baked in Windsor, sold in Detroit for 18 cents. They are the same weight and of equal quality. The difference in cost of these two loaves is represented largely in the difference in labor costs. I read in a Toronto paper the other day that Buffalo bakeries are actually being put out of business by Toronto bakeries because Canadian bread is selling in Buffalo at two loaves for 29 cents against one equivalent American loaf at 23 cents, at the sales volume of about 150,000 loaves a week and increasing weekly. Over 400,000 loaves of Canadian bread are crossing our border at various points from Sault Ste. Marie to Vermont every week. The American housewife knows no national loyalties when she sees a

There are just two simple illustrations that point up what is taking place on a gigantic and rapidly expanding scale, largely unsuspected by the American public.

This threat is a double-edged sword which I would like to discuss in its two phases.

- 1. The foreign invasion of our own domestic market which these exhibits illustrate, and
- 2. Foreign competition in our own export market.

Let us then first consider the foreign invasion of the United States (and Canadian) markets which is close to home and by far the most startling and dramatic. While the percent of invasion, some will argue, is only small, nevertheless the effect is toward a general forced lowering of prices which in many instances can be disasterous. For instance, the Canadian invasion of our bread market may not be over one-tenth of 1 percent nationally but if you happen to be a big baker in Buffalo who is put out of business by that competition you are really hurtnot one-tenth of 1 percent but 100 percent.

Foreign car imports into United States have run about as follows:

1946	1,374
1950	21, 287
1952	33, 312
1954	34, 554
1956	107, 675
1958	378,000

Estimates for 1959 run from 500,000 to 600,000. In the month of February alone over 77,000 foreign cars came into this country. The advent of the new "compact" U.S. cars will have little effect on this flow as the foreign makers are anticipating a volume of 750,000 cars for 1960.

The opening of the Great Lakes to For-eign vessels of 27-foot draft (80 percent of the world shipping) must be taken into account in this picture too. Although we see quite a number of foreign automobiles in Detroit, our automotive capital, the penetration on both our east and west coast areas has been far greater than it has here. The difference is due to the added \$100 to \$150 transportation costs to bring these cars from New York to the Midwest. With the opening of the Great Lakes our ports become ocean ports. It will cost very little if any more to bring an auto from Bremen or Cherbourg or Southampton to Detroit than to New York and the whole Midwest will then feel the impact of this added competition. We have thought of the opening of the Great Lakes as a great boom to the Midwest as an outlet for our ore and grain and manufactured products but there is this reverse effect too.

I don't say it isn't a great thing in the long pull. The Great Lakes Seaway will not only benefit the great heart of America but it will benefit the other areas of the United

States who so strongly fought it.

International trade must be a two-way street and benefits must accrue to both the exporter and importer nation and this will

apply to the Great Lakes country.

My company makes clutches. Practically every one of these foreign cars had a clutch in it. I have figured out that if you include the miner who mined the iron ore, the steelmaker who made the steel, the man who fabricated some of the parts we buy for clutches plus our own labor of fabrication and assembly, that nearly 500 people could have been employed for a year had just the clutches that came into this country in cars in 1958 been built here instead of abroad. And this was a year of depression for our auto industry when we had over 250,000 unemployed in Detroit alone.

This year about 12 percent of the cars sold here will be imported and in Canada it is far more serious because it is nearer 20 percent there.

Last year over 80 percent of the barbed wire used in the United States was imported. Close behind are nails, steel fenceposts and many other items of steel. If we have a steel strike much more steel will be imported.

I once read a theory that the country which achieved the lowest cost of producing steel would become inevitably the indus-trial leader of the world. This distinction was first held in modern industrial history by England whose Sheffield steel was the standard of the world. Then under Andrew Carnegie and the Bessimer process the United States was enabled to take over. At the time of World War I and even World War II.

Germany was fast taking over from the United States. The Germans by their foolish wars lost their advantage. I believe they would have gained all the advantages they sought by war if they had stuck to commercial and economic means. This gave the United States again a temporary advantage.

Actually, we have lost it already, and Germany-and Europe-again is the low-cost steel producer as is evidenced by the amount of steel now being imported into the United States which is currently coming in at the

rate of 400,000 tons a month.

Their tenure, however, is going to be shortlived because Russia, with possibly China and later maybe India, threaten to be the low-cost steel producers, in which event they will be on the way to dominate the world industrially. This year China expects to make 18 million tons of steel, an increase of over 500 percent in 4 years.

One of the top purchasing men in the auto industry the other day told me that he is buying sheet aluminum from Europe at 9 cents per pound, cheaper than the U.S.

price, laid down in Detroit.

You know of the Norelco electric shaver. Three years ago you probably hadn't heard of it. I hadn't. In late 1956 I went to Europe looking for new products for my company. Among other things I found a cleverly designed electric shaver and visited the factory in the Black Forest that made it. They made their own tools in a beautifully equipped toolroom. They built this shaver and also made a line of jewelry and things like this wristband for watches. This razor was similar in principal to the Norelco.

Well, the toolmakers where this shaver was made were paid about 85 cents per hour. The women working in the shop were paid 35 cents per hour. This obviously wasn't a product I could bring back to the United States, and hope to build in competition. I saw the Phillips electric shaver being sold in Europe. This shaver is made by the Phillips Co. of Holland and it was the most popular shaver in Europe. Incidentally, the story of the growth of the Phillips Co. is a most fascinating one. The Phillips shaver of Europe and the Norelco of United States are identical and they are all made in Holland. Three or four years ago it was practically unknown here and today it dominates our market and is the most popular shaver in the United States. How did they do it? It was by utilizing the wide margin of cost differential as promotional money to spend in advertising and promotion to gain a market. The other thing, of course, is that it is an excellent product.

The Japanese have taken a leading position in the camera field along with United States and Germany. Hitler taught the Japanese how to make quality lenses and today their cameras are equal to the finest of the German makes, both of which are generally superior to ours and sell at prices

well under our prices.

The Japanese are today the leading shipbuilding nation, having taken over from England. We would have no shipping or shipbuilding industry in United States were it not for Government subsidies. How long can we keep that up and to how many more industries must we give artificial respiration?

The watch industry is an example where by special duty provisions, the Government by special duty in the industry. Even that doesn't shut out foreign competition. The Cormens are outdoing the Swiss. This Germans are outdoing the Swiss. This watch I have on my wrist was bought in the Black Forest District of Germany for \$12.50 and it is a very good watch—it keeps perfect time and I've worn it for 11/2 years without any attention whatever.

A friend of mine who is chief engineer of one of the principal car manufacturers of England was here in Detroit recently. I suggested that he visit J. L. Hudson's so he could take something nice home to his wife. The next day he told me of his shopping expe-He had selected seven different articles that appeared to be attractive, to have quality, and to be something representative of America that his wife would enjoy. He rejected everyone of them when he found a designation on each indicating either "Made in Germany" or "Made in Japan." Finally he found something his wife would enjoy as being distinctively American made. English apparently are much more conscious of this than we are and even at a price dis-advantage are inclined to "Buy British." The American shopper seemingly has no such perversion.

For a long time we have bought plate glass from Belgium but during the recent disastrous glass strike these imports were greatly increased and will probably stay increased.

There is a more subtle and dangerous form of market invasion that is taking place.

Recently, while in New York, a friend showed me two transistor radios he had purchased there. One was an American make for which he paid \$80. The other was a slightly smaller one for which he paid The latter was equal to the first in volume, better in tone, just as attractive in appearance and being smaller was easier to carry around in his pocket. This one was made in Japan. This condition has brought about a rapid change in the radio industry. The makers of transistor radios in United States faced complete annihilation. they have done is to procure the radio chassis from the Japanese maker, enclose them in an American made case and sell them under their own name as an American product. I understand you can buy an American transistor radio for \$30 now. This transformation has taken place in the past 6 or 8 months.

At latest report the Japanese are exporting 400,000 transistor radios a month.

In the past, foreign branches of U.S. companies were built primarily to take advantage of a foreign market, for example:

Parke Davis in England and other countries.

Hoover vacuum cleaner plant in England is larger than United States.

ATT and in foreign countries.

International Harvester and Massey Fergu-

General Motors and Ford in England,

France and Germany.
Burroughs Adding Machine Co. in England and other countries.

Today there is an added purpose for expansion of such foreign plants; namely, also to manufacture American products in foreign cheap labor markets for sale as American products in this country.

Company after company is either buying components from abroad or establishing branch plants of their own abroad, making components there for the local market and are also bringing them into the United States for assembly into the finished product which you and I buy thinking it is a

product of American labor.

This process will save the U.S. company for a while, but what is it doing to American labor? One authority estimates that already about 1 million jobs have been exported to other countries by this practice which may well become a significant factor in creating unemployment in the midst of our greatest prosperity.

Then, of course, comes the question of how long this practice can preserve the manufacturer himself because, if it goes far enough, it will destroy his own market by creating so many unemployed that nobody in this country will be able to buy the foreign-built product.

To illustrate how devastating some of these practices are becoming, I'll tell you the story of a printer friend of mine. You know that the typographers and other unions affiliated with the printing industry occupy a power position in that industry and have achieved a very high rate of pay along with restrictive rules on productivity.

A practice is now developing in color printing of having the artwork prepared here because of the close supervision necessary to arrive at the final product. But then the artwork is sent to France where the color plates are made which are then sent back by air for printing. Enormous savings are achieved in cost and even they find that the plates are of superlative quality.

Similarly, it is something like the situation of the American coal miners who under John L. Lewis have gotten the cost of coal so far out of line with that of competitive fuels that thousands of coal miners are now permanently out of work. Many furnaces have been changed over from coal to oil or gas to save money and they will not be changed back. The miners are now screaming to the Government for help which, be-cause of the shortsightedness of their union bosses, the poor fellows don't have coming.

I could go on and on with examples of the invasion of foreign products into markets where because of our mass production we thought we were supreme: Antifriction bearings, bicycles, textiles, hand tools, machine tools, generators, typewriters, sewing machines, business machines, cameras, steel, aluminum, movies, furniture,

Within the last few weeks a Kalamazoo firm that makes cigarette lighters announced that it was leaving Michigan. The principal reason given had nothing to do with the "unfavorable climate" in Michigan. They are not moving to Indiana or Kentucky either. They are moving to Japan to obtain the low labor rates that will enable them to compete. There were 66 manufacturers of cigarette lighters in the United States in 1947. Today there are only six and as you see there will soon be only five. This industry in United States has been practically wiped out by foreign competition.

Speaking of textiles, we often do things to defeat our own ends. For example, by our farm policy we have accumulated enormous surpluses of cotton. We sell this cotton to foreign countries far below the domestic prices at which our textile manufacturers must purchase their cotton. Then we give these foreign countries money with which they buy our textile machinery. In other words we give them the machinery. Then with their labor which in Japan is about \$1 a day versus our \$1.75 an hour in this industry, we permit them to come into our market and world markets at prices far under our costs.

Another example that adds to the parade which is sapping our strength and producing more unemployed (in this case tailors). I know of several friends (and my own son) who have been in the Orient-particularly Hong Kong and Tokyo. There they bought suits and overcoats made of the finest English woolens for from \$20 to tops of \$40 They are very well tailored. Having made the connection with a tailor and having their measurements on record, they order new clothing from cloth samples and have them shipped here with a norminal duty to pay.

Recently a boatload of 1,006 Volkswagens was unloaded at Toronto, Canada, and another load of over 600 Renaults was unloaded at Milwaukee. The reduced cost of transportation to Great Lakes ports from Europe will undoubtedly increase the competition of the foreign cars in the Midwest.

On the day the steel strike started there were several ships unloading over 21,000 tons of steel at Port Houston, Tex. About

two-thirds of this steel was from Japan and one-third from Belgium. It was being laid down in Texas at prices ranging between \$35 and \$50 per ton less than U.S. prices. Piguring that the average price of U.S. steel is \$124 per ton you can see what a large percentage margin the foreign steelmakers' prices are under ours. Imports of steel to the United States may easily exceed 5 million tons this year.

From a world-touring friend of mine, I know of a recent case where competitive prices were taken for a large crane to be installed at Manils, P.I. The American bid-der's price was \$83,000, the German's was \$54,000. The successful bidder was Japan-

ese and his price was \$36,000.

I could go on all evening and cite you more firsthand cases but we must move

Now let us consider the other edge of the sword which is cutting us out of our foreign markets. We aren't quite as conscious of this as of our home market but it is

equally important.

In 1958 our exports in one form or another were \$16.3 billion, a decrease of 14.5 Percent from the total of 19.5 billion in 1957. You can get some idea of the magnitude of our exports by comparing them with that of our enormous automobile business which was \$13.3 billion in 1957 and \$9.7 billion in 1958. Think of the effect on our economy and particularly Detroit, produced by this drop of 28 percent in auto sales in 1958. This will give you some idea of how much a comparable drop in our exports can mean. Some economists have ascribed to our export business as the difference between good times and depression. A complete loss of our export market or possibly even 50-percent loss could well wreck our economy. In the face of this, our imports increased 17 percent in 1958.

A while ago I had sa visit from a young German who had married the boss' daughter and was in line to take over some day a family-owned business that employs 7,000 people. He was here to look for new products to make because the Japanese were taking his export market away from him which constitutes more than half of his business. If the Japs can do this to the Germans, where does that put us in the race

for world trade?

In the mid-19th century, Howe invented the sewing machine. Singer sold it to the entire world as you all know, all the way into the jungles of Africa and South America. Up until World War II and even after, Singer held this market and some 70 percent of their business was export. they are fighting for their life. The Germans, Belgians, English, Italians, and lastly even India are making sewing machines for World markets, including United States.

We are as yet a creditor nation. In total goods and raw materials we still sell more than we buy so we currently have a favorable balance of trade. The thing that has kept a monetary balance has been (a) the money spent abroad by American tourists, (b) the "services" we buy abroad such as shipping space in foreign vessels, (c) investment of American money in foreign countries, (d) U.S. military expenditures abroad, and (e) U.S. monetary and material "gifts" to foreign countries.

Since 1950, our gold reserves have diminished by over \$2,300 million. This gold has been flowing back to foreign countries. In this period, foreign claims against U.S. gold reserves have increased \$8 billion. This is the best indicator that the trade balance is turning against us and further confirms the record of a decrease of 14 percent in our exports in the past year accompanied by a 17-percent increase in our imports.

We know that in the long pull imports must balance exports but it is a painful

experience to find that your imports are exceeding your exports because then you have to start tightening your belt and doing without some of the desirable imports while you get back in balance again. This is a position we do not realize but which could easily develop in United States if we do not halt the present trend.

Even in our raw materials such as cotton, wheat, oil, steel, metals, wood pulp, etc., we are fast tending toward a position of "net importer" rather than a "net exporter." This is particularly true in steel within the past 2 years. This year we will be a "net importer" of steel for the first time in our history. In the face of this, the steel workare are asking for wage increases that will price us even further out of the market.

We have, of course, always had world competition but heretofore it has gradually developed into certain accepted channels. For instance, we think nothing of importing most of our perfume and ladies' handbags from France, much of our fine china from England, all of our Scotch from Scotland, etc: We on our part have enjoyed major foreign markets in such fields as sewing machines, cash registers, business machines, drugs, safety razors, canned foods, soap, etc., and at one time in automobiles.

But these accepted situations are being rapidly upset and it is the speed of change wherein I think lies the great danger.

Now for a moment let's take a look at this world competition we are facing. Principally, it can be divided into:

1. The European Economic Community or the Common Market, the United States of Europe and the fringe countries of Europe.

- 2. The British Commonwealth which is nothing but a worldwide free trade union.
 - 3. Japan.
 - 4. Russia.
- 5 Latin America
- 6. Miscellaneous, including Australia, In-

7. In the longer pull we are facing the extremely low labor cost areas of China and Africa

As already indicated, we are feeling the pinch of competition from Europe at home and abroad. The European Economic Community consists of France, West Germany, Hullity consists of France, west Germany, Italy, Belgium, Holland, and Luxembourg (EEC). This common market includes about 168 million people. They are highly intelligent, very well educated and industrious people. They make up a market about as large as the United States but in a much smaller area much more easily integrated. They will have easy communication and low transportation costs. They are somewhat shy on raw materials but ocean freight costs are low to bring them to their shores.

By 1972 all trade barriers between these countries will be completely removed by a gradual process of reduction which began January 1, 1959. This will give this community all the advantages we have enjoyed as a mass market unhampered by trade barriers between the States. This in turn will generate mass production and the consequent high rate of productivity comparable to that of the United States. This process is already well advanced.

Meanwhile the other great advantage we have enjoyed in having so-called unlimited natural resources is disappearing as we are finding our resources dwindling and we become more and more dependent upon im-

portation of our raw materials.

Thus, we are now losing two big factors that have given the United States industrial supremacy of the world. Another, and most important ingredient of our success is, of course, our freedom and we are gradually losing that as socialistic trends are becoming more dominant each year in our governments.

In the face of this, we find ourselves paying wages so much higher than these competing countries that we are about to price ourselves out of all world markets.

Average wage rates paid by a U.S. manufacturer in Europe

	Direct wages	Social charges (cents per hour)	Total	Index, Holland 100	Index, Japan 100
Holland Japan Belgium France Italy West Germany United Kingdom Detroit	\$0.40	11	\$0.51	100	340
	.15	0	-15	30	100
	.51	15	-66	130	440
	.41	17	-58	114	387
	.37	18	-55	108	370
	.50	14	-64	126	407
	.65	7	-72	141	480
	2.83	59	3.42	670	2, 280

A production worker in Germany averages about 70 cents per hour, in Coventry, England, about 85 cents per hour, and the Detroit area \$2.83 per hour. On top of this he receives in my plant 59 cents per hour in fringe benefits, or a total of \$3.42 per hour. The productivity of the American worker has always been higher than the European, but it has been largely because of the tools he has been given to work with, while the European worker has emphasized more the quality of craftsmanship, and hand-work, and artistry. Now, their whole picture is changing to mass production techniques like

How are we going to close the gap between these wage rates? Europe will have to go up at a much more rapid rate than it is and ours must hold the line or go down, because I don't see how we can hold our lead in productivity. We are definitely facing the possibility of a lowering of our standard of living. We are facing the possibility of more and more "permanently unemployed."

Now in Europe there are some other countries not in the EEC. These are mainly Great Britain, the Scandinavian countries, Austria, Switzerland, Portugal, and Spain. Sooner or later they will become, if not an integral part of EEC, at least closely allied with them as an economic unit something like Canada's relation to the United States.

Already the British Commonwealth of Nations is a strong economic bloc, and it was because of this that England could not join the EEC. Strenuous efforts were made, you know, to have them join.

Now, on the other side of the world we are finding an industrial colossus in Japan. Here are 90 million highly intelligent, educated, and very industrious people who are willing to work very hard for long hours at wages which begin at \$1 per day per family.

Before the war, Japanese merchandise was generally known as cheap and shoddy. That is no longer true. They are now making products that compare in quality with that of the United States and Europe. The resuit is that Japan today is enjoying an industrial boom and the greatest prosperity in her history. She is invading all world markets. Then the next threat not only to the United States but to the rest of the world is Russia, and later China. This threat is just beginning, but we have had a startling insight into what it can be like. U.S.S.R. is a great land with 200 million people who have emerged from one form of serfdom to another quite different form of serfdom. Whether we like it or not, Russia is developing industrially, scientifically, and economically at an enormous rate.

I mentioned steel. It is possible that in another 10 years Russla can match the steel production of the United States. She is invading foreign markets with her raw materials, with steel mills, agricultural implements, and already is shipping automobiles to the United States. The Skoda, made in the satellite of Czechoslovakia, is a good little car and very attractive. A Russian-built car has already been anounced in New York.

We are seeing the beginning of an economic attack from Russia that can be more devastating than old-fashioned war. How does it work? Well, a few months ago the aluminum market went to pieces. The Russians had put some aluminum into the market at prices far below the world price. It wasn't much because no doubt they have limited supplies to deliver but it gave a lot of people the shivers. What is going to happen when Russia can deliver unlimited supplies of aluminum at any price she wants to set?

Russia is building a pipeline from her Caspian oilfields to the Baltic. From there she can deliver oil to any northern European port at a very low cost and at any price she chooses to set on it. The selling price is set in the Kremlin and no Russian oil company is going broke by selling below costs because there are no such companies. It's all the Government. Some people say they aren't worried about this because Russian oil is the wrong type of oil. I think we should not let this view lull us to sleep as they will most likely find a way to convert it to the right type if the statement is true.

Similar threats will appear over the next 10 years in all fields of industry, I firmly believe, and what can be done about it?

The danger with Russia, aside from the political aspects, is that Russia is one single great monopoly. We saw what happened with monopolies here in the 19th century and passed laws to break them up.

Who can pass any laws to break up Rus-

sia? Her people are actually serfs or slaves of the government. They work how, where, and when they are told. The Russian Government can do as it pleases with the products of their toil. Therefore, the Kremlin can take these products and dispose of them in any way and at any price it sees fit.

As I have shown you, they can put their oil or their aluminum or anything else on the world market at destructive prices. Like the Standard Oil of old they can enter any market they choose and put all competitors out of business. They will most likely do as Standard Oil did and be selective and spot their activities from place to place knocking off one at a time. That is an old Bolshevik technique. Then after competition is out of the way, up will go the price to be paid and the consumer who has nowhere else to go will pay through the nose. Gentlemen, I believe that within the next 10 years we will have to be prepared to meet this situation on a massive scale.

Then, in addition, we have the awakening nationalism of the backward and colonial countries of the world and the desire of their people for a higher standard of living expressed in all kinds of moves for industrialization and independence. This has led to exclusion of our products from most countries of Latin America, Australia, and others.

Even India is building steel mills and is manufacturing such products as sewing machines which I have already mentioned.

Generally speaking, this is all for the good—to raise the standard of living of all peoples and thus eventually provide larger world markets for ourselves. But in the process of this taking place we could easily find ourselves in a bad pinch.

We must recognize that we are an integral part of the world and can no longer exist alone. Isolationism, I believe, is dead in the United States. We must recognize the vital necessity of foreign trade to our very existence. In such trade there has to be a balance because if we don't buy from others they cannot have the currency to buy from us. It is a two-way street. Therefore, we cannot put too many blockades in the way of the free flow of such trade.

If we find we are getting hurt too much we can of course raise import duties. We have them now but are they keeping out automobiles and a thousand other articles? I don't believe we can put on duties high enough to keep out foreign goods. Duty on autos is now 12 percent. I understand that the U.S. price of the Volkswagen could be reduced \$500 and still show them a profit. The Renault which sells in this country for about \$1,700 can be bought in Paris for \$900 and the price of a small British car that sells for \$1,600 here is only about \$800 in England if you neglect the high 60 percent British excise tax which of course is not applied to their exports. This all means that their basic cost of production leaves a large margin within which they can trade in world markets.

Of course, we could then apply quotas to foreign goods to limit the import as we have recently done with oil or, finally, we could completely ban the importation of certain goods such as Australia and Mexico have done to protect home industry.

done to protect home industry.

I don't believe we can do these things without further injuring ourselves to a greater degree in other areas. In other words we are facing a dilemma for which we must find other answers.

And the flow of world trade is going to change. We are going to find foreign markets for the things we are best fitted to make or grow or mine. Other countries likewise. Eventually, we will benefit from a rise in the standards of living of the rest of the world out I believe we will have a lot of headaches before that happy day arrives.

The airplane and the radio have shrunk the size of the world to perhaps the size of Michigan 100 years ago. We are part of it and can't help ourselves. But, I believe, it is time that the American people and particularly industry and labor wake up to the fact that we have a serious threat at our door to our present standard of living and actually to the very existence of the United States. I believe Eisenhower and Dulles know it. Leaders in industry are only beginning to realize it within the last few years. Labor is only just beginning to realize it. A recent editorial in the Dertoit News highlights this. It is entitled "Look Who's in Bed." It reads as follows:

"We hope that Walter Reuther, proposing import duties on automobiles to protect American wages from cheap foreign competition, will have the grace to nod at least to his strange bedfellows. We refer not only to some sturdy high tariff men in the National Association of Manufacturers but to the dead, the McKinleys and Aldriches, the Hawleys and Smoots, all the late misguided souls who stood against the march of progress and were buried by it. Mr. Reuther, of course, is worried. Recovery has come to the automobile industry without reabsorbing many thousands of unemployed UAW members. Imported cars are making serious inroads on the American market. Worst of all, American in-

dustry, including the automobile manufacturers, is investing ever more heavily in factories abroad. That means both less domestic production for export and increased foreign production for sale here, a double squeeze on American jobs. Mr. Reuther's proposed answer is an international fair labor standard-meaning uniform, or roughly uniform, wage scales in automobile factories everywhere so that no manufacturer would enjoy a material competitive advantage based on labor costs. To enforce such a standard he suggests import duties equivalent to the differential between foreign and domestic wages. Despite the direct tleup proposed between tariff rates and wage scales, Mr. Reuther's idea remains the oldest and most discredited in the book. It assumes that high wages in America cannot be justified by anything more substantial than the desire to have high wages and cannot be maintained except by political power. The assumptions are demonstrably untrue. America has developed its high-wage scales mostly in competition with low-paid foreign industry, by and large without effective tariff protection. High wages have resulted from high labor productivity which in turn has been the product of skill. We could pay more, in short, because we got more for the wage dollar. If that is no longer true, then there is the problem that demands solution. No ingenuity in ducking it will serve. In the long run none can profit from artificially maintained high wages and high prices in a closed market. Mr. Reuther knows that. It is sad to see him abandoning his principles in unseemly haste to find an old refuge from his current troubles."

The No. 1 enemy to our future successful competition with the rest of the world is "inflation." The Eisenhower administration has done a great job in holding inflation in line, but actually it has had only lukewarm help from the public in general and absolute opposition from labor and the labor Democrats who are all out to spend us into disasterous inflation.

The trend is for more inflation. Our dollar is only worth 48 percent of the prewar dollar and its going lower. If the steel-workers win any substantial gains, it will go still lower and apparently no reversal of the trend is in sight. Each time, it becomes more difficult to meet foreign competition. The inevitable result will mean the eventual devaluation of the dollar—a happening that you probably think impossible.

Just look at the strengthening of foreign currencies, Canadian and Venezuelan, Swiss. German, and British. De Gaulle is bringing out a new franc called le franc lourd—(the hard franc) at 4.93 to the dollar. It could well be in a few years that it will take more dollars to buy any of these currencies. The dollar is already discounted in several countries.

Now, of course, it is not all as bad as I have painted it. The United States is not going to fold up tomorrow but these problems are very serious and the public must be awakened to the perils we are facing so that something effective can be done about them. Let us look at our assets.

In the first place, ours is a vast and rich market and we are still the leading industrial unit in the world by a wide margin.

We are a young and virile country, in fact only just beginning to come into maturity.

While many of our resources are being depleted we are still rich in natural assets.

As the great melting pot of America continues to leaven the bloods of many races and peoples, I think we are producing the greatest race of people the world has ever known.

We have a great productive machine, but it must be improved rapidly enough for us to maintain the lead we now hold. There

are some things the Government can do taxwise and otherwise to help improve this situation. You must keep in mind that most of the productive equipment of Europe and Russia was destroyed in the war. been replaced since with almost 100 percent modern equipment which makes a large percentage of ours obsolete by comparison. Can we tolerate this situation with our high labor costs?

Our productivity, at least temporarily, is rising at the most rapid rate in history. Before 1957 it was rising at about 1.75 percent a year. Between mid 1957 and to date it has risen about 8 percent. The reason for this is that before 1957 it was wholly due to improved tools and technology. With the depression of 1957-58, unemployment increased a point where labor's attitude was changed and the threat to their security induced a willingness to give a fairer day's work for a fair day's pay. This is probably a temporary spurt, but it shows what can be done when we are put to the test.

Another thing is American ingenuity and inventiveness. However, we hold no monopoly on this as Europe has been a great source for invention, and the Russians are showing signs of a considerable capacity in

this direction.

We are building our merchandise more and more to higher standards of quality and must strive to maintain the highest quality in whatever we produce. We must remain Preeminent in production of quality goods.

We have provided educational facilities for a greater proportion of our population than any other people. We must see to it that they are expanded and greatly improved in the quality and character of education they provide.

As previously explained, we are still a creditor nation. We presently have a favorable balance of trade. People still buy more from us than we do from them.

Our percentage of imports to total product is small but is changing rapidly. Once our export of automobiles represented from to 15 percent of our production. Only or 6 years ago importation of foreign cars wasn't 1 percent of our production. Today our export of automobiles is almost nothing, and we are importing 12 percent of the cars being sold here this year.

Our population is growing at an unprecedented rate, greatly adding to the strength of

our Nation.

I need not go on to list our assets any further. They are known to us all but the greatest of all is the degree of freedom we still enjoy. It is the most precious thing we have and is something we must preserve with our lives if necessary, as there are forces at work both from within and without that are seeking to destroy our freedoms.

Now let me suggest what, in my opinion, are some of the workable means to guide us down the path and out of this economic dilemma into which we are plunging as a result of the rapid rise in foreign productivity coupled with their minimum wages to labor.

Essentially, labor and management in the United States must find all possible common ground for pulling together better than they are now doing. Better leadership is required on both sides to narrow the areas of difference. Their interests basically are the same. Neither can prosper without the other. As an example of the healthy type of togetherness philosophy I envisage, I would like to recall the results achieved in the two great World Wars by the different groups of Deople finding a common ground on which they could pull together against a common enemy. I believe that labor and management now have their last clear chance to get together to save our economy from destructive foreign compeition. I therefore urge a three-way stretch on the part of management, labor, and our National and State Governments with the united efforts of all directed toward licking the common enemy for the common good.

Specifically, the wage demands of labor must be more truly realistic and commensurate with increased productivity. Labor must purge itself of corruption and racketeering, and the many practices that limit productivity such as featherbedding, work limitations, jurisdictional restrictions, and get back under rational and patriotic leadership to the old idea that built America of a fair day's work for a fair day's pay.

Then management must be realistic in its pricing policies and constantly alert to new and improved processes and machines to improved product designs and inventions, to every move that will improve the efficiency and productivity of our productive facilities. Management must also give every attention to its people. Proper personnel and public relations is a vastly important factor in meeting the foreign challenge. We must create a climate in which there is a real incentive for each to give his best. And this is not limited to monetary incentives.
"Man lives not by bread alone." He must be appreciated and he must be told so. In these areas we in the United States should not fear the competition of the marginal and slave-labor foreign competition. Management must also be alert to learning from people in other lands. Americans are becoming much more world conscious and less provincial. Much of what we have taken advantage of in the past has originated as an idea in foreign areas. We must be especially alert as research and development abroad

is going on at a terrific pace.

Then let our governments and political leaders become more conscious of the common problem and less conscious of class or group pressures. We need real statesman-ship. There are many things our Govern-ment can do to meet these challenges far beyond what they are already doing if partisanship can be forgotten. It behooves us all therefore to take a greater interest in government and see that the best type of broad-minded Americans are put into office. The high efficiency of the activity of labor organizations politically in stimulating real action on the part of business and industry in the same direction. I think this is a good thing as then the public will be presented more fully and accurately with both sides of the problem. I have an abiding faith in the good commonsense of the American public, and I think that if they get a complete and accurate picture of both sides they will make the correct decisions and will provide the leadership we need. And in our combined efforts we must control inflation. Balanced Government budgets is a must.

This, I think, is the most significant development of our time and one to which everyone of us must lend his support, to work from the grassroots up to educate our people in the problems they face and provide the leadership in the great challenge to the progress, and yea, to the very existence of these United States as our forefathers envisaged them and as we know them today.

Thank you.

Questionnaire on Vital Issues

EXTENSION OF REMARKS

HON. HAMER H. BUDGE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 26, 1960

Mr. BUDGE. Mr. Speaker, recently I mailed at random to telephone subscribers and rural box holders in my district a questionnaire on issues I consider to be vital to them and the Nation at this time. To date I have received and tabulated some 6.500 returns.

Believing the results of this tabulation will be of interest to the Congress, and under leave to extend my remarks. I insert them in the RECORD. With the exception of the optional presidential preference question, the percentages will not add up to 100 percent as many persons did not answer all of the ques-

The tabulation follows:

1. On farm price support programs: Do you believe Government spending is insufficient (8.8), about right (14.6), too much (65.9)?

2. On space exploration programs: Do

you believe Government spending is insufficient (20.9), about right (36.8), too much (29.9)?

3. On national defense: Do you believe Government spending is insufficient (30.1). about right (42.4), too much (23.0)?

4. On foreign aid: Do you believe Government spending is insufficient (3.2), about right (16.4), too much (71.2)?

5. On public welfare programs: Do you believe Government spending is insufficient (23.0), about right (32.4), too much (33.2)?

6. Should the Congress, through its spending, allow the \$280 billion national debt to be reduced (78.0), remain the same (9.4). be increased (2.0)?

7. Do you believe the Landrum-Griffin Labor Reform Act approved last year: Helps (37.6), hurts (7.0) rank-and-file union members? Helps (18.6), hurts (16.8) union leaders? Helps (36.7), hurts (10.3) the general

8. Do you believe labor unions directly, or through organizations such as COPE (AFL-CIO Committee on Political Education), should (9.3) should not (78.2) be allowed to use funds from regular membership dues or compulsory special assessments for political contributions?

9. Do you believe that decisions as to which candidates and parties a union will support should be made at the local (72.3), national (8.8) level?

10. Do you believe our immigration laws should remain as they are (41.9), admit more people (12.0), admit fewer people (35.1)?

11. Under present conditions in Cuba, do you believe Cuba should (13.4), should not (74.0), retain its preferred status in trade with the United States?

12. Do you believe that taxes should be collected at the Federal level for the payment of teachers salaries (16.6) yes, (71.3) no; for the construction of schools (24) yes, (59.3)

13. Do you favor the levying of tariffs on foreign crops when those crops are in com-petition with domestic crops? Yes (78.1), no

14. Do you favor legislation providing that the Federal Government shall sue and be sued in State courts in water rights litiga-Yes (56.3), no (18.8).

15. Do you favor the creation of single-use (recreation) wilderness areas in Idaho? (36), no (51.1).

16. Do you favor diplomatic recognition of Red China? Yes (15.4), no (73).

17. Do you favor a series of summit conferences such as the one scheduled for Paris this spring? Yes (66.7), no (18.9).

18. Do you favor repeal of the 22d amendment which limits the President to two terms? Yes (21.9), no (69.5).

19. Do you favor increasing postal rates to allow the Post Office Department to reduce its yearly deficit? Yes (47.3), no (41.2).

20. Do you favor increasing the limitation of \$1,200 on yearly outside earning for those receiving social security? Yes (67.7), no

(23.9).
21. Do you favor allowing tax credits to parents for college educational expenses paid on behalf of their children? Yes (67.4), no

Optional: If the 1960 presidential election were being held today, for whom would you vote? (Please check one only): Hubert Humphrey (2.5), Lyndon Johnson (3.7), John Kennedy (11.1), Wayne Morse (2), Richard Nixon (48.7), Adlai Stevenson (4.5), Stuart Symington (4). No opinion, or undecided (22.4). Others (1.1).

Medical Care Now: America's Great Need

EXTENSION OF REMARKS

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1960

Mr. SANTANGELO. Mr. Speaker, a nation's moral fiber is judged by the regard the government has toward its people, especially its senior citizens. The Forand bill, H.R. 4700, is a measure which demonstrates a concern for the health and care of our elders in the twilight period of their lives. I was happy to be a cosponsor of this humane and practical measure and introduced H.R. 7154.

Our problem is the care of over 15 million of our citizens, and I believe the Forand bill provides the best approach to the solution of this problem. The administration proposal is a cruel hoax upon the American people and the proposal by the American Medical Association is based upon the premise that only a small fraction of our senior citizens need health care and most of them can afford the cost of hospitalization and medical care.

The problem of medical and hospital care for our elderly citizens arises from the fact that medical science has made more progress in the last decades than ever before. Today some diseases such as malaria, smallpox and bubonic plague have been almost completely eradicated in America. Other diseases such as polio and osteomyelitis are on the way out, and we may hope that the recent progress in cancer and heart research may someday result in their eradication as well. Because of these strides, people are living longer than ever before. Man's life expectancy is now 70 years of age. There are now over 15 million Americans who have passed their 65th birthday. In 1975 there will be 20 million.

The increase of life span has not been an unmixed blessing. The aged today face a number of problems some of which they find very difficult to meet. One of the most pressing of these needs is adequate medical care. The Secretary of Health, Education, and Welfare has stated:

Older persons have larger than average medical care needs. As a group they use about two and a half times as much general hospital care as the average for persons under age 65 and they have special need for long term institutional care.

It should always be kept in mind that the cost of this large amount of medical care must be paid for out of the same resources on which the older person depends for his food, clothing, and shelter. Unfortunately, millions of our senior citizens simply cannot meet all of these expenses out of their present slender means.

In 1958 half of the people over 65 had incomes of \$870 or less. That amounts to 8 million people who must live and pay for their medical care out of \$73 per month. The cost of medical care has risen far more steeply since 1949 than the cost of items like food. In November 1959 food cost 17 percent more than it did in the base period ending in 1949. while medical costs had increased by 53 percent. The cost of hospital care alone has nearly doubled. It is little wonder that older persons are often forced to forgo medical care they really should have, or that proper care is often delayed until the situation is serious.

As the American Hospital Association stated in hearings before the Senate Subcommittee on the Problems of the Aged and Aging:

We are convinced by all the evidence we have seen that the problem of health care and its financing is one of the most serious facing the nonindigent aged, and one of the greatest threats to their economic security.

* * Various indications * * * suggest that a good many of the aged postpone or refrain from seeking hospital or other care which would be desirable.

It is also not surprising that a single illness can wipe out the savings of a lifetime and leave a person dependent on the public dole. These problems not only affect the aged persons themselves, but they can also be a tremendous shock to the children and other relatives who assume responsibility for the expenses.

The American Medical Association, which bitterly opposes the Forand bill seems to believe that there is no need for Federal legislation because of the longstanding policy of many doctors to render their services free of charge to those who are in need. You and I know of many excellent physicians who follow this policy. They deserve our respect, our love, and our affection. I know how much they do and how much they can do. I had a brother who was a medical doctor and surgeon who rendered much free services and practically operated a free clinic for the community during the thirties. These doctors are the men who have earned the great respect of society and undying gratitude of their patients. They contribute to the high regard in which the public holds the medical profession. Nevertheless, it seems to me that the evidence is conclusive that many people do not get the care they need despite the generous assistance and charitable work rendered by the followers of Hippocrates.

Even though physicians do take their patient's financial resources into account in fixing their own fees, a great part of the medical expense problem remains beyond their control. In days gone by a doctor could carry all the equipment he needed in a small bag and depended largely on his unaided senses to make his diagnoses. Modern research has ended

those days forever. A doctor now requires a host of complicated instruments and highly skilled personnel to operate them. These require huge capital investments and someone must pay for all this modern apparatus.

The Forand bill would help meet the medical care needs of the aged in a way no other proposal yet developed can. would make health benefits part of the social security system, and thus provide at least a minimum of protection to the nearly 11,300,000 persons over 65 who are now eligible to receive regular old age and survivors benefits. The health ben efits would include 60 days' hospitalization per year, plus 60 days' nursing home care per year, and all surgery performed in a hospital. These benefits would be paid as a matter of right out of the social security trust fund created by the joint contributions of the workers and their employers. This, I think, is the most important thing about the Forand bill. The Government, Federal or State, makes no contribution. The taxpayer is not saddled with income taxes to finance the program. Older people would not be subjected to a humiliating "needs test" or forced to take a pauper's oath. Benefits would not be charity doles, but the proceeds of insurance for which the worker had made payment during his working life. The fact that protection will be completely paid for by the time the worker reaches age 65 does not make medical care free any more than automobile, fire, or life insurance is free.

Most important of all, the worker would pay his share of the cost when he is most able to afford it—when he is working. When a worker retires he would have permanent insurance which would not require additional premium payments out of his meager retirement income.

From one point of view it is difficult to understand the opposition of some doctors to this proposal. As we have already noted many doctors assume a personal responsibility for providing medical care to those who cannot afford it. Even though physicians may be willing, even eager, to carry so much of the load, it is not fair that they should do so. This is after all a national social problem for which the Nation as a whole should bear responsibility.

One question which always arises and which must be answered is "How much will it cost?" The best estimates now available have been prepared by the Department of Health, Education, and Welfare. According to these estimates the cost of the Forand bill could be defrayed by increasing the rate of social security tax by 0.40 percent of payroll each for employers and employees—0.60 percent for the self-employed. The small increase in the contribution rates seems to be more than justified by the great benefits it would provide.

Opponents of the Forand bill have a great many arguments, which I would like to discuss. First, some attack the cost estimates of the Department of Health, Education, and Welfare as too low, even though that Department, as part of the administration, is opposed to the bill. Representatives of the insurance industry and the medical profes-

sion have claimed that it will cost almost twice as much as the Department says it will. I am tempted to believe that the zealousness of these opponents has caused them to overestimate the costs. Similar predictions were made when we Passed the disability benefit program in 1956. In fact, the Department's estimates proved entirely reliable, even somewhat conservative.

Part of the argument that the cost of the bill would be excessive rests upon assertions that hospitals and nursing homes would be flooded with malingerers Who were not really ill. There will, of course, be an increase in the number of people going to hospitals. The bill would not serve its purpose if this did not happen and there would be no reason to pass it. The idea is to get people into hospitals who need treatment but are not getting it because they cannot presently afford it. As for the malingerers, no person would receive health benefits unless treatment were found to be medically necessary by a doctor. I cannot believe that the doctors of this country would deliberately abuse the program. I do believe they are too skillful to be misled by any great number of hypochondriacs.

I think a great deal of opposition to the proposal has come from people who do not want socialized medicine and who have been taken in by statements that the Forand bill would mean the socialization of medicine in this country. Of course, the Forand bill would do nothing of the kind. It provides that medical bills will be paid out of a trust fund to Which the patient has contributed. The Secretary of Health, Education, and Welfare would have no more authority to control the practice of medicine by fixing fees and prescribing treatment than does the president of the Mutual Insurance Co., of Omaha, probably less. In fact, any such control by the secretary is specifically prohibited by the bill. Every patient would have the right to be treated in the hospital of his choice so long as the hospital were willing to receive payment out of the trust fund. No hospital or doctor would be required to admit or treat a patient unless they thought it medically necessary. It seems to me that every conceivable safeguard has been built into the bill.

It has been said that the Forand bill is unnecessary because of the growth of Private health insurance, and that passage of the bill would destroy the progress made by private insurers. The op-Donents cite figures to show that 40 percent of the aged now have some form of health insurance and they predict that the proportion will increase to 70 percent by 1965. The growth of private insurance is a wonderful thing and our Government has helped them grow. However, figures can be misleading because, even if true, they refer to those who are covered while they are employed and not after they retire.

Since World War II because of the war-time restrictions on wage increases, collective bargaining agreements gave impetus to fringe benefits and hospitalization plans. Private hospitalization plans. Private hospitalization plans developed on a scale so vast that 95 mil-

lion American workers and dependents are presently covered by hospitalization programs while they are still working and have not retired. After retirement, only a small portion of the 19 million workers who have pension plans are covered for medical care and hospitalization. Retirement means the end of hospitalization and medical care for our Nation's workers and their dependents. The Forand bill is designed to take care of this need after retirement when because of age, most people need medical and hospitalization care desperately.

With each passing year, our senior citizens develop inexplicable pains and aches. Our senior citizens have arthritic and old bones. I, for one, know of those pains which come from nowhere and end just beyond where the doctors fingers touch. They frequently defy location. I know of the pains which come with the night and disappear with the dawn. A prescribed pill or an appropriate injection, inexpense but effective, determines whether our elders shall pass many hours of agony or a period of comparable comfort.

Many of the people who are included in the 40 percent have wholly inadequate coverage for which they must pay more than they can really afford. For instance, one insurance company charges \$78 per year for benefits which are less than one quarter of those which would be provided by the Forand bill. If the insured failed to make a single deadline on his premium payments, the policy may lapse and perhaps cannot be reinstated. Many of the aged who have health insurance have this type.

It is not hard to understand why some private insurance companies must charge so much for so little. In some cases almost 60 cents out of every premium dollar is eaten up by overhead expenses, leaving about 40 cents for the actual payment of benefits. Under the Forand bill more than 96 cents out of every dollar collected would be paid out again in the form of benefits. The real problem with most of these private insurance contracts is that they must be paid for after retirement when the ability to pay is lowest and the premiums are highest. As for the predictions of their expansion to coverage of 70 percent of the aged, it seems unlikely to me that the 8 million aged with yearly incomes of \$870 or less are going to buy very much insurance at \$100 per year, or even \$78 per year. The dire prediction that the Forand bill would result in the destruction of private insurance is also fallacious. The same type of argument was used in 1935 when opponents of the social security system claimed it would destroy the great progress which had already been made in private pension plans. Of course, the reverse has been true—private pension plans have burgeoned as they never did before 1935. I believe we could expect the same kind of results after passage of the Forand bill. The Forand bill, like the Social Security Act, is not designed to supplant, but to supplement private initiative.

Within recent days in response to the great demand that some action be taken,

the administration has finally come up with a proposal of its own. The general idea is to put the State governments in the insurance business, with part of their expenditures to be reimbursed by the Federal Government on a matching basis. The States would not, of course, be required to participate in the program. But if they do, they would sell health insurance to people over age 65 for premiums of \$24 per year, provided he meets certain fine print qualifications. Benefits would be payable for almost every conceivable type of medical service. However, as in all something for nothing proposals, there is a catch to it. No beneficiary of the State insurance policies would get a penny in benefits until he had spent \$250 per year on medical expenses out of his own pocket. Even then his policy would cover only 80 percent of the yearly expenses above \$250. Any person who made more than \$2,500 per year would not be eligible to buy a policy. However, once a person owned a policy he would not be deprived of coverage no matter how high his income, provided he were willing to pay an increased premium. This is hailed as a voluntary program. This program, I submit, would be neither voluntary, nor calculated to meet the needs of the aged.

Another point. As we have already noted, half of the people over 65 had incomes of \$870 or less in 1958. Let us see how much protection such people would have under this program. First, a person in this income group must spend \$274-\$24 enrollment fee plus the \$250 deductible amount—in a year before he will get a penny. That amounts to more than 30 percent of an annual income of \$870. Even after he has spent this amount, he will receive benefits only if he is able to put up one more dollar for every \$4 of benefits. This means that a person with a \$700 medical bill would have to pay almost \$360 of it himself. I cannot see how a person who has \$870 to live on for a year can afford to spend 40 percent of his income for medical care. If I have only \$10 to spend, I cannot buy a \$50 suit of clothes even if the merchant offers to cut the price to \$25.

The opponents of the Forand bill have called it socialistic. It is surprising that the administration should offer a proposal which is far more susceptible to such charges. The Forand bill would simply extend the well-established social security system to provide for the payment of medical bills. The administration proposal would actually put the State governments in the business of selling insurance to the public at large. Moreover, the State governments would be given control over such aspects of the practice of medicine as the fixing of doctor's fees.

The eligibility requirements of the administration proposal are arbitrary and would operate capriciously. A man who has an income of \$2,500.01 would be ineligible to buy a policy. However, if he voluntarily brought his earnings below this level in 1 year he could buy a policy, and then boost his earnings to any level without losing his coverage. This would result in a situation where there are

two persons, with exactly equal incomes, one of whom will be covered while the other is not.

It is said that more than 12 million people would be covered by this program. However, this assumes that all 50 States, some of whom are already in financial difficulties, are going to jump into a program which will cost the States \$600 million per year. If a State decides to stay out of the program its citizens will not have an opportunity to receive the benefits of the program, even though they must continue to pay the Federal taxes which will be used to finance the program. No one has yet estimated what the administrative expenses of the proposal would be, but I am inclined to think they would be large.

For all of these reasons, I am, therefore convinced that the administration-in spite of its exhaustive studieshas not come up with an acceptable alternative to the Forand bill. Pain cannot wait until 1970. I, therefore, urge support of the Forand bill now.

Health Care of the Aged

EXTENSION OF REMARKS

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, May 12, 1960

Mr. BENTLEY. Mr. Speaker, in view of the controversy over the whole subject of health care of the aged, and particularly the Forand bill. I feel it would be interesting to observe the efforts made by the UAW to support this legislation. Under leave to extend and revise my remarks, I would like to in-clude herewith the following letter dated April 29, 1960, which President Walter Reuther has apparently sent to all retired members of his organization:

INTERNATIONAL UNION, UNITED AUTOMOBILE, AIRCRAFT & AGRICULTURAL IMPLEMENT WORKERS OF AMERICA

Detroit, Mich, April 29, 1960.

To: All retired members.

From: Walter P. Reuther.

DEAR RETIRED MEMBER: This is a progress report on our efforts to get favorable con-gressional action on the Forand bill which would provide hospital, surgical, and nursing home care for all social security bene-

Those of you in the Detroit area know about the rally we held on March 27 at which Senators McNamara, Symington, Kennedy, and HUMPHREY were guest speakers. As a result of this rally, prospects for passage of the Forand bill, or similar legislation, have greatly improved, and the 12,000 retired UAW members and their friends who jammed the State Fair Coliseum contributed greatly to this turn of events.

In keeping with our commitment to do everything possible to get favorable action on this important legislation, I again arranged meetings in Washington with key Members of Congress. On Wednesday, April 13, I had the opportunity to meet with the Speaker of the House, SAM RAYBURN, the majority leader, JOHN McCormack, and the chairman of the House Ways and Means Committee, WILBUR MILLS, to discuss the

need for action on the Forand bill. I also met with a number of members of the Ways and Means Committee and a group of Congressmen who have been cooperating with us in pushing for legislation to take care of the medical needs of our older citiens.

The results of these meetings, during which I assisted two of our retired members in presenting petitions signed by 7,000 people at the Detroit rally, are fairly accurately reported in the enclosed collection of press

clippings. I am now very optimistic about the chances of getting constructive legislation providing some basic hospital and nursing home benefits for all social security beneficiaries in this session of Congress. your help is still needed to encourage Congressmen that interest among our senior citizens in this issue is great and continues to grow day by day. Even if you have already written to your Congressmen, there are still important things you can do to

1. Write a letter to Congressman Wilbur Mills, chairman of the Ways and Means Committee, explaining why you personally need the help which the Forand bill provides. Mention facts and figures concerning health, drug, hospital, and health in-surance costs and the effect of these costs on your retirement income.

2. Get your wife and adult children to

write similar letters.

3. Get at least one friend or neighbor to write a letter to a Congressman and urge them to get relatives and adult children to do the same.

4. Address, sign, and mail the enclosed post card and send it to a member of the House Ways and Means Committee, living in your State or a nearby State. A list of members of the committee opposed to the Forand bill follows:

Democrats: HALE BOGGS, Louisiana; BURR P. Harrison, Virginia; A. Sidney Herlong, Florida; Frank Ikard, Texas; James B. Fra-ZIER, JR., Tennessee; JOHN C. WATTS, Ken-

Republicans: Noah Mason, Illinois; John W. BYRNES, Wisconsin; Howard H. BAKER, Tennessee; Thomas B. Curtis, Missouri; Tennessee; Thomas B. Curtis, Missouri; Victor A. Knox, Michigan; James B. Utt, California; Jackson E. Betts, Ohio; Bruce ALGER, Texas; ALBERT H. BOSCH, New York; JOHN A. LAFORE, Pennsylvania.

I feel certain that if we can get 100,000 post cards and letters in the mail in the next 10 days, we will get favorable action on a health bill for senior citizens. I am counting on you to keep up the good fight for this legislation. By working together I am confident that we can get favorable action on this important legislation and thus lift the heavy burden of hospital-medical care from the backs of our aged citizens.

All good wishes.

Sincerely and fraternally, WALTER P. REUTHER, President, International Union, UAW.

Conference of World Tensions

EXTENSION OF REMARKS OF

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Monday, April 25, 1960

Mr. BOWLES. Mr. Speaker, at the Conference on World Tensions held today in Chicago, Gov. Adlai E. Stevenson has given an important and timely address. In a forthright but nonparti-

san manner, he has addressed himself to the tension-increasing events of the past week, as well as to an incisive survey of our world position. His words, as always, deserve the thoughtful and careful attention of all American citizens:

This is not an easy time to talk about world tensions and peace with the meeting of the Chiefs of State about to convene in Paris. I hope your deliberations on reducing world tensions have been fruitful, because I am sure our Goverment has recently hit upon some good ways to increase them. In view of the strange events of the last few days, about all we can be sure is that the temperature has fallen sharply at the

But what disturbs me even more is the drop in America's reputation around the world, where the democracies are competing with the Soviet Union and its Communist friends for the respect and confidence and leadership of the peoples who will decide the great issue of our century.

In spite of all the rhetoric of the past few days, no one questions the necessity of gathering intelligence for our security. The Russians, of course, do the same, and they have a great advantage because of their addiction to secrecy, while our countries are virtually wide open to all the world spies-

But our timing, our words, our management must, and will be, sharply questioned. Could it serve the purpose of peace and mutual trust to send intelligence missions over the heart of the Soviet Union on the very eve of the long awaited summit conference? Can the President be embarrassed and national policies endangered at such a critical time by an unknown Government official?

Is it possible, indeed, that we, the United States, who want nothing of anyone but peace and security, could do the very thing we dread: carelessly, accidentally, trigger the holocaust?

Doesn't this incident make the reduction of international tensions all the more imperative?

What effect will this untimely drama have on the hospitality and confidence of the host countries adjoining the Soviet Union where our bases are situated?

And what of our international reputation for honesty, even comptence, when we announce that "there was no deliberate attempt to violate Soviet air space and there never has been," and 2 days later admit that the plane was on an intelligence-gathering mission over Russia and such missions are routine? One could say with the cynical diplomat: "Sir, it was worse than a lie, it was a blunder." But I would also congratulate Secretary and the secretary states of the se ulate Secretary Herter and the State Department for their prompt recovery and their candor after the first fumbling contradictions.

In short, our Government has blundered and admitted it. And the blunder has made the President's task at the summit meeting more difficult. Changes must and will be made. But this is no time for partisan censure. The summit meeting is too fateful for any American to risk making the President's teak and the summit meeting is too fateful for any American to risk making the President's teak and the summit teak dent's task even more difficult.

I hope this incident will not cause the Russians to really question our good faith in seeking a way to peace. And I hope that Mr. Khrushchev's intemperate words will not discourage us from the most serious and patient negotiations. It is more apparent than ever that there is no security for either side in this divided and suspicious world. So we must pray more earnestly than ever for the success of the President's mission at the summit.

But there was another development of this weird week that has passed almost unnoticed, which gravely disturbs me. On May

7 the President announced that we were going to resume underground nuclear test explosions in connection with research on detection. Evidently there was no approval or consultation with the British and the Russians. The discovery of the spy plane, coupled with the simultaneous announcement that we were unilaterally resuming these nuclear tests, can hardly enhance our image as the champion of peace in the world.

Well, I hope you will forgive this excursion into a field already badly trampled, but increasing tensions seems relevant at a conference on reducing tensions. I hope and pray that the prospect for a test ban agreement at the summit has not been harmed by this confusing announcement just when everything looked as if there was for the first time a real chance—perhaps a last chance—to bring the development of nuclear weapons under reasonable control before they spread further through the world and before they become still more lethal and versatile.

Only a few points remained to be settled at the summit meeting. The Russians had accepted our position that a permanent treaty could only cover tests that could be monitored. After Mr. Macmillan's visit, we had finally accepted their proposal for a further moratorium on underground tests, and they had accepted our proposal of joint research to improve techniques for detecting underground explosions. Congress seemed ready to ratify. The critics had been pulled into line. The presidential candidates said they would back up the President. A scientific conference was set for yesterday to discuss the joint research program.

And then, a few days before the summit, the President announced our unilateral program without even waiting for the scientific conference which we had proposed and without assurance that the British and the Russians would have full access to our research work and nuclear explosions. Research on any other basis would hardly be possible unless there is mutual trust, and of course that is just what there isn't.

Unhappily, the suspicion is already widespread that powerful influences in this country really don't want to halt the development of nuclear weapons—in spite of the fact that if we go on, by 1980, or earlier, scientific progress (we should invent another name) will have perfected the ultimate explosion, which, with one touch of the button, incinerates the globe—the overkill to end all overkills, which cancels at one stroke all Soviet, or Chinese, military strategies based upon the postatomic survival of a part of their vast countries and vaster manpower.

As we know, the only solid basis for successful negotiation with the Russians is the basis of common specific interests—the basis of mutual advantage. And this certainty—of the perfection of the ultimate explosion—is linked with the most specific common interest of East and West to prevent the spread of atomic power to all the other governments of our troubled world, and possibly to forestall one of the most ominous and immediate possibilities—the extension of atomic weapons to both Germanys, thus creating in a divided continent an atomic armory at the very point of maximum political instability.

The control of atomic testing, which looked so promising, is no more than a first step, but to my mind it is a first step of overwhelming importance, for it would establish international inspection for the first time—the safeguard upon which all future steps toward disarmament and sanity depend. I believe that it is worth a great deal to us in ultimate security to achieve this first step, and this for a reason I do not always see given the emphasis it deserves.

We in the West are an open society. The Russians need no aerial reconnaissance of this country for their security. But Russia since Ivan the Terrible has never been an open society. For them to agree to inspection on their own territory violates an ancient traditional and basic principle of their national life-which is secrecy. we are asking for and they seem willing at last to concede is something with incalculable consequences for the future of man. A formal end to Russian secrecy and the start for the first time of even the proposed limited system of international inspection and control of nuclear testing is worth a good many theoretical improvements in the refinement of these weapons by further tests, which can only complicate the problem of control and put even heavier demands on the world's political maturity.

I don't believe that no treaty is better than an imperfect one; that the choice is a perfect test ban or none at all. I don't believe things have got to get worse before they can get better. They can't get much worse, and to go on with the tensions mounting, the arms race expanding, new weapons multiplying, is not the road to reason; it is the road to ruin.

I deeply regret that on the very eve of the summit the United States has created the impression of another change of policy and cast any doubt on its purposes and total commitment to halting all nuclear arms tests.

But I had planned to talk about Latin America where I have traveled extensively this winter. For Latin America is making no mean contribution to world hopes and also to world tensions, especially in Cuba. But instead, I want to question one or two of our attitudes and beliefs from which all our policies in the international field—all our strategies and plans, all our efforts to mitigate the tensions of our world—are in the last analysis derived.

My first query is this. Do we know, in the broadest sense, what we are trying to do with our foreign policy? And what relation does it bear to what we ought to be doing in the atomic age? We accept the fact that, every day, science is revolutionizing our environment. Space is conquered. Communication is instant. Wordwide political forcesanticolonialism, antiracism, burning nationalism-operate across the old boundaries and often obliterate them. Even in less sensational ways, we are caught in a new web of international influences and commitments. Is not one reason for the new pressure on America's balance of payments the fredom with which producers and consumers alike now shop around the world, turning naturally to foreign suppliers when price and convenience dictate the choice?

In short, we are irreversibly part of a worldwide human community. But it is not a community that enjoys the structure or the safeguards of a civilized society. At home we live under law. We play our part in promoting the general welfare. We share some sense of national purpose. These are surely the minium conditions of a truly civic life, or a life in society that deserves the name of human.

But all are lacking in our international world. Should not, therefore, the introduction of such fundamental institutions be the first aim of our world policy? Should we not at least attempt a political inventiveness which in some way matches the horrific inventiveness of our scientists? Can we tolerate a world in which everything changes—every measurement, every distance, every material prospect—and only civic life remains unchanged to founder in an environment for which it was never designed?

The main aims of our foreign policies bypass this central issue. We do not pursue the general welfare. We pursue our separate national interests and hope that the selfish good of the part will add up—against the witness of all social history—to the wider good of the whole.

We do not urgently seek a world under law. Primarily we seek national security or, in simpler terms, to stop the Russians. As for policies which attempt to articulate some common purpose for a threatened humanity, they occasionally get a brief run in our rhetoric. But they do not occupy much of our planners' time.

So I would suggest that a first need in our international policies is to be clear about our fundamental aims. We are trying to construct a civilized world for the genus man. We are trying to create for the whole human family insitutions, obligations, decencies and traditions which will enable it—with planetary suicide insight—to avoid disaster and build for itself a saner, comelier life on earth. This aim may appear one of high generality. But so are such phrases as "the defense of national interests." or "Lebensraum," or "the white man's burden," or any of the other catch phrases with which men have gone out with good conscience to plunder and maim their neighbors. Behind the generality "national security" lies the concrete misery of a thousand wars. At least the aim of living as neighbors under a common law, with mutual support and respect, is an ideal with less palpably lethal consequences for the human race.

A world under law entails essentially an end to the settlement of disputes by private violence. And this in the context of 1960 means, first of all, a dedicated, unshakable search for disarmament. Here again I won-der whether some of our beliefs and stereotypes are not hampering the energy and purposiveness of our search. We are bargaining with a tough and resourceful adversary. Nothing will be given away. Sentiment will not enter in. The only basis for negotiation is certainly to match strength for strength, concession for concession, and never to suggest for a moment that the Russians can have something for nothing in the field of security. Nobody has improved Churchill's definition of our posture at the bargaining table. "We arm to parley." Heaven help us if we don't.

But equally, we aim to parley; to parley is the objective, for it is the only way to peace open to either side. Times have changed since diplomats could sit around a table and divide up the world for a hundred years to come. But now peace is not the product of a single conference but rather of continuous conversation.

But there are some states of mind that make negotiation enormously difficult. And we have some of them. I believe many of our stereotypes about the Russians are mistaken. We regard them as undilutedly ideological and constantly plotting world revolution. I don't think they are. Whatever their long term objective of a world safe for communism, in all current events there is a highly pragmatic side to their policies. They want good relations with Mr. Nehru; so they do not use the steel mill they are building in India as a base for propaganda. They do not embarrass France in Algeria. And they may even find Chinese aggressions in Asia embarrassing. They propose to sell their gem diamonds on the world market through those "imperialist capitalist exploiters," the inter-national diamond cartel. When Western producers complain, they stop exporting aluminum at cut prices. One could multiply the instances. They add up to a careful Russian assessment of Russia's interests-of which ideology is only one.

Nor are they demons. With Stalin no doubt we were dealing with a madman whose manias took us to the fringes of hell. But

with Mr. Khrushchev we are dealing with a tough and realistic politician and polemicist. But I doubt if apocalyptic visions so darken his sight that we cannot conduct the dialogue of reason with him.

Nor above all are the Russians supermen. Sometimes when I read American accounts of Russian intentions and policies, I feel that I am studying a system of power so ruthlessly efficient and effective that our poor faltering democracies, our ponderous system of persuasion and consensus, had better give up in advance. Then I remember the Kremlin's unholy miscalculations of 1939, the near-collapse of 1941, the postwar seizure of Eastern Europe which turned the world's admiration into cold hostility, Tito's daring rebellion, the infinite difficulty of reversing a brutal dictatorship after Stalin, the uprisings of 1953 in East Germany, the Hungarian horror of 1956, the new uncertainties with China. This system—like ours—stumbles and feels its way. We must not hypnotize ourselves with the myth of its infallibility.

It seems to me both sad and ironic that the Communists have so largely succeeded in preempting and exploiting the cry for peace—which is surely the loudest and dearest sound in this war-weary, frightened world. They have been able to do so because we underestimated mankind's yearning for peace. We have emphasized military containment, and for years it appeared that we didn't want to negotiate with the Russians, either to test their intentions or to call their bluff.

Meanwhile they stopped nuclear testing unilaterally; they reduced their army unilaterally; they proposed summit talks about reducing tensions and the dangers of war; they proposed total disarmament before the world forum of the United Nations. Whatever the motive, cynical or sincere, they have constantly taken the initiative. They have answered the cry for peace, while we have quibbled and hesitated and them finally given in. Too often our approach has been "yes but" instead of "why not." Too often our uncertainty and quibbling has left the impression that the United States is looking for reasons not to reach an agreement.

But security is not the only vital field in which our policies are confused and clouded by false or inadequate preconceptions. If we turn from disarmament as a preliminary to achieving the rule of lawour first international concern-to the other great issue of the world's general welfare, I think we find the same uncertainty of goals betraying itself in hesitations and inadequacies of performance. Since the Korean war the chief aim of our programs was, frankly, to stop the Communists. Recently, however, a new and more hopeful goal has appeared. Many of the West's leaders—the President, Mr. Macmillan, General de Gaulle—have taken notice of the great and growing gap between the rich nations (largely in the Atlantic arena) and the poor who make up at least a billion souls in the lands outside the Communist bloc which are underdeveloped, unmodernized, and almost wholly lacking in the capital they need for growth. Many of us at this conference have long preached that economic development is as important to our security as military defense, and now our leaders have stated that bridging the gap must be a full Western responsibility.

This new emphasis on the positive task of building up the economies of the emergent puoples brings us within measurable distance of a genuine concept of solidarity and welfare. It is in every sense a welcome step forward. What troubles me is the evidence that little serious thought is being given by governments to the concrete strategies needed to turn the new aspiration into concrete policy.

To give two concrete examples—we have in the Indian development plans admirable instruments for transforming 40 percent of the peoples living in the poorer lands into active productive citizens of a modern state. As in all developing economies, India cannot cover the foreign exchange element in its plans out of trade earning alone. And I could say many of the same things about Latin America, where we have no more loyal friends of freedom, and where their needs for foreign development capital are equally large.

But the western nations have made no decision to see these great ventures through to success by a massive and sustained joint effort. Can our talk of our obligations to end the gap between the world's rich and the world's poor be treated seriously when our approach to any specific commitment still rests on a day-to-day basis, with no guarantee that we are ready to look beyond tomorrow's need, or tomorrow's crists?

To my mind, the situation in Africa is quite as critical as Asia. The ending of the old colonial links can mean the end of a large flow of public capital just as private enterprise hesitates to undertake new commitments in the face of political uncertainty. Have we a strategy for this situation? Is the end of western control and the beginning of independence to coincide with massive impoverishments in Africa? If so, what better recipe could there be for Communist infiltration, what greater mockery of the West's claim to a constructive and modernizing role?

The universal complaint in South America and all these raw material exporting countries is the instability of prices for their metals, coffee, cotton, wool, and the other products that often constitute their major source of foreign exchange. Is it beyond the genius of free government and capitalist economy to stabilize some of these prices and give these countries some predictable continuity of income on which they can plan and build?

I could talk of other uncertainties; for instance, government often expecting private business to take political risks which go far beyond the responsibilities it can legitimately undertake; private enterprise in its turn showing an almost ideological distaste for government investment and "socialism" even where there is no capital to support capitalism in these underdeveloped countries.

So, if the balance of the world turned on the recovery of Europe and the success of the Marshall plan 12 years ago, now it turns on North-South relations, to borrow General de Gaulle's phrase. But as some of us here have been saying, our separate economic strength is not great enough for the task of the industrial North in the developing South. We shall have to coordinate cooperate and confederate-or whatever it is-to insure that we have common economic policies on both sides of the Atlantic. We shall have to contrive adequate machinery to answer the many questions of how much investment is needed, where and in what priority it should be invested, how the burdens and benefits should be shared, and all the problems of planning and programing.

But perhaps the chief difficulty is also the most serious—the lack of public understanding of our assistance programs, the failure to give the American people any really constructive idea of what is being done in

"Operation Rat Hole," "Wasting the taxpayers' money," "Paying foreigners to compete with us." "Giving away our jobs"—the chorus of articulate disapproval is constant. Even though many citizens sincerely and consistently support the programs, I wonder if half enough people really know the profound reasons for their continuance? I believe the reasons can be made more than convincing. They can be made exciting. They can accord with our American tradition of an expanding frontier, of work to be done and hurdles to be leaped, of new markets to be opened in a challenging, exhilarating world. To complete the revolution of modernization which began in the West, to spread education to all peoples, to offer hope and health and good food and shelter and elbow room to all the members of our great human family—these are not negligible goals. They complete the vision of a Jefferson or a Lincoln—of burdens lifted from every shoulder and a life of opportunity for all mankind.

In this perspective, we can see the vast joint effort of bringing capital and trained manpower and technical skill to work in the emergent economies, not only as a world-wide extension of our principle of the general welfare, but as a new and exciting extension of our American dream, a new frontier, a new hope, a new achievement, a new pride.

Nor would I wish for a greater vision and a higher aim simply for ourselves. Am I wrong in supposing that in the world at large there is some latent desire to see expressed and practiced the policies which unite us, which express not our differences but our profound human needs, which give us something of our human solidarity, which leave our tribal feuding behind, which remind us of the grandeurs and miseries of our shared human destiny?

Here we are caught up in our horrible war games, in this gang warfare of a delinquent universe. But in our hearts—and perhaps in Communist hearts as well—there are times when we feel to the core war's idiocy and futility. We cannot give up our armaments separately. We are like two men in a dark room, each armed and feeling for the other. Neither dare put his weapon down for fear the other does not. But, as we grope in the dark, could we not reach for some other light to flood our narrow chamber, some fresh illumination of our aims and intentions which might enable us at last with confidence to put the ugly weapon aside?

Light could come, I believe, from working together on projects really relevant to our profoundest human needs. We know what they are. They are not concerned with frontiers or nuclear weapons or matters of prestige. They deal with the fundamentals of our living—with the surge of population, with the expansion of food, the mobilization of resources, the direction of science to creative ends, the opening of the doors of knowledge, the banishment from outer space of the petty rivalries of earthbound man, the expansion of beauty in our lives—through competing in excellence, not in tons of metal or kilowatt hours.

Such aims, more in keeping with the full dimensions of the human spirit, need not remain remote and disembodied. Why not propose to the Russians an international commission to tackle the problem of the world's great deserts? We are on the verge of achieving the desalinization of water on an economic scale. Why not work out the implications of this scientific breakthrough in some great arid area and do it jointly, creating as we go a new patrimony for the human race?

Why not speed our preparations for a worldwide medical year; and after it, set up permanent commissions in vital fields of research to formalize the fact that in this of all fields all knowledge should be available to all men?

There are other areas. I trust no squabbling over chairmanships will long delay an international commission for outer space. I hope the powers will quickly return to the conference table to work out an agreed law of the seas, and perhaps add to it a commission to establish rights and procedures to be followed when nations begin to probe under the oceans for new raw material supplies.

I trust, in short, that every opportunity we in the West can see to dramatize the common interests of humanity will be seized on and developed so that, whate er the obstructions put up by the Communists, the sense will spread through the world that the Western peoples are profoundly and permanently committed to the survival and dignity of man.

For in the last analysis, what else is of value, for ourselves and our children? These are visionary days in every field. We have unlocked the atom. We are laying bare the secrets of man's heredity. New infinite vistas have opened in space, new infinite abysms are opening backward in time. We have seen a rocket hit the moon. We know its dark face. Our astronauts wait to venture on a journey more mysterious than the quest of the Golden Fleece. We are adding a city a day to the world's population. How can we be content in such an age to keep our political thinking within the narrow bonds of class or race or nation? How can we permit outdated ideology to obscure our identity as citizens of a common world?

As you are doing here, our Western peo-ples must speak once again for man and for the human city. In doing so, they can save themselves and their present adversaries. They may do more; they can begin to realize the full promise of this abundant but

distracted world.

Medical Care Problems of the Aged

EXTENSION OF REMARKS S OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Thursday, May 12, 1960

Mr. BYRNES of Wisconsin. Mr. Speaker, in connection with the study by the Committee on Ways and Means of proposals dealing with health care problems of the aged, the committee membership has been attempting to defineate the special characteristics of the health needs of older persons. The Acting Surgeon General of the United States, Dr. John D. Porterfield, has presented a memorandum to the committee commenting on these special health problems confronting the aged.

In the interest of furthering general understanding and knowledge on this subject. I will include as a part of my remarks Dr. Porterfield's comments. I believe it is important to the solution of the problem of health care for the aged that we have knowledge of their special requirements:

SPECIAL PROBLEMS IN THE MEDICAL CARE OF THE AGED

(By John D. Porterfield, M.D., Acting Surgeon General, U.S. Public Health Service, partment of Health, Education, and Welfare)

The health condition, both physical and mental, of the approximately 16 million people in this country over 65 years of age covers a wide range.

Over 3 million-or about 22 percent-report to the National Health Survey that they have no chronic conditions.

Over 5 million-or about 35 percent-report that they do have chronic conditions, but they are not limited in their activities.

Four and a half million-or about 29 percent-report that they have chronic conditions which partially limit their activities.

More than 2 million-or about 14 percenthave chronic conditions which prevent their carrying on any major activity. Of this group, almost half are unable to leave their homes.

About 600,000 are in institutions, most of them because of sickness.

A million of the 16 million older people will die this year. Almost half of them will die from heart disease. One in six deaths will be from strokes, and another one-sixth will be from cancer. Many, probably most, of these deaths will have been preceded by long periods of illness. In some cases it will have been years. As this million leaves the ranks, a million and a third people will move into the over-65 age group.

Other diseases, not major causes of death, also cause long Illnesses and severe disability. Arthritis, rheumatism, and mental illness are notable examples. All of these are far more prevalent among those over 65 than they are in the younger age groups.

Older people are, of course, also subject to acute conditions. According to the National Health Survey, acute conditions ac-count for an annual average of about 1,300 days of restricted activity per 100 people over the age of 65. This is 15 percent higher than the rate for people under 65. Most of this restricted activity is due to respiratory diseases. The next most important cause is injury. The rate of accidental in-jury does not differ substantially from that of the lower age groups, but the resulting disability is far more severe and of longer

These are the statistics, but they are not the whole story. They are comparable to laboratory reports as aids to diagnosis and prescription; they are essential, but one needs also to look at the patient.

In general, the recovery time for an older person is longer than it is for younger people. The time needed for the knitting of a broken bone is a familiar example. And there are other differences. Illness in older people is more likely to be accompanied by mental confusion than is the case among the younger. They are more likely to be alone, or else physically dependent upon other old people who themselves are not strong. Their incomes have been reduced and, what perhaps is more important, there is seldom hope that this will change. Their physical strength is reduced. And, they haven't always been old, it is difficult them to become accustomed to these changes and they are frightened. I think it is fair to say that the prospect of becoming sick and dependent on charity is a constant fear, sometimes amounting to terror, of just about all older people of modest means who have in their earlier years not only been self-reliant but have supported others. As most of them have. These are facts that need to be taken into account.

In the population as a whole, most illnesses are short. The cost per day in many cases may be high, but the duration is short. We have gone a long way in developing mechanisms for providing and paying for the necessary medical care to meet these kinds of illnesses.

This is certainly not true in the case of long-term illness. In proportion to all cases of illness, there are relatively few cases of long-term illness. And while the average cost per day is much lower than for an acute illness, because of the duration the total cost is much higher. Yet we have almost no mechanism except public assistance for paying the costs, and few services

and facilities for delivering efficiently and effectively the medical care required.

A4111

There are only a few communities in the country that have available the services needed—and then only on a very limited scale—to serve the dual purpose of providing the kind of out-of-hospital medical care needed during long-term lilness and at the same time doing the things that can be done to prevent or ameliorate the permanent disability that threatens.

When illness strikes suddenly, instance in the case of a stroke, and lifesaving measures are necessary, the physician has no trouble deciding what to do. The patient goes to a hospital, and lifesaving measures are taken. Once the crisis has been passed, services to restore the individual to the best possible health must be instituted promptly and must be maintained if the patient is eventually to be restored to as nearly a normal level of activity as possible.

Most stroke patients need physical therapy soon after the stroke to enable them to re-gain maximum use of their arms and legs. Many need early retraining to recover the power of speech. The sooner such restorative services are provided, the more quickly the individual expects that he will not be a hopeless invalid. Now these services are available primarily in some hospitals. But they can be provided at home-in the setthey can be provided at home—in the set-ting in which most people prefer to con-valesce. From a medical viewpoint, the best thing for the patient is to get him out of the hospital and back to his home or some other more nearly normal environment as soon as his condition permits. This can be done, of course, only if the services the patient needs are available outside of the hospital. This is arely the case.

What is the doctor to do? Maybe it isn't the best medicine, but if the patient has hospitalization insurance, he can stay in the hospital until it expires. Unless, of course, local hospital bed shortages constitute an even greater problem. Perhaps a skilled nursing home could provide the services, but all too frequently no such place is available, and even if it were, there would be no way to pay for it. Eventually the patient goes home. He no longer receives the services he needs, and the likely result is that he becomes seriously and perma-

nently disabled.

In other kinds of illnesses and in some strokes, where lifesaving measures are not needed, it would not be necessary to hospitalize the patient at all if nursing and other services were available to him at home, or if a bed in a skilled nursing home were available to him. Since this is usually not the case, he must go to a hospital.

Some years ago, the Commission on Chronic Illness was established to study the problem of long-term illness in the United States. Among their conclusions and recom-

mendations is this one:

"Most long-term patients can best be cared for at home during much of their illness and prefer care in that setting under supervision of their personal physician. spite of this, community planning continues to underemphasize such care. Comparatively little effort has been made to organize and provide the means whereby physicians can obtain for their patients the variety of services required to meet the diversified and complex needs that arise in long-term ill-

That is, unfortunately, just about as true today as it was 6 years ago when it was written.

We have, in this country, done a good job of making hospitals available to peo-ple and of providing insurance to pay for much of the cost of care in hospitals. it were possible to provide only one of the facilities needed for the care of the sick, there can be no doubt that it would have to be the hospital. And if it were possible to provide insurance against only one segment of the expense of illness, again it would have to be the hospital. But this is not the same as saying that the hospital fulfills all need.

This is especialy relevant to the medical care needs of older people, although it is by no means confined to them. Chronic illness strikes all ages.

Let me quote again from the report of the Commission on Chronic Illness:

"In addition to physician services, long-term care for many patients—though by no means all—requires nursing, dental, social work, nutrition, homemaker, housekeeper, occupational therapy, physical therapy, and other rehabilitative services. In most communities these services except nursing, are not yet available for the patient in his home. Communities are urged to make these services available and to develop methods to acquaint professional groups and the general public with them."

If these services were available to the physician and his patient on an organized basis, if in addition we had a sufficient number of skilled nursing homes, and if we had the mechanism to pay for these services, we would have available better medical care at less cost, and here I mean cost in dollars. We would also have less disability. Disability that could have been prevented is another of the costs we are paying today.

I want to emphasize that these services must be organized and integrated so as to provide for what is usually referred to as continuity of care. They must be known to and centrally available to the whole community. If the physician is not aware of some of the resources of his community, then so far as his patients are concerned those resources might as well not exist. If a person in need of help does not know where to turn, then to him the best of resources are useless so long as they are unknown to him or so long as he does not know that he may avail himself of them.

There is one bright aspect to this problem of medical care for the long-term patient. It isn't often these days that we can have any hope of bringing into happy conjunction better medical care and lower costs, but we do have that opportunity here by providing not more expensive but less expensive services and facilities.

No one can say precisely—by day, month, or year—when public health became truly aware of the modern possibilities and promise of out-of-hospital care for the long-term patient. I do know that 12 or 14 years ago there were few people in the country who understood the implications, or who understood the importance, the poignancy, of the problem. This, of course, was also the time when the shortage of hospital beds was perhaps most acute. Obviously, the right thing to do in that circumstance was to build hospitals. But over the years since then there has been a growing awareness of the need, the silent demand, for skilled nursing homes, homemakers, visiting nurses, physical therapists, home care. We in the Public Health Service have encouraged experimentation with and establishment of these services. I think we have now come to the time when this need is widely recognized and acknowledged, and that increasing effort is being made to find some way, some mechanism, to change silent demand to effective demand, just as was done through hospitalization insurance to meet the need for hospital care. Once we have the mechanism for paying for the services, then establishment of the services will follow.

U-2 Rubbish

EXTENSION OF REMARKS

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 6, 1960

Mr. ROBISON. Mr. Speaker, as the debate over the spy plane incident continues, and many people are gradually readjusting their earlier opinions toward more realistic conclusions, it seems to me that the following column by William S. White as published in the Washington Evening Star, May 11, 1960, is worthy of our consideration:

PUTTING SPY CASE IN PERSPECTIVE—EXAG-GERATORS URGED TO QUIT BUYING KHRU-SHCHEV'S MELODRAMATIC RUBBISH

(By William S. White)

The people who ought to be on the side of the United States are doing more than its enemies to destroy its influence as the irreplaceable leader of the free world.

Of course, the Eisenhower administration itself is partly to blame; but only partly. Hysterical exaggerations of its sins, both here and abroad are far more to blame.

here and abroad, are far more to blame.

The incident of the American "spy plane" over Russia is being inflated to manifest absurdity.

One might think this Government had committed the most sordid crime of the century. The truth, of course, is that a government responsible for the safety of its own people (and of millions of other peoples) has a plain duty to run reconnaissance over a vast, hulking and secret power like the Soviet Union.

The truth, of course, also is that our first explanation for this particular plane was clumsy nonsense. But another truth is that our Government has now surely made enough public confessions to satisfy the most petulant here and among the Allies. What more do these people want our Government to do? Must it wallow in the very streets in self-abasement? Must it publicly promise Nikita Khrushchev that the United States will go to the summit as a humble penitent so as not to annoy Mr. Khrushchev or those who want a settlement at almost any price?

There is great need to see this episode in some perspective. Yes, it was a bad business. But has a Communist dictatorship that has looted and murdered across half of Europe now become a spotless victim of a dreadful scourge to peace, the United States of America? Is the unarmed aircraft the equivalent of the bloody Russian suppression of Hungary? Is it possible that the home of the most massive and malignant esplonage system in all history, the Soviet Union, can put our small efforts into such vast discredit?

True, one unarmed aircraft went across Soviet airspace without the personal command of the President of the United States. (The President did not personally pack the pilot's lunch kit, either.) But does this really suggest that some reckless band of militarists has taken over the foreign policy of the United States?

Is there any rational content whatever in the argument that because this could happen it follows that some intelligence agent or colonel could himself "set off a nuclear war"? Do the people who make such frantic suggestions know anything of the immense precautions that would make any such thing literally and physically impossible?

If a gunshop sells a .22 rifle without proper safeguards, does this prove that anybody can walk in off the street and buy a loaded atomic cannon?

Why don't we—and our friends abroad—quit buying the melodramatic rubbish the Russians are putting out? Why don't we quit reacting in automatic breastbeating? And if the U.S. Government had not undertaken the intelligence activities it has undertaken—and will go on undertaking—would we not now be denouncing that same Government for being asleep against the possibility of another Pearl Harbor?

Significantly, the official opposition to the Eisenhower administration, the leaders of the Democratic Party, are acting responsibly and speaking softly. Those now raising the shrillest clamor about this dreadful, dreadful administration are those who only weeks ago were intoning hymns to the wonderful, wonderful cold war policy of that same administration.

The responsible Allied statesmen have a plain duty—and powerful men here who are their good friends are going privately to remind them of it. They ought to speak out for a Nation which has, after all, poured out billions in their defense. An alliance has a leader who is supported when things are rough—or an alliance has no leader at all.

Along the same line, Mr. Speaker, the following calm analysis of the same incident by William H. Stringer, chief of the Washington News Bureau of the Christian Science Monitor, as published in that paper on May 10, 1960, is also included:

STATE OF THE NATIONS—BREACHING THE CLOSED SOCIETY

(By William H. Stringer)

Washington,—Really the best face to put on the U-2 reconnaissance plane incident is to say—as the State Department suggests—that since the Soviets falled to accept President Eisenhower's open skies proposal for aerial surveillance of each other's territories, the United States inaugurated its own version of this plan.

This is, in effect, what happened when U-2's were sent on a series of flights over the Soviet Union. And since this is a case of the West's open society versus the closed society of the Soviet Union, one must note that Moscow has been equally active in conducting its own surveillance of the United States.

The difference has been that Moscow does not have to fly planes at high altitudes over America to learn the minimum about American defense preparations.

Soviets in the United States can pick up a lot of information just by walking and riding around, and reading the newspapers. The Soviets also send their spies here, as is attested by the presence of Col. Rudolf Ivanovich Abel, Soviet intelligence officer, now serving 30 years in Atlanta Federal Penitentiary. According to evidence at his trial, his studio contained more photographic and short-wave radio equipment than did the U-2 which came down in the U.S.S.R.

Having said this much, one must note also that in the long run, when hysteria and speculation have subsided, the "case of the U-2 flight" likely will have some salutary impact.

The Soviets are discovering that, despite all the tremendous efforts to maintain a concealed military position, the West has been flying over the Soviet Union and taking exceedingly accurate photographs.

The British have made a few flights themselves, it is reported. Pakistan, Turkey. Norway, despite denials, have had some idea that this is going on and—in responsible high quarters if not in the penny press realize the necessity for the surveillance.

And none of these allies has any history of being intimidated by Premier Nikita S. Khrushchev's threats any more than they were intimidated by Stalin's threats before him. The surveillance, in short, is likely to continue.

But the Soviets, if they are at all rational, will discover after a while that this possession of minimum information by the United States has not wrecked their defenses or ruined their economy. They will be realizing that two can play at this game, and that if they need to read the West's defense posture, so the West needs to read theirs.

This is an argument for the "open skies" plan and for other international safeguards against surprise attack. Moreover, the Soviets, again if they are rational, must realize that before many years have passed there will be reconnaissance satellites circling the earth capable of maintaining nearly as effective surveillance as the U-2 has accomplished, even though the Soviet Union is more cloud-covered than is the United States.

In short, whatever Moscow attempts to do about it, gradually, and inexorably the closed society is going to have to open up. The U-2 incident is just the beginning, and if more people would take note of this inevitability instead of merely shouting "stupidity" and "blundering" at the American high command, they would be doing human society a better service.

To be sure, espionage is a dirty business. And there are different types of spying. Some cloak-and-dagger ventures, by isolated individuals, can easily be denied by the perpetrating government. Moscow never admits its spying. But when a NASA-United States Government plane, big as life, files over a foreign country, that cannot easily be denied.

Some people have been making much of the fact that President Eisenhower did not order this specific U-2 flight over Soviet territory. "Suppose this plane had carried a hydrogen bomb; does the United States have no better control over its flights than this incident indicates?" they worriedly ask.

The answer is simple enough, President Eisenhower did approve a "series" of U-2 flights, though not this specific one. Intelligence officials who sent this pilot on his mission were indeed foolhardy to risk a flight so near the summit conference. But no such low-level command could authorize a mission by a B-47 or B-52 plane carrying an H-bomb. In those instances, the command is ironclad and heads up directly in the White House.

The U-2 incident has, of course, damaged American prestige. But the President's determination is to press on to the summit conference, regardless. His chief goal is still to reduce world tensions. If Mr. Khrushchev wants to raise the U-2 case with him, the President undoubtedly will advise him to recognize the surveillance necessities of the cold war, and to be as realistic about it as Soviet policy always purports to be.

Twenty-fifth Birthday of REA

EXTENSION OF REMARKS

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1960

Mr. METCALF. Mr. Speaker, I, too, wish to join in congratulating the Rural

Electrification Administration on its 25th birthday. Its creators and administrators can look back on a brilliant record; they have lighted and powered rural America.

When the REA Act was passed in 1935 only 1 Montana farm in 20 had electricity. At that time, life on the farm meant pumping and carrying water by hand, chopping wood for the cookstove, bending over a washboard, and poor light for reading, and for farm jobs after dark.

Today, almost 9 out of 10 Montana farms have electricity and roughly 2 out of every 3 of them are served by one of Montana's REA-financed power systems. These systems were built by men and women who banded together to provide for themselves the electricity which commercial utilities either could not, or would not, make available. They borrowed money from the Federal Government, loans on which we taxpayers have made millions of dollars.

Their job is still far from being done. Experience shows that electric power consumption doubles every 5 years. So the REA program must continue. That it, it must continue if our co-ops are to "heavy up" their lines to meet the growing needs of their members. I know our colleagues will be interested in the following clippings from the May issue of the Montana Rural Electric News and the Great Falls (Mont.) Tribune. I also wish to call attention to the satement in support of the REA program by President George Meany of the AFL—CIO:

[From the Montana Rural Electric News, May 1960]

EIGHTY-NINE AND ONE-TENTH PERCENT OF MONTANA FARMS HAVE ELECTRICITY

At the time the Rural Electrification Administration was created on May 11, 1935, only 2,768 farms in Montana, or 5.5 percent, were receiving central station electric service. Current REA estimates show that 29,450 farms in the State, or 89.1 percent of all farms recorded in the 1954 census, were being served by June 30, 1959. REA borall farms recorded in the 1954 census, were rowers serve about 64.7 percent of these electrified farms.

The first REA electrification loan in Montana was approved in May of 1936. The first REA-financed line was placed in operation on December 5, 1937 by the Lower Yellowstone Rural Electric Association of Sidney.

Up to January 1, 1960, the beginning of REA's 25th year, the agency had approved a total of \$61,045,733 in loans to 25 electric borrowers in the State, of which all are cooperatives. The loans were made to enable the borrowers to construct 29,910 miles of line and other electric facilities to serve 44.401 consumers.

Loan funds actually advanced to these borrowers amounted to \$53,465,147 by January 1, 1960. With the help of this financing, the locally owned and managed systems had already placed 29,671 miles of line in operation and were serving 44,100 farm and other rural consumer outlets. The average monthly consumption of electricity by these consumers had increased from 283 kilowatthours in 1950, to 547 kilowatthours in 1958.

REA electric borrowers in Montana have repaid \$8,964,709 on the principal of their Government loans. In addition, they have paid \$5,564,906 in interest and \$3,891,578 ahead of schedule. As of January 1, 1960, no borrower in the State was overdue in its loan payments.

[From Montana Rural Electric News, May 1960]

TEN PHONE CO-OPS NOW IN MONTANA

In 1950, the year the first REA telephone loan was approved, 28.5 percent of the farms in Montana had telephones. By the end of June 1958, it was estimated that 21,000 farms or 60 percent of all farms in the State had telephone service.

The first REA telephone loan in this State was approved on March 14, 1952, to the Mid-Rivers Telephone Cooperative,

Circle, Mont.

As of January 1, 1960, REA had approved a total of \$16,256,000 in loans to 10 borrowers in the State (one commercial company and 9 cooperative associations).

These loans will enable the borrowers to serve 13,682 new subscribers, and to provide improved service for 4,427 existing subscribers over 15,036 miles of line. Work is progressing rapidly on the new REA-financed facilities, and 9 borrowers report that a total of 73 exchanges have been cutover to dial.

Loan funds actually advanced to the borrowers on January 1, 1960, amounted to \$11,289,934. On the same date loan applications on hand from telephone organizations in the State amounted to \$1,060,000.

On January 1, 1960, the State's borrowers had paid \$256,327 in interest and repaid \$305,415 of principal on their Government loans. They had also paid an additional \$68,673 ahead of schedule.

[From the Montana Rural Electric News, May 1960]

IN THE BEGINNING

(By Max Mathews, manager, Yellowstone Valley Electric Cooperative)

(EDITOR'S NOTE.—Max Mathews, veteran manager of the Yellowstone Valley Electric Cooperative of Huntley, was the project engineer on the first REA construction project in Montana in 1937. The Montana Rural Electric News is proud to print the following exclusive article about his experiences through the years.)

The 17 years following my discharge from the Army in September 1919, after 2½ years overseas in World War I, found me engaged in the retailing of building materials and then in various construction activities—then in July 1937, quite by accident, I got into the construction of rural electric cooperative powerlines in Montana—a pioneering project that was designed to bring the better things of life to all rural people and was to give me, personally, an opportunity to fulfill a lifelong ambition to superintend in the field of construction.

My first job was with the Manning & Noyes Construction Co., building the original lines for the Lower Yellowstone REA Cooperative at Sidney, Mont. Later building the second section for the Yellowstone Valley Electric Cooperative in Huntley. The first REA loan in Montana was made to the Yellowstone Valley Electric Cooperative in Huntley in May 1936, however the first lines constructed in the State were for the Lower Yellowstone at Sidney. Their first lines being energized just before Christmas in 1937. My job continued with construction of lines for the Park Electric Cooperative at Livingston and for Vigilante Electric at Dillon, finishing there in July of 1940. Many new cooperatives have been formed in Montana since, there being 24 active at this

The actual construction of electric cooperative lines in those early years was quite different than that of today. The poles were shipped unframed and unroofed, the holes had to be bored by hand and the gains and roof cut by hand as there was no power for power drills and electric saws. Most of the holes were dug by hand and in many instances the poles were raised by hand and the use of pikes and main strength. The hole digging machines at that time were not nearly as efficient as they are today and were of little use in most areas of Montana,

Experienced linemen were hard to come by and the general practice was to pick the most promising men from the crews and develop them into linemen. Many of these self-made linemen later became the backbone of the maintenance crews for the various cooperatives—men with a great deal of pride in their work and part they had played in this now most successful enterprise. There were plenty of laborers in those early days and sometimes so many wanted work that they would draw straws to see who would get the job.

The lines were completed and still there was a selling job to be done—farmers were not used to the idea of using electric power in so many ways and the main thought seemed to be that the current would be used just for lights and refrigeration and there were doubts in many minds as to whether they could possibly use 40 kilowatt-hours per month and if they really could afford to pay the \$3 minimum monthly bill. Most of the transformers hung were 1½ kilovolt-amperes, some were 3 kilovolt-amperes, and once in a great while it seemed necessary to hang a 5 kilovolt-amperes for an exceptionally large load.

When I first became manager at Yellowstone Valley Electric Cooperative in 1940, there were 80 idle services where the potential consumers felt financially unable to have their premises wired so that they could use power. Strange as it may seem today, here was a situation that required some real encouragement and it probably fostered the original "power use" department in the State as we felt it necessary to send our employees out into the field to set up meetings to "sell ideas on how the use of power could save labor and time and in addition make more income on the farm."

With the onset of World War II the picture changed—manpower was scarce and electric power meant the difference between staying in business or having to quit in many cases. But here too came the problem of hard-to-get materials, appliances, and the shortage of manpower to construct and maintain lines—but as is always the case—it sharpened the determination and everyone pulled together to see the thing through.

The postwar boom in the use of electric power on the farm swept over the country until today we find the average farm consumption to be 700 kilowatt hours per month and apparently we have only scratched the surface of the many uses for electric power—the most recent upswing being in house heating.

The pledge to see that all rural families have central station power is rapidly being fulfilled and on this 25th anniversary of the Rural Electric Administration we find 24 active electric cooperatives in Montana serving 43,556 consumers with an investment of approximately \$53,208,000 in 29,180 miles of line.

Looking back on a successful program of this magnitude causes one to reflect on the human interest aspect and in so doing I find some of my greatest satisfactions have come from being in on the ground floor and being privileged to see the faces of proud and pleased families who eagerly watched the "lights come on" for the first time and then returning to these same homes a year or so later to see how they had grown up with their new servant and were continuing to enjoy their new standard of living—the look ahead seems of even greater magnitude as there is no end in sight—rural electric cooperatives are here to stay and serve rural families of America.

[From the Great Falls Tribune, May 8, 1960] RURAL ELECTRIFICATION—AN END TO DARKNESS

REA PROGRAM TO BE 25 YEARS OLD MAY 11

It's hard to explain to a child of today that there was no television 25 years ago.

It's even harder to explain that a great many farm homes in Montana were lit by gasoline or kerosene lamps even less than 25 years ago, and that most farm and ranch families had nothing but battery-powered radios because there was no electrical power line near their homes.

All this began to change 25 years ago with the founding of the Rural Electrification Administration on May 11, 1935. It didn't change overnight, however. The first REAfinanced power line didn't go into operation in Montana near Sidney, until 1937.

in Montana, near Sidney, until 1937.

Since then, 29,910 miles of REA line have been erected in Montana to serve 44,401 consumers of 25 electrical cooperatives. The number of farms served by electricity in this State has risen from 2,763 to nearly 30,000, which is almost 90 percent of all farms recorded in the 1954 census. About 65 percent of these electrified farms are served by REA borrowers.

This was still a dark land when REA began in 1935. Only 1 American farm in 10 had electric service. Now nearly 97 percent of all U.S. farms and ranches are electrified, with more than half served by 1,053 rural utilities financed by REA.

rural utilities financed by REA.

REA. an agency of the Department of Agriculture, is one of the most successful cooperative efforts in the history of the Nation. Its loan program builds electric systems, not only for farms and ranches, but for hundreds of thousands of other rural establishments.

REA has only two representatives in Montana. Harry Reising of Livingston is operations field representative and Ben Wallace, Lewistown, is field engineer.

REA has not only made farm and ranch homes more comfortable and convenient, it has provided power to take over hundreds of farm chores, especially in dairying, poultry and egg production and in feeding meat animals.

While it has provided more leisure for farmers and ranchers, it has given them the means of enjoying that leisure. While part of the family watches television, others may be working in the basement with power tools or photographic darkroom equipment, or in the garage with electric welders and metal lathes.

That's why it's hard to explain to a child of today that the dark ages didn't end too long ago.

REA PHONE PROGRAM NOW IN 11TH YEAR

REA's telephone program was established by Congress in October 1949, and the first telephone cooperative loan was approved in 1950.

Two years later Montana's first REA phone loan was approved, to the Mid-Rivers Cooperative at Circle. Since then one commercial company and eight other cooperatives in the State have received loans.

These loans will enable the borrowers to serve 13,682 new subscribers and to provide improved service for 4,427 existing subscribers over 15,036 miles of line. Nine of these borrowers report that 73 exchanges have been cut over to dial service.

To help provide the best possible rural telephone service, REA has a small staff of telephone engineers in Washington, D.C.

Among other things, these engineers developed construction assembly units for all telephone plant items, permitting contractors to bid competitively on construction of borrowers' telephone plants.

The staff also developed standard technical specifications for automatic dial switching equipment. This also enabled equipment makers to bid on central office equipment on a truly competitive basis.

REA has played a key role in developing plastic-insulated cable for rural use and a new plastic cable and wire suitable for burial

in the ground.

Some of the engineers' most successful work has been in the field of subscriber carriers. The typical rural telephone subscriber line will carry only one conversation at a time. Since start of the telephone program, REA engineers have worked closely with makers of electronic equipment to perfect the use of "carrier current techniques" so that as many as 8 or 10 conversations can take place simultaneously over one subscriber line. The voice is transmitted by radio and the signal travels along the same pair of wires used for an ordinary telephone conversation.

R. J. Justice of Lewistown is operational field representative for REA phone service in Montana. Road Peterson, Great Falls, is field engineer and Peter Schwan, Havre, is field accountant.

AFL-CIO President George Meany today (May 11, 1960) issued the following statement hailing the 25th anniversary of the Rural Electric Cooperatives:

"America's workers join with the farmers and the public in general in hailing the Silver Jubilee of our country's rural electric

cooperatives.

"Since May 11, 1935, when President Roosevelt signed the Executive order creating the Government's rural electric program, the benefits to every segment of the population have been obvious. Today, thanks in large part to the rural electric co-op program, more than 95 percent of America's farms are served by electric power lines. That availability of low-cost electric power has meant a lifting of some of the work burdens for farm families, a great increase in the productivity of the farms, and a tremendous rise in the buying power of the people of rural America. Much of that buying power is used to purchase the products which union members manufacture and the services they provide.

"America's prosperity must always be based on the economic well-being of both its industrial workers and its agricultural producers. The rural electric cooperatives have achieved great success in their first 25 years of helping extend the benefits of America's economic growth to all the people of our country. In the years ahead, they carry our best wishes for continued service to the national community."

Invocation Given by Rabbi Harry J. Kaufman

EXTENSION OF REMARKS

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1960

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the Record, I include the following invocation given by Rabbi Harry J. Kaufman of Beth Sholom Congregation and Talmud Torah of Washington, D.C., at

the annual meeting of the President's Committee for the Employment of the Physically Handicapped on Thursday, May 5, 1960, at the departmental auditorium:

Almighty Father of all men, giver of life and of law. Thy children have been called together by the President of the United States to serve Thee by rendering true and meaningful service to their fellow man. Guide and sustain these hands that seek to fulfill Thy will by bringing dignity and exaulted purpose into the lives of those who have been burdened by physical disability. Grant us of Thy wisdom and Thy strength to overcome the greatest of all our afflictions and handicaps: the deafness of disinterest, the blindness of prejudice, and the lameness of selfish unconcern.

May this meeting and these deliberations bring forth the blessed fruit of understanding and cooperation in the heart of all America, to build a richer and more meaningful life for those whom by our shortsightedness we may have forsaken. Teach us to ever use our genius and intellect, courage and will in the arts of construction and creativeness, to bring forth the good that Thou has implanted in all men, as it is written, "In the image of God was He created." In these fateful and challenging times we pray unto Thee, bless our President, Dwight D. Eisenhower, our Government, and our people. Help us to be what we seek to be; Thy messengers of peace amongst all the nations of the world. Sustain the hands of all who labor on behalf of human dignity, social justice, and freedom. Through our devotion grant the fulfillment of the words of Thy prophet, Isaiah "Strengthen ye weak hands and stumbling knees, make ye firm, say to them that are of fearful heart, be strong fear not; then shall the eyes of the blind be opened, and the ears of the deaf shall be unstopped. Then shall the lame leap as a hart, and the tongue of the dumb shall sing; gladness and joy shall they obtain and sorrow and sighing shall flee away" Isaiah xxxx: 1-9.

Water for Southern California

EXTENSION OF REMARKS

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1960

Mr. LIPSCOMB. Mr. Speaker, just a little more than 20 years ago, on October 14, 1939, ceremonies were held at the west portal of the San Jacinto Tunnel in Riverside County, Calif., marking the completion of the main Colorado River aqueduct in its initial development.

On May 11, 1980, another celebration was held at the same location, this time dedicating the completion of the vital water supply line to its full planned delivery capacity of 1,212,000 acre-feet annually, or more than 1 billion gallons of water a day.

This celebration was the culmination of a \$200 million aqueduct expansion program started in 1952. The Metropolitan Water District aqueduct system is not subsidized in any manner by the Federal Government.

Under leave to extend my remarks, I submit for inclusion in the RECORD an editorial which appeared in the May 5,

1960, Eagle Rock Sentinel by publisher Harry Lawson, in which Mr. Lawson pays tribute to this outstanding engineering and construction feat, and recounts its great meaning to Los Angeles and other communities of southern California:

When we turn the water on in our homes few of us stop to think where it comes from, how it comes, or its tremendous value. Nor do we realize the vast water delivery system that has been built up around us. instance our own community, Eagle Rock, where, under its two main boulevards virtually a river runs, or, that a reservoir is located on its eastern borders in which this lifegiving fluid is stored-all a part of the huge Metropolitan Water District of Southern California, of which this suburban community of Los Angeles is part. On Wednesday, May 11, ceremonies commemorating the completion of the main Colorado River Aqueduct to its full planned delivery capacity of 1,212,000 acre-feet annually, or 1 billion gallons of water a day will be held at the west portal of the San Jacinto Tunnel where Colorado River water enters near Hemet. This event not only marks the completion of a 7-year, \$200-million construction job, but is also the culmination of the great Colorado River project, first placed underway back in 1931.

Because of the vital importance of this water supply, and because the Colorado River aqueduct is a southern California project, owned, controlled and paid for by the taxpayers in this area, and because it serves the consumers without any Federal subsidy, this commemoration date is important. Growth of the metropolitan water district is phenomenal. Statistics are dull and uninteresting reading, but this can be said without tiring anyone, the district has increased its area from about 600 square miles to more than 3,400 square miles. Its territory now extends into five California counties—Los Angeles, Orange, San Diego, San Bernardino, and Riverside. Its population is over 71/2 million people and its assessed valuation approximately \$12 billion. It represents about one-half the entire State of California. It is self-sustaining. This year it will be able to deliver sufficient additional water to meet the needs of about 3 million more people.

Just a little more than 20 years ago ceremonies were held at the west portal of the San Jacinto tunnel in Riverside County marking the completion of the main Colorado River aqueduct in its initial development. At the same location in May its completion will be dedicated celebrating its delivery capacity of 1 billion gallons of water a day to the district. The event will be the culmination of a \$200 million expansion program started back in 1952. This work has doubled the capacity of the aqueduct compared to a year ago. This means that the areas within the district now have "water to grow on" pending bringing in of water from northern California. Today there are 89 incorporated cities and a number of large unincorporated areas in the district. The construction program has trebled the initial delivery capacity of the aqueduct. Southern California does not get all of its water from the Colorado River. For years it has depended in part on underground water and in some sections is still doing so. But this water basin is steadily being lowered because of the drain on it and the long years of drought when rainfall was light. Creation of the Metropolitan Water District has in a sense been their salvation.

All southern Californians are greatly indebted to the long-range planning of those who direct the affairs of this district. Without the water it is supplying to this area it would be a sorry blighted place indeed, mainly a barren waste. But water has transformed it into the garden spot of America

into which people are pouring in hordes from other States. No section in the United States is growing more rapidly than southern California. The increase in the population has been a strain upon the district they planned, early and wisely translating plans into acts, to meet the growing needs of the people who should give them silent praise the next time they turn on a water tap.

The Presidential Candidates and the People: NBC's Statesmanlike Proposal

EXTENSION OF REMARKS

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1960

Mr. UDALL. Mr. Speaker, the President, as a student of our history recently wrote, is the one authentic trumpet in the American system. Out of regard for the importance of the presidency, and concern over the overriding urgency of the presidential election of 1960, earlier this year I sponsored a bill (H.R. 11260) which would have required the networks to provide free radio and television time for the candidates of both major parties during the campaign this fall.

It gives me great satisfaction to report that Mr. Robert W. Sarnoff, chairman of the board of the National Broadcasting Co., has voluntarily put forward a plan which would achieve the main objectives of my bill-and identical legislation sponsored by 21 Members of the other body. I am happy to commend Mr. Sarnoff for this statesmanlike proposal and am reproducing below an address which he delivered before the Academy of Television Arts and Sciences in New York on April 21 in which he outlined his plan, together with a letter which I wrote him a few days ago in response to his proposal.

The speech and letter follow:

When I received my invitation to address the academy, I felt not only honored but heartened to be reminded that those respectable handmaidens of civilization, art and science, may still be mentioned in the same breath as television. I am glad to see that you are still meeting openly in public places.

It is no laughing matter, but this may go down in the more light-hearted histories of broadcasting as the season that a funny thing happened on the way to the studio. And, indeed, it has not been without its lighter side. For example, the popular pastime of deploring television has made some strange bedfellows: David Susskind and Jack O'Brian; Walter Winchell and Walter Lippmann; James Hoffa and the Attorney General of the United States; Henry Luce and Clare.

It is now 6 months since the open season on television began with a vengeance. We are not out of it by any means but we have lived through this critical period long enough to make a sober accounting of just what has been happening, to assess the damage that may have been done—and the good—and while nursing our wounds, to count our blessings and take a clear-eyed view of the hopes and hazards ahead. In the 6 months since the quiz-show disclosures struck the industry with full force, we have witnessed a curious confusion between ethics and taste.

The quiz rigging posed a grave and clearcut ethical issue upon which honest, thoughtful men could not differ. Those cynical malpractices on the part of some producers and contestants not only abused the conflidence of the public but set premium on dishonesty and blurred the difference between right and wrong. striking single evidence of the social damage represented by these malpractices, as well as the thoroughness of their concealment, is the fact that they prompted scores of men and women to commit wholesale perjury before a grand jury. The issue of ethics is clearly involved in any form of deception that goes beyond the limits of traditional artifice in the field of entertainment.

But what began as a sense of indignation over dishonest practices in one corner of television has been rubbed off increasingly on all of television. An ethical judgment on wrongdoing has been distorting an evaluation of the overall quality and character of television programing. It is a classic case of guilt by association.

The charges that have been aired so vigorously against television in recent months are long-familiar charges of mediocrity, imbalance, violence, and overcommercialism. There is no firmer basis for these charges now than there has ever been, but those who press them are now armed with the cudgels represented by the quizshow deceptions, and they are making the most of them.

IRONY OF THE PRESENT CLIMATE

Certainly this medium has its faults and frustrations. We often deserve criticism and we need it. Yet, in my opinion, the great irony of what we have come to call "the present climate" is that it has descended on us at a time when, in most respects, television has gone further than ever in raising This is the season that television its sights. has presented more special news, public affairs and cultural programs during peak evening viewing hours than at any time in its history. These enlarged efforts grow out of the steady progress of the past; they are not a sudden reflex to new pressures. professionals in this medium, you know that such major projects in a season's schedule have to be planned, organized and committed long before the season begins.

Speaking for one network alone, this is the season that has seen the doubling of a pioneering effort to teach college-level courses in science for academic credit; the season that operas in English have returned in force and won sponsorship for the first time in 10 years; the season that has given "The Tempest" the biggest audience Shakespeare has ever had; the season that has offered more specials, more sports, more color than ever before; the season that is lavishing the finest creative resources on provocative live drama as controversial as the story of Ira Hayes and the Sacco-Vanzetti case, This month alone viewers are being offered Mozart's "Don Giovanni," Gilbert & Sullivan's "The Mikado," an adaptation of Joseph Conrad's "Victory," a biographical drama about Andrew Carnegie, an Easter documentary retracing the Way of the Cross, other documentaries ranging from the America of Mark Twain to the one Charles de Gaulle will start visiting tomorrow. And these are only highlights of what one network is of-We hear so much about what's wrong with television; it may not be amiss to remember what's right with television.

RESULTS OF SELF-REGULATION

What are some of the lessons of the climate in which broadcasters have been living? We were caught unprepared by the quiz-show disclosures, but in swift and decisive response to the discovery of deceptions, we faced up to the sins of omission that helped make them possible. We have long since taken vigorous and thorough

measures to clean our house, and to keep it clean. These have been measures of self-regulation so that, in some respects, they have differed from one network to another, but they reflect a solid determination to keep broadcasting ethically above reproach.

And they are working effectively. In the case of quiz and audience participation shows, for example, it was our conviction at NBC that these programs could and should be presented with integrity to the millions of viewers who find them enjoyable and instructive. Such shows are now operating under rigorous safeguards and they have passed the acid test with the public. Today six of the seven programs in this category on the NBC daytime schedule lead their opposition in popularity, and the seventh is a close contender for first place in its time period. On our evening schedule, two shows of this type are among the most popular in all of television.

In a larger sense, there is another significant verdict on television by the viewing public. The major audience measurement services report there have been more sets in use this season than last, and more time spent watching them in the average telesion home. These facts hardly support the notion of some observers that the public is losing interest in television or turning away from it. On the contrary, they make clear that the vitality of the medium is strong, and the public is responding to its powerful attraction.

Still the clamor of criticism goes on. Indeed, we have been entering a new and more dangerous phase in the period that began 6 months ago—a phase that makes this more than ever a time for reason.

LEGISLATIVE PROPOSALS

Seen in proper perspective, the disclosures of wrongdoing developed by Chairman Harais' House subcommittee represent a genuine service to the public and the industry. By the same token, much of the proposed legislation introduced in the wake of these disclosures reflects an earnest and constructive effort to create legal sanctions to deter such wrongdoing in the future. For example, Chairman Harris and his associates are conscientiously seeking to cope with the difficult, complex problems of legislating against payola, and are considering various bills to set up criminal penalties against quiz-show rigging, along lines that we at NBC were the first to urge.

But the emotions generated over the past 6 months have also spilled over into legislative proposals ranging far afield from these ethical issues—proposals that would dictate the scheduling and quantity of certain types of programs, and would drastically alter the structure of broadcasting itself. I am hopeful that, upon sober analysis, responsible legislators will discard the type of bill that threatens to create far more serious problems than it seeks to solve.

Another aspect of proposed legislation demonstrates how ill-conceived regulation can breed problems that beget still more regulation. An example is the recent bill that would make broadcasters give at least 8 hours of free evening time to the presidential nominees of the two major parties during the election campaign. Here is a bill that would unfairly compel broadcasters to do what they have in the past been prevented from doing by the impractical restrictions of section 315 of the Communications Act.

Those restrictions made it impossible for a broadcaster to present the major-party candidates for President without giving equal time to every other candidate for the office. In 1956, that would have meant some 15 other candidates. Devoting hour upon hour to the often quixotic antics of little known minority and splinter-group candidates would have been an unreasonable

price on the public's patience and a disservice to commonsense.

As I wrote Senator Lyndon Johnson in 1956, NBC has always stood ready to offer suitable opportunities for network appearances to the major-party presidential and vice-presidential candidates if we could be relieved of the penalty of having to grant equal time to every minor candidate. I repeated those assurances last year when the broadcasting industry was urging Congress to ease the "equal-time" restrictions imposed by section 315 of the Communications Act.

Unfortunately, Congress failed to remove these practical obstacles to face-to-face debate or campaign appearances by the major candidates as guests of the networks. But it did lift the "equal-time" penalty from candidates' appearances in news broadcasts and on regularly scheduled news interview programs.

A WAY TO PRESENT THE CANDIDATES

On the basis of this recent amendment of section 315, we believe we have found a way to give the public an unprecedented opportunity to hear, observe, and evaluate the major presidential candidates in appearances on network television in prime evening viewing hours. Beginning 8 weeks before election day, NBC will enable the Democratic and Republican nominees for President to appear together side by side before the American television audience in regular weekly sessions to come to grips with the issues confronting the country.

The vehicle for these historic appearances will be "Meet the Press," television's oldest news interview series. We propose to expand it to a full hour—as we have done on occasion in the past—and to reschedule it on Saturday evenings, preempting "Worldwide 60."

On six of the eight weekly programs leading to election day, each major presidential candidate will get an equal chance to reply to well-informed questions by impartial, trained journalists—courteous but skillful questions designed to bring out their ylews clearly and effectively on the matters uppermost in the voter's mind. Each program featuring the two presidential nominees will be devoted to a major national issue or a particular group of issues, designated in advance, and the final one before election day will treat the highlights of the issues as they have developed in the homestretch of the campaign.

In addition to these six programs, there will be one devoted to a session with the two vice-presidential candidates. And another will present the minor candidates for President—not out of any legal requirement but because we believe their appearance within this framework will make an interesting and informative program. It will also give them a national hearing far in excess of any that could be justified by their voting support.

I believe that the course we are taking voluntarily is far preferable to the one that the proposed legislation would impose upon us. It represents the initiative of a broadcaster acting in freedom, not a Government edict that raises grave questions of public policy and constitutionality. Moreover, it represents a broadcaster's exercise of his own judgment as to how the candidates can be presented most effectively rather than Government dictation that they be presented in a prescribed way. There can be no doubt, in my opinion, that the format in which we plan to present the candidates can be more genuinely informative to the American people, and more interesting as well, than the speechifying contemplated by the pending bill.

HUMPHREY-KENNEDY DEBATE

Now I would like to discuss a dramatic and unusual development that arose only yesterday. As you know, Senators Humphrey and Kennedy have agreed to engage in a televised debate during the West Virginia primary campaign. After thorough consideration of the circumstances and implications, we have today offered the NBC television network facilities for this debate.

You might wonder why we decided to follow this course, in view of the equal-time burdens of section 315; and why if we are able to offer time for a Humphrey-Kennedy debate in this instance, we cannot do the same for debates by the Democratic and Republican presidential candidates after they have been nominated. The differences between these two situations themselves illustrate the problems arising under section 315.

After the conventions, there will be a large number of presidential candidates from all the minor and splinter parties. If NBC were to devote as much time to debates between the Democratic and Republican candidates as we will allot to their appearances on Meet the Press under the plan we have developed, we could be under legal obligation to offer over 50 hours of evening time to the minor-party candidates. This would be an intolerable burden on the public and the network.

By contrast, televising a Humphrey-Kennedy debate at this initial stage of the campaign could give rise only to a limited number of claims for equal time. Since this is a Democratic primary contest, our only obligations under section 315 would be to bona fide qualified candidates for the Democratic nomination. Since it is still early in the preconvention period, relatively few contenders have committed themselves and would be eligible for equal time.

This course presents some problems, but we believe they are manageable. We have assessed the burden and decided to accept it, because in our news judgment, the particular issues being raised in the West Virginia primary are of unusual significance to the public and may not be representative of any of the other preconvention contests.

Station WTRF-TV, the NBC affiliate in Wheeling, W. Va., has already undertaken to originate the Humphrey-Kennedy debate and to furnish it to NBC. We expect to present this debate at a time and date to be worked out with our Wheeling affiliate and with the candidates.

In my opinion, this is probably the last time in the campaign that any network will be able to afford the luxury of presenting a debate between candidates. The way to make such televised debates possible as a regular feature of our political life is simply to free such programs from the equal-time penalty of section 315. The way not to do it is to pass another law enabling the Government to expropriate air time for campaign purposes.

THE AIR AS A PUBLIC RESOURCE

It has been argued that broadcasting is fair game for expropriation of air time by the Government on behalf of political candidates, because the airwaves belong to the people. The air does belong to the public, but what is proposed for Government expropriation is a great deal more than air. The public resource represented by the airwaves had no value until scientists and technicians invented ways to use it as a means of communication. In fact, vast unchartered areas still remain in the spectrum which cannot be used until science, technology, and enterprise develop their usefulness for the public. Thus, the present broadcast frequencies had only theoretical value until individuals undertook the heavy investments in facilities and programing to provide a broadcasting service. Works and stations lost millions of dollars for many years in pioneering this service; and today, many stations are operating at a loss in developing their own service.

It is not the airwaves that would be expropriated under the proposed legislation. What would be expropriated is the product of a broadcasting enterprise which, through business risk and development, like any other enterprise, has created a service where none existed before.

Is it fair to single out the broadcasting industry for expropriation of a portion of this service? It makes as much sense to suggest that newspapers and magazines be compelled to donate a prescribed number of pages to the major candidates. After all, most of them get the benefit, not of the public air, but of public money through second-class mailing privileges for which the taxpayers provide scores of millions of dollars a year.

It makes as much sense to suggest that the airlines, the railroads and the telephone company be compelled to donate their facilities to political candidates. Like broadcasting, they all make use of a public resource; and they also operate under a Federal standard of public interest, convenience, and necessity. Indeed, the telephone company uses radio frequencies to provide network interconnections and is licensed by the FCC for that purpose just as broadcasters are licensed.

THE ISSUE OF FREE EXPRESSION

There is another issue at stake here that goes to the heart of the current threat to broadcasting: the issue of free expression. Any scheme that puts the hand of governmen upon broadcast program content is a curb on the freedom of expression that Americans have as much right to expect from their radio and television stations as from their newspapers and magazines. When the Government can tell a broadcaster that he must carry a certain program, or a publisher that he must print a certain story, it is as much a curb on free expression as when the Government tells them what not to print or broadcast.

The danger of governmental tampering with program content hovers like a specter over broadcasting. It is the chief hazard before us. It lurks behind every scheme to license the networks. It looms over the proposals that the Government lay down fixed percentages for program categories and that the FCC impose program rules and regulations on anyone who wishes to receive and hold a broadcasting license.

What makes this problem especially delicate and confusing is that the FCC's duties in resolving public-interest questions sometimes do require it to consider overall programing. For example, this issue can arise when two or more applicants equally qualified on other grounds are seeking a station license; or when an existing licensee is seeking a renewal.

But this delicate problem can and must be solved. The FCC should exercise its role in such cases with the utmost restraint. Instead of laying down fixed and uniform rules to govern programing throughout the counthe Commission should encourage the broadcaster to exercise his own responsibility in judging and meeting the needs of his own area. It should ask him to describe how he has sought to determine the audience interests in his community; to define those interests he seeks to satisfy, whether spe-cialized or diversified; to outline how he proposes to serve those interests and, if he is seeking a license renewal, how he has already served them. Under this procedure, the Commission would be justified in raising questions about programing only if the application reflected a service unreasonable on its face.

Such a standard of reasonableness, properly applied, can effectively reconcile the freedom of the broadcaster to exercise his initiative and the duty of the Commission to grant licenses only to those who will serve the public interest. And by placing proper bounds upon the Commission's role in pro-

graming, it can help hold the line against attempts to set up the Government as the arbiter of taste for American viewers and listeners. That is the ultimate challenge we must meet as the outgrowth of the trying period that began 6 months ago.

THE TASKS AHEAD

To meet that challenge, we have some difficult tasks to master. One of them is to create greater knowledge and understanding of our medium-an awareness of its nature as a mass medium and its obligation to the total public. This also means creating an awareness of all that we do to meet the specialized viewing tastes of those who have been so out of temper with us. It means cultivating the concept and practice of selective viewing as the only intelligent means of enjoying a service that cannot possibly please all its viewers with all its programs all the time. And it means persuading some of our viewers that their enjoyment of television should not be conditional upon depriving others of programs they enjoy.

This is a task that has been assigned to the Television Information Office, and it has made a good start. But it is not a task that can be delegated altogether. It is one in which every one of us with a stake in this medium can and should play a part. Broadcasters have a special role they can play through the use of their own facilities in creating this understanding. They should explore means of doing so not on a hit-ormiss basis but with care and a sense of responsibility.

There are other important tasks to which these difficult months have spurred us and in which we have already made encouraging We must keep at the job of mainprogress. taining the highest standards of ethical conduct in our operations. We must continue to strengthen our supervision of all broadcast material, commercials as well as program content, in the interests of taste, truth, and our special obligation to young viewers. And always we must work with all our creative might to keep expanding the horizons of the most powerful and eloquent medium in the history of communication. On the basis of what we have already accomplished in this medium-even with our mistakes and shortcomings, and in spite of the dangers that now threaten us-there is every good omen that we will prove worthy of all that must be done.

Robert M. Chapman

EXTENSION OF REMARKS

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. LEVERING. Mr. Speaker, it was my distinct privilege today to participate in the ceremonies in the Office of the Vice President of the United States at which a fine young man of my congressional district, Robert Merle Chapman, was one of five youngsters throughout the United States to receive the School Safety Patrol Lifesaving Medal Award for 1960.

Bobby Chapman, the son of Mr. and Mrs. Merle Chapman, is a quiet, unassuming young man of 14 years, of the type that reaffirms my conviction that the future of our country will be in good hands. I do not subscribe to the common talk in some circles that another

generation had a monopoly on courage, intelligence, and integrity.

Mr. Speaker, it has come to my attention that Patrolman F. L. White, of the Ohio State Highway Patrol, one of the most efficient highway police systems in the United States, and Mr. Marvin Huffman, of Ashland, are responsible for organizing the countywide school patrol program in Ashland County. I com-mend these gentlemen, the Ashland Junior Chamber of Commerce for furnishing the annual Chapman award medal and the American Automobile Association, affiliated automobile clubs, and my good friend of long standing Blake Darling, for their sponsorship of the school safety patrol movement which has saved the lives of many of our young people.

Mr. Speaker, under leave to extend my remarks in the Record, I include the citation relative to my young friend Robert M. Chapman, and a statement concerning the history of the school patrol

Medal Citation-Robert M. Chapman, Age 14, Montgomery School, Ashland, Ohio

Quick thinking and courageous action by Robert, while on school bus patrol duty the afternoon of March 24, 1960, prevented a tragic accident. The schoolbus had stopped east of Ashland on U.S. Route 250. Three children were about to cross the road. A heavily loaded tractor-trailer combination bore down on the bus. Being unable to stop, it swerved to one side but nonetheless struck the bus, driving it forward over 25 feet. Robert shoved the three children, two into the ditch and the other flat onto the pavement. Two of the children were not hit. Robert and the third child, although struck by the bus, fortunately escaped serious injury.

PATROL HISTORY

The school safety patrol movement has grown tremendously since its origin in the early 1920's. Today, it is a national institution—a vital force in the important work of protecting America's children from the hazards of modern traffic. Well over 770,000 boy and girl patrol members in the United States daily help to protect millions of children enrolled in thousands of elementary schools. In cities and towns, in rural areas, and on schoolbuses, the school safety patrol serves to remind schoolchildren of hazards of street and highway crossing on their way to and from school. This "Nation on wheels" can well be proud of the work that these young citizens are doing.

Educators regard the patrol movement as an excellent school activity, as well as a method to help develop a sense of responsibility, character, and positive usefulness for community living. Commendation for patrol work is universal. It comes from par-

ents, educators, police, and other outstanding public officials.

While it is obviously impossible to set any precise figures on the lifesaving results of school safety patrol work, it is certain that this movement has been partly responsible for the improvement of the traffic death rate of children 5 to 14 years of age. Since 1922, the traffic death rate for this group has continued to decrease to nearly one-half, while the death rate of other age groups has practically doubled.

Lifesaver medal and citation certificate

The American Automobile Association and affiliated automobile clubs inaugurated the AAA Gold Lifesaver Medal Award in 1949. Yearly, the president of the AAA appoints a medal award board and authorizes the members to select patrol members whose traffic lifesaving acts have saved the life of persons in imminent vehicular traffic danger. The gold medal is awarded in cases involving extraordinary heroism, while the citation certificate recognizes actions beyond the call of duty.

In the decade of this honor award program, beginning in 1949, the brief summary following explains the considerations given by the board:

Recommendations submitted 172
Medals awarded 83
Citation certificates awarded 22

States represented: Arizona, Arkansas, California, Colorado, Connecticut, District of Columbia, Florida, Georgia, Indiana, Iowa, Maryland, Ohio, Michigan, Minnesota, New Jersey, New York, Pennsylvania, Rhode Island, Virginia, Wisconsin, North Carolina.

Presentation of the award is made annually by outstanding national leaders. It has been the good fortune of recipients to have been decorated for their valor by the President of the United States, the Vice President, Cabinet officers, the Director of the FBI, and top military leaders. In 1959, Mrs. Eisenhower graciously presented the awards.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity pur-chasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the Record at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Appendix

Problems of Domestic Shoe Industry

EXTENSION OF REMARKS

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES
Friday, May 13, 1960

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a speech delivered by Harold Putnam, a staff member of the Senate Select Committee on Small Business, to the New England Shoe Superintendents' and Foremen's Association on May 7. Mr. Putnam's remarks contain a helpful summary of the difficult problems facing the domestic shoe industry particularly in the rubber footwear category. Since it is a problem with which the Government is much concerned, I believe Mr. Putnam's remarks to be very pertinent.

There being no objection, the address was ordered to be printed in the RECORD,

as follows:

Speech by Harold Putnam, Counsel. U.S. Senate Select Committee on Small Business, Washington, D.C.

Mr. Chairman, ladies and gentlemen, it must seem a bit presumptuous for me to come all the way from Washington to Taunton to tell you what is right and wrong with the shoe business. Because I am sure you know already.

But it may be good for you to know that we in Washington share your concern. Senator Saltonstall has asked me to convey to you his regrets that he could not accept your kind invitation in person; he is keenly aware of the problems facing your industry,

and is most anxious to help.

He is responsible for shoes being an item on the current agenda of the Senate Select Committee on Small Business, and we have been engaged in a study which we hope will be of benefit to all of you, particularly to the New England shoe industry which seems to be getting a progressively smaller share of the Nation's shoe business.

Both Senator Sparkman and Senator Sal-Tonstall, the ranking members of our committee, know that the glants of this industry are well able to take care of themselves; but they are anxious to preserve the reservoir of skilled manpower and the reputation for fine quality which have made Massachusetts and New England shoes famous around the world.

I hesitate to discuss the details of your business with you, because I feel a little like the brash young college lad who stopped beside a country road to try to sell a set of the Encyclopedia Britannica to a hard-working farmer.

The college lad gave his best spiel, but the farmer was unimpressed:

"What use would I have for 'em?" asked the farmer.

"Why," said the college lad persistently, "this set of books contains the latest, most up-to-date information on all types of farming. If you'll just read these books, and learn the modern ways of farming, you'll do twice as well as you do now."

But the farmer was unimpressed.

"Heck, son," he says, "I ain't farmin' half as well now as I know how."

I am sure that you are not making and marketing shoes now half as well as you know how. But perhaps a pooling of our ideas will do neither of us any harm.

Probably nothing troubles the shoe industry at the moment more than the mounting volume of shoe imports, particularly the

imports of rubber footwear.

The volume of leather footwear imports in the calendar year 1959 was about double what it was in 1957. The volume of special types of footwear, such as slippers, moccasins, and boots, was also nearly double the 1957 volume.

But in the rubber footwear category, the volume has increased nearly eight times over the 1957 volume. Over 46 million pairs of footwear are now imported annually, and 41 million of these are rubber shoes and overshoes or rubber-soled footwear with fabric uppers.

There is no doubt that this flood of cheap rubber footwear is working a hardship upon competing suppliers in this country. The problem has been called to the attention of the U.S. Department of Commerce and the U.S. Tariff Commissioner by Senator Leverett Saltonstall.

The Department of Commerce admits "a substantial increase in the volume of imports of rubber footwear during 1959," and suggests that "if domestic shoe producers believe that imports are causing or threatening serious injury in their industry, they should consider utilizing the opportunity for remedial action which is available in section 7 of the Trade Agreements Extension Act of 1951, as amended," the so-called escape clause procedure.

An injured domestic industry can take its import troubles to the Tariff Commission for an escape clause investigation. If the Commission agrees that the imports are causing serious injury, it recommends appropriate remedial action to the President.

As of the end of 1959, 107 such applications had been made to the Tariff Commission, not including the rubber footwear problem. The Commission decided against escape action in 41 cases, but in favor of escape action in 32 cases.

Of those 32 cases which reached the White House, the President declined to invoke the escape clause in 20 cases, but did invoke it in 12 cases—and these successful cases included watches, bicycles, safety pins, lead and zinc,

and stainless steel table flatware.

Senator Saltonstall has called a meeting of representatives of the Tariff Commission and the State Department for May 17 to work out a course of action to defend this important domestic industry from serious injury. He has cafled for worldwide fair labor standards to outlaw profiteering in world markets at the expense of exploited labor. He is insisting that those countries which seek the privilege of selling to us remove their own trade restrictions so that U.S. business can sell to them. These are the only practical defenses to protect our industry from short-term injuries.

But over the long term, these trade restrictions are falling everywhere. Common markets, jet airplanes, improved communications, the pressure of the United Nations—all are contributing to a freer flow of commerce between the nations of the world. To try to stem the flow indefinitely by high tariffs is no more practical in today's world

than to try to hold back the tide with a spoon.

We have discarded long ago the notion that we can exist peacefully in an ivory tower of plenty in an impoverished world. We are beginning to learn that our economic health is drained by keeping friendly foreign nations on a permanent dole; our prosperity is strengthened when those friends can buy and sell with their own resources, enhanced by their own foreign trade.

Down this two-way street, our State Department, under the enlightened leadership of our own Christian A. Herter, must travel. Our national policy must be concerned as much with our exports, as with our imports, and in this area, we have much room for

improvement.

The average price of our exported footwear is \$3.30 per pair, almost double the price of Japanese footwear exports. And we are exporting only 3½ million pairs a year, a pittance when measured against the world's insatiable need for shoes.

Millions of people in China, India, Africa, and South America have never worn foot-wear of any kind. With their rising standards of living, they are becoming possible buyers, but we are doing little to meet their needs.

All of South America is a hungry market for the high-quality products of our New England factories, yet little is being done to improve the flow of shoe exports to the south.

Much remains to be done in our own country. We haven't yet educated the American male to the facts that foot health and good styling demand as many shoe changes for him as for the American female. We haven't even taught him that his own comfort demands a seasonal change to summer shoes. As Thom McAn puts it, the average American male still thinks summer shoes are "strictly cornball."

For the shoe industry of New England, it is not enough just to make good shoes. You must enlighten the thinking of the American male; you must work through all the agencies of Government to clear the way for profitable exporting; you must put your own house in order for efficient production and exciting products.

Putting one's own house in order is a first order of business for companies being challenged by foreign competition.

The Eigin Watch Co. led its industry in losses in 1958—going into the red by \$8,500,-000. It called in new management, and its

first step was a market survey.

It found that men prefer round watches, and Elgin's were rectangular; that men like functional stainless steel watches, and their's were mostly yellow gold; that men want sweep second hands, and only 15 percent of Elgin's output had them. Elgin changed.

The result: Eigin is now in the black, a pay cut has been restored, and the company is swamped with back orders.

Or take Genesco in your own industry. This company claims that it can meet the competition of Japan and Hong Kong through automation and our advanced technology. Chairman Maxey Jarman has written me: "We began to do some figuring. * * * We came to the realization that even with the extremely low labor costs in Hong Kong that the expense of training labor, of shipping raw materials to Hong Kong and bringing the shoes back, paying the low duty on them, and with the time element involved in such transactions, that we would wind up not being able to compete as well nor be-

ing as flexible as we are with our present manufacturing plants."

Or take sewing machines and typewriters. Self-satisfaction was producing stagnation in those industries in this country; while foreign firms were producing new designs that were engineering marvels and that were soon in worldwide demand. Foreign firms, hungry for a fair share of world trade, were building "better mousetraps," and the consumers of the world beat a path to their

Under the whip of enlightened competition, American industry is fighting back, and the results seem to be good for everyone. American producers of electrical equipment were shocked when the Tennesee Valley Authority accepted a low bid from a British firm. But now the foreign representatives are complaining; their complaint: "American electrical equipment manufacturers are coming in under us every time."

Out in Worcester, the Anderson Corp., makers of wire brushes, was stumbling along near the bottom of its industry, when new management took over. Products were redesigned and standardized. The union cooperated to increase efficiency and lower costs.

Quality control was instituted, and cost accounting. A rundown and obsolete plant was given first-class maintenance and repair. All orders were filled promptly and on time. Data processing machines digested the facts of business life, and came up with useful answers. Good money was spent on research for new products. The result: Anderson is moving up to a position of leadership in its

This success story, chronicled in the April Bulletin of the Smaller Business Association of New England, may be a useful example for the older shoe plants which are still the backbone of the industry in this area.

What about New England's share of Government shoe procurement?

I am able to bring you the latest figures of the Quartermaster General of the Army on shoe procurement during fiscal year 1959.

They show that the services bought 4,705,-149 pairs of shoes, 52 percent from New England manufacturers and 17 percent from factories located in Massachusetts.

They also show that New England manufacturers were able to compete realistically with plants located in the Southern States. The average cost of these service shoes was \$5.76 per pair, and three New England suppliers were able to sell to the Government at a contract price below the national average: J. F. McElwain Co. of Nashua, N.H., at \$5.63 a pair; Sportwelt Shoe Co., Inc., of Nashua, N.H., at \$5.44 a pair; Doyle Shoe Co. of Brockton, Mass., at \$5.65 a pair; and Adams Bros., Inc. of Pittsfield, Mass., was only slightly above the national average at \$5.84 a pair.

The services awarded 94 shoe contracts, with a total value of \$27,139,114.23. Of these, 52 were the result of formal unrestricted advertising, 13 were small business set-asides and 16 labor surplus area set-asides.

Government agencies are sensitive to the trend toward concentration in the shoe industry, and they can be counted upon to use their purchasing power to resist the trend. Smaller plants in New England stand to benefit from this Government position, and they can benefit most from increased use of the small business set-aside and the labor surplus area set-aside.

The fight for a healthy New England shoe economy goes on on many fronts.

We must break the barrier that keeps our shoes out of most of the country's shopping centers, a market monopolized by the chains.

We must improve our depreciation laws, and make better use of the ones we have, to junk our obsolete machinery, and lower our costs with the best machinery available.

All the world is now a hungry market for the products of our shoe factories. By continuing to sell a quality product at a fair price, we can have our fair share of that market. Those who would knock us off our perch as the greatest shoe producing center in the world have yet to reckon with our skilled labor force, our New England ingenuity and our determination to use all the valuable tools of modern business.

This combination can guarantee a healthy shoe economy. The result will be a service to the Nation, and an example to a troubled world.

"Missionaries" for Mississippi

EXTENSION OF REMARKS OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 19, 1960

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent I include the following editorial from the Jackson (Miss.) Clarion Ledger:

"MISSIONARIES" FOR MISSISSIPPI

Mississippians generally, we believe, are proud of their official representatives in Washington. Our Senators and Representatives in Congress have all long carried the torch for the Magnolia State in the Nation's Capital.

Likewise representing Mississippi well over the country are the State's two Miss Americas, the pulchritudinous Mary Ann Mobley of Brandon and Lynda Lee Mead of Natchez. A number of our citizens have distinguished themselves in business and professional circles to add to the cavalcade of missionaries for Mississippi sent abroad over the land. Much credit has reflected upon the State by their representation.

Recently, spending a week in Washington, there were four more emissaries of whom the entire State is proud. Two lovely girls and a pair of handsome young men ably represented another segment of life important to Mississippi-our farms. Selected from the thousands of 4-H Club members of the State, the delegation to Washington and the National 4-H Club conference were Kay Beevers of Cleveland, Rachel Todd of Soso, Teddy Estess of Tylertown, and Thomas Allen Patterson of Senatobia. Their selection was upon merit, and a list of their accomplishments just about covers the index to what farm boys and girls have the opportunity to do in 4-H work.

Kay Beevers, 17, is presently a freshman at Mississippi State College for Women at Columbus and is the daughter of Mr. and Mrs. K. M. Beevers of Cleveland. She has been a 4-H Club member for 10 years and has completed 55 projects. Kay has participated in 153 leadership and citizenship activities, held 74 offices and committee assignments, taken part in 12 demonstration contests and made 152 4-H exhibits. She has attended the State 4-H Junior Leadership Conference and in 1958 was State and National winner in the health contest, receiving a trip to the National 4-H Club Congress and a \$400 scholarship. She has been the State song leading winner, president of her county 4-H Council and local 4-H Club. Kay is now secretary of the State 4-H Council and has been a Northwest District State 4-H Council vice president.

Teddy Estess, 17, is the son of Mr. and Mrs. Ansel Estess of Tylertown. His father is Walthall County agent. He is a senior at the Tylertown High School and has been in 4-H Club work for 8 years. He has completed 65 projects, given 48 demonstrations to various groups and has served on 20 local 4-H committees, 52 county council committees and 17 State committees. He was president of his county 4-H council from 1957 to 1960 and was southwest district vice president of the State 4-H council in 1958. Teddy attended the State 4-H Club Congress, the State 4-H Junior Leadership Conference, and the State 4-H Roundup. He has been a member of the State livestock judging team, presented the State winning livestock conservation demonstration in 1959 and won a blue ribbon and a savings bond in the national contest in Chicago. In 1958 he was State and National forestry winner and received a trip to the National 4-H Club Congress.

Thomas Allen Patterson, 19, is the son of Mr. and Mrs. Allen M. Patterson of Senatobia. He is presently a sophomore at Northwest Mississippi Junior College and has been a 4-H Club member for 6 years. He has completed 66 projects and has participated in over 200 leadership and citizenship activities. Thomas has attended 34 tours, held 37 offices in his county 4-H council and community 4-H Club. He has entered four judging contests, 228 demonstration contests and has made 228 4-H exhibits at various fairs and shows. He has attended the State 4-H roundup, the State 4-H Junior Leadership Conference and the State 4-H Club Congress. He is a member of the 4-H all stars and in 1959 was State winner in the soil and water conservation contest and received a trip to the National 4-H Club Congress.

Rachel Todd, 19, is the daughter of Mr. and Mrs. Travis Todd of Soso. Rachel is a sophomore at Jones County Junior College at Ellisville and has been in 4-H Club work for 10 years. During this time she has completed 128 various projects. She has participated in over 300 leadership and citizenship activities and has had several hundred 4-H exhibits at fairs and shows. Rachel has attended the National 4-H Club Congress as State canning winner, the State 4-H Junior Leadership Conference, the State 4-H Club Congress, and Roundup. She has held all of the offices in he rounty 4-H council and community 4-H Club. She is now serving as vice president of the State 4-H council and was southeast district vice president of the State 4-H council in 1958. She is also a member of the 4-H all stars, and the county honor 4-H Club.

Add the names of Beevers, Estess, Patterson, and Todd to the growing roster of people Mississippians proudly salute. Their mission to Washington was evidence of Mississippi's greatest crop and prime native resource-her youth, citizens of tomorrow.

High-Level Hypocrisy

EXTENSION OF REMARKS

HON. STUYVESANT WAINWRIGHT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, May 12, 1960

Mr. WAINWRIGHT. Mr. Speaker, as you know, I very rarely place anything in the Appendix of the Congressional RECORD because of a desire to save the taxpayers money. However, every once in a while, an extraordinarily poignant editorial should be noted by the Con-The East Hampton Star, a weekgress. ly published in my own village on Long Island, hit the nail on the head. People

tend to confuse espionage and truth. These are the two considerations involved. Espionage, like love, marriage, death, and taxes, is here to stay. All sides recognize this. On the other hand, the truth seems to have been misplaced. This is what did the American posture such a terrible amount of damage in what has become known as the U-2 incident. The editorial follows:

HIGH-LEVEL HYPOCRISY

The world, following the shooting down of an American plane on an intelligence mission over Russia, has been treated to an amazing display of hypocrisy from East and West.

Washington's hypocrisy was best illustrated by the early cooked up stories of a plane on a weather mission straying off course, perhaps because the pilot had difficulty with his oxygen equipment.

Moscow's hypocrisy is shown by Khrushchev's pretended indignation over the flight. Obviously, this sort of thing has been going on for a long time—but the Russians did not want to admit that they were unable to shoot down earlier intruders.

Accurate intelligence is essential in the free world's struggle against communism. But as for getting it by flights over Russia, We can only recall the hubbub a year or so ago, when it was revealed that a flight of geese, picked up by radar as they flew south over the Canadian Arctic, almost set the Wheels in motion for massive retaliation against the Soviets. If a flight of geese can set off the Americans, what does an actual alreraft do to the Russians? The stakes are too high for such risks.

Fiftieth Anniversary of Forest Products Laboratory in Madison, Wis.

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Friday, May 13, 1960

Mr. WILEY. Mr. President, during 1960, the Forest Products Laboratory in Madison, Wis., will celebrate its 50th anniversary.

During its lifetime, the Laboratory has established an outstanding record of accomplishment in the fields of research relating to forest and forest products.

As a nation, we use \$15 to \$20 billion worth of forest products a year.

Although in total, this is big business, most of these goods are produced by small businesses—300 big sawmills produce a third of our lumber, 50,000 the other two-thirds.

In a fast-changing age, we depend more and more upon research to provide us with the goods and products to improve living for our people. In wood products, the Research Laboratory has led the way.

Overall, the record of the Madison Laboratory adds up to a tremendous service

Significantly, the Federal Government gets \$70 back in taxes for every dollar put into forest research. I believe it is also important to point out that private industry is carrying on extensive research—separately and in conjunction

with the Laboratory—to find new and better ways for utilizing wood and wood products.

I was pleased to note an editorial in yesterday's Washington Star recognizing the splendid work of the Laboratory at Madison, Wis.

I ask unanimous consent to have the editorial printed in the Appendix of the

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Star, May 12, 1960] WOOD'S TRANSMUTATION

The booklet commemorating 50 years of wood research by the Department of Agriculture's Forest Products Laboratory lifts wood out of the category of the commonplace into the realm of what may seem like fantasy. For the Federal scientists are transmuting ordinary lumber into plastics, yeast, alcohol and even food. And the research into new uses of wood is going forward relentlessly—with good prospects of even greater achievements in the utilization of America's forest products.

The Laboratory, established in 1910 at Madison, Wis., concentrated at first on ways of making lumber stronger, more weather-proof and generally more durable for construction purposes. Much has been accomplished toward those ends. In recent years the studies have expanded to determine how to salvage waste products, by converting wood fibers into chemical compounds for varied industrial uses. Not only industry but the general public has benefited from the Laboratory's services to the Nation.

The Summit Conference

EXTENSION OF REMARKS

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES
Friday, May 13, 1960

Mr. BRIDGES. Mr. President, in view of the great general interest in the coming summit conference, the Manchester (N.H.) Union Leader, felt it timely to reprint on May 11 a powerful editorial by that eminent political columnist, David Lawrence, which appeared in the U.S. News & World Report of August 1, 1958.

Mr. Lawrence points up the dangers of any agreements, guarantees or promises growing out of such meetings. His editorial once again reminds us, Mr. President, of the flagrant violations of international law committeed by the Communists in Hungary and reiterates the necessity of viewing all actions of the Communists with suspicion.

I believe the underlying soundness of this editorial remains unchanged and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THERE CAN BE NO DEAL WITH A MURDERER— SUMMIT PACT IS NONSENSE

(By David Lawrence)

Somehow, to carry on conferences at the United Nations with Sobolev or some other ambassador from the Soviet Government seems tolerable to a degree as a formal mech-

anism of diplomacy, but to sit down and fraternize with the archeonspirator—the man who ordered guns and tanks to shoot down and trample upon men, women, and children in Hungary just a few short months ago—this is something else again.

If summit meetings are to be held with rulers whose hands are soaked with the blood of thousands of human beings killed in Eastern Europe, then indeed have we lost sight of fundamentals and succumbed to a passion for appeasement of the present-day Hitler.

Only 2 weeks ago, the United Nations, in a special report, was deploring the fact that the Soviet Union had disregarded the resolutions of the General Assembly which had demanded information about the trial and execution of the patriots in Hungary. Henry Cabot Lodge, Ambassador to the U.N., said on July 16, 1958:

"This new and revealing report shows that the United Nations has good reason to remain deeply concerned over the tragic situation in that country. The murders of Imre Nagy, General Maleter, and other Hungarian patriots will never be forgotten. The perpetrators of these acts have reverted from civilized behavior to the law of the jungle. These frightful acts are obviously not the acts of free Hungarians, but of puppet rulers kept in power by Soviet military forces. In the name of simple humanity, these killings must stop."

And here is what the Government of the United States said about it in a special statement issued by the Department of State on July 17, 1958:

"The U.N. report makes it abundantly clear that the Hungarian regime, which was forcibly imposed by the Soviet Government in November 1956, and has since been supported by the presence of Soviet troops in Hungary, secretly tried and executed Imre Nagy and his associates in flagrant violation of assurances of safe conduct and of recognized conditions of immunity.

conditions of immunity.

"The committee (of the U.N.) also calls attention to the fact that the Soviet and Hungarian Governments have continued to persist in their refusal to comply with resolutions of the United Nations General Assembly and to cooperate in any way with the committee.

"The U.S. Government is convinced that the nations of the world, feeling a deep sense of shock and revulsion at the events in Hungary, will not assume an attitude of indifference permitted the Soviet and Hungarian Governments to escape the full weight of the opprobrium that they must justly bear because of their actions."

The committee reported also that it has evidence that 33 patriots have been sentenced to death and that more may shortly share their fate.

Who gives the command for these murders to be committed? Naturally, it's the man who holds the top post in the Kremlin—none other than Nikita Khrushchev.

This is the man we are asked to "welcome" at a summit conference.

STRANGE DELUSION

What a strange delusion has swept the world, and particularly so many misguided persons in the Parliaments of the free peoples, as they enthusiastically urge summit conferences. Is it that somehow, by sitting down under the glare of the kleig lights and television, with cameras clicking and thousands of newsmen looking on, some sort of deal can be arranged which supposedly will—as Munich falsely promised—give us peace in our time? What nonsense.

Have we lost our perspective? Are we to forgive and forget the murders of innocent persons in Siberia? Are we to deprive the enslaved peoples in Eastern Europe and in the Middle East of their hopes for emancipation?

What of the traditional ideals of the liberty-loving peoples of Britain, France, and America? Do we believe in them still? Or do we rush with open arms to welcome the man who has blasphemed us, the man who stirred up rebellion in the Middle East and sent weapons to Nasser to help him threaten and then annex, one by one, the defenseless states ad acent to Egypt?

What principle of humanity beckons us to do aught but deal sternly with the murderer who is today the foremost enemy of peace in

the world?

What principle of diplomatic courtesy requires us to remain silent when the man who has threatened to bury us comes to our shores supposedly to negotiate some vague agreement that will never be honored by him—if, indeed, one is ever signed?

We should, of course, assure the personal safety of Khrushchev, but we should din in his ears daily the case against murder and

tyranny.

Let the kinsmen of the patriots of the captive states parade flag-draped coffins down the streets of New York City day after day during Khrushchev's visit so he may be reminded that in America, at least, we do not glorify murderers. Let the placards read: "'Welcome,' Murderer."

The Nationalistic Drive in Africa

EXTENSION OF REMARKS

OF

HON. EDMUND S. MUSKIE

OF MAINE

IN THE SENATE OF THE UNITED STATES Friday, May 13, 1960

Mr. MUSKIE. Mr. President, on February 27, 29 and on March 1 and 2, 1960, Mrs. May Craig published in her daily column, "Inside in Washington," her analysis of the nationalistic drive which is so prominent on the continent of Africa, and indicated the manner in which this "anticolonial" mood is affecting French Morocco.

I ask unanimous consent that these four articles be printed in the Appendix of the Record.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From Inside in Washington, Feb. 27, 1960]
"INDEPENDENCE FEVER" RAGES THROUGHOUT
CONTINENT

(By May Craig)

Africa today is highly nationalistic—biased against the United States because we do not always side with them against our European allies. There is pro-American feeling among the people. This is what the State Department told this group of newspaper and radio-TV editors and commentators and publishers before we set off for 5 to 6 weeks in Africa. The Department was glad to see us go, because the group comes from all over the United States, from Alaska to California, from South Carolina to myself, the only one from New England. Big papers and networks and press associations have their representatives stationed round the world, but officials overseas are always glad to see a group like ours.

The State Department is keen on peopleto-people contacts and regards this group as part of that, and better because we are not Government selected or subsidized, and able to spread what we learn through publications and stations. The briefing officials told us that we will find the people of Africa personalize Americans who come. When the President and Vice President came to visit Africa, the people said: "This is the man who gave us the wheat." (Or some less complimentary things about racial discriminations.)

They besought us not to have fixed ideasthings change fast in Africa. And to re-member that the feeling against whites goes back to the fact that we took their land, and land to many Africans is life. They have a saying: "The mosquito is the black's best friend. It kills the whites. Africa is the white man's grave." That is not so true now, since we can drain swamps and have fine new drugs to fight malaria. On the other hand, in the Union of South Africa, where there is the most bitter racial hatred, and the comparatively few whites are holding by force, it has to be remembered that the whites got there to find it uninhabited. They developed it. They feel it is theirs. It is the most highly developed African country. There is more American invest-ment there than in all other African coun-The whites were there as soon as we were in America, in the early 1600's.

There is "independence fever" everywhere in Africa, was the way one State Department man put it. Many of them rush into it ill prepared. They do not have the trained people to administer the new country. It is a problem for us too, for we have to open

embassies, send staff.

The Russians know the value of Africa—they are everywhere, offering their hollow friendship that leads to being satellites. There was one bad moment for the State Department official when we asked if we could see some of the Africans who are fighting apartheid (segregation) in the Union of South Africa. Fact is, most of them are in jail. Official said maybe we could see some out on ball, or not indicted yet. What they do is against the law in the Union.

The native fighters for freedom hold it against us that we, who pose as the champions of freedom, do not help them against the whites whom they regard as oppressors, but who are our allies. Both sides in north and middle Africa are mad at us because we do not take sides against France in firing the atomic test bomb across the Sahara. Algeria is a sample of our dilemma, said one State Department man regretfully. Both sides have some sympathy from us.

The United States has a problem with the new African nations flocking into the United Nations. In the beginning there were 51 nations in U.N., and only 4 were African. Now there are 82. Soon they will control nearly one-third of the votes, and with the orientals, who also have grudges against the West and the whites, we will be outvoted in the Assembly. We have more representation in the Assembly, but because of the inexcusable use of the veto there by the Russians, most of the actions are now in the Assembly.

Mr. Berding is used to questions so we asked him some tough ones. "It is often not the question that is embarrassing—it is the answer," he said, laughing. Then seriously he said: "We must sympathize with, and help the new nations, lest we drive them to the Soviet Union. The American people must be alerted to the situation in Africa. We must get our message over—this group can help. We need patience, and give them time."

One of the economic men spoke of how we need the mineral resources of Africa—98 percent of the world's diamonds come from there—and diamonds are not only engagement rings—they are necessary in fine scientific and technological production. Bauxite we need, for aluminum. We import 25 percent of our iron ore, and Africa has rich iron ore—and 50 percent of the exports of Guinea already go to the Soviet Union.

[From Inside in Washington, Feb. 29, 1930]
Africa on the Move—They'll Risk Hard
Times To Win Their Independence

(By May Craig)

Well, like I said, flying is a chancy thing. Having left Washington in a storm, 2 hours late, we spent another 3 hours getting down at Idlewild, also in a driving storm. The jet for France, which we were to have taken at 7 o'clock, waited for us until 8:30; we arrived at 10. So a bus brought us to this incredible, modern hotel, built for just such emergencies. No wonder Khrushchev's eyes bugged out when he saw it—this is a city built around the various runways. Everything you can imagine, new and shiny and comfortable—and never have to go into the city.

The African psychology, as told to us in Washington by a galaxy of State Department experts, is fascinating and important. Don't be surprised if they seem almost rudely in-dependent, they told us. They are fierce about getting freedom-whether, they understand the drudgery and responsibility and They are willself-discipline of it or not. ing to live harder, for a while even if they have to drive out the foreign capital and lose the imports because they do not have the money to buy. They believe that eventually, after the hard times, they will be able to run their countries themselves and produce and better times will come. One thing about trade there-the Soviet Union will barter, we do not. Also, the British and French and Belgians, by tradition, have the first call on The money and the credit is all the trade. set up for them.

"There is no substitute for two-way contacts," said one official. The educational exchange helps—though some Africans hesitate to come, not knowing how they might be treated here. We began this exchange after the Boxer Rebellion when we took reparations in Chinese coming here. From this has grown educational exchanges, the Fulbright law—but not nearly enough for Africa and southeast Asia. "Mutual understanding" is the watchword they repeat at all times.

One editor said that he had been told we must not use the words "aid to underdeveloped countries," so what do we use? The State Department laughed and said, "Less developed countries." That saves faces.

These State Department people who talked

to us have really been around. One said excuse him, he had a lame back from jeeping around Cambodia lately. He had spent part of the war translating Hitler's speeches in Vienna. He told us about the growing influence of Africa in the U.N. and said the "African personality is thus important to us and the other U.N. members, from non-African and nonoriental countries. Africa started with 8 percent of the Assembly vote, now has 12 percent, will have 19 percent, fairly soon, with more "on the horizon." Samoa, Madagascar-there are 42 countries and separate areas in Africa and they are all on the move, with the idea of freedom. It must be said that some of them are still in the savage, tribal stage, and that while they resent "colonialism," they didn't make any advances into modernity in the centuries before the colonial powers took them.

What is the African personality? One official said: Neutral, independent, anticolonial, not necessarily tending to communism. Their votes in the U.N. are often not on the U.S. side. There is the Moslem influence. But on the censure of Red China on Tibet, only the Soviet opposed. They are all for Algerian independence, against France. Many of them are with Egypt, against Israel; but Israel and Ghana are friends. Israel is giving Ghana agricultural help and technicians, helped Ghana set up the Black Starline. Our abstentions in U.N. do not satisfy the Africans. They think we were against

them on French atomic explosion in the Sahara.

We were warned that Algeria colors all else in north and middle Africa-he who is not for freedom for Algeria, is not a friend of freedom or any other African, they think. They regard the French-British-Israel venture into Egypt at the time of the Suez crisis as grave indication of danger to Arab-Moslem. Not all of them want to go in with the northern Arabs and Egypt overlordship. Leaders like Nkrumah of Ghana and Mboya of Guinea want black Africans to have their own Federation, not be under Nasser and his United Arab Republic. The State Department officials spoke of the great education work done in Africa by the Christian mis-sionaries. There are 438 USIA representatives of the educational exchange-and 3,200 missionaries of all sorts in education and allied medical missions.

Finally, the State Department told us the African leaders are mature—the people, generally speaking are not. But they are as one, "on the move" toward freedom and learning and better living.

[From Inside in Washington, Mar. 1, 1960]
AFRICA ON THE MOVE—JETS ARE SMOOTH BUT
WEATHER STILL RULES

(By May Craig)

Morocco.—The camel stood quiet and haughty in the bare, brown, stone-flecked field on the fine paved road from Casablanca to Marrakech. Men and women in brown robes worked or rode donkeys. Position of animals here appalls Americans (who have their own cruelties). The man on the donkey is bigger than the donkey. Everyone drums heels on the bony ribs of the donkey; everyone carries a stick to beat the animals, from donkey to goat. It's instinctive, it is a hard life for all; life is so cheap, people are callous.

Donkey and camel are harnessed to the primitive plow for the stony ground. Why? "The donkey is lazy, he will not work, the camel makes him." The bite of the poisonous yellow teeth of a camel is warning to the donkey to keep up, once is enough.

The Royal Air Maroc plane which took us from Paris to Morocco in 5 to 6 hours was good. Food was lavish and good, with much serving of liquor and wines. A blond French hostess and two swarthy, handsome Arabs did the serving. We stopped in Rabat, the capital, to report to immigration and admissions. The flight from the United States had been all broken up by weather. Hours to get to New York from Washington meant missing the Air France plane and waiting a day at the International Hotel at Idlewild Airport. Late start at last because pouring rain and blasting winds.

But jets are smooth-30,000 feet up, nearly 600 miles an hour. Don't fly Air France if you want comfort-even first class was economical in space for seating, to crowd in more seats and therefore passengers. Tourist class was packed like Maine sardines. Food was exquisite for first class. None of the trays of stewed-looking things you get on too many U.S. planes. Frou-frou French food, served from little wagons pushed up and down the aisles. Fight courses beginning with caviar and champagne and including everything from fish to cheese, then sweet, ending with coffee and liqueurs. Took 2 hours, leaving us weary from sitting penned in by the little trays. Personally, would rather have done with more leg room, time for sleep, and less food.

Two hours restless sleep in the cramped space, then waked—"Radio says fog at Orly Field in France and we will stop at Shannon, Ireland. Orly is where Charles Lindbergh landed after his historic lonely flight alone across the Atlantic.

Having already missed Paris appointments with French Government, and our own Am-

bassador by the day's layover caused by storm, this meant probably could not make the rearranged appointments, depending on how long at Shannon. Debarking weary and wet, to meet hearty Irish welcome, with piled plates of fried eggs, Irish sausage, terrible coffee. But that heavenly hot coffee in glasses, spiked with Irish whisky and topped with whipped cream. The pounds the weary journey takes off, go on again with this sort of feeding. Everybody happier after some of the hot spiked coffee—must be made in hot, stemmed glass and the cream carefully aerated so it will float, the coffeewhisky must be drunk through the cream.

Three hours lost at Shannon—some of the men in the party thought the hot, spiked coffee made up for the French Government and our Ambassador. Ladies bought French perfume tax free, duty free, much less than in United States.

Paris, cold, gloomy—but still Paris, "la belle." Not much time and lost the French Government entirely, except for kits of propaganda they had prepared for us, most of it justifying Algeria. Back to the airport, so big it takes bus to carry us to the plane. We were lucky to get to Paris at all because our trip was the last for Air France, because of a strike by pilots and hostesses, but they landed us because previously arranged trip. Lucky the Royal Air Maroc was not struck—might be next day they said.

In Paris they take joy in their atomic bomb shot off in the Sahara Desert, puzzled and resentful at hostility aroused by it in the have-not [atomic] countries and the fury of the Arabs and Africans. This will not prevent the French from going on. They resent the United States not taking their side in Algeria.

Casablanca, the big Moroccan city, alight with neon, and fine new modern buildings going up—at the airport shouting, stamping, shouting Moroccans dancing and beating drums of welcome. Inside hot tea (minted) and exotic food. Pretty girls in bright robes dancing—no veils. Casablanca, ancient and modern, independent but losing foreign capital and soon ousting the American bases which bring them millions of dollars a year. They do not know what they will do with the hundreds of acres of ground on which the bases stand. The El Mansour Hotel we stay-so new, there is no water attached to my toilet and half the night gone while workmen leisurely decide about connections. Handsome hotel, and will have every convenience. Get up at 7, we are -it is now 1 a.m. and we are off to Marrakech by bus. Pack, unpack, travel-write when you can-as this.

[From Inside in Washington, Mar. 2, 1960] Africa on the Move—Emerging Morocco Has Need for Foreign Capital

(By May Craig)

(EDITOR'S NOTE.—This dispatch from Morocco by May Craig, Guy Gannett Publishing Co. correspondent, was written before the Moroccan port city of Agadir was wrecked by earthquakes, fire and a tidal wave.)

Hardly anywhere in the world can you see snowcapped mountains rising high just beyond palm trees, but you can in Marrakech. A grove of 250,000 date palms, spreading over acres and acres, with a paved road running through it, still on the flatlands that form the coastal plains of north Africa. And then behind the mighty ranges of the Atlas. This is one reason Winston Churchill came here to paint. There was the tropical riot of color in flowers—and the snowcapped mountains when he glanced up.

Morocco is an old, old land. In the 13th century B.C., the people we now call Berbers in Morocco invaded the Nile Delta and fought the Egyptians who called them Libyans. The Greeks and Romans called them Numidians or Moors. The Phoenicians invaded what is

now Morocco, and the Carthiginians came to trade, then the Romans came. The Green Hills along north Africa, across from Italy was the breadbasket of the Romans, and it was the dream of Mussolini that it should be again. This was the basis for his invasion of northern Africa for agriculture first, and then for empire, and led to our own battles against Italians and then Germans in World War II. This area is watered with the blood of American soldiers as well as myriad other men of the ages past.

The first Arabs came in the latter half of the 7th century and went as far as the Atlantic coast of Morocco. Many dynasties ruled, and the lands became Moslem. Its trade relations go back to Elizabeth I of England, mother of the present Queen. Links with the infant American Republic began almost at once. We do not forget that Morocco was one of the first nations to recognize the United States. And when President Elsenhower came here to visit King Mohammed V last fall he reminded him of our gratitude in those early days of struggle.

In 1912 Morocco became a protectorate of France, and Mohammed, then called Sultan, was later exiled. In 1956 Morocco became independent again and the sultan is now the king, and friendly to the West. All the nations of the world now recognize the sovereignty of Morocco and when we speak of "Africa on the move," we must recognize that Morocco is on the move, too. It is not easy. They want foreign capital; they need it, but they do not make the climate that is attractive in their fierce need to feel free. So much here is ancient. The agriculture, the veiling of the women, the lack of sanitation—the need for industry in a country where 85 percent of the activity is agricultural. There are the very rich and the swarming, breeding millions—go into the Casbah in Casablanca, that honeycomb of unbelievable slums, byways so narrow one must walk sideways to pass, and the quick dagger finds a target in the dark.

In Marrakech go through the medina, the souks, the markets and bazaars, where corners are spittoons and urinals are worse, and every second woman carries a baby on her back.

But it is a lovely land, the climate in Marrakech gives you 365 days of sunshine a year—that is why American pilots were brought here to train. The king is a good king, he devotes himself to the welfare of his people. But some of the fine new buildings, started 2 and 3 years ago, are still unfinished. No capital; it is leaving rather than coming. It is too uncertain whether the capital will pay, or even be redeemable.

The lovely new hotel in which we stayed in Marrakech, El Marana, is modern, but in many respects is not efficient. Only one elevator, and with more than three people in it, it will not go above the second floor. The flush toilets still have tanks on the wall—perfectly adequate, but not modern. But the colors are bright everywhere, the palm fronds wave, the mountains look down so white and cold, the people are friendly-"only remember, they could mob you tomor-' said one American to me. They are heart and soul with freedom for Algeria, as is Libya, on the other side of Algeria and if the tug came, they would be against us if we stayed with France. There is shock and much exaggeration about the atomic test of the French, and they remind us that we test in the Atlantic. Wild tales have been told the illiterate crowds of the danger of fallout, with pictures. Most of the papers are published by political parties who make capital out of national issues.

They hate any idea of foreign rule coming back in any form, and so they join the nationalistic bloc. But they stood with us firmly in World War II, and Mohammed would enact any anti-Jewish laws, even

though many of his people wanted him to. There is no racial discrimination here because people are of all shades, but I noticed that the waiters at the hotel were all light colored Arabs, the busboys were Negroes, or much darker.

Senator Mundt's Role in Wheat Legislation

EXTENSION OF REMARKS OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES Friday, May 13, 1960

Mr. CASE of South Dakota. Mr. President, South Dakotans are proud of the part played by the distinguished senior Senator from South Dakota [Mr. MUNDT] in bringing to the floor of the Senate soon a bill to deal with the wheat problem.

Senator Mundt's proposal was adopted in the Committee on Agriculture and Forestry as a compromise, in place of several other proposals offered by members of that committee.

I ask unanimous consent that an editorial setting out in detail the part played by Senator Mundr in reporting the wheat bill, and published in the May 5 edition of the Pierre (S. Dak.) Daily Capital Journal, be printed in the Ap-

pendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD. as follows:

[From the Daily Capital Journal, May 5, 1960]

MUNDT'S WHEAT PROPOSAL

If the present Congress adopts any new legislation dealing with the problems of wheat farmers it will be because Senator KARL MUNDT, of South Dakota succeeded in proposing a program which was acceptable to a majority of members of the Senate Committee on Agriculture.

In his current newsletter MUNDT discloses what occurred in an executive session of that committee on April 27. The committee had held hearings in which testimony was received with respect to a number of bills re-

lating to the subject.

The first bill considered, Mundt reports, was one offered by Senator Frank Carlson, of Kansas. It proposed a two-price program, distinguishing between wheat for domestic consumption and wheat exported. MUNDT supported the proposal, but southern Senators objected and the proposal falled by a tie vote.

The committee then considered a program proposed by the Farm Bureau. This also was rejected. The next proposal, submitted by Senator Ellender, of Louisiana, who is the committee chairman. The plan called for price supports at 75 percent of parity, 25 percent cut in acreage, and annual reduction in price supports. Senator HUMPHREY, of Minnesota offered a substitute which MUNDT supported, which would put price supports at 85 percent of parity and acreage cuts at 20 percent. This also failed to get committee approval.

It was at this point that MUNDT came through with a proposal which a majority of the committee did accept. The proposal contemplates a 3-year program of price supports at 80 percent of parity, a cut of 20 percent in wheat acreage, and a payment in wheat amounting to 50 percent of the normal production of the retired acreage. It was this feature, providing for payment in wheat, which provided the new approach to

the problem of reducing the existing stock of wheat now held in Government storage.

Under this scheme a farm which has a wheat allotment of 300 acres would have 240 acres planted to wheat and 60 acres retired. The farmer would have price support for the production from his 240 acres amounting to 80 percent of parity. He would also re-ceive a negotiable certificate entitling him to payments-in-kind amounting to one-half of the normal amount of wheat produce from the retired 60 acres.

This bill has been reported to the Senate. It has not been passed either by the Senate or the House; but it is the only bill that has even reached the floor of Congress for a vote. If it is passed by the Senate it has a reasonable chance of approval by the House, and probably would be accepted by President Eisenhower.

Failure To Hire Workers Over 49 Years of Age Constitutes Waste of Manpower

EXTENSION OF REMARKS

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES Friday, May 13, 1960

Mr. YARBOROUGH. Mr. President, one of the most complex employment problems of our day involves the refusal or reticence of many firms to employ well-qualified workers simply because the workers happens to be over 40 years

Modern society finds itself in position of having reached the place where man lives many years longer yet frequently his services are not wanted when he has reached middle age. This despite the fact that because of experience and other factors, his work may often be far superior to that of younger people. Refusal to hire middle-aged workers constitutes a serious waste of manpower.

As cosponsor of S. 1172, a bill to prohibit discrimination because of age in the hiring and employment of persons by Government contractors, I am especially interested in making available all pertinent information on this subject. ask unanimous consent to have printed in the Appendix of the RECORD the article from the April 26, 1960 issue of the Corpus Christi Times entitled "40-Year Age Limit on Hiring Wastes Productive Manpower."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FORTY-YEAR AGE LIMIT ON HIRING WASTES PRODUCTIVE MANPOWER

(By Nicholas Shuman)

CHICAGO .- A man of 40 may thump his chest and proclaim he's a tiger-full of pepper, at the peak of his creative power.

But if he loses his job, for whatever reason, there's a soul-searing discovery ahead: In a startling number of personnel offices around town he'll be considered unemployable-over the hill.

"They come right out with it and tell you in man talk: 'You're too blank-blank old for us."

This statement came from a man of 43husky, handsome, aggressive, the very model of the American man on the way up.

During World War II, he was an Army colonel, and since then has held a variety of top jobs-the last as a \$30,000-a-year national sales manager of a food product company.

He left that job to put to rest a dying family business and now—in 3 years of searching—has not been able to find work

to match his talents.

"I've got the ability to do a job," he said. "I've got the know-how and the stamina-But they won't let me try. At 43 I'm too

This Mr. X was found at the professional, sales, and clerical office of the State employment service. Here, looking for jobs were other "old" men in their forties.

They represented a variety of vocations but had a common denominator-poorly

concealed despair.

Mr. Y, 41 and the father of four, has been hungering for a job for 6 weeks, "but all they want is men under 35," he said. "Why? Experience should count for something, too.

Mr. Y has had 15 years in the food chain business, the last of them as a store manager. He quit, he said because one day his district manager told him:

"You've got 10 more years in the grocery business. We need young men to run these big stores."

Rather than face the risk of being shelved at 50, he went into the garage business with friends. It didn't pan out, and now he

can't get on a payroll again.

Mr. Z was 42, dark and scholarly, a college graduate. He was an executive for a clothing manufacturer, but the company folded.

He has been tromping the payements. "But it's no go—I'm too old," he said with a bitter grin.

"I took extra business studies at night schools and have a background in research and statistics. "I'm not limiting myself to any one field.

I'm wide open. I want a job. I can hustle and produce. "Employers just don't have a concept of

their social responsibilities.

"And they are hurting themselves. A man of 42 is a young man. I've got at least 25 good years ahead of me. The value of ex-perience is tremendous, but they pick a year-a number. They draw a line, and that's that."

Ada Mustcovy, older workers specialist for the State employment service, rifled through a stack of about 100 job orders from employers.

"About half of them show no age limitations," she said. "But that's because we don't raise the question of age in the forms.

"Too often, when it comes to actual re-ferral, they say, 'We want somebody younger.' "

Maximum ages on the orders that specified them ran something like this:

Bookkeepers, 20 to 25, one 25 to 40, one under 45; payroll clerk, 35; accounting clerk. 30; stock clerk, 35; would-be guards and watchmen get a break-55 to 60.

"For factory assemblers they often put on a limit of 35 to 40," she said.

"There's no really good reason. A few well advised employers ask for older workers. They find them more reliable, more experienced.

"One factory that asks for people up to age 60 says that the older ones work more slowly but more surely. They have fewer rejects.

"Dependability is characteristic of the older workers. I don't know if it's because they're depression-oriented or what, but they do take their jobs more seriously."

The U.S. Department of Labor has accumulated volumes of statistics proving that the older workers suffer higher unemployment rates, lose their jobs more often and are out

of work longer when they do lose them.
A study of job openings in seven U.S. metropolitan centers showed that 58 percent of the jobs available had upper age limits on them, 41 percent specifying an age under 45.

Why? One Federal employment specialist said that too often the blame lies on the shoulders of ineffective personnel managers.

'They don't take the trouble to find out from their production chiefs what a job demands," he said. "No job studies are made. They just assume a young man is Wanted.

"Prejudice enters into it. They think a plant has more vitality with younger work-

It's a foolish waste, "one we can't afford if we are going to meet our requirements for an expanding economy and adequate de-fense," said Emmanuel Kohn, regional employment security representative of the Department of Labor.

He noted that the employer who adver-"Wanted, senior analyst, under 40," is "throwing out of consideration about a third of the labor supply, eliminating men of high qualification and increasing his own cost of recruiting manpower."

Kohn knocked down some of the most popular prejudices against hiring older work-

Studies, he said, have proved these facts: Productivity-output per man-hour shows no significant decline until after age 55, and then the drop is only slight. Nearly half of older workers in fact exceed the average output of younger workers.

Stability: Older workers are not job hop-Pers. They stay longer, reduce the cost of job turnover.

Absenteeism and safety: No significant difference between age groups.

Skills: Older jobseekers have longer ex-perience, greater know-how. They make up more than half the reservoir of unemployed skilled workers.

Pension costs: Under most plans, there is no significant increase in hiring older work-

Kohn said, "The boys of World War II now are pushing into their forties and they certainly shouldn't be discriminated against. They lost some of their job experience on the way up; let's not slough off anything on the other side."

Kohn noted some serious implications for the future in the shifting age groups within

the population.

He said that in the next 10 years the work force will show an increase of 51/2 million

in the over-45-age bracket.

But because of the low birth rate of the depression years, the 25-to-44 group most favored by employers will rise by less than a million.

Employment prejudices obviously will have to give way to a statistical imperative.

New Hampshire and the Civil War

EXTENSION OF REMARKS

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Friday, May 13, 1960

Mr. BRIDGES. Mr. President, an article recently appeared in the Rochester (N.H.) Courier, which is the first of a series of articles dealing with the beginning of the Civil War in New Hampshire.

This fine account by Mr. Robert S. Ross, who has been recently named to the New Hampshire Civil War Centennial Committee, points up the impact which the Civil War had on the town of Rochester and other small surrounding

It not only, Mr. President, forcibly brings to mind the effect of the Civil War on a town and State, but it also forcibly reminds us of the problems created by war in general.

Its account of patriotism, enthusiasm and excitement exemplify the virtues which this country and the State of New Hampshire display in moments of stress and crisis.

I ask unanimous consent to have printed in the Appendix of the RECORD this fine account of the Civil War in Rochester, N.H.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ROCHESTER MEN WENT TO WAR JUST 99 YEARS AGO NEXT WEEK

(By Robert S. Ross)

(EDITOR'S NOTE.-Robert S. Ross, who lives at 29 Broad Street, was named recently by Governor Powell to the New Hampshire State Civil War Centennial Commission. Ross is probably one of the leading students of the Civil War in the entire State of New Hampshire.)

Rochester was a quiet little village 99 years ago this week. We had a school prob-lem then as now. Rochester was growing and needed a high school. They solved this unique problem by building one.

We were becoming quite a business center where the slogan of "a nimble penny is better than a slow shilling" prevailed. Some of our older businesses had already been established and were thriving. We were drawing new workers for our factories from Farmington and Barrington. New streets were being laid out, large homes being built. Things looked good.

The national scene was different. War clouds had been gathering for years, and now they covered the whole country, black and ugly as the crepe that was to be worn and become so familiar in every town and hamlet. Clouds not made of rain and moisture, but clouds of hate, distrust, and ignorance. Mr. Iverson, of Georgia, had summed it up pretty well back in December of 1860 on the Senate floor when he said: "Sir, disguise the fact as you will, there is an enmity between the northern and southern people, which is deep and enduring, and you can never eradicate it—never. We are enemies as much as if we were hostile states. We have not lived in peace. We are not now living in peace. It is not expected that we shall ever live in peace." Mr. Mason, of Virginia said "society against another form of society." We were two distinct societies: Mechanical and agrarian. If war came it was obvious who would be victorious. No agrarian nation has ever waged successful war against a mechanical nation, but sometimes the lessons of history go unheeded.

At 3:30 on the morning of April 12, 1861,

the slow burning fuse ran out and the re-sulting explosion was to change the course, the face, the very destiny of this country

Rochester went wild with excitement and each mail for 2 days told them that Maj. Robert Anderson and his band of 70, an underfed, underarmed, undersupplied garrison, was holding out. Their hopes were blasted by news of his subsequent surrender, but were raised anew by Lincoln's April 15 call for 75,000 men for 3 months' service.

If war had to be, then Rochester would uphold the national honor. Wild rumors were clicking in from the telegraph office at Great Falls (now Somersworth).

But soon these were received with distrust and Rochester settled down in compliance to Lincoln's proclamation for raising a regiment from New Hampshire. A young man from Gonic named Joseph D. Horne, upon learning of the fall of Fort Sumter, started the very same day for Lowell, Mass., and enlisted in the 6th Massachusetts Regiment. While marching through Baltimore en route to Washington this regiment was set upon by a mob of rowdies that stoned and fired into them. Private Needham, one of the three killed, fell by young Horne's side. He himself was to die of disease at New Orleans in 1863 at the age of 22.

On receiving the President's proclamation a public meeting was called at the townhall. The call for this meeting was signed by men with names like Farrington, Wentworth, Sanborn, Corson, Varney, McDuffee, Edgerly, Hussey, Kimball, and Wallace; names that are still among us today. That evening the hall was packed. Te meeting was called to order by Jacob H. Ela and James H. Edgerly was called to preside, with a list of vice president and secretaries chosen alternately from each political party. Three resolutions were passed: Rochester would sustain the administration, appropriate money for the volunteer and his family until otherwise provided for and form a committee of five to receive the names of volunteers who were to take to the field. Also it was agreed the firing of a cannon would be used as a signal to summon the people to the townhall. Many such meetings were held that spring and summer. Processions marched through the streets to the sound of fife and drum, frequently meeting other such processions coming in from other parts of

A committee was made up to furnish each Rochester volunteer with a revolver, heavy shirts, blankets, and other such articles as they thought would be valuable in the field. After the first 30-mile hike these impediments would likely be discarded along some dusty Virginia road. But the spirit was high and exemplified by Mrs. Anna Hanson, who, in her 94th year, made up one-half dozen shirts to be distributed to the boys' leaving on the trains from Dover. The recruiting har far exceeded the expectations and since only one regiment was required from the whole State, the residue was sent not to Concord but to Fort Constitution in Portsmouth for training until another regiment formed. Many of these were to become the 22d New Hampshire Regiment, who fought so gallantly in the first Battle of Bull Run under Col. Ambrose Burnside (who was to become commanding general, Army of the Potomac). Capt. C. W. Edgerly raised 47 recruits, whom the Dover Enquirer described as some of the best in town, some of whom never used intoxicating drink, not even tobacco. These same men were to end up in the 5th New Hampshire Regiment, known as the Fighting Fifth throughout the Army of the Potomac. Third regiment was to participate in the war's most sanguinary battles under the gallant Colonel Cross who died in action at Get-

tysburg. Enlistments were so low that two special town meetings were called to vote a total of \$200 to each volunteer. Samuel Jones, Daniel McDuffee, Daniel Young, Charles Chisholm, and Rufus Clark were appointed as a committee for additional volunteers. They devoted September 9 to drilling the townspeople, all business was suspended, and the evening was dedicated to some rather eloquent and extended speeches. One local gent remarked from the platform that "slavery is the blackest soot that ever befouled any national chimney." Eloquent, indeed. The bounty system was effective, and all recruits received their \$200, which was a sizable sum back then. The quotas filled rapidly under such inducements. Cool. businesslike committees replaced the first flush of patriotic zeal. The Sanitary Commission (the Civil War Red Cross) had now become thoroughly organized and the women of Rochester were sending frequent supplies for the volunteers and necessities for the sick and wounded.

Rochester had proven her devotion to the national freedom and was to continue so unselfishly throughout 4 long, dark years of civil strife. She assumed the direct cost of \$67,281.89. This does not include the sums paid by individuals nor the gifts of patriotic women. She had sent 273 of her sons to the seat of war and saw them return with depleted ranks, stricken with disease, and old before their years. She was to build monuments to these boys and continue to honor them as long as they lived. I am sorry I never had the chance to meet one of these veterans. They were a special lot. They had been part of something of which there had never been anything quite like and never would be again.

No matter what they were to do in life, they were always remembered as the "boys in blue." The remorseless years thinned in blue." The remorseless years thinned their ranks until one Memorial Day there wasn't one left to ride at the head of the

New York State Cooperation With the Federal Government in the Atomic Energy Field

> EXTENSION OF REMARKS OF

HON. KENNETH B. KEATING OF NEW YORK

IN THE SENATE OF THE UNITED STATES Friday, May 13, 1960

Mr. KEATING. Mr. President, I wish to invite attention today to the fine spirit of cooperation which exists between New York State and the Federal Government with regard to the framing and establishment of New York's atomic energy

regulation program.

An amendment to the Atomic Energy Act which was enacted last year provides for the assumption of exclusive State regulatory control in the field of atomic energy. New York has been for several months endeavoring to work out a regulatory program which will be acceptable to the Atomic Energy Commission under this authority.

In accordance with a recent bill enacted by the legislature, the State is presently drafting its proposed agreement which will be submitted to the Atomic Energy Commission in the very

near future.

Mr. President, these events represent a significant step. As the President has so clearly stated, it is important that we recognize "the need to increase the functions and responsibilities of the States as a safeguard against excessive centralization of governmental power in this country." I am hopeful that New York's efforts in this field will set an example which other States will follow.

Mr. President, I ask unanimous consent to have printed at this point in my remarks a press release from Governor Rockefeller, which includes an exchange of letters between the President and the Governor on the vitally important subject of atomic energy regulation.

There being no objection, the press release was ordered to be printed in the

RECORD, as follows:

STATE OF NEW YORK. EXECUTIVE CHAMBER

Albany. Governor Rockefeller today made public an exchange of correspondence between the President and the Governor, and between the Atomic Energy Commission and the Gov-ernor, on the subject of atomic energy regu-

The correspondence disclosed that the Atomic Energy Commission has expressed the hope that the State of New York take the lead in reaching an agreement with the Commission on atomic energy regulatory control and thereby "serve as an example for other States to follow."

Authority for such an agreement was contained in an amendment to the Federal Atomic Energy Act, adopted last year, which would provide for the assumption by the State of exclusive regulatory control within the State of radioisotopes, natural uranium and thorium, and fissionable material in quantities of less than a critical mass.

In his response to the President, Governor Rockefeller said that "I am pleased to assure you that we shall make every effort to cooperate with the Commission in arriving at an agreement that will serve as a valuable precedent in safeguarding the public health and safety and in introducing into the regulatory control of atomic activity the competence and high regard for the public interest which exists among State authorities."

Legislation expressly authorizing the Governor to enter into such an agreement with the Commission was adopted by the New York State Legislature in its last session, and the State's office of atomic development was at the same time authorized to enter into related subsidiary agreements with the Com-mission on behalf of the State.

The regulatory authority that would be assumed by the State under the proposed agreement would primarily be administered by the State department of health, the State department of labor, and the New York City Department of Health, with the State office of atomic development functioning in a coordinating role.

The texts of the letters from President Eisenhower and the Atomic Energy Commission to Governor Rockefeller, and his responses, follow:

> THE WHITE HOUSE, Washington, April 11, 1960.

Hon. NELSON A. ROCKEFELLER, Governor of New York,

Albany, N.Y.

DEAR NELSON: I have often stressed the need to increase the functions and responsibility of the States as a safeguard against excessive centralization of governmental power in this country. Public Law 86-373 was enacted in response to a recommendation by the Joint Federal-State Action Committee.

The law authorizes the Atomic Energy Commission to enter into agreements with the Governors of the States under which the States will assume responsibility for specified regulatory functions now per-formed by the Commission for the promotion and regulation of the peaceful uses of atomic energy. Following consultations with representative State groups, the Commission has prepared proposed criteria to guide both parties in reaching agreement on the transfer of these functions.

I have asked the Chairman of the Atomic Energy Commission to send copies of the proposed criteria to you. Your views, and those of the other Governors, will be important in determining the actual criteria to be applied. I request that you give this matter your personal attention and ask that you send your views as soon as possible to Mr. John A. McCone, Chairman of the Atomic Energy Commission. Mr. McCone and his staff will welcome an opportunity to meet with you or your representatives to discuss the proposed criteria and other aspects of the program authorized under Public Law 86-373.

This legislation is a constructive step toward a better distribution of functions between the Federal Government and the States. I know that you share with me the hope that more such steps to expand State responsibility will be taken in the future.

With warm regard.

Sincerely,

DWIGHT EISENHOWER.

U.S. ATOMIC ENERGY COMMISSION, Washington, D.C., April 12, 1960. Hon. NELSON A. ROCKEFELLER, Governor of New York,

Albany, N.Y.

DEAR GOVERNOR ROCKEFELLER: Within the past few days, President Eisenhower wrote to you about the importance be attributes to the reapportionment of responsibilities between the States and the Federal Government and mentioned the authority granted by Public Law 86-373 to take such steps in the atomic energy field. Our first step in implementing this proposal is the develop-ment of criteria for use in the discontinuance of the Atomic Energy Commission's responsibilities over certain radioactive material and the assumption of those responsibilities by the States through agreements with the AEC.

Therefore, I am sending copies of our "Proposed Criteria for Guidance of States and the AEC in the Discontinuance of AEC Regulatory Authority Over Byproduct. Source, and Special Nuclear Materials in Less Than a Critical Mass and the Assumption Thereof by States Through Agreement." Also enclosed are the following background materials: Public Law 86-373; a summary of AEC policies and procedures of the regulation and licensing of source material, special nuclear material, and byproduct materials; and AEC regulations applicable to source, special nuclear materials, and byproduct material.

My fellow commissioners and I are looking forward to receiving your comments on the proposed criteria and to working with you to achieve the objectives of Public Law 86-373.

Because of the great interest of your State in atomic energy and of your many atomic energy activities, we hope that you would be willing to take the lead in this matter of reaching an agreement and to serve as an example for the other States to follow. If we or our staff can facilitate your consideration of this material, please let us know.

Sincerely yours,

JOHN F. FLOBERG, Acting Chairman.

STATE OF NEW YORK. EXECUTIVE CHAMBER, Albany, April 26, 1960.

THE PRESIDENT, The White House, Washington, D.C.

DEAR MR. PRESIDENT: Thank you very much for your letter of the 11th and the related material which was sent to me by the Atomic Energy Commission on April 12th at your request. I share your view that the law authorizing Federal-State agreements in the atomic energy field constitutes a constructive step toward a better distribution of atomic functions between the Federal Government and the States, and wish to advise you that we are proceeding immediately to

with the objective of submitting our views to the Commission within the next few

We are gratified that the Commission, in recognition of our interest and activity in atomic energy, has expressed the hope that New York State would be willing to take the lead in reaching an agreement and to serve as an example for other States to follow. We are mindful of the responsibility that this imposes upon us, and I am pleased to assure you that we shall make every effort to cooperate with the Commission in arriving at an agreement that will serve as a valuable Precedent in safeguarding the public health and safety and in introducing into the regulatory control of atomic activities the com-Petence and high regard for the public interest which exists among State authorities.

We look upon this new step as a milestone in the development and control of atomic energy, and we shall do all that we can to insure its success.

Sincerely,

NELSON A. ROCKEFELLER.

STATE OF NEW YORK. EXECUTIVE CHAMBER, Albany, Apr. 26, 1960.

Hon. JOHN A. McCONE,

Chairman, U.S. Atomic Energy Commission, Washington, D.C.

DEAR JOHN: I am inclosing a copy of a letter I have sent to the President advising that New York State will submit its comments on the Commission's criteria for pro-Posed Federal-State atomic energy agreements to you within the next few

We deeply appreciate the confidence in New York State evidenced by the expression of the Commission's hope, contained in Acting Chairman Floberg's letter to me of April 12, that we take the lead in reaching an agreement with the Commission and thereby serve as an example for other States to follow. We shall make every effort to achieve this desirable objective.

With best wishes. Sincerely,

NELSON A. ROCKEFELLER.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent; Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

evaluate the Commission's proposed criteria LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES .- The Joint Committee on Printing shall have control of the arrangement and style of the Congres-SIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUS-TRATIONS, MAPS, DIAGRAMS.-No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

- 1. Arrangement of the daily Record .- The Public Printer will arrange the contents of the daily Record as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: Provided, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the Record with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered
- 2. Type and style.—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the Congressional Record, in 71/2 -point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 61/2-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.
- 3. Return of manuscript.-When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.
- 4. Tabular matter.-The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.
- 5. Proof furnished .- Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than

six sets of proofs may be furnished to Members without charge.

6. Notation of withheld remarks.-If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.
7. Thirty-day limit.—The Public Printer

shall not publish in the Congressional RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. Corrections .- The permanent Record is made up for printing and binding 30 days after each daily publication is issued; there-fore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the Congressional Record the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to

apply to conference reports.

10. Appendix to daily Record.—When either House has granted leave to print (1) a speech not delivered in either House, (2) a news-paper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. Estimate of cost.—No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. Official Reporters.—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Daily Digest

HIGHLIGHTS

Senate passed military construction bill, and received veto of area redevelopment bill.

Senate

Chamber Action

Routine Proceedings, pages 9496-9529

Bills Introduced: 6 bills and 1 resolution were introduced, as follows: S. 3543-3548; and S.J. Res. 193.

Pages 9498-9499

Bills Reported: Reports were made as follows:

S. 1235, authorizing the Secretary of Commerce to enter into contracts for the conduct of research in the field of meteorology (S. Rept. 1348);

S. 3074, providing for U.S. participation in the International Development Association (S. Rept. 1349); and

H.J. Res. 602, relating to the establishment of a National Transportation Week (S. Rept. 1350). Page 9498

Bills Referred: Three House-passed bills were referred to appropriate committees. Pages 9495-9496

National Transportation Week: Senate passed without amendment and cleared for President H.J. Res. 602, relating to the establishment of a National Transportation Week.

Coast Guard: H.R. 9449, relating to personnel matters in the Coast Guard, was passed without amendment and cleared for President.

Military Construction: Senate passed H.R. 10777, fiscal 1961 authorizations for military construction, with committee amendment (in nature of a substitute), which had been amended as indicated below:

Adopted: Byrd (Virginia) amendment to guard against excessive costs by air freight of military household effects; Byrd (Virginia) amendment providing that additional fees for reimbursement to contractors for certain project costs shall not exceed the interest that Treasury would have to pay on such money, if borrowed for the same period; Holland amendment to add authorization for housing units at Patrick Air Force Base, Fla., and at Clinton-Sherman Air Force Base,

Okla.; Goldwater amendment to add authorization for housing units at Army Electronics Proving Ground, Fort Huachuca, Ariz.; Anderson amendment to add authorization for housing units at White Sands Proving Ground, N. Mex.; Mansfield amendment to add authorization for housing units at Glasgow Airport, Mont.; and Stennis amendment authorizing \$800,000 for operational facilities, McGee-Tyson Airport, Knoxville, Tenn.; and

Rejected: On division vote, Douglas amendment to eliminate provision for transfer of Food and Container Institute from Chicago, Ill., to Natick, Mass.

Senate insisted on its amendments, asked for conference, and appointed as conferees Senators Stennis, Jackson, Cannon, Case (South Dakota), and Saltonstall.

Pages 9529-9557, 9561-9564

Veto Message—Area Redevelopment: President transmitted message vetoing S. 722, to establish an effective program to alleviate conditions of unemployment and underemployment in certain economically depressed areas—ordered to lie on table and be printed.

Pages 9569-9570

D.C. Auto Safety: Senate again made its unfinished business S. 2131, to amend in several respects the D.C. Motor Vehicle Safety Responsibility Act. Page 9565

Saline River, Kans.: Letter from Secretary of Army transmitting report, dated March 10, 1960, from Chief of Engineers, together with accompanying papers and an illustration, demonstrating justification of Wilson Dam and Reservoir, Saline River, Kans., was ordered to be printed as S. Doc. 96.

Nominations: The following nominations were received: 10 Army; 1 Navy; and numerous Coast and Geodetic Survey nominations.

Pages 9574-9575

Program for Monday: Senate met at noon and adjourned at 6:08 p.m. until noon Monday, May 16, when its unfinished business will be S. 2131, D.C. auto safety.

Senator Randolph, West Virginia's Son of the Year—Address by Senator Mansfield

EXTENSION OF REMARKS

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, May 16, 1960

Mr. MANSFIELD. Mr. President, on Saturday, May 14, I met with members of the State Society of West Virginia for the purpose of designating our distinguished colleague, the Senator from West Virginia [Mr. Randolph], as West Virginia's Son of the Year.

Mr. President, in meeting with these people of West Virginia, I felt both honored and humble. Their State had just been subject to much disgraceful malignment and to many irresponsible charges

of bigotry and backwardness.

West Virginians have now given an answer to those who fostered this malignment, to those who made these charges. They have given an example to the rest of us of a political maturity in which such false issues as religion and sectionalism are put aside and political judgments are made on the basis of records and platforms. I sincerely hope the rest of us, particularly the pollsters and commentators, will take this example to heart.

Mr. President, I ask unanimous consent that my remarks in designating Senator Jennings Randolph as West Virginia's Son of the Year, delivered before the State Society of West Virginia, be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PRESENTATION TO SENATOR JENNINGS RAN-DOLPH AS WEST VIRGINIA'S SON OF THE YEAR, SHERATON-PARK HOTEL, MAY 14, 1960

(Address by Senator Mansfield)

I hope that West Virginia has room for many sons. In view of the warmth and friendliness of your welcome to me I am going to apply for adoption. I have no sense of being an outsider here tonight and perhaps that is understandable. For my meeting with you, topographically speaking, is a kind of meeting of the mountains. What West Virginia is to the East in that respect, Montana is to the West. Each State gives character and spine to its respective sector of the country.

I've heard somewhere that West Virginia is a wonderful State in which to work because if you get tired all you have to do is stop and lean on it. Montana is something like that except that there we can lean on

it even when we are working.
Even as West Virginia and Montana share
a common heritage of mountains, the two
States also share a common heritage of great

natural resources and for that reason they are sometimes called Treasure States. For those of us of these States, however, the real treasure is not copper or coal but fine, generous and friendly people.

We share another heritage—West Virginia and Montana—a less pleasant heritage—the heritage of grave economic problems which grow out of a heavy dependence on a single industry. This is not the occasion to detail these problems. I mention them only by way of noting that we are close not only in the sense of common joys but also common sorrows.

For, tonight, then I hope you will act favorably on my petition for adoption as a son of West Virginia. I file it because it takes an ordinary son like myself to recognize an outstanding son. And to recognize and to honor an outstanding son of West Virginia is half of the reason why we are gathered here tonight.

The man whom we honor as West Virginia's son of the year began a long time ago the work which was to merit him this great distinction. The work began as soon as he had learned enough at Salem College to teach his younger brothers and sisters. And for 7 years, as a newspaperman and educator he taught and taught well.

But that was only prelude to his coming to the House of Representatives in 1933. From his seat there which he held for a long time-I found him enthroned as a senior when I arrived as a freshman in 1943-from his seat there he carried on his work in education. Only this time he was not educating West Virginia about the rest of the country but rather the rest of the country about West Virginians. He did much, too, I may add, during his service in the House to make the District of Columbia the 56th county of West Virginia. So strenuous was his-if I may coin a word-his Westvirginianism that we in the House of Representatives in 1946 voted him the man who was doing most for his constituents.

There is one achievement to his everlasting credit which dates from his days of service in the House: Few people know of it because it is in keeping with his modest nature not to publicize it. Yet, I believe tonight is the time to bring it to light. Back in 1936, he authored the act which established blind citizens as the operators of newsstands and snack bars in all Federal buildings. Out of his sensitive awareness of the needs of his fellow men this concept has grown until now more than 2,000 blind persons are running these small, successful businesses. Each year they do over \$35 million of business and last year they earned more than \$5 million for themselves. That is the kind of imaginative approach to public welfare in which the entire Nation can share a deep sense of achievement. We, West Virginians, can take special pride in the fact that it was our son of the year who provided the inspiration and the legislative drive in the House of Representatives which made the achievement possible.

Yet his long service in the House was also prelude, prelude to his coming to the Senate. In that body, in his work on the Labor and Public Welfare and Public Works Committees, in his work on the whole range of the questions which come before the Senate, in close partnership with your other dedicated Senator, Bos Byrd, he has pursued a diligent course of service which blends the interests

of West Virginia with those of the Nation in a most responsible and helpful fashion.

West Virginia's son of the year is well chosen. It is a distinction and a privilege to make this year's presentation to Senator Jennings Randolph whose service to the State and to the Nation has extended over many years and yet is just at its beginning.

To a good, decent, honorable and devout man it is a personal privilege to have the honor to present this citation. It is more than deserved.

Sound Leadership Manifested by Secretary of Defense Thomas S. Gates, Jr.

EXTENSION OF REMARKS

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. ARENDS. Mr. Speaker, the re-cent decision on Defense Department communications announced by the Secretary of Defense, Thomas S. Gates, Jr., on May 12, is in the pattern of conduct he has established since he took office some 6 months ago. In this period Mr. Gates has left no doubt that he not only recognizes the responsibilities of the Secretary of Defense in the law and under the Constitution, but he has made it clear beyond doubt that he will meet these responsibilities head on, with timely, honest decisions. There is no question that he has sought out the problem areas, brought their issues to the surface, and moved with forceful purpose to their resolution.

The 1960 defense picture is one which opens a new era of tremendous weapons, fantastic speeds, global ranges, and technological sophistications unbelievable a few years ago. The essence of such military operations is control, and the fundamental tool of control is communications. Without communications the most modern of Armed Forces would be practically useless. The volume and cost of long-range communications within our defense system is, thus, of great magnitude. Efficiency and economy require that we do not support unnecessary duplications in the vast and extremely expensive worldwide military communications networks. Mr. Gates' recent decision has wisely recognized this requirement and has given us a solution. His action will give us one efficiently integrated system. Wisely, it will eliminate any uncoordinated systems which might exist, and head off the future creation of any such unnecessary facilities.

Dollars, resources, and time are all vital to this Nation, and the system cre-

ated by Mr. Gates will insure that we get the most out of each of these. Research and development will be pointed toward the actual requirement of our defense system, without duplication and waste. The system itself will be based only on our total needs, with no other consideration. This is truly a step in the right direction.

This action by Mr. Gates will save money, conserve our resources, and provide us with more efficient communications system—in a word, it will improve the defense and security of this Nation. It will result in dollar and materiel economy and at the same time provide enhanced military efficiency.

It is a constructive step.

It is thoroughly in keeping with the kind of sound, responsible, and exemplarly leadership which has been so consistently manifested by the present Secretary of Defense, Thomas S. Gates, Jr.

End of a Self-Imposed Moratorium

EXTENSION OF REMARKS

HON. WALLACE F. BENNETT

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, May 16, 1960

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "A Self-Imposed Moratorium Ends," published in the Salt Lake Tribune of May 8, 1960.

There being no objection, the editorial was ordered to be printed in the

RECORD, as follows:

A SELF-IMPOSED MORATORIUM ENDS

Eighteen months ago the United States and the Soviet Union announced voluntary suspension of nuclear tests. Then just before the self-imposed U.S. moratorium expired on January 1, President Eisenhower announced that this country felt free to resume testing but that advance notice would be given the rest of the world.

He has now done so. The United States will resume underground testing, described as a "nonweapons" nature, possibly before the end of 1960. However, it would not be surprising if some of the knowledge thus gained has military application. Many scientific studies can be put to military use.

The question of resuming tests has provoked heated debate in Government and scientific circles. The general belief had been that all but the smallest underground tests could be detected by earth shocks recorded on seismographs. But later studies brought out a new possibility—a process called "decoupling" can be used to dampen and disguise underground nuclear explosions.

Another factor has also been emphasized—the matter of good faith.

So far as anyone knows, all nuclear testing ceased during the moratorium. But as Chairman McCone of the Atomic Energy Commission emphasizes the United States has to depend on the Russlan's word for this, And if they have not done what they said they were doing, then they could have put the past 18 months to excellent use.

put the past 18 months to excellent use.
In discussing the President's decision with reporters, James C. Hagerty, White House press secretary, said that the resumption

program has a two-fold goal: (1) Further development of peaceful uses of nuclear power; (2) discovery of effective methods of detecting nuclear explosions of all sizes.

The latter point is of particular signifi-

U.S., British, and Soviet experts are to meet in Geneva Wednesday to eychange information on detection problems. Moreover, America and Britain have already invited Russia to join in a research program on the detection of underground explosions.

Thus, the United States, by resuming tests for such a purpose, stresses a problem in which the three major atomic powers are

supposedly concerned.

The effect of the announcement on the summit conference is also cause for speculation since a nuclear test treaty may be considered there. The Russians, of course, can now say that the United States, by resuming tests, has kicked over the apple cart. But if they sincerely desire a treaty, they should realize that the test moratorium was a voluntary one and that, under such circumstances, resumption of the tests by no means ends the possibility of agreement. Indeed, one announced reason for resuming testing fits in very well with development of a treaty.

The most important point, however, is this:

For 18 months the United States has done no testing. That is a long period of time in a fast-moving world. And the United States is not pledged to stand still forever while i's are dotted and t's are crossed.

We believe that President Eisenhower made the proper decision.

Omaha's Archbishop Bergan Receives NCCJ Silver Medallion Citation; New York Mayor Wagner Main Speaker

EXTENSION OF REMARKS

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. CUNNINGHAM. Mr. Speaker, the mayor of New York City, Robert F. Wagner, was the speaker at a recent banquet in Omaha at which the National Conference of Christians and Jews paid tribute to the work of the Most Reverend Gerald T. Bergan, archbishop of Omaha, in the field of human relationships and understanding.

Archbishop Bergan received the NCCJ Silver Medallion Citation at the banquet for his lifelong work toward better understanding among all people. It was a well-deserved award to a leader in our community.

Under leave to extend my remarks, I include excerpts from the address by Mayor Wagner and also excerpts from the response of Archbishop Bergan:

NCCJ CITES AECHBISHOP

(Excerpts from address of the Honorable Robert F. Wagner, mayor of the city of New York, on the occasion of the NCCJ silver medallion citation banquet honoring the Most Reverend Gerald T. Bergan, Archbishop of Omaha.)

It was with pleasure and pride that I accepted your invitation to be guest speaker at the annual brotherhood dinner of the National Conference of Christians and Jews

here in Omaha. During the 31 years of NCCJ's existence we have seen many changes that could be characterized as revolutionary in nature in every area of this country and, in fact, throughout the world. We have lived through a depression, World War II, the Korean conflict and cold wars. We have experienced many of the effects of the atomic age and the space age. Yet, with all of our knowledge and ingenuity, man has not yet learned to live in peace and harmony with his fellow man.

In our own United States we find that some racial and ethnic groups are denied the right of free choice concerning the neighborhoods in which they would wish to live. We find, also, that these groups are very often excluded from certain types of employment and that their children are denied entrance to some schools. We also see these same struggles in other parts of the world and must be shamed by the specters of prejudice and bigotry wherever they rear their ugly heads.

Much progress has been made in the area of intergroup relations, and in my own city of New York we have been diligent in making firm strides to plug up loopholes which would pedmit discrimination in any form.

pedmit discrimination in any form.

All during my years in public service the National Conference of Christians and Jews has been one of the civic organizations I have relied on for counsel and cooperation. New York City is rich in human resources. We have representatives of every race, creed, color, and national origin among our residents. All have valuable contributions to make to the growth, development, and welfare of our city. To frustrate this talent is a waste that we cannot afford. NCCJ, by bringing together Protestants, Catholics, and Jews in programs of brotherhood, strikes a hard blow at the roots of prejudices.

I cannot speak too highly of NCCJ's work with our young people. Its programs of career clinics, summer camps, human relations institutes and leader conferences help prepare youths for the roles of responsibility they must soon assume. Since prejudices are not inborn it is important that we reach our youngsters before they can acquire them.

Let's not fool ourselves. Today's young people are deeply disturbed by the incidents of racial outbreaks in the country they are being taught to love and believe in as the world's stronghold of democracy. If this were not so, we would not see, among other things, the spreading wave of sympathy action concerning the "sit-in" strikes. Responsible students on campuses, located distances away from the scenes of such strikes, are protesting the indignities to which their contemporaries are being subjected. know that discrimination is morally wrong. It is heartwarming and inspiring to see students in the North and South speak up for what we all should know is right and just. They are also to be commended for their determination to accomplish their ends only by peaceful and rational means.

There is one other subject I would like to touch on briefly, and that is NCCJ's endorsement of the code of candidates set forth by the National Fair Campaign Practices Committee. This year's elections are crucial. Racial or religious identification of candidates should never be used to detract from real and basic issues in this campaign.

In closing, I extend my humble congratulations and best wishes to his excellency Archbishop Bergan as he receives your 1960 silver medallion citation. I would also like to congratulate the National Conference of Christians and Jews upon the designation of his excellency as its honoree. Congratulations are also due the National Conference of Christians and Jews here and in every community where it is organized for all of the work it is doing to make democracy

work. I think NCCJ's statment that "Brotherhood means giving to others the same rights, respect, and dignity one wants for oneself" sums up concisely what we have been talking about this evening. Right will always be on our side as long as our words and our deeds affirm the Judseo-Christian teachings of "the brotherhood of man under the Fatherhood of God."

(Excerpt from response of the Most Reverand Gerald T. Bergan, archbishop of Omaha, following reception of silver medallion citation of the National Conference

of Christians and Jews.)

A can would have to have a heart of stone to remain untouched by this magnificent manifestation of good will extended here tonight.

I am very pleased that the proceeds of this dinner will be used to establish a scholarship in my name for continued study

in the field of human relations.

My thanks are extended to the National Conference of Christians and Jews, Mayor Wagner of New York and to all who helped make this citation banquet a success. My special gratitude is extended to Mr. Morris

Jacobs, the dinner chairman.

We honor a man because he is human and, being human, we realize that we are all children of God and brothers of one another. Events such as this dinner tonight are important occasions in our explosive times. Our first line of defense is right here at occasions such as this. We in our democracy must unite together as never before. Our enemies have conquered one-third of the world without firing a single shot. A dynamic Judaeo-Christian manner of life is a "must" if we are to remain free and strong.

One of the saddest experiences in our conversion of the world to our way of life was the recent tragedy of Little Rock. We will win no friends throughout the world by advertising our modern plumbing and Hollywood scenery if our lives are scarred by events such as Little Rock. Tonight when we go home it might be well for us to look into our mirrors and asked ourselves if we really mean it when we speak of brotherhood. We might check to see if we are following the NCCJ rule of "Love thy brother as thyself."

Thank you once again for this wonderful honor which you have accorded to me. May occasions such as this help us to continue our work for a united Omaha, a united Nebraska, a united America, and a united World.

Wiley Reviews Accomplishments of Congress-Outlines Major Legislative Action Needed

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 16, 1960

Mr. WILEY. Mr. President, as Congress hits the homestretch, we all recognize that there is a lot of work still to be done,

Recently, I was privileged to review over Wiconsin radio stations, some of the legislation not only of interest to the Nation, but of special significance to my home State. Reflecting on a part of the big job ahead, I ask unanimous consent to have excerpts from the address printed in the Appendix of the Record.

There being no objection, the excerpts were ordered to be printed in the Record, as follows:

WILEY REVIEWS ACCOMPLISHMENTS OF CON-GRESS—SAYS: "HARD WORK AHEAD"—OUT-LINES MAJOR LEGISLATIVE ACTION NEEDED (Excerpts of address prepared for delivery by

Senator ALEXANDER WILEY, Republican, of Wisconsin, over Wisconsin radio stations)

Friends, at this time, I would like to report to you on the progress of legislation in Congress.

According to current plans, this will be a short session. Why? Well, the Democratic and Republican conventions, as you know, are coming up in July. The purpose of early adjournment would be to avoid an entanglement of our legislative work with the politicking of the conventions. Even there are many efforts to play politics with issues of significance to the country.

Despite the fact that this is an election

Despite the fact that this is an election year, however, I believe Congress should stay in session as long as necessary to get its work

done.

As of now, the Senate has been in session 73 days, passed 246 measures and reported about 350 measures from the committees.

OUTLOOK FOR FARM LEGISLATION

Question. Senator Wiley, what is the outlook for farm legislation?

Answer. Frankly, the prospects for any large-scale farm bill are extremely dim.

Question. Why?

Answer, For many reasons. Fundamentally, however, there has been real difficulty in reaching agreement—even among farmers and farm organizations—as to what should be done.

be done.

Over the years, exhaustive efforts have been made to find legislative remedies for the complex problems in agriculture. Unfortunately perhaps, because these are sometimes "politically motivated" these "patent political medicines" have not succeeded in curing the patient—that is the farm economy.

As in the past, I again stress that legislative action can only provide a temporary palliative. The basic problem must be solved in accordance with sound economic principles—that is, adopting a realistic method for creating a relative supply-demand balance for dairy and other farm products.

Question. If the outlook is dim for a socalled omnibus farm bill, what legislation has a realistic chance for enactment?

Answer. First, the conservation reserve of the soil bank will in all likelihood be extended and somewhat expanded. However, the program, I believe, should be aimed—as directly as possible—at curbing production of the major farm products in surplus, that is, wheat and corn.

In addition to attempting to deal with the surplus problem, the conservation reserve, of course, benefits the country in other ways. These include: Creating a soil bank of land of enriched fertility for the future; expanding our forest reserve by tree plantings; attempting to improve the argicultural economy by reducing surpluses at less cost than the price support program has been to the taxpayer; providing an opportunity for expanding not only soil and forest resources but also carrying on watershed projects, improving habitats for wildlife and other such purposes.

Question. What is the outlook for change in price support levels, for example, for dairy products?

Answer. Earlier this session, I joined other Senators in sponsoring legislation which would increase the price support level.

Question. Annually, there is considerable pressure for modifying the tax laws relating to co-ops as well as increasing interest rates for REA and co-op loans. How does it stand at this time?

Answer. The Ways and Means Committee—the taxwriting body of Congress—has held extensive hearings on these controversial issues. As yet, however, the views are so wide apart that such legislation—which constitutionally must originate in the House of Representatives—has not yet been forthcoming; nor does it look like it will.

Question. Are there any other legislative proposals to be considered in the farm

picture?

Answer. Yes. Legislation (along the lines of a bill I introduced earlier) for extending and expanding the school milk program has been approved by Congress and signed by the President.

Currently, also, there is pending before the Senate a bill, S. 690, to expand research for utilization of farm commodities for industrial purposes. I would hope that expeditious approval be given this measure providing new use through industry utilization, which may well be one of the answers to our production-exceeding problem.

Incidentally, I am continuing to urge action on my bill for establishing a much needed dairy research laboratory at Madison, Wis., to find better ways of processing, distributing and utilizing dairy products.

I would hope, also, that the bill I pro-

I would hope, also, that the bill I proposed for establishing a Country Life Commission would be enacted. As you may know, the purpose would be to make a longrange evaluation of the social, economic and technological revolution in agriculture, and propose recommendations to enable the farmer to better adjust to these changes.

Question. What about the recent warnings—almost "public scares"—by the Food and Drug Administration relating to utilizing chemicals, antibiotics and other products for animal health and crop protection?

Answer. Over the years, the American farmer has—in good faith—attempted to provide the consuming public an abundant supply of good, healthful foods. In this effort, chemicals and other products have been utilized.

According to recent investigations, however, it now appears that use of some of these may be questionable. Naturally, our first obligation is to protect the public health. However, I do not believe that the Food and Drug Administration should engage in sensationalism.

Instead, the American farmer deserves a fair break. I have contacted the FDA to stress the need for working out reasonable, effective ways to assure utilization of only safe products that will serve the purposes of our farmers; at the same time, adequately protect the public health.

OTHER ISSUES OF INTEREST TO WISCONSIN

Question. Now, turning to other fronts, what's the outlook for legislation in other fronts of particular interest to Wisconsin?

Answer. Well, that's a big order. Briefly,

Answer. Well, that's a big order. Briefly, however, I'd like to review with you a few of the major issues. These include: First, authorization of a realistic rivers and harbors bill to carry forward work on flood control projects as well as deepening and improving our port and harbor facilities.

As you will recall, President Eisenhower vetoed a measure last year because he considered it too much of a "pork barrel" nature. The task now is to get enactment of a realistic piece of legislation—one that will fulfill our development needs but at the same time can avoid a Presidential veto.

In view of the real need for carrying forward such projects—many of which are now underway in our port cities, I believe that Congress should act expeditiously. Currently, the appropriations bill, H.R. 7634, is pending before the Senate Appropriations Committee. Included in this measure are authorizations of funds for work on the following projects: Menominee Harbor and River; Kewaunee Harbor; Superior-Duluth

Harbor; Ashland Harbor; and Washburn Harbor.

In the 1961 budget, also, maintenance funds would be provided for the following projects: Green Bay; Manitowoc; Milwaukee; Port Washington; Racine; Sheboygan; Sturgeon Bay and Like Michigan; Ship Canal; Two Rivers: and others.

Two Rivers; and others.

Secondly, there is a need to keep close watch on the efforts to enact the so-called water steal bill that would threaten to divert dangerously large volumes of water from Lake Michigan and thus lower the water levels of the lake.

As you may know, I have voted against the enactment of this legislation. Currently, the matter is still pending before the Foreign Relations Committee.

Question. Are there any new develop-

ments?

Answer. Yes, the "pushers" of this water-diversion legislation are now trying an end run, so to speak. Under the guise of proposing a \$12 million antipollution program for the Great Lakes generally, an effort is being made to earmark specific funds for dealing with the pollution at Chicago and in the Illinois Waterway—the same objective as contained in the water-diversion bill itself, H.R. 1.

Now I want to say this: I am fully in favor of carrying out any necessary and effective antipollution study needed in the Great Lakes. However, let's not be fooled by this ruse for attempting to increase diversion of water from the Great Lakes.

Currently, this issue is before the Senate Appropriations Committee. As a result, the pushers of the water diversion bill now have measures before two Senate committees to accomplish their objectives.

Consequently, you can well understand the need for staying "on the alert" to head off such forthright, and round-about, efforts to divert more and more water from the Great Lakes—dangerous to commerce for Wisconsin and the rest of the Lake States.

OTHER PROGRAMS AHEAD

Now, what is some of the other "unfinished business" of Congress?

As President Eisenhower recently urged, we should also: (1) remove—or at least "adjust"—the ceiling on U.S. Treasury bonds to enable the Treasurer to better carry on the financing for meeting the obligations of the Federal Government; and (2) we also need to strengthen our judicial system by creating about 40 new judgeships. Regrettably, Congress, for political reasons, has, for too long, been "sitting on" this proposal. In a splendid bipartisan action, however, President Eisenhower has offered to fill such judgships with an equal number of Democrats and Republicans. Today, our Federal courts are logjammed with thousands of cases requirup to years for consideration. The Congress, I believe, should act immediately.

NEEDED: PUBLIC UNDERSTANDING OF UNCLE SAM'S BUDGET PROBLEMS

In considering legislation—particularly spending programs—we, of course, need to adopt wise, realistic policies. Not only Congress—but each of you, as citizens, need to be aware of Uncle Sam's budgetary problems. Often, in the vast volume of mail flowing

often, in the vast volume of mail nowing into my office—amounting to hundreds of letters daily—I receive strangely contradictory letters: Some say: "I want this program for myself"; others say, "I want that program"; still others say, "I want this, but don't do anything for the other fellow."

However, Uncle Sam is not a fountainhead from which flows an increasing stream of gifts, handouts, and Federal support. To the contrary, every penny spent on grants or assistance programs comes out of the taxpayers' pockets—and that means you and me.

CONCLUSION

This, then, is a brief review of only a small part of the workload ahead of us in Congress.

As these, or other issues, in which you are particularly interested, come up for consideration, I shall, as always, be glad to hear from you to get your suggestions and recommendations on problems of significance to our State and Nation.

Thank you for listening.

In Such an Age—by Dr. Frederick Brown Harris, Chaplain, U.S. Senate

EXTENSION OF REMARKS

OF

HON. GORDON H. SCHERER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. SCHERER. Mr. Speaker, at the recent Continental Congress of the Daughters of the American Revolution, the distinguished and beloved Chaplain of the U.S. Senate, Dr. Frederick Brown Harris, was one of the principal speakers. His magnificent address entitled 'In Such an Age" contains a message that should be read not only by every Member of the Congress but also by every American. I commend it particularly to Dr. Harris' fellow members of the clergy since it comes from one of their number who daily, from his vantage point in the Senate, has the opportunity to get a truer picture of national and international problems than any other member of the clergy:

IN SUCH AN AGE

(Address of Dr. Frederick Brown Harris, Chaplain, U.S. Senate)

Madam President General, dear friends of the continental congress, that was a very much more gracious introduction than I got lately here in Washington when somebody just presented me by saying that someone said he saw my name on a bulletin board outside of a church, I think it was in Arlington, and all it said was, "Rev. F. B. Harris will speak in this church on Sunday night, after which the church will be closed 2 weeks for repairs." Maybe that is why you put me last this morning.

I assure you that as you come to the close of this 69th continental congress of militant Americans, I count it an honor and a privilege to have the opportunity of looking into the faces of those who, with all their hearts, believe that the American Revolution is a hundred times more significant than the Russian revolution, and that the inspiring symbol of the common man is not Lenin or Stalin but Washington and Jefferson and Lincoln.

During these days in your own Capital, these blossoming, beautiful days, you have been facing without fear or favor the problems and challenges of this age.

Some time ago they published a book at the Capitol called "The Congressional Anthology." It is a volume of poems suggested by Members of the Senate and the House, poems which have inspired them during these troubled days, and when they asked me to suggest a poem to represent me in that volume and suggested I could have 2 or 3 days to think it over, I said, "If I am going

to have the privilege of being in the volume, I know now what I want as the poem speaking for me." It was Angela Morgan's lines "To Be Alive in Such an Age." I hope some of you know it. She has gone over now to the other side, and I am sure all the trumpets sounded for her on the other side. Her poem is—

To be alive in such an age!
With every year a lightning page
Turned in the world's great wonder book
Whereon the leaning nations look.
When steel and stone and rail and rod
Become the avenue of God—
A trump to shout His thunder through
To crown the work that man may do,

Then she says, "O age of strife!" but immediately, "O age of life; to be alive in such an age."

Well, as we think of such an age, we know that we have entered on what is being rightly called a decade of destiny, for surely we are gazing at a world of confusion and commotion. The great powers now have in their hands the instrumentalities to destroy each other, perhaps even to write the epitaph of human life on this planet. This might happen in the sixties. It is a terrible thing to contemplate, but it may.

Or we may take the first faltering steps toward a just peace and to an era of plenty for the whole world in the golden age of brotherhood. Angela Morgan, in that same poem, says:

Rise, soul from thy despairing knees.

Give thanks with all thy flaming heart— Crave but to have in it a part. Arise and claim thine heritage. To be alive in such an age.

As we think of such an age, as we try to analyze it, even in a handful of words, apart from the fact that it is the time of the split atom with all the dread implications of that, apart from that, we would have to say, that it is a time of world revolution, which means that under all skies, teeming millions of men and women are reaching out and angrily oftimes demanding more of the good things of life, more abundant life. Of course, we do not regret that. America has nothing good for herself that she does not desire for the entire world, and what we call the world revolution is largely, anyway, the harvest of the seed of Christianity and democracy.

But we would have to say, as we think of our age, that side by side with that there is a helnous system of chains and enslavement which is attempting to pervert that legitimate revolution and use it for its own evil ends. I refer, of course, to atheistic communism, for written across the sky you have faced that very definitely here during these days. There is the menace of communism and it is not a whit less today in the face of all the talk we hear with regard to peace. Secretary of State Herter, with whom I was privileged to have a little conference the other day with regard to Korea, recently said this, and I want to quote him exactly:

"Despite a new atmosphere of hopefulness for the solution of world problems, there has, in fact, been no real change in Communist intentions. Nor have deeds followed upon peaceful words."

I was reading the other day a poem written by Rudyard Kipling, I think about 65 years ago. It was on Russia, on the aggressiveness of the Russian Bear. Of course, that was long before the Russian Revolution. But it might have been written appropriately for today's newspaper. I want to give you the last verse of Kipling's poem on the "Russian Bear" 65 or 70 years ago. Here it is:

When he stands up as pleading
In waving man-brute guise,
When he veils the hate and cunning
Of his little swinish eyes;
When he shows as seeking quarter
With paws like hands in prayer;
That is the time of peril
The time of the truce of the Bear.

That is just about where we are now The other night I attended a political meeting attended by 3,000 women from all parts of this country. This happened to be Republican meeting, but I go to both sides-you know, I have both an elephant and a donkey on my desk at the Senateand at that occasion I sat at the speakers' table netx to a man I greatly admire, Henry Cabot Lodge, a great American. I could watch the expressions on his face at close range and he spoke, of course, out of an experience of 6 years in the U.S. Senate and 7 years now as U.S. Ambassador to the United Nations, and I jotted down on a menu in front of me something he said. Ambassador Lodge said, "We face an extremely dangerous adversary. In their heart they really be-lieve that they are destined to take over the world. It is a religion with them." And then he added, "It is only on the moral and spiritual plane that we can possibly win"; and then this, "No pallid lipservice to our cause will do."

What he said reminded me of a sentence in Woodrow Wilsons' valedictory to his fellow countrymen, printed just before he died: "Our civilization will never be redeemed materially until it is redeemed spiritually"; and then he added, "It must be saturated with the spirit of Jesus Christ."

Certainly, then, that label of atheistic communism would have to be put upon our day and generation, wouldn't it? It is very interesting to see the labels that the leaders of the various centuries put upon the gateposts of the times in which they lived. Did you ever notice that the Hebrew prophets were pastmasters at coining dismal labels for the days in which they lived? Isaiah said his was a time of darkness and sorrow. Strange to say, that is just about the same labels that the leaders of every generation think characterize the times against which they thunder.

When I was in college (that is further

When I was in college (that is further back now than I like to think), Henry Van Dyke wrote a little book which he called, "The Gospel for an Age of Doubt." That, you see, was his label for the time back there.

I remember he said in it that the coat of arms for that day ought to be three bishops dormant and an interrogation point rampant. That might be a good coat of arms for our day.

Talking about bishops, when the Episcopallans held their convention in Honolulu sometime ago, at the close most of the delegates were returning to the U.S. mainland. One plane had a very heavy load of ecclesiastical brass and just about halfway between Honolulu and San Francisco one motor quit. That is not as bad as two, but it is bad enough, and you can imagine the whistling-in-the-dark conversation that was going on. But one delegate, maybe a little more plous than the others, managed to slip up to the pilot, whose face was strained and tense, and this delegate said, "Now, don't worry, nothing is going to happen to us. We will get in safely. I thought I would like to tell you that we have eight bishops on board this plane"

The pilot looked up and said, "I would rather have four motors than eight bishops," [Laughter.] I don't blame him at all.

Anyhow, as we stand at the wailing wall of our troubled times they seem as full of discounting labels as the highway billboards are full of screaming advertisements. Somebody wrote an article in one of our maga-

zines not long ago, speaking of some of the labels that we see tacked to our day, and he said in that article that the symptoms in America today are ominously like those of Rome just before the fall.

Rome just before the fall.

A woman said to me not long ago (and she wasn't a member of the DAR; you wouldn't let her in), "We all ought to be talking just about peace, nothing but peace. Even the Russlans," she said, "talk about peace and we ought constantly to talk peace."

I replied to her, "Unfortunately, peace is one of the words in the inverted and perverted dictionary of the Reds. What in their book is liberation we call regimentation, and what they call election we call coercion, and what they call peace, we call appeasement. And as my dear friend, the late Senator Vandenberg, used to love to say, 'Appeasement is surrender on the installment plan.'"

There came to my desk only yesterday the manuscript for a book that is about to be published on John Foster Dulles, the spiritual heritage of that great man to our country. I am hoping that they will carry out his idea when they go to the summit and let the world know that America is not interested in appeasement. We are tremendously interested in a just peace, and that is something else.

This woman who was talking to me said, "Well, we ought all to be yearning for the time when the prophecy will be fulfilled and the lion and the lamb shall lie down together."

"Yes," I said, "I think we all want that, but we want to make mighty sure that the lamb isn't inside the lion."

I want to say some things with regard to the church situation and communism, and I hope when you go back to your churches you will be on the alert to see what is going on. In the present world situation we need idealists, but we need idealists who are also realists. A surgeon is an idealist who is also a realist. He isn't the sort of idealist who puts a mustard plaster over a malignancy and just hopes for the best! He knows that some things have to be cut out before the recuperative powers of the body have a chance even to be mobilized.

Those who really understand the present peril the world is in because of the malignant growth of atheistic communism are idealists who dream of a healed and happy world but who realize that you cannot compromise with a cancer in the body politic.

Bishop Gerald Kennedy of the Methodist Church is both an idealist and a realist. When, after weeks spent in Soviet Russia last summer, he reached home, he declared this:

"The issue is joined at last. Either God is or He is not. Either a man is of value only as the citizen of the state, or he is of value because God created him. Either Christianity is true or communism is true, but not both. Coexistence is a pleasant term but one of these systems is going down."

I believe that. Now, again and again church leaders have failed their times tragically because they were unreal idealists. Sincere church people were back of a British Prime Minister when he went to Munich with an umbrella, but with no righteous sword; when, for "peace in our time," as they put it, a glorious little democracy in the midst of Europe was thrown to the wolves of appeasement and aggression.

In that same time, a group of influential churchmen led by the beloved Dick Sheppard of London, in whose pulpit I was privileged to preach, ignoring Germany's rearming under the madman, Hitler, and turning a deaf ear to Churchill's warnings, went up and down England exhorting religious people to sign cards declaring against any military preparation to meet the threatened blow. Tens of thousands of people signed, under their leadership. The threatening signs of the time were fearfully evident; but the policy of these churchmen was to refuse

to talk from strength, even to a ruthless dictator.

These preachers and other religious leaders proved to be the blind leading the blind. That so-called peace crusade was a definite factor in England's being caught unprepared when the blow fell. That campaign against arms helped to bomb into bits many of the churches of the preachers who signed those cards, and the streets of Dick Sheppard's London, as we know, were filled with the mangled and the dead.

And now, in this year of our Lord 1960, there are religious leaders, especially ecclesiastical bureaucrats, who are as gullible and blind as were the church leaders to whom Jesus spoke sadly. Jesus said to the leaders of His day. "You can prophesy about the weather, you can read the signs in the sky, but you cannot read the signs of the times."

Now, remember, He was talking to religious leaders. The Master said to them, "If thou hadst known, in this, thy day, the things which belong to thy peace, but now they are hid from thine eyes, for the time shall come upon thee that thine enemies shall lay thee even with the ground and shall not leave one stone upon another, because you cannot read the signs of the times."

That dismal prophecy came to pass, of course, when the armies of Titus pulverized Jerusalem.

Jesus' heart was heavy because those at the head of the church were not reading aright the signs of the times. Certainly that group of churchmen were in that category when last year they met in Cleveland and recommended the admission of Red China to the United Nations. Thank God, they were only speaking for themselves and not for the churches to which they belonged, although, unfortunately, when proclaiming their private opinions they are likely to say they are speaking for so many millions in the churches. They do not. I am proud to belong to the Committee of One Million centered in New York against the admission of Red China.

A survey of church leadership across this country by that committee showed a proportion of 9 to 1 against any such attitude to Red China, a regime of international bandits.

But even though such action is the policy of only a handful of so-called leaders, they are going right ahead now in various parts of the country, by conferences and institutes and panels, endeavoring to brainwash the youth of the church to back their notions. That is why I ask you to be alert when you go back to your churches.

To admit the criminals of Red China as partners in the United Nations is on the same moral and ethical level as to elect a band of bank robbers, who are also murderers, to the board of directors of the very bank they are plotting to rob and to destroy. One feels like paraphrasing Paul's exclamation, "O foolish Galatians, who hath bewitched you?" to "O foolish Americans, who hath bewitched and bewildered you?"

One of the leaders of this minority school of thought, a professor, by the way, in one of our best-known theological schools, sometime ago issued a petulant, scolding message to all the churches. It is the sort of statement that might just as well have been written in the Kremlin. Let me tell you exactly what he said. I quote from this leader of our united denominations.

"We should avoid the position of hostility to them (that is, to the regimes in Russia and China) and cease the practice of moralizing and the practice of continual lectures to them by our leaders."

What he is really saying is: Let the Red secret police arrest innocent peasants by the truckload, and let the interrogators brainwash and torture them; and let the official butchers kill, or perhaps merely send them to

a slave camp where the terrified peasants will be reformed, as they put it, "through labor." But let no gentle Christian in America, whose life is a bed of roses, say a rough or accusing word about the atroctiles. To do that might postpone the time when Red China will be received into the U.N. of peace lovers; and to thus speak out will interfere with Russia's wonderful ideas with regard to coexistence.

I can tell you out of my personal knowledge that, to the enslaved people of the captive countries, for the missionaries of the cross in Korea, in Talwan, and in the Philippines, and for all those across Asia yearning for freedom, that sort of call from church leaders in America advising padiocks on the lips of our churches, is frightening, disturbing and devastating to the morale of Christian churches in those lands. I wish you could see some of the letters I have received.

The final outcome of this attitude of appeasement, of compromise, and of accommodation is seen when recently, in a well-known peace organization, a minister, I am sorry to say, dared to stand before 250 students in one of our great eastern colleges and say that if America were to be attacked by Russia, the only Christian thing would be to surrender at once and to make our Christian witness as slaves of that degrading system. On the other hand, a few days I was in Texas and I heard the president of a great southern university, which has a student body of 10,000 (he wasn't in his own college, he was in another college in another city) speak to an audience of 2,000 students and tell them in no uncertain terms the unvarnished truth regarding the schemes of atheistic communism for the destruction of our liberties. So, it is not all on one side.

I am not charging that any of these mistaken church leaders are Communists. That is a matter which is now being made a political football. I do not go into that controversy at all. I am simply saying that the thinking of some who are as prominent today in church affairs as the Pharisees were in Christ's day, and of whom the Master said they could not discern the signs of the times-is blurred and dangerous and deadly. The thing that alarms me is that so many churchmen seem to be affected by a moral flabbiness, an absence of indignation at appalling crimes, a tendency to forget, not as God forgets when there is genuine repentance but a forgetting which indicates a sort of moral blackout, a williness to grasp unrepentant bloodstained hands in cooperation and partnership. Such a policy makes the church the ally of the most diabolical forces in the world. These are practices which are the utter reverse of any attitude which can be called Christian

To show the attempts of this insidious godless system to infiltrate the Christian homes of America, let me tell you of a recent instance. One of our leading church papers, ministering to millions, recently published a two-page article by J. L. Hromadka, who is a professor in Prague, behind the Iron Curtains. He wears the cloak of ecumenical Christianity, but he wears also (proudly) the Communist Stalin cross. The article is a blatant piece of Red propaganda. In it the author speaks to America of "The inevitable end of what we call Western civilization."

He refers to the Communists as those who "In their own way are trying to establish a new form and structure of human society." That is his appraisal of the murder and misery which characterize this system—including the butchery in Hungary and the betrayal of democracy in Czechoslovakia where he lives.

Speaking of "the blunders, failures, and sins of the Christian era," he has the effrontery to say that the Communists, in what they are doing, are using the motives of genuine Christianity. Then he insists "We have to take the men behind the Communist ideology seriously." He declares "the growing anti-Communist sentiment, and the cooperation of Christian churches in the anti-Communist crusade is shocking."

The article is not labeled "poison"—there is no attempt to refute its sophistries. While Christian leaders here in America have to beg for space to present facts that are pertinent in today's struggle of Christ versus anti-Christ, this Red is given two pages to spread his spurious wares which he then wraps up in pious terms to deceive the very elect.

Does all this mean that the editors of this widely read Christian publication believe that communism is the wave of the future and are deliberately aiding its propaganda? No. It simply means that those who ought to be sentinels guarding their readers against this diabolical doctrine, are either blind to the perilous menace or asleep at their post of duty while the enemy sows tares in the very garden of the churches.

And so I say to you as you come to the close of this inspiring session, that we desperately need new Paul Reveres to ride up and down the lanes of our pleasant prosperity, to remind our people that eternal vigilance is still the price of liberty; and that our heritage, which you cherish so wonderfully, our American heritage, is not like an heirloom that we can hand down to the generations to come after us. It is something that must be relived and reinterpreted and rewon with every new generation. So it is for us to stand, in the place where we are, giving the best that we have:

Against the wrong that needs resistance, For the right that needs assistance, And the future in the distance And the good that we may do.

In reply to a letter that came to him from a distant city, Wendell Phillips said something that inspires me. They asked him in that letter to let them know his lecture topics and his lecture terms. He replied, "I will come and lecture on 'Ancient Civilizations' for \$500 and expenses; and I will come and lecture on 'The abolition of slavery' for nothing and pay my own expenses." You see, slavery was a subject on which he had intolerant convictions. He was against slavery, because he was for freedom.

We are ready, and rightly so, to throw all the scornful, biting adjectives in the book against the conspirators of the Kremlin and all their lying tricks. You see that I do not hesitate to do that.

But, it isn't enough to see red every time the blighting hand of communism is raised in this world. And let me say to you, as an aside, that blighting hand is seen today in Korea. The loud applause because of the rioting in the Republic of Korea that we hear from that Communist concentration camp to the north is very significant. The one man they hate and fear is Syngman Rhec. They have bent all their efforts to get him. He is fighting our fight as well as Korea's. In spite of all you hear—and I know him through and through; I was his pastor for years here and I was sent by President Eisenhower as special Ambassador over there-he is a freedom lover of the highest caliber and character. He is a great democrat. There is not a drop of dictatorial blood in his veins. I believe history will appraise him as one of the great men of these troubled times.

But, I repeat, it isn't enough, when we see the blighting hand of communism, to cry out against it. The system that will prevail at last over regimented tyranny with its ball and chain is a vibrant, positive democracy in which we believe more strongly and love more deeply, even, than we hate totalitarianism. America will help to destroy

the foul cloud of atheistic communism not merely by denunciation of the things she is set to deplore but by the blazing torch in her hands of the things she is for.

And so let us go forward to meet the problems of this age, in such an age, as Angela Morgan called it, terrible as an army with banners, determined that—

We will be true to all truth the world denies, Not tongue-tied by its gilded lies; Not always right in all men's eyes But faithful to the light within. For what avail If freedom fail.

Representative Bizz Johnson and the 1960 Winter Olympics

EXTENSION OF REMARKS

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Monday, May 16, 1960

Mr. ENGLE. Mr. President. I was delighted to read an editorial recently in the Sacramento Union commending California's able Representative from the Second District-HAROLD T. "BIZZ" JOHNson. Bizz Johnson played a very significant role in getting the 1960 Winter Olympics held in California, and the editorial commends him for not lagging in his interest in winter sports once the games were over. It makes the important point that BIZZ JOHNSON does not regard the Winter Olympics as a fait accompli, but rather as a logical step toward popularizing the great California winter sports industry.

I take pleasure in bringing the editorial to the attention of my colleagues, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the REC-ORD, as follows:

A CONGRESSMAN REPORTS

Congressman HAROLD T. (BIZZ) JOHNSON of the Second District doesn't regard the winter Olympics at Squaw Valley as a fait accompli, but rather as a logical step toward popularizing the great California winter sports industry. In this viewpoint Johnson is to be commended.

"More than a million persons visited Squaw Valley before, during, and after the winter Olympics," declares Johnson, "but more impressive to me is that more than a million persons visited other snow sports areas of the State as well. I took a survey of California's national forests and parks to see what was happening in this recreation field. Everywhere officials reported the business of going down hill on skis and sleds is zooming."

Isn't this what California bargained for in underwriting the rather expensive spectacle of the winter Olympics? But here is a State investment, seemingly, which is paying off. Let Johnson continue:

"Many mountain areas, which once lived on summer economies, are finding the snow enthusiasts bring welcome new business. Millions of dollars have been spent in snow sports and lodge developments. And the potential still is tremendous.

"Tahoe National Forest, with the Olympics of course, led the field and Henry E. Branagh, forest supervisor, advised me that skiing was

itself up 60 percent over last season with 116,500 people on the slopes. Nearly 14,000 people have used the ice rink, not counting the thousands upon thousands of spectators.

"An old standby in the winter sports field is Yosemite's Badger Pass. Superintendent John Preston writes that there have been 126,718 visitors by early April and they still were coming. An average of 500 persons use the facilities on a weekday and 1,800 to 2,600 on a typical Saturday or Sunday. This does not include 6,232 visitors who ice skated on the valley floor. Badger Pass opened in 1933 and the use has been growing constantly.

and the use has been growing constantly. "Stanley R. Zeger, acting supervisor at Eldorado National Forest, says the year there was substandard as far as snow conditions were concerned, but that did not slow down the skiing enthusiasts. About 95 percent of the approximately 106,000 people using the Highway 50 and South Tahoe snowfields are skiers. The use was up about 7 percent. "The last two snow seasons have been poor," says Supervisor Zeger, "but the trend is steadily increasing."

"The people on the east side of the mountains are sharing in this activity and Mammoth Mountain of the Inyo National Forest is one of the fastest growing snow regions in California. Supervisor Joe Radel reports a 32 percent gain with more than 100,000 snow visits to the Inyo.

"Although skiing is a major sport at Lassen National Forest and Volcanic Park, Forest Supervisor V. A. Parker and Park Superintendent Edward Freeland say heavy family fun use attracts groups from all over northern Canifornia, including the San Francisco Bay region.

"About 22,000 traveled to Lassen Forest, half of them going just to romp in the snow with the rest doing the skiing. Another 15,000 toured Lassen Park's snowfields.

"There is a tremendous potential for future development in both the Lassen and Inyo regions as well as some of the lesser used forest lands.

"Plumas National Forest's La Porte was one of the first ski areas to develop in northern California many, many winters ago. With that facility and the new Johnsville State Park coming in, the potential winter sports development is considerable.

"I look for development of the Plumas, Cedar Pass, Nnion Valley, and many other regions similar to Mount Shasta's Ski Bowl in the Shasta-Trinity National Forest. Observing its second year of winter sports, Forest Supervisor Paul Stathem says Shasta Bowl use is up 25 to 50 percent this year over the initial season there and Snowman's Hill continues to provide an excellent community place to play in the snow, which means most of the increase consists of visitors from outside the immediate region.

"The reputation was spread this year to the benefit of all the Sierra Nevada, and everyone concerned must continue to work together to provide the facilities to meet this demand. The investment will be repaid many times."

Medical Care for the Aged

EXTENSION OF REMARKS

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. MADDEN. Mr. Speaker, one of the major issues which this Congress must act upon before adjournment, is the problem of practical legislation which will provide hospitalization and medical

care for millions of folks in the upper age bracket.

The following letter from Benjamin Saks, president of the Northwest Indiana Jewish Welfare Federation, 708 Broadway, Gary, Ind., reflects practical thoughts concerning this problem which involves so many millions of our elderly citizens throughout the Nation:

NORTHWEST INDIANA JEWISH
WELFARE FEDERATION,
Gary, Ind., May 2, 1960.

Representative RAY MADDEN,
House Ways and Means Committee,
House Office Building, Washington, D.C.
DEAR REPRESENTATIVE MADDEN: At a meeting

DEAR REPRESENTATIVE MADDEN: At a meeting of its board of directors held on the evening of April 27, 1960, the following resolution was passed by this organization, with the instruction that it be submitted for your attention and study:

"Whereas medical care for the part of our population 65 years and over is a major concern of the Nation and of this welfare federation; and

"Whereas the admission rate to hospitals is twice as large as for persons who are younger, and whereas they stay longer after admission; and

"Whereas many of them have incomes of \$3,000 or less; and

"Whereas one-half of the residents of homes for the aged require medical care in residence; and

"Whereas 80 percent of residents of homes for the aged are partially supported by public assistance funds; and

"Whereas less than 40 percent of the persons over 65 are covered by private medical insurance: Now, therefore, be it

"Resolved, That we favor the use of the mechanism of the old-age and survivors program of the Social Security Act to provide an expanded program of health services for persons 65 and over."

We earnestly hope that you will give this resolution and the sentiment that it expresses your very earnest consideration in the debate on this issue in the current Congress.

Sincerely yours,
BENJAMIN SAKS, President.

Reflections on the U-2 Plane Incident

EXTENSION OF REMARKS

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, May 16, 1960

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a very timely editorial entitled "Reflections on an Incident," which was published today in the Wall Street Journal.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REFLECTIONS ON AN INCIDENT

The psychologists say that toward the major affairs of life we all have moments of ambivalence, that we can suffer all at once the mixed feelings of joy and anxiety.

If we can judge by the samplings of public opinion, and by our own feelings Americans have had something of this same ambivalence in their reaction to the spyplane incident. Pride, relief, uneasiness of mind, and even dismay, have been inter-

mingled. Each of these emotions is understandable, and it is not easy to strike a balance among them.

The causes of pride are simply stated. Ever since sputnik the American people have had a vague but strong uneasiness that somehow we were falling behind the Russians in the struggle. There was not merely the concern over the scientific competition and basic military capabilities; there was also worry about intangibles, that we were soft, bungling, lacking in initiative, energy and alertness when compared with the ruthless, monolithic Communist empire.

Then suddenly we learned that our defense forces were not so listless after all. Hearts were bound to leap with pride at the knowledge that an American reconnaissance plane had penetrated deep into Russion territory, and that furthermore this was but one of many. Here is tangible evidence that our Government is not "asleep at the switch," that our intelligence forces have diligence and the equipment and skills to apply it.

And not the least of our pleasure at events is the way in which this incident has shaken the Russians. For make no mistake about it, the fact that their vaunted defenses can be so readily penetrated is not something that Mr. Khrushchev and his colleagues can bilthely dismiss.

Reflect for a moment on the dismay, and the fear, we would feel if we discovered that Russian planes had been fiying over the United States for months undetected. This country would suffer a psychological trauma of major proportions; it would be a national scandal and heads would roll all over the place.

Something like this may be happening in Russia now. Because of that, Mr. Khrushchev's anguished outcries are not all tears and flapdoodle. His military men have a lot of explaining to do to him, and he has a lot of explaining to do to the Politburo and to the Russian people. Whatever posture Mr. Khrushchev puts to the world, his arrogance has been humbled.

That, in turn, is bound to have an effect on the affairs of the summit conference which begins this morning. For all that the spy plane incident has given Mr. Khrushchev something to scream about, he cannot now be so cocksure. The repercussions of this affair are by no means all to Mr. Khrushchev's advantage in the realms of diplomacy.

In a world that everyone knows is perilous, there is comfort and reassurance in all this. Not only has our side scored on their side, but when this incident is added to our recent successes in space and under the sea we can feel less intimidated by Russian prowess and more confident in our state of preparedness.

As President Eisenhower put it, "no one wants another Pearl Harbor" and so we rejoice at anything that increases our knowledge of military forces that might launch a massive surprise attack in which survival would be the prize.

This being so, then, why should there be any cause for uneasiness over the events of the past 10 days?

It is not simply stated. For it stems from less readily apparent consequences, and in some cases not so much from immediate consequences as from anxieties about the future which have here been sowed.

Part of it, perhaps, comes from the performance put on by the State Department that famous weekend. Either the State Department was ignorant of what was going on, which is quite possible, or eise it had given no thought to anticipating that a plane might be caught and planning what it should do then. In either case, the Government of the United States was caught not only spying but lying. It did not make a pretty spectacle.

Part comes, perhaps, from the fact that the confusion extended all the way to the White House. It's very clear that although President Eisenhower had authorized the CIA to do "whatever is necessary" to obtain information, he was as surprised by this particular plane incident as everyone else.

But bureaucratic bungling is something to which, sadly, we have grown accustomed. The anxiety strikes much deeper. It comes precisely because we do all know this is a perilous world and that the prize in the next war will not be victory but survival. And for some of the older among us, because we do indeed remember Pearl Harbor.

Whatever mystery lies behind that naval disaster, it was no fault of military intelligence. We had the Japanese code; we knew what they were doing, even unto the hour. Besides, Pearl Harbor was no moment's inspiration of the Japanese; it came as the culmination of events in which our own mistakes played some small part.

The next world war, if it comes, can come as well from bungling as from design. An adventurous American, a trigger-happy Russian, a moment of panic—these can easily be the seeds of holocaust. And just because we can understand the panic that would come from Russian planes over Kansas City, we need have anxiety about American planes over Sverdlovsk.

It is all very true when we say we have no aggressive intent but it wholly misses the mark. For fate depends on some Russian with his hand on a button believing that that plane overhead is not on a warlike mission. It also misses the mark, though true enough, to see the hypocrisy of Mr. Khrushchev crying out against spies. We ourselves would see a difference between a Colonel Abel, spying in Brooklyn, and those planes over Kansas City.

planes over Kansas City.

So the uneasiness of mind has nothing to do with spying; we all accept the necessity for it and desire that it be done diligently.

Mr. Khrushchev's self-righteous screams on that score can be dismissed for what they are. The concern is over an adventure which, by its very nature, risks bringing on the very thing against which it is supposed to be guarding.

to be guarding.

Yet even all this, we think, might be accepted as a hazard under different circumstances, anxiety has become a daily habit which we have learned to wear patiently. But it would be one thing to know that these risks were recognized, measured, and accepted by the highest elective officers of the State into whose judgment we have put ourselves. It is quite another thing to feel that things are done by subordinates left free to do "whatever is necessary."

Here is the Government of the United States engaging in an act that by its very nature must carry always the sparks of an explosion, and yet so far as anyone can see it was an act thought up, initiated, and carried out in secret not only from the enemy but from ourselves

Their zeal is commendable; perhaps even their judgment in this case may be right. But if they have done this, unknown, what else is unknown? And if subordinate officers, not responsible to the people, are to have in the future a blank check to fill in as they please, who can know what demands their zeal may put upon the world tomorrow?

And there is one other matter. The strength of this country in the free world has always been that, unlike the Russians, we could be trusted not to do provocative things and that whatever our Government said was true. We hope that image is too strong to be shattered by any one incident, but we think it too precious to risk having it sullied.

So for our own part, we share the pride in discovering that here, in one more area, we are not being outdone by the Russians, and we do not hide our human satisfaction at the consternation that must now be wide among them.

And yet for all of that, we confess that in this incident we, too, have anxieties that will not down.

Health and Medical Care for the Aged

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. McCORMACK. Mr. Speaker, in my remarks I include an informative letter sent to me by the Honorable Patrick A. Tompkins, Commissioner of Public Welfare of the Commonwealth of Massachusetts, in connection with the administration's plan to provide health and medical care for the aged. The letter of Commissioner Tompkins to me points out the weaknesses in the administration's proposal. The views of Commissioner Tompkins are worthy of profound consideration because he is one of the best-qualified persons in the field of public welfare throughout the United States:

THE COMMONWEALTH
OF MASSACHUSETTS,
DEPARTMENT OF PUBLIC WELFARE,
Boston, May 11, 1960.
Hon, John W. McCormack,

Hon. John W. McCormacs House Majority Leader, House of Representatives, Washington, D.C.

MY DEAR CONGRESSMAN McCORMACK: Thank you for the copies of the statement by Mr. Arthur S. Flemming. Secretary of the Department of Health, Education, and Welfare on presentation of the administration's plan to provide health and medical care for the aged. I have, up to this point, only been able to devote my observations, as to the impact of these proposals upon the aged of the Commonwealth and upon the Commonwealth of Massachusetts and the constituent cities and towns, in a limited manner, as no data seems to be available on the premium costs that would be charged by either commercial or nonprofit insurance carriers for the coverage proposed in Mr. Flemming's statement.

We do, however, have some facts as to potential eligibility that we can draw from Mr. Flemming's statement on page 4, under item 1, "Eligibility for Participation in Program." Apparently, all persons receiving social security benefits over the age of 65 would be eligible, plus others on whom I cannot secure up-to-date data. This would mean at least 350,000 persons over 65 currently receiving old-age insurance benefits, either primary, or dependency, or survivor benefits, would be eligible.

We also know that the standard monthly budget of an aged person living alone is \$127.80 under our old age assistance program. We also know that the means test to be applied for participation in this program is to be rather liberally interpreted and applied. If not so applied, it would mean that these 350,000-plus persons, if given the opportunity by State legislation and if desiring to participate in the administration's insurance health program, would, in fact, have to apply for and be subjected to the indignities of the old-age assistance means test. Moreover, I think that, in view of our old-age assistance standard, all such persons

applying for oid age insurance under the administration's proposal would have to have their personal portion of the premium paid for by the State governmental agency without any matching fund from the Federal Government. As this involves 350,000 persons, it would amount to a new unmatched expenditure of \$8,400,000. For the current 80,000 recipients of old-age assistance, it would amount to an additional cost of \$1,920,000, or a total of \$10,320,000 as the individual's share of the premium at \$24 per person per year.

Since Mr. Flemming suggests on page 2 of his statement under paragraph 4 that less catastrophic policies on major medical ex-penses available to persons over the age of 65 called for annual premium payments ranging from \$60 to \$130 a year, it would appear obvious that, since most major medical expense insurance policies are limited to 60 days of hospital care, the full coverage for nursing home care for the entire year and for one-half year of hospital care plus the other itemized benefits for surgery, drugs, X-rays, home care, etc., would result in a \$250 per year per person upward. If the premium were \$300 a year and under the financial formula that the State government was to pay \$200 or two-thirds in Massa-chusetts—one of the wealthier States according to the Hill-Burton formula employed in this insurance plan—the State's share of the premium matched by the Federal Govern-ment would be \$75 million. This, added to the absorption of the individual's premiums, represents a total of \$85,320,000. I have checked with both the Blue Cross and one commercial carrier, and there are no rates available for year-round nursing home care for persons over 65 or under 65 in operation or even contemplated at this point. There are no policies available for 6 months' care in a hospital for persons over 65.

However, to apply this proposal to the typical expensive hospitalization of a person over 65, as we know it in Massachusetts, the hospital costs for the acute illness or accident will run about \$1,000. To have this bill paid in accordance with the administration's formula, the breakdown would be as follows for the sick patient over 65:

(a) Initial premium, \$24.

(b) Initial payment for sick patient, \$250.(c) Twenty percent of the remaining bal-

ance, \$150.

(d) Paid by the insurance company, \$600.

Therefore, for the privilege of electing to be insured for the usual catastrophic hospital bill under the administration's proposal, the individual over 65 must pay \$424, and the insurance company pays only \$600—pretty expensive insurance.

It should be pointed out that, under the Forand bill, the entire \$1,000 hospital bill would be paid at no premium, deductible payment, or coinsurance obligation on the part of the sick elderly person over the age of 65.

In short, the cost to the individual and the cost to the individual States and their municipalities becomes prohibitive.

(a) No individual, dependent solely upon old-age and survivors insurance, can find in free money the initial \$24 premium and the initial \$250 to be paid against a hospital bill—a total of \$274 plus 20 percent of the cost of the illness.

(b) No State can afford to spend \$85 million to save \$31,600,000, the present old-age assistance expenditure for hospital care and nursing home care on an annual basis; and, also note, that not all of the hospital bills of \$11,250,000 would be paid, as \$2½ million for annual chronic hospital care would not be paid, as only 180 days of hospital care are included in the administration's proposal.

In short, the proposal is not a health insurance plan for the aged as its costs are so prohibitive and so dependent upon State action that it is doubtful if any State could financially, out of general revenue funds, adopt such a proposal. The plan does not meet the fear that most elderly people hold about an immediate, single, catastrophic siliness in one year, as is evident by the case illustration of paying \$424 in costs to secure \$600 in benefits. It is highly questionable whether nursing home care is insurable for a full year by either nonprofit or commercial carriers. It would be far better to have such prolonged and terminal illness costs covered as at present through the old-age assistance program which, in itself, is self-insurance.

Finally, the plan does not, as is emphasized on page 3, satisfy the number one test, "It should provide the individual with the opportunity of deciding for himself whether or not he desires to be a participant in the program," as the economics of the cost of such insurance make that decision for him. He cannot afford to decide that he desires to

be a participant.

The average individual beneficiary of old age and survivors insurance has and will be able to finance the occasional consultation with a doctor for a minor illness and for the occasional medication that may be pre-The concern of America and National Government should be directed to the financial catastrophe occasioned by a sudden, serious illness or accident making hospital care necessary. The National Government should not concern itself with doctors' fees or drug payments in an insurance plan. No one has attempted it on a national basis-why should it be attempted for the high-risk, over 65, age group? The only answer, the only feasible answer, is to confine the principles of social insurance to acute hospital care not exceeding 60 days to be paid for by the payroll tax or employer and employee alike—the principles embodied in the Forand bill.

The proposal imposes such financial hardships on both the individual and the general revenue of each State that it should not be given serious consideration on the basis of the imparative and demanding hospital economics facing the aging population.

Very sincerely,

PATRICK A. TOMPKINS, Commissioner.

A Sounder Wilderness Approach

EXTENSION OF REMARKS OF

HON, WALLACE F. BENNETT

OF UTAH

IN THE SENATE OF THE UNITED STATES Monday, May 16, 1960

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Sounder Wilderness Approach," published in the Deseret News of May 2, 1960; and a letter to the editor entitled "Wilderness Detour," written by Mr. William A. Welsh, secretary-manager, National Reclamation Association, and published in the Washington Post and Times Herald of May 9, 1960.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

[From the Deseret News, May 2, 1960]

A SOUNDER WILDERNESS APPROACH

Senators Bennerr of Utah, O'MAHONEY of Wyoming, Allorr of Colorado, and others who have thrown their weight behind a substitute for the much-argued wilderness bill

have more than just use of the land-important as that is—at stake.

They also are striking a blow for constitutional government.

Basically, the backers of the substitute are trying to keep policymaking decision in respect to the wilderness lands in the hands of Congress, where the Constitution says it belongs, rather than in the hands of the executive department.

The difference between the orginal bill (S. 1123) and the substitute on this point is basic. S. 1123 provides that if the President proposes creation of a wilderness area, the proposal shall take effect unless both the Senate and the House pass an opposing reso-

Intion.

Obviously, that would give either House power to approve, in effect, the President's proposal. It would, for example, give the House, which is largely controlled by the populous East, power to approve (by not voting to disapprove) disposition of wilderness areas that lie almost exclusively in the

As Senator BENNETT explained to the Senate last week, this provision would constitute "an end run around the Constitution." It would effectively kill, in this area, the principle of legislation by two Houses, one representing population, the other repre-

senting the sovereign States.

The simple, but tremendously important change proposed in the O'Mahoney-Allott substitute would simply reverse the procedure to conform to traditional constitutional procedures. It provides that the executive branch would make its proposals respecting wilderness in the normal and that Congress, after appropriate hearings and recommendations by committees,

would approve or disapprove. Just how important this matter is to the West can be readily seen by examination of the location of the 5,834,491 acres of national forests already designated as wild, wilderness or roadless, and which would be included in the wilderness designation by act of Congress. Of 240 pages of detailed descriptions of these areas included in the bill, a half page deals with lands in New Hampshire and two pages with lands in North Carolina. The rest deal exclusively with lands in Wyoming (63 pages alone), Montana (31), California (30), Colorado (28), New Mexico (26), Oregon (20), Arizona (16), Nevada (14), and Washington (3).

Utah has no lands now designated in the bill, but its High Uinta primitive area is among the 8,629,000 additional primitive acres (again almost entirely in the West) that would be reviewed by the Secretary of Agriculture to determine suitability for wilderness designation.

A number of strong safeguards to protect Western economy are written into the

O'Mahoney-Allott bill.

creating for 1. Recommendation wilderness area would be submitted to the Governor of the State involved before submission to Congress, and the recommendation of the Governor would accompany the recommendation to Congress.

2. Grazing of livestock and other multiple uses already established in the area would be permitted to continue.

- 3. Prospecting, mining, drilling for gas and oil, building of reservoirs, pipelines, powerlines and other such facilities can be authorized by the executive branch if found to be in the Nation's interests.
- 4. State water law would not be overridden by any provision in the act.
- 5. Hunting and fishing allowed prior to designation of an area as wilderness would not be prohibited by the Federal Govern-

In the continuing debate over handling of the Nation's wildlands, the O'Mahoney-Allott substitute is certainly a constructive

step forward. It should be given careful consideration.

[From the Washington Post, May 9, 1960] WILDERNESS DETOUR

In your May 2 editorial "Wilderness De-tour" you referred to the National Book you referred to the National Reclamation Association.

Approximately two-thirds of the members the association are irrigation farmers. These people have as great, if not a greater, reason for being interested in conservation than any other group of citizens. They must have a well-sustained streamflow runoff for the irrigation of crops during the hot summer months in that arid and semiarid region. They cannot survive without irrigation water during that period. Good conservation practices on the watersheds could mean the difference between success and failure for them.

These people live close to the area which would be included in the proposed wilderness systems. They have a thorough understanding of the problem. They believe in conservation as defined by two of the greatest conservationists this Nation has yet known: former President Theodore Roosevelt and our first Chief Forester Gifford Pinchot. These men gave a broad practical meaning to conservation. To them conservation meant the use of the natural resources for the greatest good of the greatest number for the longest time.

Wilderness, as proposed in the legislation before the Congress, would mean the very opposite. In wilderness areas there would be no roads, no campsites, no use of the natural resources. It would mean setting aside vast areas of our public lands for the benefit of only a select few. Its enjoyment would be limited to those with a strong physique and

ample finances.

We believe that the natural resources which are to be found in these great public land areas, most of which are in the West, were placed there by the Divine Creator for the benefit of all mankind. We believe the Forest Service gives us a good illustration of how these areas should be utilized. The protection of the watershed for the production of that most important of all natural resources-water-should be the primary consideration but all other available re sources within a region should be used in such manner as not to do damage to the Yes, there should be use-in watershed. fact, multiple use of all these resources-but there must be use without abuse.

The Forest Service areas, with its good roads, and numerous campsites, are always available for enjoyment by the average American family. They are readily accessible, either by the old jalopy or the modern station wagon.

Another point that is often overlooked is the fact that, because of the rough and rugged terrain of much of the mountainous regions of the West, there will always be vast areas that must forever remain wilderness in spite of all that man can do. Former Senator William E. Borah, when he first viewed from across Red Fish Lake the majestic and incomparable Saw Tooth Mountains, is quoted as saying, "Man need not attempt to create a park here. God has already created a park far beyond the ability of man to either add or detract."

Yes, we believe in true conservation. We believe in conservation as defined by our two greatest conservationists, Theodore Roosevelt and Gifford Pinchot-conservation as it has been practiced by the Forest Sérvice for more than half a century. We believe that true conservation means the use of the natural resources for the greatest good of the greatest number for the longest time.
WILLIAM E. WELSH.

Secretary-Manager, National Reclamation Association.

WASHINGTON.

A Decade of Progress

EXTENSION OF REMARKS

HON. ALBERT THOMAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. THOMAS. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address:

A DECADE OF PROGRESS

(Address by Dr. George B. Klostlakowsky, special assistant to the President for science and technology, at the 10th anniversary dinner of the National Science Foundation, held at the Mayflower Hotel, Washington, D.C., May 12, 1960)

Most of us, as we push through the years, tend to feel pleased when our friends forget our birthdays. When we were young, however, and particularly when we reached the exciting milestone of 10th birthday, we quite naturally expected that the occasion would be very specially observed.

My metaphor is really not strained, in the context of the occasion tonight. Certainly the 10-year-old gains eagerly new knowledge that he will apply eventually. In a real sense he is going through his basic-research phase. We, and he, won't know until many tomorrows pass, what will be the rewards of his diligence, how he will apply his knowledge, how he will develop his promise. We do not, however, withhold from youth our encouragement and our support because we have no positive assurance that the man will fulfill the promise of the child. On the contrary, our experience has taught us that encouragement of the pursuit of new knowledge by support of basic research, richly rewards and ennobles men and societies of

Young among agencies of the Federal Government, the National Science Foundation is destined to remain young in purpose so long as our citizens, through the Congress, permit it. Into the act which established the Foundation 10 years ago, the 81st Congress wrote a recipe for youth in these words:

"The Foundation is authorized and directed to develop and encourage the pursuit of a national policy for the promotion of basic research and education in the sciences."

Conceptually, basic research and education in the sciences are young. Both are directed to tomorrow. One to add to knowledge, of man and the world he lives in, knowledge that will, in some as yet unknown way, assist mankind in its march toward a brighter future. The other is to assure that ravages of time do not thin out the ranks of those who add to our store of knowledge. Also that citizens at large better understand the role of science in our dynamic times.

On this felicitous occasion, it is indeed important for each of us to know, and indeed pay homage to, the man who probably more than any other foresaw the need of an agency of the Federal Government dedicated to science and helped materially to persuade the Congress to establish one. wish he might have been with us tonight so that each of us might extend to him personally our feeling of gratitude. More than 15 years ago, Dr. Vannevar Bush, then Director of the Office of Scientific Research and Development, was asked by President Roosevelt how the vast advances of science emerging from the war years might be continued into the promised years of peace, so that our citizens might enjoy "more fruitful employment and a fuller and more fruitful life." Without doubt, his written response, "Science—The Endless Frontier," will one day be accorded by historians the place it

richly deserves as a crucial turning point in the attitude of our Government toward true science. Dr. Alan Waterman tells me that as a feature of its tenth-anniversary observance, the Foundation will within a few days reissue "Science—The Endless Frontier" with a new preface by Dr. Bush and a foreword by the Director of the Foundation. Even though we might have read this report before, this is the opportune time to do so again. It will help us to assess what has been accomplished in the last decade, it will help us look into the future with renewed courage. No other report has been written like it, nor is any likely to be, because Van Bush and his associates wrote the definitive treatise about basic-research support in the United States.

Science is indeed an endless frontier. Reach one of its majestic horizons and there before you looms another, still more alluring to an inquisitive mind. The word itself, science, means to know. Once attacked by the virus of knowledge one is stricken with a pervasive, insidious, and-at times delightful malady. Would that it might become a universal epidemic. It is international; it recognizes no manmade boundaries; it seeks to bring men togetherwhen men let it. But during the years when many of you here tonight-and I am proud to count myself in your company—when many of us worked among the teams of scientists recruited by Dr. Van Bush to help subdue ruthless antagonists, we sought to pre-empt all scientific and technological knowledge for ourselves and our allies. those desperate days few found time or inclination to think about the universal benevolence of science. Customs of the scientific community were forsaken in the relentless effort to make better fire controls, to split the atom, produce penicillin, improve radar-in short, to defend our country.

From this prodigious search for better tools of war emerged the realization of our own potentialities in basic scientific research and, conversely, our own inadequacies. In developing its thesis for increased research support, the Bush report warned that the "intellectual banks of continental Europe, from which we formerly borrowed, have become bankrupt through the ravages of war." And then, these wise and prophetic words:

"In the next generation, technological advance and basic scientific discovery will be inseparable; a nation which borrows its basic knowledge will be hopelessly handicapped in the race for innovation. The other world powers, we know, intend to foster scientific research in the future. Moreover, it is part of our democratic creed to affirm the intrinsic and aesthetic worth of man's attempt to advance the frontiers of knowledge and understanding. By that same creed the prestige of a nation is enhanced by its contributions—made in a spirit of friendly cooperation and competition—to the worldwide battle against ignorance, want, and disease."

Despite the war-torn background against which those words were written, we hear scientists and educators who wrote them—Bowman, Tate, Land, Rabi, Weaver, others—reaffirming the potential for world harmony inherent in the pursuit of true science. Because what I have to say to you tonight is built on such a foundation, I will have occasion to return to these words again later,

The high aspirations of these men were not to be realized completely. The immediate objective toward which they worked—establishment of an agency of Government to be concerned primarily with fundamental research—was attained. Even this took some doing. The Congress and President Truman could not quite agree on details, and 5 years elapsed between the time these men helped Dr. Eush prepare his historic report and the time when the act establishing the National Science Foundation was signed on May 10, 1950. Dr. Alan Waterman was nominated

and quickly confirmed by the Senate as the Foundation's director. Fortunately, Alan Waterman still directs the destinies of the Foundation.

The first chairman of its 24-member governing body, the National Science Board, was Dr. James B. Conant. Its first appropriation for carrying out operational responsibilities was \$3½ million. In the first annual report of the Foundation to the President, Dr. Conant observed:

"As time goes on, Congress will come to have confidence in the widely representative board of citizens and look to this board for the policy decisions affecting research in the natural sciences."

A measure of congressional confidence is reflected in the fact that 10 years later the Foundation's appropriation is \$160 million. No small credit for building into the Foundation the public trust which it enjoys today resides in the qualities of leadership which mark the men who followed Dr. James Conant as chairman of the National Science Board—Dr. Chester I. Earnard, between the years 1952 and 1955, and its present dynamic chairman, Dr. Detlev Bronk, President of the National Academy of Sciences.

The realities of the decade in which the young Foundation began its career were not lost to Dr. Conant. His foreword closes with

this urgent warning:
"Until such time as disarmament becomes
a reality, the free nations must be deeply
concerned with finding and developing
scientific pioneers, for on their efforts we
must rely as much for increasing national
security in a war-torn decade as for industrial progress in periods of peace."

dustrial progress in periods of peace."

Clearly audible today is the echo of Conant's warning—"until such time as disarmament becomes a reality." The reality then—and now—was that temporary comrade in arms became an intransigent foe, reaffirming the subservience of the individual to the state, ruthlessly enguling unwilling neighbors as satellites; threatening the freedom of peace-seeking peoples throughout the world. The science of the United States had no choice but to focus on the needs of national defense, and this it has done well.

History began to record the early years of a quasi-peace we have come to call the cold war. From time to time its temperature climbed to boiling point, and sporadic outbursts of "hot" war flared up in places distant in miles from our shores but, measured in time, now our next-door neighbors—Korea, Suez, Talwan, Victnam. Science found no release from its association with arms and armament, nor did it seek any, so long as its help was needed to safeguard the liberty of the world by insuring the strength of our defenses.

Unprecedented funds were unloosed that we night maintain our leadership in weap-onry. Corporations, big and small, and even universities, entered into contractual relationships with Federal agencies involving very many dollars, to undergird our defenses. Science and its offspring, technology, flourished and prospered as never before in our history. Under the impetus of this massive Federal support, our scientists and engineers contributed vastly to our storehouse of knowledge and its applications.

Working closely with military people on military problems, scientists and engineers supplied the elan for one of the most striking technological developments to emerge from the postwar period—automatic data processing, using the high-speed digital computer. Most of the stimulus behind this development came from the military sources seeking fast methods for processing data on military tactics, logistics, flight simulators for testing and training, or any other end-product which required the speedy reduction of a vast input of data.

Fortunately for our long-term leadership, more basic aspects of science were not for-gotten. High-energy, elementary-particle physics is a field in which vast progress has been made since World War II. Similarly, radio astronomy has pushed rapidly ahead in the last decade, using advances in electronics born out of military-related work. Molecular biology made spectacular advances and brings us near the understanding of the origins of life.

Creativity budded and bloomed in a brilliant burst of innovation. Despite their essential preoccupation with developing the defensive strength of the Nation, science and scientists demonstrated the great rewards of research irrespective of the environment to which it was applied. In retrospect, the decade of the fifties may become known best for its identity with two capital letters, R. & D.

Until the midperiod of the decade, economists had to guess the amount of research and development performed within the United States. At that point, the National Science Foundation, on the basis of a thorough survey of the 1953 period, pegged the dollar figure for R. & D., not at the estimated \$2.5 billion, but at more than double that amount—\$5.4 billion. Today it has more than doubled again, the foundation's estimate being on the order of \$12 billion. The late, great Harvard economist, Sumner Slichter, coined the most connotative phrase I know for research and developmentindustry of discovery." I would also like to call it "the industry for tomorrow." None need be surprised to learn, therefore, that those industries which have invested most in research and development, the electronics and pharmaceutical companies, have shown the most rapid rate of growth in recent years.

The industry of discovery cannot be confined. It is as profitable for mankind as it is for the corporation. Although science, no less than any other human activity, was engulfed by the political strife of the cold war, It showed a way to demolish political barriers during the 18-month period of the International Geophysical Year, even though such was neither its mission nor its design. Scientists suported by their government, sought simply to map man's physical environment, to schieve a scientific understanding of the earth and its cosmic en-virons. They succeeded magnificently in accomplishing their scientific mission. From investigations of the universe made or initiated between mid-1957 and the end of 1958, a micro-second on the cosmic clock, will emerge a volume of geophysical knowledge greater than any theretofore assembled.

Yesterday, as a chemist at Harvard, I should have found such accomplishment all that I could ask for. Today, as a servant of government, I find it even more encouraging as a kind of a breakthrough of its own, to better international understanding. Sixty-six nations, representing the free and Communist world, participated in this exploration of the unknown. They marshalled 30,000 scientists and technicians to work together as a team, although separated across the distance between the poles. With but few exceptions, they share the knowledge they uncovered.

Similarly in the Antarctic, an area for years dominated by rivalries for territorial claims and rights, the cooperative efforts of scientists of many countries served as a pattern of international cooperation accepted as valuable by their political leaders. Work started during the International Geophysical Year, including the exchange of scientific personnel, the sharing of facilities and results, and the efforts to plan cooperative schedules and arrangements, is now more than ever developing a broader spirit of cooperation among the scientists of these countries and, perforce, drawing in the political interests as well. The United States

is deeply engaged with its scientific personnel in cooperative efforts and is receiving the same type of help from other countries.

Attesting to the value and importance of these scientific efforts led by the United States, the interested nations have recently drafted and signed a treaty for Antarctica which opens all areas freely for scientific research to all nations of the world, places claims for individual territory in abeyance for the duration of the treaty, and assures all that Antarctica shall not become a place for military operations or military rivalries. Were it not for the scientific effort in this area during, and following, the International Geophysical Year, the pattern for cooperative arrangements in Antarctica would never have been established, nor would there have been the impetus for drafting a treaty.

However substantial were the cooperative aspects of the International Geophysical Year, the period was characterized as well by a heightening of international competition in sicence and technology. The IGY literally thrust us into the space age. Our country can justly be proud for first announcing space satellite plans to assist the IGY program. However, the sputnik launch provided the thrust, without doubt. I am not so sure but that the emphasis should be on the spectacle of immaturity we made of ourselves over this engineering accomplishment. Today, I believe, most of us feel a bit shamefaced about our sputnik-provoked anxiety, particularly when we realize that not even one Soviet satellite remains in orbit that is transmitting information, while several of our own still riding through the reaches of space continue to send back most of the scientific information they were designed to uncover. Even the humblest of these, Vanguard I, continues to remit valuable scientific data. Tiros I proved to be much less of a tyro with a camera than we had thought. The quality of its photographs permits identification of individual hurricanes and other centers of disturbance as well as study of the gross features of cloud cover. The amount of useful information transmitted will contribute to a deeper understanding of the earth's atmosphere for the benefit of all mankind.

As a scientist and as a servant of Government, I say let no nation count the United States out of competition in any contest for superiority in science and technology. Though the frontiers of sicence are endless, the competitive spirit of frontiersmen is a legacy of the American tradition. We are tough competitors but hardly less persuasive is our instinct for cooperation. By compelling the United States to keep its guard up, our antagonists may yet be hoist on their own petard. The competition in armaments into which we have been unwillingly thrust has served as a driving stimulus to scientific creativity. Because we are fortified with a credo which insists on the primacy of the individual, and are not perverted by the drive for aggrandizement of state, our science seeks to serve, rather than master, mankind.

At times misinformed men raise voices in criticism of science as a major national commitment. They could better spend their energies seeking to improve the education of their sons and daughters that they will be prepared to participate constructively in national and international affairs in this era of scientific revolution. They themselves would have been better prepared for the events of today had they followed the counsel the great British mathematician and philosopher, Alfred North Whitehead, offered for their guidance nearly 50 years ago:

"In the conditions of modern life, the rule is absolute—the race which does not value trained intelligence is doomed. Not all your heroism, not all your social charm, not all your wit, not all your victories on land or at sea, can move back the finger of fate. Today, we maintain ourselves. Tomorrow

science will have moved forward yet one more step, and there will be no appeal from the judgment which will then be pronounced on the uneducated."

Today we have successfully maintained ourselves, but will science be given the chance to move forward yet one more step tomorrow? This is the crux of what I try to say, the question I leave with you to answer. If the walls of misunderstanding among nations can be slowly razed, what stimuli will keep science and technology moving forward at the accelerated pace it has enjoyed with the massive financial resources made available to it through investments in armaments?

I tried to underscore the worldwide achievements of science made during the International Geophysical Year. In other ways also nations less fortunate than our own in keeping pace with advancing science and technology are being helped materially as we share our know-how with them. Initially inept in such relationships, we were quick to learn that often their need is less for esoteric research facilities than for better roads, a nurse or two, an elementary school-teacher.

Nor need we look beyond our own shores to view unreached horizons of science. Our hospitals are overcrowded with men, women, and children emotionally unfit to move among their fellow men. Killers and cripplers of men such as cancer, arthritis, heart disease, muscular dystrophy, all await the day when science will marshal still greater forces against them. Rich depostis of minerals and food await extraction from the sea while the sea awaits desalination in quantities large enough to open new lands to mankind. The atom awaits fusion, photosynthesis to be harnessed, new galaxies to be discovered. Science itself awaits the day when it will be reunited with music, art, and literature into harmonious culture to move together, toward the achievement of excellence in our lives.

Who will assure for science the resources it will need for these conquests? Who will stem the tide of complacency when the elusive day of gradual disarmament dawns? Government alone cannot, nor should it pave the highways for science to travel. Business, professional people, educators, labor, in sum all citizens must find ways to keep science moving forward if we are to break the grip of ignorance, want, and disease. You here tonight have a tremendous stake in such decisions. Our citizens need to be literate enough in science to tackle intelligently the problems that arise during this revolutionary decade of science, and to share the responsibility of decisionmaking. However, when the vast majority of our people even do not distinguish clearly between basic research and science, on the one hand, and the applications of science and technology, on the other, the Nation will benefit if its scientists exercise a kind of scientist-statesman role for which unfortunately too few are trained. Further, the Nation places heavy burdens upon its Representatives in Congress. The Nation can be thankful that some Members of the House and Senate have found time and resolution to keep themselves so well and currently informed about the needs of science that they created an atmosphere and an attitude, in and out of Congress, more favorable to the support of basic research.

Science will need their continued interest if it is to fulfill its many promises. They are rich but attainable. The spread of understanding of science among our people will enrich their intellectual horizons. Through the application of science, sickness will be conquered; labor will become less a burden to eke out a living, more a challenging experience; our Nation will maintain military strength needed in times of international strife; science will find ways to Insure

reliable monitoring of arms limitation agreements. Throughout, science will give to our an essential ingredient leadership. Let us all wish that the National Science Foundation remains a strong national instrument to share in achieving these goals.

Era of Nationalism Brings Twilight of

EXTENSION OF REMARKS

OF

HON. EDMUND S. MUSKIE

OF MAINE

IN THE SENATE OF THE UNITED STATES Monday, May 16, 1960

Mr. MUSKIE. Mr. President, on March 3, 4, 5, and 6, 1960, Mrs. May Craig published 4 columns which were printed in various Maine newspapers.

In one, she spoke of the Twilight of

Kings in Morocco.

In the second, she discussed the importance of religion in the Moslem countries.

In the third, she took her readers inside Guinea and introduced us to President Toure.

In the fourth, she suggested that while this country ponders a policy toward these new African States, the Soviet world is already taking action.

I ask unanimous consent that these 4 articles be printed in the Appendix

of the RECORD.

There being no objection, the articles were ordered to be printed in the REC-ORD, as follows:

[Inside in Washington, Mar. 3, 1960] ERA OF NATIONALISM BRINGS TWILIGHT OF KINGS

(By May Craig)

RABAT, MOROCCO.-Uneasy lies the head that wears a crown in this day of changing forms of government. This is so for King Mohammed V of Morocco who worked so long and hard for the freedom of his country from French protectorate—was exiled for his efforts, came back and reigns. The idea of freedom, nationalism, rife in the world today, is wrapped up with the twilight of kings.

All across Africa they have gone. Mohammed is popular with his people, we were told by our Ambassador here and by others. But there is unrest, there is rumor of an attempt to assassinate the Crown Prince not so long ago. Back in Washington we heard that the leftists in the country, even some who had helped bring Mohammed back, were not so sure they want him as King, but only as religious head. Here they are Arab and Moslem. It is almost impossible to run down the truth. One hears of jailings, ar-rests of key men in the restive elements. It is all hidden. The newspapers are organs of political parties, the King has all the instruments of power, he can repress open disaffection—but nobody forgets how we were surprised in the Iraq rebellion.

There is not the Communist influence here-Islam is against communism, and this is a devout country. Our Ambassador spoke so carefully, that we would not tell what he really thought about the situation-he said he dld not know more than the story printed in a local paper about the alleged attempt against the Crown Prince.

At nearby Nouaseur, Commanding General Horace Wade, when we asked him if

perhaps the deadline of December 1963, when we must liquidate our bases here, might be extended, said that it might depend on the stability of the Mohammed regime. We might be asked to leave sooner or might stay longer.

Fact is, that these bases, which cost us a half-billion dollars to build, and where we spend \$30 to \$40 million a year, are going out of date. The General said he hopes by 1963 we will have missiles enough so that we need not depend on oversea bases. These bases were built when we had B-26's and B-36's, with net range enough to reach our target in the Soviet Union and return. With the European, English, and Moroccan bases we could refuel to go on, we could fly back to them after delivery. But, with the onset of the long-range missiles, we will not need the bases. Europe and England are already in reach of shorter range missiles from

We should not think that the money was wasted, he said. We had the bases when we needed them, as deterrent. If we do not have enough missiles when we leave here and Tripoil, we have bases in Spain—and an airborne Strategic Air Command alert could protect us for awhile.

Trouble is that we made agreement for the bases with the French; the Moroccans do not recognize the agreement. Under the agreement, we must give the bases back to the French. What happens then? The French at the moment are making propaganda that they will give the bases to the Moroccans. But the Moroccans will not have it that way-they never recognized the French right to the bases or the agreement. This could cause trouble for us and we want friendship with Morocco.

We had an audience with the King in his gorgeous palace. He had a bad cold and had cancelled all his engagements but ours. He came into a throne room, carpeted with glowing fine rugs, stood two steps in front throne chair, and we came by to shake hands and then he made a little speech in Arabic, translated into French by an aid, and into English for us by Marcel Duriuax,

our tour director.

He spoke of the friendship between the two countries, which he hopes will last forever; and he spoke for world peace through negotiation of controversies. Then he said negotiation of controversies. Then he said that as Arabs and Moslems, Morocco would stand by Algeria until she has her freedom. They are brothers of the Algerians. more trouble for us because France is our ally too, and the Algerian war is going on and on, bloodily. De Gaule is trying to set-tle it peacefully, with French settlers in rebellion. The King gave us fair warning he will stand by the Algerians, he remembers his own battle for freedom.

It would be a bad thing for us if the King should lose any of his power because he is our friend, and we do not know what might come after him-even a period of chaos or civil war would be a terrible thing for us. Farewell and best wishes to us, the King said kindly, and messages of friendship and goodwill to President Eisenhower, who was here last fall to visit.

[Inside in Washington, Mar. 4, 1960] DESIRE FOR FREEDOM WARS WITH ANCIENT ISLAM RULES (By May Craig)

EN ROUTE TO GUINEA.-The free should not smugly say that Islam (Mohammedanism) will never go Communist. is not true. It can, because Islam does not put shoes on the feet or food in the belly of the teeming, starving, sick millions in Moslem countries, and they are beginning to find out that there is a good life to be had. The Soviet Union takes Moslem religious leaders to travel in the Union, and shows them open mosques and says religious practices are free

there. This is not true of any religion in the Communist countries. Communism is necessarily atheistic. It cannot allow God above the state; it cannot allow an individual man's conscience to be above the party line. It allows only so much religious activity as is necessary to allure people into Communist orbit.

Islam is essentially an individual religion. But the Islam religious leaders are divided on whether or not Islam can be practiced within the Communist orbit. The illiterate Moslem masses do not know that communism will eventually destroy all religion. They want the better life. They do not know that communism is intrinsically collective.

Within the Moslem countries, Middle East and African, the longing for nationalism, independence, the better life, wars with the shackles of ancient Islam rules. Communism is on the side of the material aspirations. The Koran does not forbid communism as such. So, some Moslem leaders say they can work with the Communists. is the danger to the free world which counts on religion to fight atheistic communism.

In Morocco, though, the leftist movement is not called communism, it would restrict the King to being a religious leader, if it could, preaching that it is compatible. The recognition of the need for the good life in freedom of government, the people, and of religion, is the crusade of President Bourgiba of Tunisia, that the ancient feast of Ramadan be subordinated to the modern economic demands. This feast lasts a month. No one may eat, drink, even swallow his saliva, during the daylight hours-when a white thread can be distinguished from a black thread. You can imagine what this does to the modern world of workday. The Moslems, during this month, stay up all night eating and drinking, dancing, and recreating themselves from the dreary day. This ruins them for the workday to come.

President Bourgiba says Ramadan is restricting the economic growth of Tunisia; the growth that would give them all the betlife that the Communists so falsely promise-that economic growth would allow free religion, nationalism, higher standard of living. The hidebound religious, prelates oppose Bourgiba. The Grand Mufti nisia and the rector of the Koranic Zitouna University oppose Bourgiba. The President says that the struggle for economic liberty. which will bring them out of poverty and ignorance, is as much of a holy war (jihad) as any other "religious" war. This will excuse workers from observing Ramadan, the month-long absence from work in the day. He says that while the fasting may clarify the spirit by enfeebling the body, which it is designed to do, that the new revolution into democracy and industrialization, needs "solid bodies." Only thus in a competitive world, says Bourgiba, can Tunisia and other Moslem countries take their place of equality in the modern world.

Guinea is 80 percent Moslem and 20 percent Christian and of the latter 80 percent are Roman Catholic. The Guineans are that beautiful velvet black. President Sekou Toure is tall and handsome and pure black. This is one of the proudest of the new African countries. They are the only one of the former French colonies that refused to stay in the French community. They demanded freedom of choice and, if they stayed in, to have practical autonomy in foreign affairs. This was refused and the French departed in deep hostility on both sides. This freedom has been costly to this poor country. but they think they did right. One result has been that the Russians have come in with offers of trade, long-term loans, aid with agriculture, water power, anything. Russia takes 50 percent of the Guinea agricultural products, pineapples, bananas, coffee, etc. We do not need these, we get them from Latin American countries. The Russians take them as a matter of political policy whether they need them or not. There is a Russian delegation aboard this plane.

There is no use our complaining. We are in a great duel between the two major political systems, communism and democracy, and each side must do what it can to spread its system. President Eisenhower has asked for money for the countries south of the Sahara, of which Guinea is one, and Congress is hesitating—if they could come here and see what happens when the Russians help and we do not, tney would do what the President asks. "Backward people are always exploited," one knowledgeable American told me. The colonial powers did it. That is over. "Aid" in development is the new way. The Russians are hoping to make more satellites this new way. They have practically got Egypt sewed up. We could do it without imperialism, which Africans fear.

[Inside in Washington, Mar. 5, 1960]
PASSIONATE PATRIOTISM MAY CREATE DESIRED
UNION

(By May Craig)

CONNAKRY, GUINEA.—Anybody who calls this African trip a "junket" will get a box of poisoned chocolates from this traveler. We have had bad luck with weather and long delays in flying which have upset a tight schedule. We were due here at 8 o'clock in the morning, after the long, cramped, horlible night packed into an old-fashioned plane, with a change at Dakar, French West Africa, at dawn.

President Sekou Toure waited for us. We arrived at 11 a.m., to go with him a hundred miles into the country to Kindia where there is a school for teachers and workers in agriculture and industry. They said "propatrie," for our country, it was on the red, yellow and green banners, on signs along the paved road through the thick jungle, winding along the peculiar frowning mountains typical of this part of Africa.

It shames us that we have lost so much of that passionate patriotism of the newly free peoples. They are not ashamed to speak of patriotism; they would not object to a loyalty oath that pledges to protect their new freedom from those who would overthrow it by violence. They are willing to live hard, and be free; that is why they three out the French. All along the 100 miles, the people were out, from almost naked, to the bare-breasted women with babies tied on their backs, the swarming children, the men and women in colorful, voluminous robes with incredible starched headdresses.

They had come from miles away, or from huts along the road, to see their President, who is the symbol of their freedom from the White masters. The President has a shiny new Cadillac, 2 months from the United States. Part of the time I rode in a small Chevrolet with the Guinean Ambassador to the United States and the U.N., Diallo Tell, who has been in the post a year. Guinea get its Independence in October of 1958 and he has learned very good English in that time. He says his wife had more time to spend on English and speaks it well.

The Cadillac is a symbol; before independence a Guinean would not have had a Cadillac to rid in. It is a bubbletop like President Eisenhower has, and Toure stood up most of the time, getting out a hundred times to greet large groups.

There is no veiling of women in this Moslem country; but along the roads, in the crowds, the men and boys usually stood on one side, the women on the other, except when they stood together outside the family huts—thatched roofs on conical round huts.

You could see that Toure's heart was warmed by the outpouring of the people's enthusiasm—the Africans are naturally emotional. There were drums beating rhythmically, I could not read what they said. The people shouted "The Elephant has come over and over. That is the name for They sang and clapped, and sitting Toure. down on the side of the road were other men playing weird sorts of instruments. In front of the rows of people, every now and then, a man or a woman, specially good dancers, would be out with special dancing. It was boiling hot, and the President thought we had had lunch before we left Connakry, and it was nearly 5 in the afternoon before we got to one of the houses at the school where we had food and drink.

When we got to the school, high on a hill, there was a dedication and a formation of soldiers and a band and a little platform where the flag was raised, and, oh horror, the worst happened, the ropes stuck and the flag only went half way up while the band was playing and the President standing at attention. This is always the nightmare of such an occasion.

The parade of the students and the workers, from adults to little children and their version of Scouts, girls and boys, before the little stand, was impressive in their in their intense earnestness and the pride of Toure. At the rest house we found an American colored girl from Columbia University, an exchange student. We had a press conference with Toure, who spoke French through an interpreter. His cabinet of 17 was introduced to us—two women, which is more than we have in the United States—no women in the Cabinet. The signs along said "The United States of Africa," "Union of Guinea and Ghana." Toure spoke passionately for this—these Africans do not mean e under the rule of Egyptian Nasser and his United Arab Republic any more than they meant to stay under the French. They mean to have an African federation.

Someone asked about the position of women. Toure said all the Guinea men were slaves and the Guinea women were slaves of the men. The revolution and independence for Guinea meant freedom for all-including the women-this also is more than women get in the United States. Formerly women were property, now they are free and vote, get equal pay, and all other rights, all public offices open to them. There is no child marriage-not until 17 and no sale of brides, the girls have a say in marriage. As to relations with the United States and Sovietthey want to be friends with all-they must trade where they can-that is where we have fallen down—they are friendly with the U.S.S.R., too. We could not have had a more cordial welcome anywhere. But they are determined to stay with their free African brothers first. Their leaders are educated, determined men-I would bet they make the

[Inside in Washington, Mar. 6, 1960] United States Ponders, Russia Acts— Africa on the Move

CONNAKRY, GUINEA.—"The Communists have established a beachhead here," an informed American said. They can move fast and massively; a democracy cannot. There are laws, made by Congress, that have to be obeyed by the President and the executive branch in relation to foreign countries. The day that Guinea became free, there were Russians, Poles, Czechs, Rumanians, East Germans, others, ready to move in, with money, offers of trade, technicians. The Soviet Union gave them immediate recognition, a matter of much pride to the Guineans. They speak even now of our "tardy recognition." They believe we held back because of French influence.

The French stupidly, in their surprise and anger that Guinea refused to remain in the French community, took out every operational unit they could, "everything not nailed down," from wiring to plumbing. The Guineans believe France meant to beat them to their knees. Liberia and Ghana helped Guinea—and the Communists, Guinea asked us for small arms and uniforms for police and national guard. We do not like to furnish arms to countries where they may be used in revolution—or fall into Communist hands. We hesitated. The Soviets provided them.

France left a vacuum. We did not fill it.

Reason it is important to tell this about Guinea is that it is a lesson to us of the terrific battle we are in, for Africa. We have no "short answer" to the problem. The Communists sold arms to Egypt too; they have offered them to Cuba. Khrushchev is coming here to visit. They sent in 5,000 tons of rice, right away, while we thought about it. The comparison to what we did and what the Soviet did—and does, is not to our credit with Guinea. They do not care about the reasons. They are desperate for help.

This Communist policy could spread through Africa like a cancer, said my friend. The African Federation is nonexistent yet; the Communists are here.

We have a fighting chance, but we must move fast and we are strangled in redtape. The Soviet Union is here offering deals. They can buy rotton bannanas, take them to sea and dump them. Our officials have to account to the American taxpayer for every dollar spent. Does this mean that we will lose Africa because our system cannot compete with communism? Maybe.

President Toure knows that the passion of the other African nations for independence, means they do not want Soviet overlordship either. They are watching him—if his country is taken over by communism his dream of pan-Africanism is gone like a

bubble

Our ambassador here is John H. Morrow, a highly educated man, with feet firmly on the ground. He is a brother of Frederick Morrow, the first Negro to be graduated from Bowdoin College, who is now in the White House on the staff of the President. The fact that we have colleges who have educated men like these, who know languages, who can accept posts like Ambassador Morrow, and do this important service, is to the credit of the colleges which pioneered in the higher education of colored Americans.

A most interesting man I lunched with is Rolf Parelius of Boston, 10 years a Baptist missionary on the Ivory Coast, now in Guinea with his wife, to run a school for the children of Baptist missionaries from all over Africa. The 60 children will live at the school 8 months of the year, in the cool of the hills, the rest of the year with their parents. While Guinea is 80 percent Moslem, the rest Christian, the government is nonreligious, and all religions are permitted, except that they may not denounce Mohammedanism. This is a tightrope for Christian missionaries, who must preach an evangelical religous doctrine, that Christianity is the only true way. They must be discreet. educational and medical service helps acceptance of their religious teaching.

There are American trade missions here but they have no authority to make commitments—Ralph Lovell of Sanford, Maine, is on one of these missions. They will go home and report and recommend. This is slow. We must invite private enterprise to come in here; we cannot get diplomatic immunity for them. We cannot tell them they will not come at a loss. We can suggest that it would be a service to their country to take a loss if necessary to establish "an American

beachhead" here, a beachhead for capitalism, lest it go down all over the world.

One of the best events was that President Toure, and our Ambassador Morrow with him, went to visit the United States last fall, traveled also in the South, was surprised and pleased with what he saw, because the way it had been told to him most of the Negro Americans were hung to cypress trees in southern swamps. He was impressed with the vastness of the United States, its resources, the warmth of his welcome there. It helped to countervail the Communist propaganda lies. The Guineans already have found the poor quality of the goods the Soviet sells them—that will help us in the long run—if we get a long run chance. We can lose the cold war in Africa.

Courage: An American Tradition

EXTENSION OF REMARKS

HON. ROBERT E. COOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. COOK. Mr. Speaker, under leave to extend my remarks in the Congressional Record, I wish to call to the attention of my colleagues a recent editorial published in the Painesville Telegraph of Painesville, Ohio.

The initiative of the 44 people who have formed Glen Area Flood Control, Inc. is to be commended. They have pledged time and money in an attempt to temporarily alleviate a situation that last year alone cost the lives of five of their neighbors and nearly a million dollars property damage.

The U.S. Corps of Engineers is presently conducting a survey, with funds appropriated last year, to make recommendations to solve the annual flood threat to the Chagrin River Basin.

The courage and spirit of these people deserve notice and praise:

DEMONSTRATION OF INITIATIVE AND COURAGE

Good old American inventiveness and initiative were well demonstrated by the 44 Willoughby Hills families which decided to do something about the flooding Chagrin River.

They formed Glen Area Flood Control Inc., and now plans are well underway for dredging a 900-foot channel which would allow rampaging water to bypass the Horeshoe Glen area.

The 44 residents have pledged \$13,100 so far to defray expenses. They are donating labor, and two heavy machine companies will donate machinery.

The project was able to get off the ground mainly because John and Francis Sherwin of Waite Hill kindly donated the 30 acres of land needed for the channel.

Residents decided, with memories of the loss of five lives during the 1959 floods still fresh in their minds, that they shouldn't wait for the Federal Government to act. The U.S. Corps of Engineers presently is conducting a survey as the first step in a Federal flood control program. But it may be years before ald is realized.

With this in mind, the Willoughby Hills group is forging ahead with its courageous plan. It is clearly a demonstration of the fine "get it done" American tradition.

We wish them well.

The Importance of the American High School

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following award-winning essay of the Kline essay contest written by Richard T. Swank, a senior student at Hazleton (Pa.) High School, which appeared in the Hazleton Plain Speaker of Thursday, May 12, 1960:

RICHARD SWANK WINS KLINE ESSAY CONTEST

Richard T. Swank, son of Mr. and Mrs. Martin Swank, Drums, one of the top 10 senior students at the Hazleton High School, is the winner of the Kline Essay Contest it was announced by George Shanno, high school principal.

Following is the award winning essay, "The Importance of the American High School":

"'Oh, for those good old high school days,' is the unceasing lament of adults caught in the crush of a cold, care-laden world. The years spent in high school are among the happiest and most critical of any in the lives of the modern American. With the possible exception of the church, no other institution approaches the paramount role played by the liberal public high school in modern society. High school years are the romantic years, the bewildering years, the character molding years, and the fruitful or wasted years. With these facts in mind let us scrutinize more closely our average American alma mater.

"By definition a high school is a public school offering instruction between the elementary, or common schools, and the college or university. Today's public high schools exist in varied forms, especially in the larger cities. There are academies, vocational schools for boys, and business schools. The first free public high schools in America were largely vocational and for boys only, the first coeducational schools not existing until the 19th century. Gradually high schools began to improve in quality until the two-class system, in which the children of rich people attending a private school received a superior education was practically eliminated. majority of modern high schools in America are now well equipped with cafeterias, health centers, libraries, guidance counselors, and varied courses. Studies and extra-curricular activities are combined to entail good mental and physical health. High schools proving so successful and necessary, a movement has been set afoot to increase free public education to the junior college level. In short the high school has become as truly American as the hot dog or baseball. Most other countries differ from our policy of a liberal education for 12 years. In Europe a national examination is given to students at about 12 years of age, and only those that pass certain requirements are allowed to continue their education. The rest are literally thrown by the wayside without so much as a vocational training. In Russia the state pays for the education of its brighter students, but they in turn lose their identity since they study what the state dictates. The great advantage of the American high school system over these other plans is that the masses are educated with the vast majority of our people having a knowledge of great works of the past, their own Government, and their duties as citizens. This fact is one of the main reasons that the United

States has suffered less social discontent than most other nations.

"'The goal of almost all education,' as Thomas Henry Huxley stated, 'is to put man in harmony with nature." To accomplish this, we must dispel ignorance or nature's reprimands may prove fatal. Of course most the fundamentals of such a goal can be realized in elementary school, but it is in high school that the real job is done. Although high school courses are greatly varied, they do have certain similarities. English and social studies, probably the most essential subjects in this highly civilized nation, are required in all courses. Foreign languages help to put our Nation in harmony with other nations while in science and mathematics courses students literally learn how to put nature in harmony with man. In its varied courses the high school prepares its students for life in our country's tradition.

"Why does high school have such a great influence on students and on society in general? Primarily it is because of the fact that young men and women enter high school at what is probably the most critical time in their lives. Being about 15 years old, a sophomore is starting to mature both intellectually and emotionally. He is literally thrown into a melting pot where he meets and evaluates fellow students and, most important of all, learns to live harmoniously with them. Lasting friendships and loves are formed. He encounters new sensations, that of being more independent and also that of having increased responsibility.

"The teachers are different; they demand

more of the pupil, yet do less pushing than those in the grades. Students participate in extracurricular activities of their own choice, undertake individual projects, and take new courses and subjects. Pupils have the choice of taking advantage of these opportunities or wasting 3 years of their lives. Fortunately, because of the fact that they can pick their own course of studies, most students acquire a greater respect for learning. Likewise, if the student really has a goal in mind, such as entering college, becoming a secretary, or learning the ma-chinist's trade, he will need very little prodding from the teacher. High school necessarily has a great influence on society since it is the end of the school road for over half its graduates and is a stepping stone to higher education for the re-mainder. In the first case high school determines to a great extent the economy of a region and the attitude of the citizens. Corrupt government results from and is of necessity a parasite on uneducated minds. As long as there are dictators and would be dictators in the world, the strength of the United States will depend a great deal on the quality of our high schools. Today almost everyone knows the importance of high school to those planning to further their education. A person with 'C' and 'D' grades just doesn't stand too much chance of being admitted to a reputable college. There are a few misguided people who quit high school at the age of 16, scornfully stating that they can be successful without a high school education. However, I believe their arguments were very capably refuted by John Henry Newman who said, 'The educated man has a gift which serves him in public, and supports him in retirement, without which good fortune is but vulgar. and with which failure and disappointment have a charm.'

"Although high school education has advanced greatly in recent years, there remains much to be done. Of prime importance is acquiring more highly trained and competent instructors. To do this, we will have to make teaching a more attractive and honored profession tempting the very best of our young people. Teachers colleges will have to be raised to a par with liberal arts

colleges and engineering schools. It seems that today many students, despite the fact that there are many competent and highly glited teachers, regard a teaching career a a last resort. Making a shortage of teachers even more acutely felt is the fact that our country's birth rate is skyrocketing. Some teachers have as many as 50 pupils in a class, making the teacher little more than a custodian. Some high schools still operate in firetrap buildings while others lack adequate material and are plagued by outmoded courses. Obviously, the only solution to these problems lies in a more vigorous public interest in education. Some progress has already been made in rural areas where jointures are becoming common and in cities where organizations like the PTA take an active interest in their children's welfare. With professional advice the citizens of our country can improve our entire educational system immeasurably."

No Further Duty Concessions on Textiles and Textile Apparel

EXTENSION OF REMARKS

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. MARTIN. Mr. Speaker, under leave to extend my remarks, I include a resolution adopted at the 95th annual meeting of the National Association of Wool Manufacturers, urging that the U.S. Government place an immediate moratorium on further duty concessions on textiles and textile apparel.

The resolution follows:

RESOLUTION OF NATIONAL ASSOCIATION OF WOOL MANUFACTURERS AT ITS 95TH ANNUAL MEETING IN NEW YORK CITY ON MAY 5, 1960

Whereas existing customs duties of the United States on textiles of wool, cotton, and manmade fibers are not unduly burdening and restricting the foreign trade of the United States but rather are permitting rapid growth in imports which are burdening and threatening the American textile industry, an industry ranked by the Department of Defense as second only to steel in terms of military essentiality; and

Whereas our Government is now in the Process of developing its position for inter-national renegotiation of the customs duties on wool cloths at the request of the United Kingdom under the General Agreement on

Tariffs and Trade; and

Whereas the U.S. Tariff Commission now is developing its recommendations to the President on an appeal, under section 22 of the Agricultural Adjustment Act, from the National Cotton Council, supported by the American Cotton Manufacturers Institute and the Northern Textile Association, for relief from unfair and injurious imports of manufactures of cotton; and

Whereas our Government is about to release the list of products on which it may consider further duty concessions at tariff bargaining sessions early next year under the General Agreement on Tariffs and Trade; Now, therefore, be it

Resolved by the National Association of Wool Manufacturers at its 95th annual meeting ing in New York City on May 5, 1960, That the Government place an immediate moratorium on further duty concessions on textiles and textile apparel.

An Interview With General Lemnitzer

EXTENSION OF REMARKS OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mrs. ST. GEORGE. Mr. Speaker, the following interview with General Lemnitzer appeared in the Washington Post Parade of May 15.

This interview answers many questions asked by laymen, and does so in a forthright and straightforward manner that is refreshing indeed. This seems to give the interview a very real place in the CONGRESSIONAL RECORD. I am especially glad to have the general's statement as to the place of the Reserves in our defense posture.

AN EXCLUSIVE INTERVIEW WITH GENERAL LEMNITZER—WILL GIS FIRE NUCLEAR WEAP-ONS? WILL THE HELICOPTER REPLACE THE JEEP? HOW NECESSARY ARE THE RESERVES?

(Next Saturday is Armed Forces Day, to get us better acquainted with our defenses. In an exclusive interview, Parade's Fred Blumenthal asks Gen. L. L. Lemnitzer, Chief of Staff, U.S. Army, provocative questions on the fate of the foot soldier in an age of rockets and nuclear warfare. Here they are, with the hard-hitting answers:)

Question, General, you have said that the Army will have an increasing role in the nuclear-space age. Do you envisage the frontline infantry man armed with nuclear weap-

ons? If so, what control will be exercised over his use of them?

Answer. We have already developed the "Davy Crockett," a bazookalike weapon capable of firing a small nuclear warhead. But the use of the "Davey Crockett," or other nuclear weapons, great, or small, must first be authorized by the highest authority-the President. The safeguards for small nuclear weapons will not be unlike those already in existence for large weapons.

Question. Might the use of the small tactical nuclear weapon be barred-or if it were used, wouldn't it finally lead to the use of

the big H-bombs?

Answer. I agree that it could-possibly.

You have pointed up the key reason why we must have a dual capability—the ability to fight large or small wars with or without nuclear weapons. What we are really talking about in "tactical" nuclear weapons are those with small enough yield to be limited to military targets in the battle zone-or the war zone-as distinguished from the large bombs or missile warheads which could be employed against strategic targets.

Obviously, we want no war at all. And if there is no war, there is no reason to use any nuclear weapons. However, we must be prepared with all the kinds of weapons that the man in command needs to conduct his battle against any enemy-and, similarly, the weapons to destroy or neutralize any weapons he may choose to employ against us.

Question. Is the Army's role now re-stricted to limited war, which you have said is the more likely threat now that we face a possible nuclear stalemate?

Answer. Definitely not. It is an un-fortunate fact that the Army, in its effort to focus attention on the threat of limited war, has come to be thought of by many people as only a limited war force. As I see it, the role of the Army in all forms of war is as great as ever.

In the cold war today, the Army is playing a major role with substantial forces deployed overseas-in Europe and in Koreaface-to-face with the Communist threat. These are strong deterrent forces for keeping the peace.

And in the general war, where the outcome of the struggle will be determined by the combined land, air, and sea forces, the Army will be essential to victory. In this con-nection, I would like to point out that this is not merely an Army viewpoint, and I have noticed that the Soviet military leaders are thinking along the same lines as we are—that a general, nuclear war would not be over in a few days. They make it clear that they believe the decision would be determined by the outcome of the struggle following the opening thermonuclear exchange.

In limited war, the Army obviously has a major role to play. There is a requirement for the participation of all services—Army, Navy, and Air Force—just as in general war. Army forces—if limited war occurs—will definitely be involved in the performance of their primary role, which is sustained com-

bat on land.

Question. If there is a limited war in the Far East or in the Middle East, would the Army be able to get there fast enough?

Answer. That's exactly why I am so in-terested in the availability of tactical and strategic airlift. We cannot be strong everywhere. We must have forces available to reinforce our deployments overseas, and to go to the assistance of our friends in other parts of the world, where we are committed by treaty and by agreements. It is for these purposes that the Army maintains its Strategic Army Corps (Strac). Our effectiveness in this respect is directly proportional to the speed with which the Military Air Transport Service (MATS) and the Tactical Air Command (TAC) can move these troops in the proper strength to the area where the emergency occurs. Therefore, I strongly support the provision of adequate numbers of modern aircraft-strategic transport aircraft for MATS and tactical transport aircraft for TAC.

Question. Will helicopters be taking the place of trucks and jeeps in the army of to-

Answer. Yes; in many cases. We have made long strides in helicopter development, and I believe there will be many more rotarywing aircraft on the battlefield in the future. We have also certain types of fixed-wing aircraft which offer tremendous possibilities for very short landings and takeoffs-and can carry heavy cargo loads. But we must remember that aerial vehicles cannot do the whole mobility job. We must also continue to modernize all of our surface vehicles.

Question. What about our tanks?

Answer. We are just going into production with a new army tank, the M-60, a medium tank, which is one of the best tanks in its class in the world today. Its new diesel en-gine can use several types of fuel; it has a greatly increased range; and its 105-milli-meter gun is one of the best tank killers in existence.

Question. Can you foresee any military use for space satellites?

Answer. Yes. Satellites can be used for communications, for mapping, for navigation, for providing early warning of possible attack, for weather forecasting-to name only a few.

Question. What about the antimissile missile?

Answer. In my view, a top priority. Since long-range enemy missiles may soon pose the greatest threat, it should be obvious that any weapon capable of destroying that threat is desirable. We in the Army are very en-thusiastic and optimistic about our achievements to date with the Nike-Zeus system.

Again, consider our plight if an enemy should develop an effective antimissile mis-sile and we did not. We would be at a serious military disadvantage in that we would

be wide open to his attack, and he would have a means of defending against our retaliation.

Question. How do you feel about a single armed service replacing those we have to-

day?

Answer. I am against it. In general, I think the present organization of our forces is proper and logical. The technical problems of fighting in three elements—land, air, and sea—are such that no single service could possibly master them all; and the complexity of those problems is increasing. You must also consider morale. If you put everybody into a single service, men would lose their sense of identity, their esprit de corps.

Question. Do you favor the Navy continuing with its aircraft carriers and the Air Force with its supersonic B-58 bombers?

Answer. Yes, in both cases. Both carriers and B-58 bombers present additional and serious problems for any aggressor. The carriers have an important role in ensuring the freedom of the seas. The B-58 is possessed of a high-speed bombing and a superior reconnaissance capability which I regard as highly important.

Question. I see that the Tactical Air Command squadrons are now being equipped with F-105 fighter bombers. Since it will provide air support for the Army, what is your opin-

ion of the F-105?

Answer: I have inspected the F-105 at Langley Field, Va., and have observed its performance. It appears to be an outstanding aircraft and will go a long way toward meeting the Nation's tactical requirements.

Question. What about other requirements the Army has for the Tactical Air Command?

Answer. We have great confidence in the Tactical Air Command, on which we rely for reconnaissance, close-air support and tactical airlift. We work closely with them, and we feel that we have developed a most effective and smooth-functioning team. The Tactical Air Command is doing a great job and is striving constantly to improve its equipment and its capabilities.

Question. General, what value do you set on the role of the Army National Guard and

the Army Reserves?

Answer. A very high value. No nation can maintain in peace all the active forces that would be required in war. Once in the field, the regular forces have to be sustained and constantly reinforced. The Army National Guard and the Army Reserve are the reservoir that adds immeasurably to our strength. In addition to their combat role, there is another important capability: they provide trained, disciplined manpower to cope with any national disaster, and the possibilities in this respect in the thermonuclear age should be obvious to everybody.

Worth Trying Again

EXTENSION OF REMARKS

HON. GEORGE M. WALLHAUSER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. WALLHAUSER. Mr. Speaker, the editorial that appeared in the Washington Post on May 14, after President Eisenhower had vetoed the so-called area redevelopment bill, goes to the heart of the problem in the final paragraph, in my opinion.

There is one area of compromise on this important matter, and I respectfully suggest the hope that the opportunity not be lost to seek it:

WORTH TRYING AGAIN-

To no one's astonishment, President Eisenhower has vetoed the so-called area redevelopment bill, charging that it would spread Federal aid too thin, extend some aid that is unnecessary, and inhibit local initiative by excessive Federal intervention. There is some merit in all of these objections, although the complaint that the bill would duplicate assistance now provided under other programs is not valid enough to justify a veto, in our view.

Mr. Elsenhower does not contend that there is no need for various kinds of economic help for chronically depressed areas; indeed, he calls again for enactment of his own somewhat more modest program. If the need is real, as it certainly seems to be in States like Pennsylvania, Kentucky, West Virginia, and Massachusetts, would it not have been better to accept some program with which to make a start on redevelopment in these areas?

By the same reasoning, however, it may now be asked whether Congress ought not to meet the President half way and pass another bill that eliminates the major sources of objection. Mr. Eisenhower has indicated he would accept some broadening of the criteria in his proposal. If legislation, not mere campaign talk, is the objective, a workable and useful program ought still to be within reach.

Syngman Rhee

EXTENSION OF REMARKS

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. DORN of South Carolina. Mr. Speaker, the following letter from Syngman Rhee indicates the courage, the faith, the dedication, the Christian spirit and honor of this great patriot:

SEOUL, KOREA, May 4, 1960.

Hon. W. J. BRYAN DORN, House of Representatives,

Washington, D.C.

DEAR MR. DORN: I am deeply grateful for your warm words of support before the House of Representatives on April 26 last. My first and last thoughts have always been for the upholding of freedom, peace and justice and were I to relive my 4 score and 5 years, I would not choose to alter one single concept in which I have always believed. In process of time, God sparing me, the righteousness of my intentions will be made known. I shall continue my strong advocacy of democracy and unswerving opposition to communism.

With very best wishes. Sincerely,

SYNGMAN RHEE.

Mr. Speaker, I hope that riots and raving mobs encouraged by our own State Department will not become the order of the day throughout the world. Since our State Department encouraged mob violence in South Korea, there has been a chain reaction—now it is Turkey, South Vietnam, and even San Francisco, Calif., at the hearings of our great Committee on Un-American Activities. I am fearful of the future in South Korea,

but Syngman Rhee's splendid attitude, void of bitterness and vindictiveness, may yet save that great Republic for the cause of freedom.

Failure of Summit Points That Era of Fantasies for United States Ending

EXTENSION OF REMARKS

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. EVINS. Mr. Speaker, it is always disappointing to have our hopes shattered, but we all know from our own personal experiences that sometimes it is better to face the hard facts rather than to delude ourselves with false hopes. I am sure that the people of the Nation share our disappointment in the fact that the summit conference is not succeeding. In a very perceptive article which appeared in the Sunday Star, David Lillienthal made some remarks which are all the more pointed and cogent in the light of the news we received from Paris today. I, therefore, ask unanimous consent to have Mr. Lillienthal's article inserted in the Appendix of the Record.

The article follows:

THREE DISILLUSIONMENTS IN THE MONTH OF MAY SHOULD END AN ERA OF FANTASIES FOR UNITED STATES

(By David E. Lilienthal)

New York.—May 1960 may be remembered as the month when we Americans returned to the harsh reality of the world as it is. Once again our feet are on the rough and long and painful road to survival. Two years of wistful thinking and fantasy about the approach of an era of peaceful coexistence and nuclear disarmament are about to come to a close.

Three recent events can be thanked for

this awakening:

First, the demonstration of how little substance there is—in terms of survival—to all the fanfare over summit meetings outside the United Nations, and the essential hollowness of ceremonial visits of heads of state and lesser lights.

Second, the collapse of the technical, and therefore the political, basis for an agreed ban on the testing of nuclear weapons.

Third, the furor over an American reconnaissance flight into Russia.

HISTORIC TURNING POINT

The barrenness of trying to slow up or halt the nuclear arms race by an "inspection" agreement on an issue so collateral and essentially remote from disarmament as a "ban" on the testing of nuclear weapons and the impending debacle of the summit conference, are events which the free world may view as a turning point of historic proportions. Something graphic was needed to awaken the people of America and Britain to the facts of life.

The major significance of the crackup of one of our reconnaissance planes within Russia, it seems to me, is that this episode dramatizes for the average citizen what has, quite unwisely I think, been hidden from him by the words of many of the world's political and intellectual leaders, West and East—namely: that the not-so-cold war has not and cannot in fact be abated by wishful

thinking or a verbal escape from the evidence of the Soviet's determination to dominate the world, and the free world's equal resolution to remain free of such domination, come what may.

Once again we may begin to live in the world of reality, which is a world of constant danger. It may continue to be just that for

a generation or more.

To face up, as now I believe even the most optimistic must, to the realities of how wide is the chasm between the Soviet world and our own is, I think, the only hope for the avoidance of war, and for building a solid foundation upon which two basically opposite concepts of life can manage to live side by side.

The sure road to war is to live in a fantasy, in a world that does not exist. Neville Chamberlain at Munich demonstrated how tragic this kind of escape from reality can be. World War II was a direct product of that kind of wishful thinking. The French confidence that the impregnable maginot line made an attack by Germany impossible is the older equivalent of the current doctrine that nuclear weapons possessed by both antagonists have produced a stale-mate that frees the world from the danger of a nuclear war.

COMMUNIST REALISM

It is through such a dream world that the West has been passing. During this incredible period, however, the hard-bitten, realistic, and aggressive Communists were softening up our American resolution—their prime target.

They flooded us with horror stories of mutual suicide by atomic warfare, and alluring but empty offers of peaceful coexistence, total disarmament, and an end to nuclear

weapons.

They realized that if by threats and promises our will to resist was eroded, freedom might perish without a single shot being fired. I think we must admit that their

campaign was partly successful. Now we are ready, I hope, to put aside the superficial hopes engendered by the "spirit of Camp David," or the notion that visits of Russians to this country, and Americans to Russia, highly desirable and beneficial as they are, in themselves, have any basic relation to survival. We are now ready. I hope, to recognize that these are only sideshows that to many have obscured the real and basic obstacles to getting along with the Soviet system.

We are, I hope, ready to put aside, too, the wishful thought that the Russian political leadership desperately wants disarmament because they must keep their people happy with consumer goods, and cannot do so unless their huge costs of armament are diministrative.

diminished.

Perhaps now we can come to grips with the central problem. That is to return to our efforts, exhausting but essential, to learn, step by cautious step, case by case, the process process of negotiation with political leaders whose concept of life is almost as far from ours as if they were beings on another planet.

NEED FOR A JOLT

It is in the American temperament to be sanguine, to believe the best of others. It is also in the American temperament to face up to whatever must be faced, but only when some dramatic fact forces us to. The story of Pearl Harbor is a classic in this category.

There is a wealth of impressive evidence There is a wealth of impressive evident that the American people can face hard, cruel, and disappointing facts, and can act with vigor, toughness, tenacity, and firmness. Here I think is the hopeful side, and the same of the rather sudden disthe saving grace of the rather sudden dis-illusionment of the past weeks.

It was American firmness and readiness to face up to facts that helped get the Red army out of Iran, that rebuilt our Armed Porces and thereby kept the Chinese out of South Korea, that saved Greece and Turkey, that helped produce a peace treaty of Austria, that saved Berlin by the amazing airlift. On almost any of these acts of resolution, the Soviets might have gone to war. They didn't.

We are dealing with a revolutionary and highly successful enemy. We must be at least as realistic as the Russians have shown themselves to be. We do not want to compete with them by imitating their closed society, their lying to their own citizens. We need above all to be ourselves, Americans at our best. And at our best we do not flinch from facts, we do not insist that our public servants feed us only good and pleasant words, but that they tell us the truth, however distasteful.

Let us hope that the debacle of the summit and the maneuvers of the nuclear ban test negotiations will mark the beginning of a period of realism in our dealing with

A peace that is no peace, a "thaw" that is now warming up except in the most superficial ceremonial sense, a consequent lulling and deterioration of American resolve and will to stand firm for what we believe—this is not the road to peace. On the contrary, it is the road to disaster.

A stockpile of atomic and other weapons are inert machines. They have no deterrent value whatever, unless there abides the will to use those weapons rather than surrender

freedom.

There is as yet no evidence that facing up to reality in dealings with the Soviet adds to the risks that already exist. My own opinion is that the greatest risk of all would be to continue to nurse the illusion that international tension is relaxed because we ourselves have been relaxing.

Democrats Draw Blank on Farm Solution

EXTENSION OF REMARKS OF

HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. McINTIRE. Mr. Speaker, Mademoiselle Bertin once said: "There is nothing new except what is forgotten."

I submit to the RECORD the following article on the farm situation-lest we forget:

DEMS DRAW BLANK ON FARM SOLUTION-END 2-DAY MEETING

(By Dickson Preston)

Democratic farm experts admitted today they haven't a single new idea so far on how to deal with the costly and distressing farm problem. They'll keep trying, though,

After a 2-day meeting here, 23 farm advisers to the Democratic National Committee endorsed a program which in effect would simply take farmers back to where they were in 1953.

It included rigid high price supports at 90 percent of parity and strict production and marketing controls-all of which the Eisenhower Administration and Congress have been moving away from for the past 7 years.

CONCEDE

Gov. Herschel Loveless of Iowa, chairman of the advisory group, conceded that the endorsement merely amounted to saying "what we had before 1954 is better than what we have now." But Governor Loveless asked:

"On the farm problem, what is there that is new under the sun? Until we overcome the inelesticity of food demand I don't know where else we could go."

And he predicted that Vice President Nixon, who is reportedly readying a new farm plan of his own, eventually would come up with nothing more than "the Eisenhower program of 1952."

Governor Loveless said several subcommittees of his group would attempt to work out detailed recommendations to be sented at the next meeting of the full committee in Chicago June 15-16. This meeting will give final approval to farm planks which the advisers hope will be adopted by the Democratic National Convention in Los Angeles in July.

NO DISCUSSION

Although former Agriculture Secretary Charles Brannan attended the sessions here. Governor Loveless said there was no discussion of the so-called Brannan plan which he espoused during the Truman administration.

Some Democrats favor this plan, under which direct payments would be made to farmers to make up the difference between market prices and parity-the amount of income necessary to give farmers the pur-chasing power they had before World War I.

However, Governor Loveless personally favors the idea and thinks it would cost the Government less than the present farm program. A subcommittee will study various payment proposals, he said-and the Brannan plan still could emerge from the June meeting as approved policy.

Twenty-five-Year Social Revolution: REA

EXTENSION OF REMARKS OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 11, 1960

Mr. PRICE. Mr. Speaker, last week, on May 11, 1960, the Rural Electrification Administration observed its 25th anniversary throughout the Nation. Many news publishers have been paying tribute to the effective work of the REA over its quarter century of operation.

It is my pleasure to call to the attention of the House membership a fine editorial, which appeared on Thursday, May 12, 1960, in the Collinsville (Ill.) Herald. The publisher of this newspaper is the Honorable James O. Monroe, who was among the dedicated group of men throughout the Nation who gave life and support to the program of the New Deal back in the days when REA and many other helpful agencies of the Government were created—agencies that rescued the people of the country from the depth of the Nation's most serious depression.

REA is not the only successful Government agency created by the New Deal in the interest of all of the people of the country. We can recall the very successful operations of the Home Owners Loan Corporation, the Federal Deposit Insurance Corporation, the Securities and Exchange Commission and many others. These were the days when the Government acted in the interest of the people.

It has been conceded by even the most bitter opponents of this type of social legislation that was enacted 25 years ago that such programs as REA, social security and the others which I have mentioned has formed a cushion to protect our country against repetitions of the crises that existed when the people of the Nation turned to the Democratic Party in November of 1932.

I well remember editor Monroe as being in the forefront of those who assisted in the successful campaign of 1932. He remained a crusader in the interest of the people and vigorously supported the strong legislative program of Franklin D. Roosevelt.

The editorial follows:

TWENTY-FIVE-YEAR SOCIAL REVOLUTION: REA

The Rural Electrification Administration observed its 25th anniversary on May 11, 1960, with nearly 97 percent of all U.S. farms and ranches electrified. A little more than half of these farms, together with hundreds of thousands of other rural establishments, are served by 1,053 rural utilities financed by

This was still a dark land when REA began in 1935, with only one American farm in ten receiving electric service. During the years that followed, the lights were turned on in one farm after another through one of the most successful cooperative efforts in the history of the Nation. REA, an agency of the Department of Agriculture, made loans to bulld electric systems and offered technical advice. In most cases, farmers organized their own cooperatives to construct the systems and distribute the power. Today these rural utilities, financed by the Government and owned and operated by local people, served more than 4.7 million consumers in 46 States, Puerto Rico, and the Virgin Islands.

Southwestern Electric Cooperative, Inc., with headquarters at Greenville, Ill., is one of the borrowers of REA. Southwestern Electric serves approximately 7,500 rural members in Madison, Bond, and Fayette Countles.

As 1960 began REA has approved loans of more than \$4 billion for rural electrification, including all kinds of facilities. their part, the rural utilities which obtained the loans have proved financially responsible and good credit risks. So far, they have made payment to the Government in excess of \$1.1 billion, including a balance of \$154 million pair ahead of schedule. On January 1, 1960, only one borrower was behind in its payments more than 30 days.

As borrowers have gained in strength, the technical and management assistance rendered by REA has gradually diminished. This is in line with REA's guiding policy toward its borrowers, which is to encourage rural utilities to look after their own affairs as soon as they are able.

History has proved that farmers and other rural people use as much or more electricity than their neighbors in the city. more than any other, accounts for the tre-mendous success of the REA program. The first REA-financed lines were built on the assumption that farmers might use as much as 100 kilowatt-hours of electricity a month. Today farm consumers use an average of 350 kilowatt-hours per month, and the monthly average for all consumers on REA financed lines is up to 433 kilowatt-hours per month.

Much of the electricity is used to operate household appliances and equipment, such as washers, ranges, and vacuum cleaners. In recent years, a number of rural people have started heating their homes electrically. But electric power also has been harnessed to perform hundreds of farm chores. The greatest changes have been wrought in dairying. poultry and egg production, and in feeding meat animals. Electricity is revolutionizing these fields, permitting one man to care for

many more birds or animals. By 1975, REA estimates that each consumer on rural lines will be using an average of 14,400 kilowatt-

hours of electricity a year.

Besides altering life on the farm, the availability of electric power in rural areas has brought about profound changes in the character of rural America. New business firms and industries have appeared in the country. Suburbs have been built on the fringes of towns and cities. Retired people and commuters have been moving into rural areas. In some places, resort booms are underway. In 1959, 139,000 consumers were added to REA-financed lines.

These two trends-more consumers and greater average use of power-mean that REA borrowers will have to increase greatly the capacity of their systems in future years. They will need increasing amounts of new capital to do the job. Rural utilities already are making both financial and engineering

plans for the years ahead.

The member-owned systems have proved themselves efficient organizations. have proven themselves capable of distribut ing electric power on an areawide basis to even the most thinly populated parts of our country. They have proven their right to serve. If all REA-financed systems continue to concentrate on service in the future as well as they have in the past, there appears to be no reason why they should not be a permanent part of the utility industry of the United States.

Private, free enterprise power companies have fought REA at times, pointing out with considerable truth that it smacks of socialism and urging that it gives them unfair competition. They may be able to prove their premises, but it would be difficult to convince millions of Americans that REA is

a bad thing.

A rather obvious proof that it is beneficial is that the private power companies have managed to thrive and expand. Competition hasn't hurt them and in fact some of them sell large amounts of power to the REA companies. The socialism argument is countered by the obvious fact that no matter how socialistic the power in their lines may be, our rural population does not feel like the REA is overturning the free enterprise system. Our rural population still feels and votes ruggedly capitalist even though their life is shot through with governmental action.

Keep Cur Powder Dry and Our Feet on the Ground

EXTENSION OF REMARKS OF

HON. JOHN DOWDY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. DOWDY. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following telegram which expresses the sentiments of a large majority of the people of the district I have the honor to represent:

NACODDOCHES, TEX., May 11, 1960. Congressman John Dowdy, House Office Building, Washington, D.C.:

To heck with foreign aid, to heck with the summit conference, to heck with Khrushchev, and to heck with this disarming, I agree with Lyndon Johnson, keep our powder dry and keep our feet on the

E. I. RICE.

NACOGDOCHES, TEX.

Espionage and Spying Are Not New

EXTENSION OF REMARKS OF

HON. J. EDGAR CHENOWETH

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. CHENOWETH. Mr. Speaker, I wish to include in my remarks an editorial from the Pueblo Star-Journal of Pueblo, Colo., on the subject of espionage. I am sure the Members of the House will enjoy reading this most timely editorial, which follows:

ESPIONAGE AND SPYING ARE NOT NEW

When the State Department learned from Premier Khrushchev that he had most of the details about the flight of Francis G. Powers in a Lockheed U-2 jet on a photographic mission over Russia it was readily admitted.

And there is nothing wrong in that.

It would have been ridiculous to try to make out otherwise. The Russians had captured the equipment Powers had on his person which would not have been carried by anyone who had merely veered off course or became unconscious because the oxygen system had failed in his plane and he passed

The point is that most people in this country are glad to know that we are not sitting idly by outside the Iron Curtain without trying to learn what's going on

behind it.

Russia has spies and espionage agents all over the world, particularly in the United States. They have never denied it. possible for espionage agents to operate over the United States and any other free nation in a manner that helps them get all the information they want, except the laboratory and field testing secrets of military equipment.

The unfortunate thing is that Powers was caught. Everyone will feel sympathetic to-ward his family and the fact that he may have to stand trial and suffer the penalty under Russian law. That is the role of a spy who agrees to such procedures volun-tarily and understands all of the risks in-

What we don't know is at what altitude Powers was flying in a plane that is capable of reaching 60,000 feet. Neither do we know whether it was just one Russian rocket which brought the plane down, or disabled it, to such an extent that Powers had to ball out. If he were flying at that altitude and had to ball out because the plane had been hit, there is some consola-tion in knowing that the equipment he was wearing worked perfectly in getting him back to earth.

There is no reason to get excited over the whole thing. There is nothing we can do about it if Khrushchev decides to make more capital out of it in order to try to upset the summit conference. He has been pointing in that discrete ing in that direction for the past 3 months. It was felt when the story was told last week that he had found his excuse for wrecking the conference.

As some English papers stated, it is nothing unusual for British and American aircraft to have flown special reconnaissance missions deep inside of Russian property.

We hope some Congressman doesn't press too far for a public investigation of the circumstances surrounding our counterintelligence system. The more talk there is about it, even if supposedly behind closed doors, the greater the opportunity for Russian agents to learn more about our methods and plans.

The incident is the most dramatic of any involving spying activities by either side, primarily because it involved a high altitude mission and a rocket which brought the plane down. It is probably not the first time that such a mission has been attempted.

If we are going to have a defense system Which will deter attack because of its retaliatory power, we must know where the targets are and aerial photography is one of the best ways to get the information.

American Passport Policies

EXTENSION OF REMARKS OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. TOLL. Mr. Speaker, on Friday, April 29, 1960, I had the honor of presiding at a luncheon during briefing sessions on immigration and naturalization law, which was sponsored by the Philadelphia chapter of the Federal Bar Association and the Philadelphia chapter of the Association of Immigration and Nationality Lawyers.

It was my privilege to present John W. Sipes, Esq., special assistant to the Administrator, Bureau of Security and Consular Affairs, Department of State. Mr. Sipes spoke on the subject of "American Passport Policies." I believe his remarks may be of particular interest to Members of Congress and I am including them below:

AMERICAN PASSPORT POLICIES

(Aldress by John W. Sipes, Special Assistant to the Administrator, Bureau of Security and Consular Affairs, Department of State, at the American Law Institute, Federal Bar Association, and Immigration and Nationality Lawyers Association luncheon meeting, Philadelphia, Pa., Adelphia Hotel, April 29, 1960)

Mr. Chairman, ladies and gentlemen, I was indeed honored by your invitation to address this luncheon meeting today. As associations composed of practicing attorneys in a city steeped in legal tradition, you afford me an excellent opportunity to discuss a matter which the Department feels is of vital importance to the United States.

There are two important aspects of U.S. passport policy, especially as it affects in-dividual U.S. citizens. First, is the policy of expeditious and efficient processing of the rapidly increasing number of requests for U.S. passports, to keep pace with the requirements of the traveling public. Our outstanding progress in this area, under the Present Director of the Passport Office, Miss Prances G. Knight, is a matter of record. The Department is justly proud of this record.

Second, and perhaps of more interest to you as lawyers, is the substantive passport Policy. Under what circumstances are or should passports be withheld from U.S. citizens? And what are the procedural requirements necessary to properly balance private rights and public interests? This is the aspect of passport policy that I wish to discuss below the control of t cuss briefly today.

American passport policies are not a recent development. The legal implications of the relationship of these policies to the rights of the individual citizen are new. We are presently on one of the frontiers of the law, and the ground rules have not yet been fully considered and developed by the courts.

To speak of passport policies as such may be misleading. Passport policies have long been a primary means of implementing our foreign policy toward a given country, area, or foreign nations generally. These policies may be generalized or specific in application; or certain policies may apply to all citizens

and others to only certain citizens.
On June 16, 1958, it was the policy of the Department of State to deny passports to members of the Communist Party; persons who knowingly engaged in activities under the direction and control of the Communist apparatus; and persons believed to be going abroad for the purpose of advancing the

Communist conspiracy.

On that date the Supreme Court, in a 5-4 decision, held that statutory authority was necessary for a general prohibition of this nature and scope. The Immigration and Nationality Act of 1952, which made a passport necessary for foreign travel and left its issuance in the discretion of the Secretary, did not, said the Court, constitute such authority since the Department's policy of denying passports to Communists had not "jelled" at the time the basic passport statute was enacted on July 3, 1926.

The dissenting Justices found sufficient statutory authority in the pattern of travel control statutes from 1918 to the present 1952 act. In any event, the Court did not reach the basic constitutional question-the authority of Congress, acting through the Secretary of State, to regulate and control generally the travel of Communists abroad. While this remains a matter of vital concern to the executive branch, action is now clearly up to the Congress.

The efforts of the Department and the executive branch since July 7, 1958, when the President requested appropriate authoriza-tion for the Secretary of State, are a matter of record. I will not detail them here. Suffice it to say, that the House passed a bill last September, which together with a num-ber of other bills on the subject, is still pending before the Senate Foreign Relations

It would take much more time than I have today for me to explain in detail the reasons why the Department deems it imperative to reinstitute its policy of denying passports, under appropriate procedural safeguards, to persons knowingly engaged in activities in furtherance of the international Communist

Simply stated, we are seriously concerned about the danger to our national security. and the harm to our foreign relations objectives, involved in the totally unrestricted travel abroad by Communist conspirators, including any American functionary of the party who has a Communist mission abroad.

is an undisputed fact that the Communist apparatus regards the American passport as an invaluable document. On March 28 the Supreme Court upheld the conviction of "Col." Rudolf Abel for conspiracy to commit espionage.

At the time of his arrest Abel had in his possession one birth certificate which was a complete forgery, and another which was issued to a child who died at the age of 2 months in 1903. These are the tools which foreign agents use to obtain U.S. passports and Abel didn't want to be caught short. He had traveled to the United States on an American passport issued to a naturalized citizen who presumably died abroad. Abel claimed he purchased this passport through a contact in Copenhagen and he wanted to be in a position to get additional passports when he needed them.

I do not imply that passport legislation will stop the passport frauds of the Abels. I merely mention this case to illustrate the importance of mobility in the espionage business. Many American Communists would not risk traveling on illegal docu-mentation—those who did would be vulnerable to our laws as well as the laws of friendly foreign governments. Today, however, an American Communist does not have to risk illegal travel. He can and does obtain an American passport which not only legalizes his travel but facilitates it immeasurably. Also, this makes American passports readily available for Soviet espionage operations, passports that are more negotiable than those of their own origin.

While court cases have generally involved passport denials to Communists, we must consider a broader potential application so-called when discussing the 'right to travel" in the constitutional sense-for the Supreme Court has not yet defined this concept or the statutory restraints permissible on individuals whether or not they be Communists.

The Department has acknowledged for some time, and the Solicitor General conceded before the Supreme Court, that a citizen has a natural right to exist and enter the United States; that this right is protected by the U.S. Constitution; and, ac-cordingly, that the denial of such a right must be in accordance with the due process requirements of the fifth amendment. find nothing in the Supreme Court holding in the Kent-Briehl case requiring the recognition of any broader right.

This does not mean that the right to go abroad cannot be reasonably regulated in the public interest. Neither does it mean that there is a "right" which can be guaranteed to our citizens to enter any particular foreign country, which is a matter of the which we have and claim no control. Nor does it mean there is a "constitutional right" to a passport. Passports come into the picture because in the present cold war situation they have, in addition to their other attributes the effect of exit permits. other attributes, the effect of exit permits for travel beyond the Western Hempisphere. Therefore, the denial of a passport, at least for non-Western Hemisphere travel, must be in accord with due process of law.

What are the requirements of due process in the passport field? As Mr. Justice Holmes observed, "what is due process of law depends on circumstances. It varies with the subject matter and the necessities of the situation." It is important therefore that (1) we understand that our passport policies are effectuated by administrative control over passport issuance rather than by enforcement of penal provisions of the criminal law; (2) we recognize that we are today in a period of Presidentially declared national emergency, and that there has been a Presidential proclamation of necessity for travel controls—we are not talking about normal peacetime conditions, but rather the realities of a cold war situation; and (3) we realize that the rights of the individual, to the extent that they conflict with national interests, must be brought into balance with the broadest and most important powers of the political branches of the Government, namely, the foreign affairs power and the

defense or war power.

The national interest which the Department had sought to promote by its pre-Kent-Briehl, anti-Communist passport policy was the protection of the Nation from the internal and external menace of the international Communist movement. The internal security and foreign affairs aspects of this national interest are inseparable.

As Circuit Judge Prettyman observed, "The Communist organization and program have long since passed beyond the area of mere politics and political opinion. All three branches of the Federal Government—the executive, the legislative, and the judiciary have declared unequivocally that the Communist movement today is an international conspiracy aimed at world domination and a

threat to the internal security of this country. The foreign policy and a large part of the fiscal policy of the Government are based upon that proposition. * * * unless all the major foreign and fiscal policies of this Government, under two administrations of opposing political parties, have been a gigantic fraud, it is the unequivocal duty of the Department of State to prevent international incidents which might arouse hostile activities on the part of the Soviet Union or its satellites."

The Department is convinced that authority to proscribe indiscriminate travel abroad by Communist Party functionaries and Communist Party agitators is necessary in present world conditions; and that legislation can be enacted which adequately protects basic individual rights under the Constitution. We believe the international Communist conspiracy constitutes a clear, present and continuing danger to the United

The recent Supreme Court's holding in Barenblatt v. U.S. is encouraging in this regard. The Court there said "That Congress has wide power to legislate in the field of Communist activity * * * is hardly de-batable. * * * In the last analysis this power rests on the right of self-preservation, 'the ultimate value of any society'. * * this Court has upheld Federal legislation aimed at the Communist problem which in a different context would certainly have raised constitutional issues of the gravest character.'

I have been talking about a prior policyone which we have been without authority to follow or enforce since mid-1958-denial of passports to Communist activists. However, there are other policies of passport denial involving individual restraints, most of them of long standing. For example, the Supreme Court in Kent-Briehl specifically recognized statutory authority in the Secretary of State to deny passports where "the applicant is participating in illegal conduct trying to escape the toils of the law.' Passports are also generally denied to persons who have been adjudicated insane by a competent authority, and persons repatriated at Government expense who have not repaid their debt to the Government, and other common sense situations of this kind.

Additionally, we believe as a matter of policy, passports should and may be denied where the applicant or holder is going or staying abroad to participate in specific conduct which would directly interfere with the conduct of foreign relations or harm our friendly relationship with other govern-ments. This situation was not dealt with specifically by the Supreme Court in the Kent-Briehl and Dayton cases, and the regulations outlining this authority were not in issue in those cases. Actually, our Communist travel control regulations were based, in large measure, on this same premise. The Court apparently felt that general travel restraints against Communists as a group involved ideological matters which, at least in the absence of statutory authorization, outweighed any prejudice to the foreign policy interests of the United States. Insofar as individual restraints on general

travel abroad are concerned, the Secretary of States does not claim or seek absolute discretion to determine the grounds for passport denial actions. We find no fault with decisions of the U.S. Court of Appeals in cases such as Shachtman and Kraus holding that the Department is required to grant substantive as well as procedural due process to passport applicants; that the factual bases of passport refusal actions by the Secretary are subject to some judicial scrutiny. We agree with the courts that the Department, as a matter of substantive due process, is required to show that the grounds of denial have some reasonable relationship to the orderly conduct of U.S. foreign relations. We must remember, however, that the courts have also emphasized that freedom to travel abroad like other rights, is subject to reasonable regulation in the public interest.

Until a relatively recent date passport adjudicative procedures in the State Department were quite informal. Prior to August 1952, the practice of the Department in denying passports was merely to advise the applicant that to accord him passport facilities would not be in the best interests of the United States. The contention that procedural due process must be afforded applicants in passport refusal cases was first given judicial recognition in the 1952 case of Bauer v. Acheson. The court interpreted the Passport Act as requiring notice and an opportunity to be heard prior to the revocation of a passport; and shortly thereafter the State Department complied with the decision by promulgating substantive refusal criteria, and establishing a more formalized hearing procedure, including a de novo review of the case by an appeals board staffed by officials from various operating areas of the Department. The applicant's rights be-fore this board, which makes it's recommendation direct to the Secretary, are set forth in departmental regulations

In Boudin v. Dulles another important case involving procedural due process, the U.S. Court of Appeals sitting en banc ordered certain refinements in the Department's adjudicative and hearing procedures but did not reach the question of the propriety of the Secretary's use of confidential information. To facilitate thorough consideration of this issue the Court decreed that an adverse ruling in passport matters be supported by specific findings of the fact bringing the applicant within a designated section of the passport regulations, and that the Secretary state the degree of his reliance upon confidential information and the reasons for nondisclosure. Subsequently, the Court of Appeals upheld the use of confidential information in Dayton v. Dulles where the Department had followed the ruling in the Boudin case. The Supreme Court, however, has not considered the question of reliance on confidential information in this

area of Government operations.

In fairness to the individual and to stand the scrutiny of the Courts, the Department has endeavored for several years to base its decisions upon the open record plus only that classified or confidential information obtained from sources the disclosure of which would substantially prejudice the interests of the United States. The substance of even the classified information, with rare exception, has been disclosed to the appli-

cant.
As a matter of experience, however, under our now defunct Communist travel control regulations, it was quite obvious that the dedicated Communists, were not interested in obtaining information to assist them in preparing their case-but solely in ascertaining the identity of Government sources of information reporting on various aspects of the Communist conspiracy. It was their contention that the Department must produce all such sources in support of a denial action even though they had not disavowed the assertions of Communist Party membership or activities.

While permissive reliance on confidential information in administrative proceedings is a controversial issue, especially among lawyers, any passport control legislation designed to control the travel of Communist activities abroad which prohibits the utilization of any information obtained from confidential sources would be an illusion-a sham. Information concerning current active Communist Party members, information relative to their future plans and purposes

of foreign travel does not come from neighbors, janitors or the corner groceryman. is obtained from sources that in general the Government understandably is not prepared to compromise for use in an individual administrative passport proceeding. To require the source to be produced or disregarded would, in most instances, grant the Communist passport applicant in effect an absolute right to a passport.

With adequate hearing procedures, with the tender of a summary of the derogatory information from valuable confidential sources where appearance would not be in the public interest, with stated grounds for denial, and with specific findings of fact by the Secretary of State, passport legislation would, we think, protect the basic rights of the individual and under present world conditions, conform with due process of law-

There is another area of very important passport policy. That is the placing of certain countries or areas off limits for travel by U.S. citizens, when necessitated by for-eign policy considerations.

Historically, area restriction in passports has been an important method of foreign policy implementation. In some instances it has been for the safety of American citizens, as it was in the case of the Suez crisis when passports were restricted against travel in the Middle East. It may be to insure a position of neutrality in areas of civil strife. as was the case during the Spanish Civil War. In other cases, a travel ban may be imposed as a retaliatory measure, as was the restriction in 1947 against Yugoslav travel, for a series of hostile acts against American citizens; or the 1951 restriction against Czechoslovakian travel for the unwarranted imprisonment of William Oatis; or the 1949 restriction on travel to Hungary because of the Imprisonment of Robert Vogeler, and the reimposition of the restriction in 1951 because of the imprisonment of American flyers, and again in 1956 because of the mistreatment of our legation employees.

Passports are invariably restricted for ordinary travel to areas where armed conflicts are in progress, as was the case in Ethiopia in 1935 and China in 1937.

There may be more pervasive foreign policy reasons for area travel restrictions as was the case of the general limitation on travel to Iron Curtain countries in effect from May 1, 1952, to October 31, 1955.

Passports are customarily not validated for travel to countries with which we do not maintain diplomatic relations, as was for-merly the case with Bulgaria, and as is presently the case with Albania and Com-

munist China.

In this area we have been fully upheld by the courts. The court of appeals in the case of Worthy v. Herter held that the designation of certain areas of the world as forbidden to American travelers falls within the power to conduct foreign affairs, for which the court found both constitutional and statutory authority. Worthy, a newspaperman, traveled to Communist China in knowing disregard of the restrictions in his passport. seeking further passport facilities, Worthy refused to agree to honor existing area restrictions. The Secretary of State denied him a passport in the belief he would, if given a passport, go into those areas where it was determined that the presence of American citizens would impede the execution of A related case, American foreign policy. A related case, Frank v. Herter, sustained the Department's policy of making reasonable exceptions to general area restrictions in the national interest. In the summer of 1957, the Secretary decided on a temporary and experimental basis to allow a limited number of American reporters to go to the China mainland, in the interest of firsthand news coverage, but without permitting a general influx of Americans into that area. This was worked out by a formula whereby American newsgathering organizations which had maintained correspondents abroad, and were willing to maintain a full-time correspondent in Communist China for at least 6 months could designate one representative each for passport validation for travel to mainland China,

Frank, claiming to be a newsman but undesignated by any organization qualifying under the formula devised by the Secretary of State, sued for a passport without restriction in order to travel to Communist China. The court rejected the argument that the Secretary of State's policy was arbitrary and discriminatory.

The Supreme Court denied certiorari in both the Worthy and Frank cases.

Our area restriction policies have come under one other line of attack in the case of Porter v. Herter. Representative Charles O. Porter of Oregon sued the Secretary of State for a passport to permit him to travel to Communist China in the interest of his legislative duties. Congressman Porter had not requested or received congressional authority to travel to Communist China-but urged that our policy impaired his legislative interests and perogatives as an individual Congressman, which he claimed to be superior to the newsman involved in the Worthy and Frank cases, and alleged an unconstitutional breach of the separation of powers. On April 14 the court of appeals held that a Member of Congress, by that status alone, is not exempt from regulations Within the executive's constitutional competence, and he must therefore conform to the passport restrictions which apply to citizens generally.

Let us examine more closely our policy of not permitting American citizens to travel to Communist China. This policy has been more strictly applied and in effect longer than any other area restriction. It is founded on the combination of a number of im-

Portant considerations.

We have followed a calculated policy of non-recognition of the Chinese Communist regime since it seized power. We are still in an unresolved state of conflict with Communist China over their aggression against the United Nations in Korea in which the United States suffered 142,000 casualties. All trade with Communist China is prohibited by law. Talwan remains under threat of at-tack by the Chinese Communists. The Chihese Communists have utilized what they term "people's diplomacy," in promoting visits of private citizens from other countries, especially those with which they maintain no diplomatic relations. This is a propaganda device to advertise the "attainments" of the regime, and to create an impression, which they cannot do by direct negotiations, that their purpose is "peacoful" and their conduct "civilized."

To permit general travel to Communist China, at this time, would make it appear that the United States is yielding to Communist pressure, a circumstance which could Well weaken the determination of other nations, especially in the Far East, to resist Communist aggression. Mutual confidence among the members of the free world is of the utmost importance.

Another factor is the absence of diplomatic relations which does not permit the extension of customary protection services to Americans. There is danger to American citizens traveling to Communist China. Many Americans have been imprisoned and maltreated by the Chinese Communists. American citizens are still being held in hostage despite their pledge to release them. Just recently the Chinese Communists sentenced Bishop James Edward Walsh to 20 years imprisonment for alleged espionage. The spy charges are totally false and a transparent screen for further systematic religious persecution. This is but the latest illustration of the Chinese Communists' complete indifference to humanitarian principles and utter disregard for civilized standards of behavior.

I recognize that you as individual citizens, may not agree with some of the passport policies I have outlined, because you may not fully agree with the aspects of our foreign policy which they are designed to sup-However, I believe that there can be no disagreement with the proposition that the President and the Secretary of State should use all means legally at their disposal to effectively carry out foreign policy objectives once they are determined.

As the Court so aptly stated in the Worthy case, "Judgment on what course of action will best promote our foreign relations has been entrusted to the President, not to the courts, journalists, scholars, or even public opinion. He makes his decision with the aid of the Department of State, a large organization with stations throughout the world, as well as on the basis of information received from all other parts of the executive branch. We, if we had all this information, might reach a different decision. But the Constitution has wisely placed that burden in the hands of one who must justify his decisions before the electorate."

Thank you very much.

Summit Now Worth While? Answer Up to Khrushchev

EXTENSION OF REMARKS

HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include an editorial appearing in the Nashville Tennessean under date of May 10, 1960. This editorial is timely and I hope the Members of the Congress will read it. It follows:

SUMMIT NOW WORTH WHILE? ANSWER UP TO KHRUSHCHEV

Hope for even a modicum of success at next week's summit meeting now depends on how far Nikita Khrushchev intends to go in exploiting the clumsy spy plane incident.

For the current propaganda barrage coming from Russia there is some understanding, but there ought to be a stopping point if there is a sincere hope to end international tension and find a beginning to disarmament.

Clearly enough, the diplomatic position of the Western Powers has been weakened at a crucial time. In awareness of this there are hurried conferences in Washington and in allied lands.

That the United States has blundered is conceded, but that does not mean that Moscow's representatives will be going to Paris with clean hands. They can profess fear and indignation over the U-2 flight far into their land, but they cannot claim moral superiority, for they have been the past masters at spying since the end of World War II, or even before.

If Mr. Khrushchev means the things he said while visiting the United States, he will let the controversy settle down at least long enough to permit the summit meeting to take up the more important questions, such as Germany and arms control, in a reasonable atmosphere.

Falling to do this, he can wreck the sum-

mit before it starts.

In Washington it is said that President

Eisenhower has been urged to write the

Soviet Premier expressing his hope, and it is suggested that an unfavorable reply might effect the President's decision about going to the summit and later on to Moscow

Perhaps no summit at all would be better than use of that forum exclusively for Communist propaganda. But this is not what the world wants. The hope for better understanding in the face of nuclear threats is almost unanimous among the earth's peoples, and this includes the men and women of Russia.

As of now, President Eisenhower seems prepared to leave this weekend for Paris. And it is important that Western unity not be weakened by a prolongation of Khrushchev's blast and his threats to wipe out airfields in Turkey, Pakistan, and Norway, to name just a few of America's allies.

He is flexing his rockets, in which he does not necessarily have an advantage, and that is a far cry from the statesmanship which

will be needed to save the summit.

Fortunately, he has refrained from putting the blame on Mr. Eisenhower for what has happened in the Urals, and that is the only encouraging sign.

Our Changing Philosophy of Government

EXTENSION OF REMARKS OF

HON. JAMES A. HALEY

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. HALEY. Mr. Speaker, under leave to extend my remarks I wish to place in the CONGRESSIONAL RECORD at this time the editorial column, "Over in My Corner," which appeared in the May 12, 1960, edition of the Lake Wales News. I have a high regard for the writer, Mr. O. A. Brice, who in this instance has paused to reflect upon our changing philosophy of Government. Mr. Brice is a man of sound thoughts. I hope my colleagues will take the time to read and then to reflect upon the thoughts he has expressed in this column:

OVER IN MY CORNER (By O. A. Brice)

I guess I am just old fashioned. At any rate the pace we Americans are traveling to-day just doesn't seem to add up right somehow. Two and two doesn't make four any more. Instead of talking in terms of thousands of dollars we refer to billions and think nothing of it. Sometimes I resort to reminiscing in order to get my comparisons straightened out and my thinking kept in

A few moments ago I had one of those pieces of folding money commonly known as a dollar bill. It is figured by the economists that today this dollar is worth only about 44 cents from a purchasing standpoint.

Personally I can't understand where I am any better off financially or otherwise one of these dollars in my pocket which I earn twice as quick, than I was when I was a youngster and it took twice as long to get a dollar, but when it really bought a dollar's worth of merchandise.

No doubt some friend will argue that it only requires half as long now to get a dollar as it did then and that we have more leisure time. But I haven't seen many people who are able to slow up much on that account. It seems to take more dollars and more hours of work to meet the demand of modern living, so we are just moving in a circle which sometimes seems hopeless.

Maybe some of this reminiscing comes from the old hometown paper I received this evening. It told of the death of an old pioneer back in Kansas who passed to his reward at a ripe old age.

His demise recalls my "knee-pants" days when I passed along the store where he held a job candling eggs in the basement. I could always tell whether he was at work in that celler by the light which sifted up through the iron grates in the sidewalk and I never missed an opportunity of stopping for a few minutes.

My spending money wasn't any too liberal those days and I recall many an evening after school when I slipped down the stairway and asked him to let me help him with that seemingly endless job of candling those hundreds of cases of eggs.

He generally had an extra box in which there were holes to push those eggs before an electric light and as we graded-we visited.

The philosophy of that old fellow was of a type which has somehow stuck with me. He had seen the rough times of the Kansas pioneer-days when food was scarce for the family-when money was an unknown quantity-when interest rates run as high as 18 percent and when hundreds of families just lived on the things they grew on the farm.

To him money had very little value if it had to be secured at the cost of a neighbor or a friend. It was a commodity used when it was prevalent, but if it seemingly disappeared for a few months or years, people got along somehow without it. A dollar then could be depended upon to buy 10 dozen eggs or 6 pounds of fine bacon.

The old gentleman knew when he had a dollar in his pocket he could take home 6 pounds of fine steak, with some liver thrown in for the dog or he could have a gallon of milk, a couple of pounds of pork, and 5 pounds of coffee for the same dollar.

His hours of work were unlimited for he remained at the job until it was finished, but he didn't have anything else to do anyhow. No radio, no auto, no movie to interrupt him, and no cocktail party to attend. His dollar bill represented some sweat and labor when he got it.

He was proud of his job too, for he understood if he lost it, his position would be jeopardized until he found another. There wasn't any unemployment check waiting for him on Monday or old-age benefit when he was 65.

But even at that he lived until last week and passed on at the age of 98 years-not a rich man, but an individual with all the self-respect he had when I knew him and one who had contributed heavily to the development of the West where he spent a lifetime. w

His Congressman in Washington was the fellow he believed would best preserve the tradition of true Americanism without becoming involved in all the wars and bickerings of foreigners who have never loved the United States and whose guns will be turned upon our grandsons in the next conflagration.

He believed in those days that initiative was responsible for success-that men should work to pay their share of government and that women should maintain the home where families could be reared with a degree of respect for their parents and the things which God-fearing people believed would steer this Nation on the course chartered by its founders.

If times were tough perhaps the folks in Ohio would help out for a period. He never dreamed of a subsidy. When those silver dollars which circulated sometimes through that section disappeared, people just continued to go along by swapping eggs, chick-ens, and cream for the things they had failed to grow that year.

I don't recall as ever having made more than 15 cents any evening while I candled eggs along side of him in that cellar but the personality I learned to know, the outlook on life he possessed, and the belief he maintained in an America he loved, has some-how stuck with me to a point where as I spend my folding dollar tonight for a piece of beefsteak, I wonder.

Yes. I wonder if a lot of we so-called Americans aren't expecting too much for nothing and if we aren't just edging ourselves closer to that brink over which we will be pushed and we'll have nothing whatever to say about what job we do, where we will work, or how much take-home-pay we

Has a benevolent government caused us to forget that we are the government and those we send to Congress are our servants? be some genuine old egg-candling days would give us time to think our way through the haze most of us are experiencing.

At any rate some of this old philosophy of government and some old-time methods of economy might not be amiss in this age if America can hope to escape the fate of some of those nations of the world which depend upon us so helplessly tonight.

Bridgeport (Conn.) Sunday Herald Calls Announced Spying Policy Provocative and Dangerous

> EXTENSION OF REMARKS OF

HON. FRANK KOWALSKI

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. KOWALSKI, Mr. Speaker, I bring to the attention of my colleagues. under unanimous consent, an editorial published yesterday in the Sunday Herald, of Bridgeport, Conn.

The Sunday Herald has one of the largest circulations in New England, and its editorial on this critical subject is worthy of close attention.

Following is the text of the Sunday Herald's editorial:

UNITED STATES PURSUES A DANGEROUS POLICY

President Eisenhower's defensive and/or aggressive explanation of the "whys" and "wherefores" of our spy plane, which was brought down over Russia, makes our announced future policy both provocative and dangerous.

Walter Lippmann, in analyzing "The Spy Business" writes that "our position now seems to be that because it's so difficult to collect information inside the Soviet Union. it will be our avowed policy to fiv over Soviet territory, using the territory of our allies as

"Although the intention here is to be candid and honest and also to make the best of a piece of very bad luck," he continues, "the new policy, which seems to have been improvised between Saturday and Monday is quite unworkable.

"To avow that we intend to violate Soviet sovereignty is to put everybody on the spot. It makes it impossible for the Soviet Government to play down this particular incident because now it is challenged openly in the face of the whole world.

"It is compelled to react because no nation can remain passive when it is the avowed policy of another nation to intrude upon its territory.'

An American broadcaster, repeating what an English commentator said, summed up the lessons which we should have learned long before the American spy plane crashed inside Russia.

The Englishman dwelt on two rules of espionage of which the first is never to be caught, and the second-in an unfortunate eventuality-is never to admit anything.

Because the Eisenhower administration seems to have been amateurish in its approach to the intrigue of espionage, to our national and international embarrassment, we hadn't learned either lesson.

And the unforgivable third mistake was to permit the flight on the eve of the summit meetings.

The summit meetings might as well be cancelled because the only dubious advantage they will give us is to answer Mr. K.'s propa-

And as for President Eisenhower's visit to Russia, he can only invite national humiliation by going after he's been told to stay

Finding ourselves trapped, we are trying to extricate ourselves by improvising a new and unprecedented policy of openly declared secret spying on Russia. Can it work?

Ohio County, W. Va., Shows Need for Federal Assistance for School Construc-

EXTENSION OF REMARKS

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. BAILEY. Mr. Speaker, a news item published in the Wheeling (W. Va.) News-Register, for Sunday, May 8, points up the need for Federal assistance for school construction. This news story, which I include as a part of my remarks, tells of plans in Ohio County to spend about one-half million dollars to eliminate fire hazards in existing school facilities. To raise this money, voters in Ohio County were asked to approve a special levy set at approximately 23 percent of all other rates.

Mr. Speaker, this is a commendable program and a worthwhile expenditure, but I invite the attention of the Members to the fact that this levy will not add a

single new classroom,

I also invite the attention of the Members to the fact that Wheeling, although in an area of diversified industry. is one of the areas of heavy unemployment reported by the Labor Department which would be eligible for assistance under the area redevelopment bill enacted last week.

The news item follows:

SCHOOL FIRE TRAGEDY COULD HAPPEN HERE UNLESS LEVY MONEY ELIMINATES HAZARDS

(By Al Molnar)

School fire, terror, tragedy.

It could happen here.

To safeguard against any disaster of this nature, Ohio County public school officials are proposing a special levy at Tuesday's primary election solely for the purpose of correcting fire hazards in all county schools. The last count shows a total of 217 different last count shows a total of 217 different

ferent hazardous conditions existing in the 29 schools and 34 buildings in Ohio County. Although many are small projects—such as can be undertaken by the maintenance staff—the biggest majority are large projects that will result in costly renovations at many schools.

The levy being put to Ohio County voters on Tuesday is set at approximately 23 percent of all other rates and is designed to raise a total of \$540,000 over a 2-year period that it is proposed to be in effect.

It has been estimated that the cost of eliminating the fire hazards in the county will amount to between \$450,000 and \$500,-000

The most costly project in all of the schools is closing stairwells. Nearly every school in the county has open stairwells which cause fires to spread more rapidly. About one-half of the total estimated cost of all the projects will be needed for the stairwells projects.

In a number of schools there are basement cafeterias, locker rooms, classrooms, and restrooms where the only means of escape in the event of a fire would be through a window. In many instances there are ladders leading to the windows.

All of these must be eliminated and doorways with properly marked exit signs installed. This will mean walls to be knocked out and other construction to comply with the order of the State fire marshal's office and the Wheeling Fire Department.

Installation of wire glass and metal sashes in many places, including windows within 10 feet of fire escapes is another big project among the many called for in the fire reports.

Levering Bonar, newly appointed superintendent of schools, said that if the levy is passed, further corrections will be started as soon as the money is available. Contracts were let recently on the corrections at three schools.

Voyage of the "Triton"

EXTENSION OF REMARKS

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. ALLEN. Mr. Speaker, the accomplishment of Capt. Edward L. Beach, the officers and men of the *Triton* will always stand out as one of the greatest Naval expeditions in history—in keeping with the highest traditions of the U.S. Navy.

President Eisenhower hailed the unprecedented feat in a special White House ceremony, at which time he conferred the Legion of Merit on Capt. Edward L. Beach.

The White House proudly announced the journey, which began, February 16 and closely followed Magellan's course of 441 years ago.

This achievement gave me great personal satisfaction because it was my privilege and honor to have appointed, Lt. Comdr. Robert W. Bulmer of Sterling, Ill., to the U.S. Naval Academy. Lieutenant Commander Bulmer served as the operations officer on the nuclear submarine *Triton* on this historic voyage.

When I appointed Robert Bulmer to the Academy in 1945, I was convinced that he would not only be a credit to himself, but also a credit to the U.S. Navy. He has always justified the confidence I placed in him.

Spires of the Spirit: Liberty in Law

EXTENSION OF REMARKS

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article by Dr. Frederick Brown Harris, Chaplain of the U.S. Senate:

Spires of the Spirit: Liberty in Law (By Dr. Frederick Brown Harris, Chaplain of the U.S. Senate)

In the midst of his great ministry, one of the most outstanding preachers of the 20th century made a significant discovery and confession. The Nation was then passing through what was being called by responsible citizens an orgy of lawlessness. This nationally known preacher who was listened to eagerly by great crowds, in examining his own message, said: "I could not recall ever having preached a sermon on obedience; I could not recall ever having heard a sermon on obedience. I have searched volume after volume on modern addresses and sermons and I have not run upon any that dealt with respect for and obedience to authority. There were plenty on freedom, on the eman-cipation of the individual, on the outgrowing of old restraints, but few, if any, upon the necessity and glory of being mastered by what rightfully masters us."

Immediately after having been made conscious of that gap in the message to his generation, this prophet of God stood in the pulpit, which was his throne, and preached

a sermon on "Obedience."

Certainly now, years later, the pulpits of the land need to thunder the same message. One does not have to be an alarmist or a pessimist to declare that one of the ominous symptoms, as we enter this decade of destiny, is that authority has broken down in the State, in the family, in the individual.

In the movies and television, upon which the eyes of millions are glued for hours every day, obedience to law is taken lightly. The representatives of the law are habitually at a disadvantage on the silver screen. The judge, the detective, the policeman, usually comes off badly in the plot, and the mere husband is often in ill repute with the audience. Those who are thus entertained are regaled with the story of attractive murderers, high-minded robbers, and noble crooks. Even in cases of heinousness involving law we witness often a veritable debauch of public sentimentality expressing itself in specious explanations of why a criminal does what he does. It is all a silly exaltation of crime.

In May, by Presidential decree, the Nation observes "Law Day." In such an emphasis there is lifted before the gaze of all our people the fundamental conception on which all else in a democracy rests. Law Day floodlights the vital truth engraved on the facade of the noble edifice of the U.S. Supreme Court—"Equal Justice Under Law"—and of that sentence inscribed over the portal of the courthouse in Worcester, Mass.—"Obedience to Law Is Liberty."

Democracy is the faith that laws should

Democracy is the faith that laws should be made and enforced, not by an all-powerful monarch or by a dictator whose rule is tyranny, but by the whole body of "we, the people," and that laws thus made should be gladly obeyed by all the people.

Any willful violation of law thus enacted is a blow at liberty itself. In just laws there is registered the conscience of God-fearing people.

Much is being said and written these perilous days about freedom and emancipation from compulsion. More, much more, needs to be said about discipline and law. The demand "don't fence me in" must be interpreted, if life is to be worthwhile and reach its highest possibilities, in the light of the larger truth mirrored in a great hymn—"Make Me a Captive, Lord, and Then I Shall Be Free." Says a U.S. Senator, as with deep anxiety he sees what so many of his contemporaries are doing with their boasted liberty: "Unless discipline and obedience can be brought back to America we are on our way to the junk heap."

There is no way by which the democratic experiment can be saved if mad insistence on individual freedom to do as one pleases crowds out sober recognition of social obligations.

Often we hear of a "Back to God" movement. It is true that we need to get back to a conception of a God who is not, as some moderns have pictured Him, very amiable, even maternal, but to a God who stands for moral order—God who is all love, but also all law.

Too often we have confined our ideas of the Christ who revealed such a God as the "Gentle Jesus." We think of the Man of Galillee only in terms of pity and compassion and kindness. But in these qualities we do not really touch the fundamental thing in His character. It was the thing that sent Him to the cross—"Thy will be done, as in heaven so on earth"—"Not my will, but Thine be done"—"Whosoever shall do the will of God, the same is my brother, my sister, my mother." To follow that Christ means to heed the injunction—"Confirm thy soul in self-control, thy liberty in law."

South Africa and South Korea

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record order. I include the following statement, in the form of a letter, which I received from the Reverend William B. Payne, president, Hazleton Ministerial Association, Hazleton, Pa., in which he sets forth the comments of the association concerning the action by our Government in the recent outbreaks in South Africa and South Korea:

Hazleton Ministerial Association, Hazleton, Pa., May 13, 1960.

Hon. Daniel Flood, Congress of the United States, House of Representatives, Washington, D.C.

DEAR SIR: The following statement was adopted by the Hazleton Ministerial Association at the April meeting relative to the action of our State Department with reference to South Africa and South Korea. The association directed that copies of this statement be sent to the State Department, to Senator Scott, and to you.

"We have been enheartened by the action undertaken and the statements made by the State Department regarding the violence inspired by the Governments of South Africa and South Korea.

"As lovers of political freedom, as men trained by the study of Holy Scripture to cherish the sacredness of human life, we stand aghast at the attempts to establish dictatorial rule in a nation established with the loss of so many American lives; we stand aghast at the attempts by governments anywhere to differentiate between the children of God on the basis of skin color.

"We commend the State Department in these two efforts to reassert the dignity of man, and are sure that not only our own congregants, but also all those who believe in the Fatherhood of God will understand these steps as being in the highest tradition of Americanism and western civilization."

Sincerely

Rev. WILLIAM B. PAYNE, President, Hazleton Ministerial Association.

Fairplay in the Milk Market

EXTENSION OF REMARKS OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. JOHNSON of Wisconsin. Speaker, consumers in Connecticut have formed a unique organization called the Connecticut Milk Consumers' Association, Inc. It is dedicated to fair play in the milk market.

When hearings were held April 26, 27, and 28 by the Health and Safety Subcommittee of the House Interstate and Foreign Commerce Committee on my national milk sanitation legislation, Mrs. Joan Cunningham, vice president and secretary of that association, testified in support of my bill to eliminate the use of health rules as trade barriers against the free flow of high-quality milk in interstate commerce. Under leave to extend my remarks, I would like to include excerpts from her statement in the RECORD.

The statement of Mrs. Joan Cunningham, vice president and secretary of the Connecticut Milk Consumers' Association, Inc., follows:

TESTIMONY RE: H.R. 3840 BY THE CONNECTI-CUT MILK CONSUMERS ASSOCIATION, INC., EAST HARTFORD, CONN.

I am Mrs. Joan Cunningham of West Hartford, Conn. I am the vice president-secretary of the Connecticut Milk Consumers Association, Inc.

As we have been told rather consistently that ours is a unique organization, we felt it might be of benefit to briefly explain what we are and our purposes in existing at all. In the past, consumers in general have been accused of apathy regarding public hearings. We are consumers of milk who have no financial investment in the dairy industry beyond the payment of our milk bills. Con cern over the size of these bills motivated the formation of the Connecticut Milk Consumers Association in August of 1957.

Perhaps the simplest way of defining the philosophy of our group is to quote the pre-amble of our constitution: "The principles of the Connecticut Milk Consumers Association, Inc., are based on a belief of all members in the American system of free enterprise and the need of an alert citizenship to assure a continuation of such." It is because of this belief in the free enterprise system that we are here today testifying in favor of the national milk sanitation bill, H.R. 3840.

We have fought hard for our beliefs in Connecticut and have succeeded in having archaic restrictions lifted on container sizes by our State legislature, thus enabling milk to be sold in the more economical one-half gallon and gallon jugs. This has partially been responsible for a strongly competitive situation in our State and has brought the price of milk to the consumers more nearly in line with our surrounding areas for the first time in many years. We feel that passage of H.R. 3840 will be but another balancing factor to keep the situation reasonable.

Let me make one point clear, however. We are not trying to drive Connecticut farmers or dealers out of business. lieve that as long as a healthy dairy industry in Connecticut is justified and economically feasible, the consumers can and will support it. However, when premiums are demanded for local milk, the consumer should have the opportunity to choose lower priced, high quality out-of-State milk.

H.R. 3840, known as the Johnson bill, provides that milk which meets the standards set forth in the U.S. Public Health Milk Ordinance and Code as certified by State authorities in cooperation with the U.S. Surgeon General cannot be discriminated against by States or municipalities when such milk is involved in inter-State commerce.

The Connecticut Milk Consumers Association, Inc., favors passage of H.R. 3840 for the following reasons:

1. Competition sets more effective standards of sanitation than health ordinances alone can do. The U.S. Code sets high standards, and the competition of milk which meets these standards will tend to raise sanitary levels everywhere.

2. The U.S. Code sets as high or higher standards than Connecticut State dairy laws

3. We do not anticipate a flood of midwestern milk because under a Federal milk order, dealers would have no incentive to buy milk so far from the market as long as supplies are plentiful in the Northeast. However, prices would have to remain competitive to prevent uneconomic shifts in supplies.

4. Opening the closed New York cream market would benefit 13 million consumers

5. Connecticut, like many other States, has long used health regulations for economic ends. However, justice can best be served through equality of opportunity for pro-ducers and dealers capable of serving the market.

West Berlin Seen From Topside

EXTENSION OF REMARKS OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 4, 1960

Mr. COHELAN. Mr. Speaker, in the May 15, 1960, issue of the Washington Post, Mr. Roscoe Drummond raises some pertinent questions about the future of Berlin as we approach the summit conference. West Berliners have some interesting views on how we should approach the summit. What they think is important because, as Mr. Drummond savs:

What we must not lose sight of is that the freedom and the vibrant postwar de-mocracy of 2,225,000 West Berliners have been guaranteed by the Governments and the peoples of America, Britain, and France.

Mr. Drummond's article follows: WEST BERLIN SEEN FROM TOPSIDE

(By Roscoe Drummond)

WEST BERLIN.-The future of West Berlin will almost certainly be the center and substance of the Big Four summit conference in Paris.

To see what is at stake in this matter, as President Eisenhower, Khrushchev, Macmillan, and De Gaulle sit down together, we must, I think, look at the answers to the following questions:

Question. Why is the summit conference, which was to try to relax tension, turning into lacerating debate on the one issue most

likely to increase tension?

Answer. Because for the past 3 weeks Premier Khrushchev has been aiming a crescendo of threats at the United States, Britain, France, and Germany, insisting that we must withdraw from West Berlin and that unless we agree to "freeing" the city from our presence the Soviets will sign a separate treaty with the East Zone and leave access to Berlin in the hands of the East German Communist regime which surrounds

For a time, Washington hoped that the Soviets would not push the summit meeting to the brink over Berlin, but it now seems unavoidable.

Question. What does Khrushchev want in West Berlin?

Answer. He has been both explicit and vague. He has explicitly said that he intends to get the Western Powers out of their part of Berlin. As the first step to that end, he has proposed that West Berlin be designated a "free city" to which all could come and go and which both sides would promise to leave to its own government.

Let's be frank; as every West Berliner knows, this is an invitation to total Communist rule by stages since West Berlin is surrounded by a Communist puppet regime intent upon bringing it within its grip.

Question. Why do the Soviets think the

Allies will buy such a deal?

Answer. Obviously, there is no certain answer, but there is tenable speculation. Khrushchev can well figure that it doesn't hurt to keep on asking, that he can't lose by trying. He can hope for division within the Allies on whether to stand firmly against the Berlin threat and try to exploit such division.

My own conviction, strengthened since Khrushchev's aggressive handling of the spy plane incident, is that the Soviet Premier feels that the balance of military power is now on the Russian side and that his title to get something for it—like one arm around West Berlin-ought to be recognized and accepted.

He can't quite understand why we don't see it that way. That's why he must be so outraged by the united Allied refusal to yleld.

Question. How can we best deal with this issue at the summit?

Answer. Here in West Berlin and earlier in Bonn I found two principal recommendations.

One is that the West should not mount any massive effort to avert what will never be in our power to avert, namely, a separate peace treaty between the Soviet Union and its satellite regime in East Germany.

The thinking behind this view is that a peace treaty between Russia and East Ger-

many-which is like Moscow making an agreement with itself-does not per se affect rights in West Berlin and therefore we should not get trapped into paying a price to avert it. We must make our stand against any diluting of Western rights in West Berlin, which we can resist, not against a separate peace treaty which we cannot avert if Moscow decides to go ahead.

The second German recommendation is that instead of talking about reaffirming the rights of access to West Berlin, we make it clear that we do not intend to yield these rights but are willing to negotiate any new agreement which would define them more clearly and enable them to be exercised more efficiently and more smoothly.

What we must not lose sight of is that the freedom and the vibrant postwar democracy of 2,225,000 West Berliners have been guaranteed by the Governments and the peoples

of America, Britain, and France.

To set in train a chain of events which would erase this freedom, to bargain it away in any degree, would not make for peace; it would make for war. It would mean that the word of the West would be so compromised that it would seem very small and unreliable indeed.

Hon. Paul Brown

EXTENSION OF REMARKS OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. DORN of South Carolina. Mr. Speaker, the Honorable PAUL BROWN is equally honored, loved, and respected in South Carolina as well as in Georgia. I have long admired and respected Congressman Brown. Coming here as a young man, I endeavored to follow in his footsteps. He is truly one of the greatest Americans of our time-courageous, patriotic, and forthright. All of my people in South Carolina join me in wishing for Congressman and Mrs. Brown a pleasant retirement in their beautiful and lovely Elberton, Ga.

The following editorial is from one of the greatest papers in the South, the

Anderson (S.C.) Independent:

CONGRESSMAN PAUL BROWN, A GREAT GEORGIA STATESMAN, WILL RETIRE

Congressman Paul Brown of Georgia's 10th District has announced he will retire

at the end of his present term. PAUL BROWN was first elected to the U.S.

House of Representatives in 1932 and his every waking hour for almost three decades has been devoted to efforts on behalf of his district, his State, and his Nation.

In 1932 near-starvation was abroad in the land, and rural areas, which made up most of the 10th District in that era, were par-

ticularly hard hit.

Congressman Brown went to Washington with the determination to do all within his power to better the lot of his constituents and to gain for them their rightful return for arduous labor.

As a freshman Congressman, he was a stalwart supporter of Franklin D. Roosevelt and the New Deal measures aimed at improving the lot of the farmer and working-

Others elected about the same time soon began falling away from such programs. They lost touch with their people. They became infected with "Washingtonitis" and mistook the voice of the U.S. Chamber of Commerce for the voice of the people. Most have long since disappeared from the scene.

Representative Brown never made that mistake. He never lost touch with his constituents and in the House he grew in wisdom and stature. On occasion of his 80th birthday, proceedings in the House were halted while fellow Congressmen on both sides of the aisle joined in expressing their respect and affection for this man from Georgia.

His devotion to duty is on record. For decades he maintained a 100 percent attend-ance at all rollcalls in the House.

But the real record of his service is written in the hearts of the people of his district. He answered their calls for assistance and advice with the same 100 percent attendance. No matter was too small for his attention. The man in overalls and the man in tophat were all the same to Paul Brown.

Throughout his career the planned development of the Savannah River's powerful potential has been one of his chief interests. He had to fight every inch of the way for every dollar appropriated to river development, but his faith in the rightness of this

development never flagged.

As a result, the entire region is now be-ginning to realize the benefits of such projects as Clarks Hill and the Hartwell Dam. In announcing plans for a mammoth \$280 million steam powerplant, Duke Power Co. officials have said the Middleton Shoals site would not have been chosen had not a steady flow of water been in prospect from

the Hartwell Reservoir.

Further, the vast H-bomb installation constructed in South Carolina near the Savannah River may have gone elsewhere had not it been for the Clark Hill Reservoir to assure the steady flow of water needed by

the atomic installation.

PAUL BROWN went to Congress in a time when a good many people didn't even know the name of their Congressman, or care. The Federal Government was far away, and the pre-1930 Congressman more often than not spent a good bit of time twiddling his thumbs. Come election year, he'd send out a few free seeds and that would be it.

But 1932 was a turning point. Nation recovered from the Republican depression, the country's economy began rolling in high and the duties of a Congressman multiplied overnight.

Instead of something of a sinecure, a Congressman's job became one of the most demanding and harowing and year by year the complexities multiplied.

Only a man of strong physical and mental constitution could have performed so efficiently and ably as Congressman Brown has done despite the inevitable toll of the in-

creasing years.

His statement as to the reason for his retirement is characteristically concise. "Under recent advice of my physician I have decided not to announce for reelection," he said. "I have not been too well for the past few months and the doctors say I must slow down and take it easy. I will be 81 years old at the expiration of my present term." He added: "I am tired and want to go

Congressman Brown will be missed in the halls of Congress, where in his own quiet and effective way he had become one of the most influential Members. He will be missed by his constituents in the 10th District. And we in South Carolina will miss him because much of his dedicated service vastly benefitted areas on both sides of the river.

Our hope and the hope of his multitude of fellow citizens is that in retirement his health will mend and he will be with us for many years to come-the well-earned autumn years of rest spent where he always preferred to be, that being among his friends and neighbors in Elbert and the other counties in his district in the State he loves and has served so faithfully and well.

Benita Wolf, a Christian Leader

EXTENSION OF REMARKS OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. TRIMBLE. Mr. Speaker, during the Washington Conference of the President's Committee on Employment of the Physically Handicapped, Arkansas was represented by Miss Benita Wolf, a student at St. Scholastica's Academy located in Fort Smith, Ark. Benita is a lovely young lady, a fine example of our young Christian leaders of today. She is typical of those young people who helped establish this country and of those who will help keep it strong and great.

We were honored to have her with us, and we wish for her all the happiness in life which she so richly deserves.

Mr. Speaker, I ask unanimous consent to insert in the RECORD as part of my remarks the essay which Benita wrote to win the honor of representing Arkansas at the Conference.

JOBS FOR THE HANDICAPPED-PASSPORTS TO DIGNITY

As human beings living in this thriving and prosperous world around us, we must always realize there are limitations to everything, no matter how modern or advanced we seem to think we are. No one and nothing is perfect; therefore; even the failings and imperfections that creation has within it has some special reason. So it is with the handicapped—that special group of people who because of certain obvious disabling abilities cannot perform all the tasks they wish to. But despite their disabilities, many of the handicapped have risen above the average individual and shown to the world that a true dignity is present within them and their labors. Exactly what and who are the handicapped?

According to the New York University School of Education, the handicapped are defined as "those who by reason of a physical, or mental disability are prevented from realizing the fullest physical, mental, social, vocational, or economic usefulness of which they are capable." But this definition would include a great number of human beings; for example, the person slightly deficient in perfect eye-sight or hearing, or one who has not had the necessary training for a specific field of work. However, the university definition adds: "The existence of a handicap is determined by the degree of the disability and the individual's capacity for self-adjustment." Of the estimated 23 million people with physical and mental disabilities in this country, few are handicapped for all vocational or occupational usefulness.

A handicap is a certain degree of limita-tion. But within the limitation of each handicapped person there remains a use-

Pamphlet "The Job for the Handicapped Man," p. 3, a publication of the National Association of Mutual Casualty Companies. 2 Ibid.

fulness and productivity. We must realize that a person is judged by what he can do, not by what he cannot do. It is that one defect of the handicapped person that is unable to be of use, not the whole person. If given a chance, the handicapped person, through sincere appreciation, his ability, and his realization of the dignity of labor, will fulfill his duty and prove to you that you made a wise decision in choosing him or her for his capabilities not his physical disabilities.

Because the handicapped are intent on proving their value and on providing their livelihood in the right job, they often set standards for workmanship and production which ascertain that hiring the handicapped is not charity, it is good business. Gainful employment not only helps them to lead happier lives, but studies have shown that many handicapped persons can actually perform many skilled and delicate jobs as well as, or even better than able-bodied workers.

Through employment the handicapped add to the efficiency of the work force; they are very careful to adapt or adjust themselves to the conditions they work in. Often they observe the company's rules to a better degree, and their attendance is more perfect than the able workers. They are safer and frequently more dependable than the other employees. By being able to have a good, regular job, the handicapped feel like whole, normal people again who have something to look forward to. They are restored to economic independence which is so essential to their feeling of security and usefulness. They also benefit the community as a contribut ing member who takes an active part in civil and social activities. Many times they become good leaders in their churches and local organizations. In general, they can help to make the State and Nation stronger.

Sometimes a handicap may be defined as a disadvantage which makes success more difficult; nevertheless, that success can be attained through hard work and determination. Philip D. Reed, chairman of General Electric Co., once said, "Give me the man with determination, for he is a doer. No physical handicap will deter a man who believes he can learn to do a job safely and well and is determined to prove it." Many handicapped persons have gained self-respect and the admiration and respect of others by means of the quality of determination. Consider, for example, Helen Keller. When only an infant, through severe illness she became a blind deaf-mute; but today she is one of the most admired women in the world. Miss Keller not only learned to read, write, and talk, but became exceptionally proficient in the ordinary educational curriculum; she graduated from Radeliffe College cum laude. She has written several wonderful books which should be an inspiration to all, especially the handicapped.

Then think of all the older people who will simply not give up their little jobs and constructive hobbies. They are determined to prove their usefulness and self-sufficiency. After retirement many live a great number of happy years yet because they have something to keep them and their minds occupied

and happy.

So it is with the majority of the handicapped—even after fallings and difficulties, they simply do not give up, and that is one of the secrets to happiness and success.

It is very edifying to see a handicapped person overcome his disability and make himself a real credit to society. It shows that the person involved is a strong one, in both character and spirit. Work raises man to a higher, spiritual level both in the eyes of God and of other men. If one can be

successful in his job, he can be successful in almost anything in life. The typical handicapped person is one with high ideals and aims who truly believes he can perform his job just as well, or better than the average able-bodied individual, and he usually does. He has overcome a great obstacle in his life and works constantly to prove himself capable of turning out excellent work. The employed handicapped person can be a wonderful example for anyone to follow, because he has fought a great battle and won.

There is a certain dignity present in all the handicapped who have learned to cope with their problem and find a great satisfaction in their work. Every employer should carefully consider hiring the handicapped because they deserve the chance to prove themselves and come out on top. Then everyone will truly realize that jobs for the handicapped are passports to dignity.

Invasion of Rights

EXTENSION OF REMARKS

HON. THOMAS F. JOHNSON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. JOHNSON of Maryland. Mr. Speaker, the Cambridge Daily Banner, a daily newspaper in my district, is to be commended for the splendid public service it renders in succinctly reporting news of national importance. Under leave to extend my remarks in the Record, I include an article written by the Banner's outstanding editorialist, Mr. Maurice Rimpo. The article entitled "Invasion of Rights" follows:

Give the U.S. Department of Agriculture an inch, and it may demand the right to enter your yard, invade your business office, and snoop through your private records. The inch, in this case, is Federal Milk Order No. 127 covering the Upper Chesapeake Bay marketing area. That heterogeneous area takes in the rural Eastern Shore of Mary-land, Metropolitan Baltimore City, and several countles west of the Chesapeake Bay. Three small Dorchester County dairies have fought a bruising, expensive fight with Department of Agriculture bureaucrats against the order for more than a year. They were temporarily outmaneuvered by the glant Maryland Milk Producers Cooperative, which, under USDA rules, was permitted to cast a single bloc vote for hundreds of members in favor of a milk marketing order.

As evidence of the octopus nature of the Department's milk marketing controls, the Dorchester milk producers offer an April 29 directive from E. Hickman Greene, new marketing administrator for Maryland. Greene advises all milk handlers under his jurisdiction to be ready to open their offices and records to his auditors "for the purpose of examining accounts and records considered necessary to verify or establish the correct data" on such matters as milk and butterfat weights and tests, the uses of milk derivatives, and payments to producers and cooperatives.

The administrator's letter lists 32 kinds of records that may be checked. But, be cautious, the record inspection "will not be limited to" them. The inference seems to be that marketing area auditors have a large loophole to crawl through in any direction they wish. Suppose you were a businessman whose operation had just come under the jurisdiction of an administrative branch of the Federal Government. How would you

like to open up such records as these? Canceled checks, bank deposit slips, petty cash tickets, check registers, accounts receivable ledgers, cash receipts and disbursements journals, general journals, accounts payable journals, private and general ledgers, balance sheets or profit and loss statements. These must be shown in addition to more specific reports on milk receipts and disposition.

Your answer to all this might be: "Thank heaven, I'm not in the milk business." you are in the advertising business, then York Congressman Samuel S. STRAT-TON has a plan that might interest you. He has revealed to a Farm Bureau committee in his home district details of a plan that would put the Department of Agriculture in the milk advertising business. Representa-tive Stratton said he had in mind a plot, experimental, advertising and promotional program designed to raise milk consumption. While he has some reservations about Uncle Sam as a huckster, Representative STRATTON said with illumination: "The fact of the matter is that Government is already in the business to the tune of several billion dollars a year, and yet we still haven't solved the problem of helping the farmer obtain a reasonable income without interfering with his right to run his buisness as he sees fit."

While the Department of Agriculture legally interferes with the farmer's right to run his business as he sees fit in order to raise farm income, does it have the same authority to interfere with the milk handler's identical right to run his business as he sees fit? As they prepare to bar the door to USDA auditors, the Dorchester dairies answer with a courageous "No." Unable to solve the problem of production and consumption, the Department of Agriculture now seems dangerously close to saying that the most undemocratic means are justified when it comes to putting a floor under farm income.

"What Fellowship Hath He That Believeth With an Infidel?"

EXTENSION OF REMARKS

HON. JOHN DOWDY .

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday May 16, 1960

Mr. DOWDY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following copy of a letter addressed to the President of the United States:

AUSTIN, TEX., May 10, 1960.

Hon. Dwight D. Eisenhower, President of the United States of America,

Washington, D.C.

DEAR MR. PRESIDENT: I begin by raising the Scriptural question "What fellowship hath he that believeth with an infidel?"

Since communism is first and above all militant atheism there can be no fellowship or meeting of minds at any level. Nor can there be coexistence and fraternization with the legions of hell.

Please, in the Holy Name of Christ whom we call Saviour, let there be no more summit meetings, exchange of visits, or any other contacts with those whose sole aim is the destruction of everything for which our Christian forebears fought and died.

Should we not rather be concerned in the matter of our Christian professions and our pledge of allegiance to our beloved flag and Constitution?

^{*}Leaflet, "Hire the Handicapped," the President's Committee on Employment of the Physically Handicapped.

Is not death with honor preferable to ex-

istence in atheistic slavery?

You led us to victory in hot war. Please now turn the tide of defeat in cold war by standing firm against those forces that would forever rob our children of the greatest heritage on earth-the freedom of our original constitutional Republic.

In God's name I write this to you.

In His service.

ROBERT L. KNIGHT.

Two Question Marks on West Berlin

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Rec-ord, I include the following column by Mr. Drew Pearson, writing from Berlin, Which appeared in the Washington Post on Saturday, May 14, 1960:

TWO QUESTION MARKS ON WEST BERLIN (By Drew Pearson)

BERLIN.-Most people have forgotten it, but the only reason for calling next week's summit conference in Paris was the allied isolated city of Berlin, still occupied by French, British and American troops 15 years after the war and still sticking like a very irritating free enterprise thumb into the side of European communism. It was only because Comrade Khrushchev threatened to squeeze them out of Berlin by force that President Eisenhower reversed John Foster Dulles a few weeks after he was buried and decided that the United States would agree to a summit conference.

Accordingly I came to this key city in advance of Paris to report on two big question marks-first, whether Berlin can be defended in case Khrushchev gets tough in Paris; second, whether it's worth defending.

It will be remembered after Khrushchev made his series of demands that the Allied troops be removed from Berlin that U.S. military experts met at Quantico and advised that, in case of a showdown, the United States could not break another Berlin blockade; therefore, we should follow a policy of talk and not fight. Exactly 1 year minus 1 month has passed since then and the question now is whether we are still any better off to champion the most important non-Communist city in Europe.

BRANDT PUZZLED

To get the answer I asked West Berlin's dynamic Mayor Willy Brandt what he thought of Mr. Eisenhower's earlier press conference statement that there is unlikely to be any Berlin blockade because "much of the raw materials West Berlin draws come from East Germany. They are a very fine customer of raw materials in that region and they deal also greatly with West Germany in commerce made out of these raw materials," Ike had said.

"We were puzzled when we read that statement," Mayor Brandt replied, "because we get no raw materials from East Germany and Our total trade with East Germany is only 1 percent. However," he added, "there are other reasons why I believe there will not

be a new blockade of Berlin.
"Khrushchev's public relations advisers will tell him that the story of a city beleaguered and starving is one which would arouse great sympathy throughout the world. Khrushchev is peculiarly sensitive to public relations

"However," continued the mayor of Berlin, "we are now in a better position than during the blockade 10 years ago. We have enough coal to last some time, also gasoline. It is now 8 o'clock," he said, looking at his watch. "At 8:30 all gasoline stations in Berlin would stop operating in case of an-other blockade and 2 days later we would be on gas rationing."

Do you have the rationing tickets print-

ed?" I asked.

"Yes," replied the mayor, "so I don't think Khrushchev will undertake a full blockade of Berlin. What he may undertake is some sort of limited blockade in order to force recognition of East Germany."

K.'S HAND STRONGER

Militarily, however, Khrushchev's hand is stronger than 1 year ago when the U.S. milltary experts met at Quantico and recommended we could not break a new Berlin blockade. He's not only stronger than 1 year ago, but is much stronger than during the last summit conference 5 years ago and since the Berlin blockade of 10 years ago.

Here is how strong Khrushchev is: Russia has 23 divisions in East Germany; the United States has 4 divisions in West Germany. The East German army is a crack disciplined force of half a million men; the West German army is in the process of building up to 12 divisions, and no match for it.

Some observers speculate whether the East German army could be relied on to fight, but our experts have noted unhappily that it appears under tight Communist control and that, while the East-German police have sometimes refused to carry out Communist orders against the German people, there is no such record in the East German army. Furthermore, not a single defector from the East German army has ever fied across the border. Aside from ground troops the United States has 1,000 shortrange missiles in Germany, all nuclear-armed. Though their range is only 300 miles they pack enough firepower to turn all Germany into a blackened desert. However, the Russians are believed to have far more atomic missiles on their side of the German border. We have not detected any IRBM sites in East Germany but the Soviets have hundreds of intermediate missiles in their own territory capable of hitting any target in Germany In brief, we are outgunned in missiles and

In airpower Russia now has a superiority of approximately 10 to 1 in Germany. Ten years ago we had air superiority both in Europe and throughout the world.

Upstream Storage and Coordination

EXTENSION OF REMARKS

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. ULLMAN. Mr. Speaker, under leave to extend my remarks, I want to insert in the RECORD the following resolution on the issue of upstream storage and coordination which was adopted recently by the 17th annual convention of the American Public Power Association.

RESOLUTION 27-UPSTREAM STORAGE AND COORDINATION

Whereas optimum benefits from water resources depend on comprehensive, multiple purpose development of rivers; and

Whereas section 10(a) of the Federal Power Act now requires that a project may

be licensed only if it is best adapted to a comprehensive plan of development; and

Whereas section 10(f) of the Federal Power Act now does not require Federal downstream projects to make headwater benefits payments to non-Federal upstream storage projects; and

Whereas various measures have been introduced such as S. 1782 and H.R. 7201 to repeal section 10(f) and also provide means for coordination of projects, and

Whereas these issues are complex and require careful studies as a basis for new legislation: Now, therefore, be it

Resolved, That the American Public Power Association reaffirms its opposition to S. 1782 and H.R. 7201 in their present form; and be it further

Resolved, That the association urges that the relevant Federal statutes be amended to authorize the appropriate Federal power marketing agency to enter into coordination agreements and contracts for the sale, purchase, and exchange of energy, stored water and use of transmission facilities with the owners of non-Federal hydroelectric generating facilities: Provided, That such arrangements may be entered into for periods not to exceed 50 years and be subject to review every 5 years: Provided further. That such legislation set forth standards to be used in formulating such agreements and include a method of appeal for the enforcment of such agreements: And provided further. That when such agreements require payment for headwater benefits, such payments shall not exceed the annual costs which would have been incurred if the downstream beneficiary owned and operated that portion of the upstream facility allocated to such downstream plant. Payments made under such agreements, may, if the agree-ments so stipulate, constitute complete satisfaction of payments required under section 10(f) of the Federal Power Act. No such agreement shall be contrary to the terms or provisions of any permit or FPC license nor shall any compensation be paid on behalf of any existing upstream storage project for any benefit it is legally obligated to provide as a requirement of its permit, license, or otherwise; and be it further

Resolved, That the association urges the Senate Committee on Interstate and Foreign Commerce to request the Secretary of the Interior and the Federal Power Commission to conduct a study of upstream benefits and coordinated operation as they may affect present and future hydroelectric power projects, and to report thereon as a basis for proposed legislation prior to January 1, 1961.

Congress Must Reassert Its Right

EXTENSION OF REMARKS OF

HON. FRANK KOWALSKI

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. KOWALSKI. Mr. Speaker, I know that no Member of Congress wishes to say or do anything that might interfere with the President's freedom of action at the summit meeting.

However, once the summit conclave has been concluded, I believe that the Congress must move quickly and decisively to reassert and reaffirm its right to know what goes on in the executive branch of the Government.

Specifically, the legislative branch must insist that its constitutional powers are not infringed upon by any department or agency including the Central

Intelligence Agency.

The Congress should further insist that foreign policy be conducted by the Department of State, under the supervision of the President, and that extreme care be taken to prevent the making of decisions in this critical field by the military.

The dangers of the present situation are pointed out in an editorial printed Friday, May 13, in the Wall Street Jour-

I commend this editorial to the careful perusal of all Members of the House. The text follows:

A NEED FOR INTELLIGENCE

In all its recent statements, the State Department has been careful to note that President Eisenhower had not "authorized" the particular flight of the U-2 plane that penetrated more than 1,200 miles into Russia before it fell into Russian hands.

At his press conference the other day Mr. Eisenhower made plain that this was a mere quibble; the gathering of any information that will protect the United States was "authorized" by him long ago. Intelligence operatives are to use "whatever means necessary short of the use of force" to learn what Russia may be up to. Implicit in his statement was that while he had not "authorized" the specific flight of May 1, he had "authorized" any and all such steps.

His statement clearly backed up Secretary of State Herter's announcement that the United States would continue to do what it had been doing for some time past about aerial reconnaissance of Russia. But it did nothing to clear up his own statement of just a year and three months ago that "the orders were very strict" about flying near Russia's borders.

In answer to a question in 1959 whether a missing Air Force research plane had been lost testing Russian preparedness procedures, the President then said: "Actually now, have forgotten the limit, but I established it personally some time back a couple of years ago, and I am sure this happening is accidental." It is hard to see how anyone It is hard to see how anyone can infer from that statement anything ex-cept that U.S. planes were under orders not to cross Russian borders.

Perhaps the President means to make a distinction between using Air Force planes, which could be considered as the "use of force" he has said will not be employed, and using National Aeronautics and Space Administration planes engaged only in intelligence. It is a distinction, however, that will escape the Russians.

And it is a distinction that certainly will continue to escape some Members of Con-The other day Speaker RAYBURN demanded that the State Department and the Central Intelligence Agency tell Congress who ordered that pilot into the air over Russia. Senator Willis Romerson said he had attended many meetings of the Appropriations Committee, but nobody had ever said anything about flying planes over Russia; certainly the CIA Chieftain, Mr. Allen Dulles, hadn't. Senator STYLES BRIDGES demanded that the State Department and CIA explain the whole story to Congress. A day or so later Representative CLARENCE CANNON. chairman of the House Appropriations Committee, said right out that the aborted flight over Russia was one of a series planned by the CIA, approved by the White House, and known to a few Members of Congress as well.

So to say that Congress is somewhat confused over the operations, as well as the role, of the CIA is to note the obvious. Even though Mr. Herter now says that our "extensive aerial surveillance by unarmed civilian aircraft" was apparently not a secret to the Soviet leadership, it was obviously a secret to many Members of the House and Senate.

But if the President's orders of 15 months ago never applied to the CIA, if the limits have been lifted, and if flights into Russia are no longer accidental happenings and only a handful of Congressmen knew about the changes, Congress is in poor position to complain about the matter.

For Congress has consistently declined to keep itself—or even its leaders—responsible for knowing what goes on in the CIA. Senators and Representatives have acted as though this Agency, whose farflung operations are answerable only to one man, is somehow not only beyond an accounting but also above the errors that are common to all

What Congress learns of CIA's activities Congress learns only if and when Mr. Dulles is inclined to disclose some information, and then only what he wishes to tell.

The sole mission of the CIA is to gather intelligence and assess it, and it may very well be doing this job in an able manner. The point is that Congress does not know whether CIA is or not.

Therefore Congress should require that Mr. Dulles give an accounting of his stewardship so that it will know whether CIA is soundly manned and directed or whether it is perhaps more adventurous than it ought to be to serve the Nation best. In a word, Congress ought to choose a committee of responsible men to whom CIA is made responsible by statute. And Congress should waste no time doing so.

It is not our purpose here to pillory Mr. Dulles individually, for his responsibilities are very great. But the fact is that in a country where, by the words of the Constitution, only Congress has the power to declare war, Mr. Dulles' responsibilities seem to us to be far greater than they ought to be and his power of decision far broader than it ought to be.

We are not suggesting that Mr. Dulles should be forced to expose his espionage apparatus to the full gaze of the American public and thus to its enemies. But clearly an agency whose enthuisiasm for gathering intelligence and whose lack of judgment in doing so can actually endanger our oversea bases, our alliances and our reputation for candor and truth shall no longer be permitted to remain almost a law unto itself.

Spy Flight on the Eve of the Summit Was a Colossal American Blunder

> EXTENSION OF REMARKS OF

HON. BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial "Spy Flight on the Eve of the Summit Was a Colossal American Blunder" that appeared in the Denver Post, Denver, Colo., on Tuesday, May 10, 1960. I know this will be of great interest to all the Members

The editorial is as follows:

The spy plane incident brings home to Americans as never before what the cold war is really like.

It shows how difficult it is for a free and open society to operate openly and honorably against the secretive, monolithic Communist empire.

It shows how badly coordinated our national leadership is, with the peace-seeking right hand knowing little or nothing about what the war-deterring left hand is up to.

It shows how a calculated risk can backfire when the risk is not properly weighed.

For the tragedy of this incident goes beyond the fact that we got caught.

The tragedy is that we lost much more, at this delicate moment in history, than we stood to gain by not canceling the spyplane flights some time ago until the summit meeting and other negotiations were over.

There is a military argument that reconnaissance flights around and over Soviet territory give us data that makes it easier for us to deter or repel aggression. It is a valid argument.

The flights tell us about the buildup of Soviet missile potential, where the pads are,

which are combat-ready, etc.

They also serve as part of the free world's warning line against a surprise missile strike.

This information would help us strike back quickly and accurately at Soviet missile bases, to knock them out before a second strike could be launched.

From a strictly military standpoint, this information, so essential both to defense planning and striking ability, is worth risking the loss of a few planes.

But as a contribution to deterring world war III, this spy-plane technique has grave disadvantages, too.

In this era of pushbutton war, the necessity of split-second decisionmaking to avoid annihilation, a misinterpreted spy-plane invasion of Russian airspace could touch off an ever-widening exchange of missiles.

Even more likely, if the United States continues to probe the Soviet periphery, would be constant clashes of American aircraft and Soviet air defenses, with possible Soviet reprisals against American air bases in nearby nations. This in turn could spread into general war.

WAR BY ACCIDENT?

Finally, the spy-plane flights could lead to ever-increasing tensions, and just when some relaxation seemed possible.

The more tense American-Soviet relations become, the more likely one side or the other might, by design or accident, pass the point of no return.

It is precisely because of this danger that the United States-or at least part of our Government—has been trying to bring about a relaxation of tensions.

It was why the President had Khrushchev visit him, and why he is planning to return

It was the reason for the 1955 summit conference, and for the disarmament conferences now in progress.

It is the reason for this month's summit conference, too.

Though there may be military justification for the spy-plane flights, it would have been merely prudent to suspend them just before the summit meeting, and act as the little boy, who "jes' before Christmas" was as good as he could be.

In short, the military objectives should have been put aside because of the threat they posed to more important political ob-

This lack of commonsense precaution, together with the evidence from Washington that the President had not specifically reviewed such a dangerous technique in this

store needs closer minding.

Our right hand has obviously been working against our left hand, and the result has been confusion over what our strategy priorities really are as we head for the summit.

Nor is this the only recent occurrence that creates this impression.

Two others are the announcement this past weekend that we shall resume underground nuclear testing, despite the Geneva conference now dealing with the problem; and the President's recent announcement that Vice President Nixon might assume his summit seat if the meeting lasts more than 7 days.

Both showed not only a lack of faith in international negotiation, but also a willingness to take action that could make that negotiation even less likely to bear fruit.

The spy-plane incident shows the same

What about the effect of the exposure of these flights on our cold war position?

When the long-range effect is considered, this is clear: In preparing for the war we hope never to fight, we have injured ourselves seriously in the political, economic, and moral war we are already fighting.

SUMMIT POSITION HURT

We have put ourselves on the defensive just as we are about to step into an important cold war encounter-that is, the summit conference.

We have lost the solid ground of fairness and openness from which we could have negotiated.

We have given Khrushchev a solid issue against us, in which international law is all on his side.

We have opened the way for him to reap a propaganda coup bigger than anything he has yet accomplished.

But perhaps even more important is the damage done to the U.S. ultimate cold war

Until this past weekend, we could still say that we operated aboveboard, in contrast to undercover Soviet activities. We could claim that we tell the truth and the Soviets lie.

Now we can no longer assume that pose, and the consequent damage to our moral leadership of the free world has suffered, especially from the point of view of the uncommitted new nations of Asia and Africa.

This shows how shortsighted is the argument that we can justifiably engage in spyplane flights because the Soviets engage in much more farflung spying activities.

UNITED STRATEGY NEEDED

If we, like the Marxists, argue that the end justifies the means, it makes the war of ideas-which the uncommitted nations take very seriously-all the harder to fight.

If we adopt techniques similar to those of our enemies, how are bystanders to appreciate the vast difference between us?

For all these reasons, the game turns out to be not worth the candle.

We must now take all precautions possible to keep from threatening our summit position more than we already have, lest world opinion blame us for the failure of the meeting

We must also insist that our leaders define cold war priorities, and make sure that the pursuit of one does not endanger the pursuit of others.

This incident suggests that the Central Intelligence Agency and the Pentagon, which favor a hard line and a minimum of international negotiation, rule our foreign policy more than does the State Department.

It also suggests that the White House has been unable to reconcile the objectives of these two camps.

If American public opinion can now force a new effort to unify national strategy, then we may have salvaged something out of this colossal blunder.

presummit period, suggests strongly that the With Detroit Bypassed-Missile Policy Answers Wanted

EXTENSION OF REMARKS OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congressional Rec-ORD a thoughtful editorial appearing in the Detroit (Mich.) Free Press of Monday, May 9, 1960, entitled "With Detroit Bypassed—Missile Policy Answers Wanted."

The editorial sets forth questions on contracts on which the low initial bidder by some \$20 million was the Chrysler missile plant. These contracts were given to another facility in another part of the country which made higher initial bids. The editorial deserves proper consideration and it would appear meticulous congressional scrutiny. Certainly a matter involving the enormous sums of money required by the Saturn program demands an extraordinary degree of care in handling millions of dollars of taxpayers money.

Discrimination for or against industry in one part of the country requires an explanation unless based upon cost or clear requirement of statute.

The editorial follows:

WITH DETROIT BYPASSED-MISSILE POLICY ANSWERS WANTED

The remark of Dr. T. Keith Glennan, Administrator of the National Aeronautics and Space Agency, that most of Chrysler's work on the second stage of the Saturn rocket would have been done in Florida is a bit

Chrysler competed for the Saturn business in order to get work for its missile parts factory in Sterling Township. The assembly plant near Cape Canaveral was conceived as an added facility to solve a transportation problem.

The bulky Saturn rocket parts would be transmitted in subassemblies, and put to-gether close to the launching-pad. Our information is that more than half the total work would have been done in Michigan.

The source of Dr. Glennan's misapprehension might be interesting to discover. There are some other questions which the Space Committee of the House, for example, might lock into.

One question involves Dr. Wernher von Braun, the noted missile designer. Chrysler engineers worked closely for 8 years with Von Braun and the Army's missile engineers at Huntsville, Ala.

They developed the Redstone and Jupiter missiles to high degrees of performance and reliability. Chrysler and the Army did this in the face of hot competition from Air Force engineers who were working with aircraft firms to develop the Thor, Atlas, and other

Today Von Braun and his Huntsville scientists have come under the management of Dr. Glennan in the new civilian space agency, NASA, Many of Von Braun's new associates have been recruited from the Air Force-aircraft industry field.

Question: Have Von Braun's old Air Force rivals acted to break up the Army-Chrysler combination?

Again, does the NASA award of the disputed rocket contract to the Douglas Aircraft Co. represent some kind of subsidy?

Douglas has been losing money, according to recent financial statements. Douglas' Thor missile lost out to the Atlas and Polaris, just as Chrysler's Jupiter missile did.

But Douglas stands on a little different footing in the Pentagon. Douglas is one of the family of aircraft manufacturers built up and nourished by the Air Force to supply its military needs.

Most of Douglas business has been military, although it also is an outstanding builder of civilian planes.

Chrysler is a civilian manufacturer which does military business on the side, so to speak. Chrysler's profits and losses are its own responsibility.

Question: Do NASA officials feel any obli-

gation to keep Douglas in the black?

The loss of the Saturn missile contract

and the breaking up of the Von Braun-Chrysler association may very well drive the only Detroit missile maker out of the field, temporarily.

Ford and General Motors have subsidaries and divisions which contribute importantly to missiles and rockets but they are located elsewhere. The Chrysler plant is right here and employs hometown people.

If the Air Force feels that Douglas must be kept in the black at all costs, why should NASA do it? And why wouldn't it be a good thing to keep some of this new missile and rocket business going in Detroit and the automotive business?

Why wouldn't it be good to have auto workers here familiar with the skills and acquainted with some of the people involved in missiles and rockets?

The Sterling Township plant would seem to be a more promising base for emergency expansion in the event of war than just one more plant in missile-crowded California,

Question: Wouldn't it be better to keep Douglas going without sacrificing the only missile activity rooted in Detroit?

Bomarc B Successful Tests

EXTENSION OF REMARKS OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Thursday, May 5, 1960

Mr. PELLY. Mr. Speaker, the Air Force exercising its right of appeal has urged the Senate to restore House cuts in procurement funds for the Super Bomarc B program.

Since technical problems in firing this missile in initial tests were responsible. in part at least, for the cuts, I include a news item from the May 12, 1960, Seattle Daily Times which reports some subsequent successful tests. I hope when the House and Senate representatives go to conference on the military appropriations bill that this latest information will not be ignored:

BOMARC AGAIN SCORES DIRECT HIT ON SUPER-SONIC MISSILE

A Boeing Bomarc supersonic interceptor missile scored a direct hit on a Regulus II missile over the Gulf Test Range this after-

The Air Force shoot marked the second time a Bomarc has scored a direct hit on a target moving faster than the speed of sound.

The liquid-fueled IM-99A Bomarc blasted the Regulus from the sky about 175 miles from the Bomarc-launch site at Eglin Air Force Base, Fla.

The hit was made at an altitude of 43,000 feet

The closing velocity of the Bomarc and the Regulus II was greater than 4 times the speed of sound.

A second Bomarc launched 1 hour 50 minutes later scored a planned near-miss intercept of a QF-80 subsonic jet drone. A proximity fuse triggered the missile's firing mechanism as it streaked by the drone target.

Michigan-Your Opportunity

EXTENSION OF REMARKS

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1960

Mr. RABAUT. Mr. Speaker, the title I have given my remarks today—"Michigan-Your Opportunity"-is also the slogan for Michigan Week, 1960. seventh annual observation of Michigan Week commenced yesterday, May 15, and will run through the remainder of this week. In general, the purpose of Michigan Week is to promote the great State of Michigan throughout the Nation. More specifically, the purposes of Michigan Week are three: First, to advance the economic and social progress of Michigan; second, to promote among Michigan residents and the people of the United States a better understanding of the advantages Michigan offers as a place for living, working, enjoying recreation and doing business; and, third to get all Michigan residents working together to make the State an even better place in which to live, work, and enjoy life. As a native and life-long resident of Michigan, I am happy to take part in this Michigan Week effort and to assist in advancing these fine purposes which I have just enumerated.

As a matter of fact, Mr. Speaker, it is comparatively easy for me to do this because the State of Michigan is replete with such a wealth of natural resources, commercial opportunities, and other advantages that I could go on virtually ad infinitum in extolling them.

Michigan is the largest State east of the Mississippi. The Upper Peninsula alone is equal in size to Connecticut. Delaware, Rhode Island, and Massachusetts combined. Both the Upper and Lower Peninsulas have been richly endowed by nature. Indeed the State motto: "If you seek a pleasant peninsula. look about you" is well justified. The economy of Michigan rests firmly upon the three main pillars of industry, agriculture, and the tourist trade. During World War II, the magnificent performance of Michigan's automotive industry earned for our State the title "Arsenal of Democracy." Our State continues today to be one of the foremost producers of military vehicular equipment and is also in the forefront of the vast new development and rapid expansion in the

manufacture of ballistic missiles—awesome and terrible weapons of the new space age.

The automotive industry, however, is only one among many in which Michigan is a leader. On the basis of value added by manufacture, Michigan also ranks first in boatbuilding, output of internal combustion engines, mobile homes, steel springs, hardware, industrial patterns, special dies and tools, and conveyors. Michigan is also known far and wide as an outstanding producer of furniture, breakfast foods, drugs and chemicals, sporting and athletic goods, steel, chemicals, salt, and paper products.

Michigan boasts of many new and upand-coming fields. One of these is the production of chemicals. The value added by manufacture in the chemical industry is even now in the neighborhood of \$600 million. The wealth of raw materials available within the State gives every prospect of boosting Michigan to one of the Nation's top producers of chemicals. In general, overall diversification of industry has proceeded at such a rapid pace that of the 453 industries classified by the U.S. Bureau of the Census, Michigan has 369—or 81 percent of the total.

What is more, industry is continuing to flock to Michigan in droves. For the 6-month period ending last month, April 1960, Michigan led all other States in industrial growth. During that time 94 new industrial facilities came to Michigan. This is far more than the second ranked State. Of these 94 new facilities. 74 were in the Detroit metropolitan area, including Ann Arbor. This means that this single metropolitan area acquired more new industrial facilities than any other single State. And it should be duly noted that these figures do not even include companies which leased or expanded into existing industrial facilities. These figures represent new facilities only. In short, during the 6 months ending April 1960, building permits were issued for 94 new industrial projects costing a total of \$111,121,209. Of this total more than \$62 million was in the city of Detroit and eight suburban communities. This Detroit figure does not include some \$20 million for expansion of 214 industrial plants and 87 industrial warehouse facilities during the same 6month period. Nor do any of these figures include any of the approximately \$150 million in new facilities announced or started in the previous 6-month period. It is easily seen, Mr. Speaker, that Michigan's tremendous attractiveness to industry has not diminished at all. To the contrary, it is on the upswing.

One of the main reasons for this attractiveness, of course, is the tremendous treasury of raw materials of which the State of Michigan can so justly boast. It is said that "whatever a manufacturer may need in the way of materials, it is probable that he will find them in Michigan." A study of a resources may of the State readily bears out this great abundance of nature's bounty.

Starting with Upper Peninsula, which is part of the greatest iron ore producing

region of the world—the Lake Superior District, we find very extensive iron ore deposits-Michigan's most valuable mineral resource. These deposits place Michigan second among all iron ore producing States. Since 1854, Michigan mines have shipped a tonnage of ore equal to the total excavation of the Panama Canal. Between 1860 and 1890 Michigan led the Nation in the production of lumber. Michigan lumber helped to build 19th century America. Although the forests have been largely cut over, Michigan is still a major lumbering State. In all, the State of Michigan boasts 19 million acres of forests, yielding about 1 million cords annually. It is expected that Michigan's lumber harvest wil be considerably increased as the second stand of timber grows in, for the lumbermen of the State are applying their knowledge of modern conservation methods to insure a continuing supply of wood. The hardwoods are basic to our furniture industry, while the softwoods underwrite Michigan's well-known paper and pulp industry.

Michigan is well endowed with many other natural resources. She is noted for her limestone. She is first in the production of salt in the Nation, furnishing about 20 percent of the Nation's supply. Of all the States, Michigan has easiest and greatest access to the bountiful supply of fresh water in the Great Lakes, by far the largest reservoir of fresh water in the world. Michigan annually ranks fourth in production of cement. She ranks high in the annual production of oil-over 10 million barrels per year. She is always very high. usually sixth, in the production of copper. Michigan has the world's largest limestone quarries and deposits of gypsum. Nationally Michigan is first in gypsum production and second in all stone production, including limestone. Michigan is second in the production of iron ore, supplying about 13 percent of the Nation's need.

Michigan's Lower Peninsula has extensive quantities of sand and gravel. Michigan's fine highways are built of her own native materials. The mention of highways brings to mind Michigan's wonderful traffic safety record. Although Michigan is high up among the States with the highest traffic volume, yet she has the second lowest number of traffic fatalities per 100 million miles traveled. In addition to industry, Michigan is a top notch agricultural State. The value of her agricultural products exceeds \$730 million each year. For example, Michigan annually produces: 42 million pounds of strawberries with a value of \$6.1 million; 65 thousand gallons of maple syrup worth \$350,000; 6,000 acres of peppermint worth \$800,-000; 3,000 acres of spearmint, a crop worth \$600,000. The Lower Peninsula of Michigan produces some 97 percent of the Nation's crop of navy beans. Beans may be baked in Boston, but they are raised in Michigan. The State also leads in the production of tomatoes, cucumbers, and cultivated blueberries. She is third in the production of apples. fifth in peaches, fourth in pears. In

addition. Michigan is the largest producer of red tart cherries and is third in the production of sweet cherries. Celery and corn are also large crops. In all. 44 different fruit and vegetable crops are grown commercially in Michi-

Recreation is also an important "product" for Michigan. The lakes, streams, and woodlands of the State combine to provide the perfect setting for vacationers. Ten million tourists annually roam the beauty spots in Michigan. The State's tourist and resort industry which caters to these millions accounts for a yearly revenue of some \$700 million. This great influx of visitors makes Michigan the fourth most popular vacation spot in the Nation, accounting for some 6 percent of the domestic tourist trade.

With all of these assets bestowed by nature, with the tremendous diversity of commercial activity and opportunity and with this great magnetism for tourist, it is readily obvious that the great State of Michigan is richly deserving of an eminent place among her sister States. I feel sure that she has been accorded such a position and I am equally sure that she will continue to earn and deserve the pride of the Nation and the respect of her sister States. I ask you. Mr. Speaker, and all other Members of this House to join me in saluting the great State of Michigan during this-Michigan Week, 1960.

Rural Electrification-A Monument to F.D.R.

> EXTENSION OF REMARKS OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 11, 1960

Mr. PRICE. Mr. Speaker, it is my pleasure to call to the attention of the House membership an editorial which appeared in the Thursday, May 12, 1960, edition of the Belleville (Ill.) News-Democrat. The editorial is entitled "REA—A Monument to F.D.R."

This is true, but the Rural Electrification Administration is also a monument to the enlightened thinking of editors such as the Honorable Robert L. Kern of the Belleville News-Democrat. Mr. Kern gave editorial support to the vigorous and strong legislative program of Frankiln D. Roosevelt during the early days of the New Deal. The distinguished Belleville editor was in the forefront of the Nation's publishers who made the Roosevelt victory in 1932 possible and who gave editorial support to the proposals of the new President and his administration, which brought about permanent reforms that today serve as a protection against the economic evils of the past.

It must be very pleasing to Mr. Kern to look back over the successful record of an organization, the creation of which

he supported through the columns of his newspaper.

The editorial follows:

REA A MONUMENT TO F.D.R.

Twenty-five years ago, wth a characteristic jaunty smile and a typical wisecrack, President Franklin D. Roosevelt signed his famous Executive order that created the Rural Electrification Administration. It turned out being one of the most far reaching of all New Deal reforms, for REA has literally changed the face of America.

As our Representative Melvin Price

pointed out to congressional colleagues yesterday, at the time this governmental lending agency was created, only 11 percent of America's farms had electricity. Today, that figure has soared well over 96 percent.

America leads the world in electrified farms. Over 17 million rural residents now have electricity. This has contributed a large measure to the high output of America's farms, which represents our greatest advantage over Russia in the cold war.

American rockets may sputter while Russian ICBM's roar, but an overlooked but comforting fact is that poor Soviet farm production limits any extended Russian adventures. Soviet farms, lacking labor-saving machinery, and particularly electricity, have lagged far, far behind in production goals.

It takes 50 percent of all Soviet citizensnearly 90 million persons-barely produce enough food to feed the Soviet Empire. And an army, as Napoleon so aptly put it, still "travels on its stomach."

America, on the other hand, has about 15 million persons working in agricultureless than 10 percent of our citizens-and they produce vast food surpluses.

A sizable share of the credit for this amazing achievement rightly belongs to the REA.

A National Fuels Policy

EXTENSION OF REMARKS OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. REECE of Tennessee. Mr. Speaker, on Wednesday, May 4, 1960, the National Executive Committee of the American Legion, meeting in Indianapolis, Ind., passed the following resolution upon recommendation of the National Security Commission of the American Legion.

The American Legion, composed as it is of veterans of World War I, World War II, and Korea, has always been in the forefront in supporting legislation that strengthens and supports the defense and security of our country.

Surely the fuels of this Nation are the basic factor of our economy for without coal, gas, oil, or atomic energy; the electrical industry, the railroads, the steel industry, the heating of our homes, most of the important segments of our economy would be completely stymied and totally ineffective.

America must never forget the basic factors in its long-range planning, and I congratulate the American Legion in its support of the proposed legislation dealing with a congressional study of the vital fossil fuels of this Nation, for in their strength is found the strength of America.

There is before the Rules Committee of the House of Representatives, of which I am a member, House Concurrent Resolution 661, as introduced by Congressman WAYNE ASPINALL, chairman of the Interior and Insular Affairs Committee, and House Concurrent Resolution 662 as introduced by Congressman JOHN SAYLOR, and some 12 other identical bills dealing with the study of the fuels of this Nation by a joint congressional committee.

I am happy to lend my support to this proposed legislation, as I am thoroughly conscious of the importance of this study in support of the defense of our great country.

The resolution follows:

Whereas the adequate defense and security of this country is dependent upon the amount of available fuels of this Nation in the event of war; and

Whereas the manufacture of steel, the operation of railroads, the making of electricity and the other important industries of our Nation are dependent on the fossil fuels: and

Whereas Canada, England, Russia, and several South American countries have established such a national fuels policy; and

Whereas all study groups appointed by the President; private research agencies; and industry groups have, without exception, urged such a Congressional study of the fuels of this Nation; and

Whereas the Federal Power Commission has repeatedly recommended such a study of the fuels and their availability; and

Whereas without such a study of the fuels by a congressional committee on all fuels, gas, oil, coal, atomic energy, there is no criteria upon which to base a fuels policy, and

Whereas there is now pending before the Senate and the House of Representatives Senate Concurrent Resolution No. 73, signed by 43 Senators of both parties; and House Concurrent Resolution 661 introduced by Congressman WAYNE ASPINALL, of Colorado: and House Concurrent Resolution 662, introduced by Congressman John Saylor, of Pennsylvania, and other Members of Congress; that establishes a joint congressional committee to study all of the fuels of this Nation and report to Congress on January 2, 1963, as to whether or not this Nation should establish a national fuels policy: Therefore, be it

Resolved, That the National Security Commission of the American Legion at its meeting in Indianapolis, Ind., on May 2 and 3, 1960, do hereby recommend the support of this legislation in the interest of national defense looking toward the study of the fuels of this Nation and the recommending of a fuels policy for this Nation.

Passed by National Executive Committee,

the American Legion, Indianapolis, Ind.

Address by Herbert Hoover Before 54th Annual Convention of the Boys' Clubs of America

EXTENSION OF REMARKS

HON. CLARENCE J. BROWN

OF CHIO

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. BROWN. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following address by Herbert Hoover, chairman of the board of directors of the Boys' Clubs of America, at their 54th annual convention, New York City, May 5, 1960:

Address by Herbert Hoover, Chairman of the Board of Directors of the Boys' Clubs of America, 54th Annual Convention of the Boys' Clubs of America, New York City, May 5, 1960

This is the annual meeting of the men and women who have the responsibility of carrying on a great character-building institution. Its organization and methods are familiar to you. But not so well known to the outside world.

This organization now reaches to 600,000 boy members mainly in the congested areas of over 300 great cities. We build character and make good citizens of these boys who otherwise have little chance.

APPROVAL OF THE AMERICAN PEOPLE

The Boys' Clubs have received the approval of the American people. This organization has a special charter from the Congress. Adequate clubs cost from \$150,000 to \$500,000 to build. This association is receiving a new club about every 12 days. It costs about \$16 million a year to maintain the present clubs and the national organization. The cost of new clubs and their maintenance is provided by gifts of nickels, dimes, and small sums. The donors come from every group in American life.

Time and again organized labor has given freely of its time and services on weekends and holldays. Recently I dedicated a club building which would have cost \$250,000 to build. But it was built by the joint free service of employers and organized labor. When inspecting the 1,000 boys already at work in this club, I complimented the labor leader who headed their part in its construction. His reply was: "Do not forget that these are our boys."

YOUTH DELINQUENCY

We hear much these days as to the causes and the growth of youthful delinquency. The blame is usually put on the failure of parents; the failure of religious training, and the infections from the TV and radio.

But one cause is too often overlooked. That is that the boys in many of our slum or congested areas have no place to go for air and play except the streets. Being self-starting dynamos of energy and also being gregarious, they join in groups. These groups too often step first into mischief and from there to crime.

The purpose of these clubs is to give them an alternative to the life on the cobblestones and pavements. Under skilled guidance the boys receive two great services: They are organized into sport teams. And the rules of sports are second only to religion as moral training. The second great service is in our shops and reading rooms where the boys are given opportunity to determine their bent in life, whether mechanics, musicians, or the wide spaces of the literary world. We transform destructive glee to constructive joy. The Boys' Clubs are not a cure; they are a preventive of youthful delinquency. Every club has proved to be an oasis of decreased delinquency.

OTHER CHARACTER-BUILDING AGENCIES

The Boys' Clubs are but one of the many character-building institutions for youth. There are the Boy and Girl Scouts, the Campfire Girls, the Girls' Clubs, and many religious groups.

All these character-building institutions are short of adequate funds. The great charitable foundations should be supporting them with millions of dollars.

NATIONAL GOALS

These days we hear much about establishing national goals. The greatest national

goals of all human history were established in the Declaration of Independence and the Constitution of the United States. All these character-building institutions give their support to these goals. Millions of these kids only learn of these goals from these institutions.

In the Boys' Clubs the boys of every race and religion take pride in this pledge:

"I believe in God and the right to worship according to my own faith and religion.

according to my own faith and religion.

"I believe in America and the American way of life * * * in the Constitution and the Bill of Rights.

"I believe in fair play, honesty, and sportsmanship."

Is not the upbuilding of these characterbuilding institutions also a national goal?

This Is Our Michigan

EXTENSION OF REMARKS

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mrs. GRIFFITHS. Mr. Speaker, the Michigan congressional delegation wishes to call attention to the book "This Is Our Michigan," copies of which have been mailed to all Members of the Congress in connection with the 1960 observance of Michigan Week, being celebrated this week.

We commend this book for your reading, for it tells the story of our water wonderland State in a way which makes clear why we do have the honor of serving it in this Congress are so tremended the provided of the State.

dously proud of our State.

"This Is Our Michigan," is an easy-to-read narrative of a sturdy people who have pioneered, persevered, and prospered. It is the story of people whose productive genius in World War II made Michigan known and respected as the arsenal of democracy, and in whom the spirit of American democracy burns today with unceasing fervor.

The book is an authoritative recital of the attributes, resources, and achievements of a richly endowed and energetic State which a century ago produced the lumber to build many of America's cities and the iron ore to build its railroads, and whose automobile factories in a later era put the Nation on wheels.

It is also the story of a State whose scientific research and whose inventive and productive talents have helped prepare this Nation of the conquest of space.

The author of "This Is Our Michigan" is Willard Baird, an experienced newspaperman in our State capital at Lansing and chief of the State capital bureau for Federated Publication, Inc., which publishes the State Journal in Lansing and the Enquirer and News in Battle Creek. His years of painstaking research and compilation of data for this project culminated in a series of 59 articles written for those two daily newspapers early this year.

So great was the interest in the articles elsewhere in Michigan that Federated Publications, Inc., made the material available as a public service to all

other Michigan dailies and weeklies. Altogether, it was published by more than 150 Michigan newspapers.

Now, as an additional public service endeavor, Federated Publications, Inc., has published the entire series in an attractive book which will be widely used as a reference work by the schools and libraries of our own State and, we hope, by similar institutions in other States.

In it you will find, briefly yet clearly narrated, the history of Michigan from Indian days through the French and British colonial periods, territorial times, and early statehood to the present day. You will find in it also the story of Michigan's tremendous natural resources, its industrial eminence, its impressive records in agriculture, its fame as a tourist and resort State, and its many cultural achievements.

It is a story we in Michigan are pleased to share with the rest of the Nation, and one we hope you will enjoy reading.

Sanitary Rules Should Be Used Only To Protect Public Health

EXTENSION OF REMARKS

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, when Mrs. Vera Mayer, general secretary of the National Consumers League, testified April 28 at hearings held on my national milk sanitation bill by the Health and Safety Subcommittee of the House Interstate and Foreign Commerce Committee, she pointed out that consumers should not be made captives of a local milk monopoly. She added that they particularly resent being made captive by the use of alleged health standards as trade barriers. Under leave to extend my remarks, I would like to include her statement in the RECORD: STATEMENT OF MRS. VERA WALTMAN MAYER,

GENERAL SECRETARY OF THE NATIONAL CON-SUMERS LEAGUE

The National Consumers League is grateful for this opportunity to present to the subcommittee its views in support of HR.

3840. For more than 60 years, the League has been an ardent supporter of legislation to improve the standard of living of all the citizens of our Nation. Our stand was, and is, based on the conviction that as consumers, we have an obligation and a responsibility to better the living and working conditions of those who produce the goods we purchase. Of course, as consumers, we share with all members of our society the desire for purity and safety in the products we purchase.

We believe that the enactment of H.R. 3840 will be conducive to more efficient production and marketing of high quality sanitary milk for shipment in interstate commerce. Such a development would be very much in the interest of consumers.

Obviously, we cannot claim to be experts on this technical legislation. But we are impressed by the various reports, including the record of hearings by this subcommittee in 1958, which show that sanitation regulations are used to restrict markets.

As consumers, we do not want sanitation regulations to be toyed with. We want sanitation regulations to be used to protect our health—not used for other purposes. We want sanitation regulations which we can trust as truly health-protective—not ones which are in conflict with each other for the attainment of other objectives.

It is exactly because consumers are not experts in this field that we need some standard, some guidepost. Conflicting standards confuse the consumer. He cannot possibly know which actually protects his health and which is a trade barrier. We need help, and we believe H.R. 3840 will provide that assistance.

Further, we oppose trade barriers which make us the captives of a particular group of dairies. We particularly resent being made captive by duping us concerning sanitation standards, which are so obviously important to us.

We understand that the fluid milk industry represents one of the few areas where the Congress has not exercised its constitutional authority to regulate the sanitation aspects of interstate commerce. Instead, it has allowed such regulation to go by default to local and State sanitation authorities.

Under these circumstances, it is not surprising that there has developed a hodge-podge of regulations, differing from State to State and from market to market, which may frequently permit sanitation regulations to be used to restrict the entry of high quality milk from other than immediate local sources.

We believe that H.R. 3840 and its companion bills are sound and flexible. H.R. 3840 does not force States and municipalities to adopt the milk ordinance and code recommended by the U.S. Public Health Service. It merely provides that when interstate milk plants qualify under this code, milk from such plants cannot be restricted from entering any market on the grounds of sanitation regulations.

We are particularly impressed by the fact that the current bill has been drafted so as to follow closely the recommendations of the Association of State and Territorial Health Officers. We are confident that these experts, together with the U.S. Public Health Service, would urge only legislation which provides full safeguards for consumer health.

In short, we urge the enactment of H.R. 3840. We believe it will help end the confusion which has purposely been created about milk sanitation standards. It will provide consumers with a good standard prepared by the U.S. Public Health Service and approved by the organization of State health officers. And most important of all, it will end the use of alleged health standards as a tool for trade barriers.

The 25th Anniversary of the Rural Electrification Program

SPEECH

OF

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. BRADEMAS. Mr. Speaker, I am proud to join my colleagues in paying tribute to the 25th anniversary of the rural electrification program, a social and economic achievement which by 1960 has brought electricity and power to more than 16 million Americans.

It was on May 11, 1935 that the President of the United States signed the Executive Order that created the Rural Electrification Administration.

In August 1938 a group of rural Americans heard the warm, familiar voice of their President dedicating the Lamar Electric Membership Corp. at Barnesville, Ga. The President explained the events that led to his signing the Executive Order, the silver anniversary of which we are celebrating this month, and concluded with these words:

So it can be said that a little cottage at Warm Springs, Ga., was the birthplace of the Rural Electrification Administration.

With these simple words President Franklin Delano Roosevelt described what has come to be recognized as one of the principal accomplishments of his administration.

REA ONE OF SAM RAYBURN'S GREAT CONTRIBU-TIONS

The rural electrification program must also be regarded as one of the greatest of the many contributions to the American people of our beloved Speaker, the Honorable Sam Rayburn, of Texas, for the Rural Electrification Act of 1936 was introduced by the then Chairman Rayburn of the House Interstate and Foreign Commerce Committee, and the late Senator George Norris, of Nebraska.

We in Indiana are particularly proudthat the Honorable Claude Wickard of our State, Secretary of Agriculture under President Roosevelt, was Administrator of the REA program for 8 years. Mr. Wickard was selected as the principal speaker at the Silver Anniversary observances held on May 11 this year at Warm Springs, Ga.

Mr. Speaker, many citizens of the State of Indiana and of the third congressional district, which I have the honor to represent, are today receiving the benefits of REMC-financed electricity.

REMC'S SERVE THE PEOPLE OF LA PORTE AND MARSHALL COUNTIES

For example, there is the REA-financed electric system with headquarters in Plymouth, Ind., the Marshall County Rural Electric Membership Corp. The president of the cooperative is Gordon Smith and the manager is Clayton E. Robinson. The first REA loan to the Marshall County REMC was made on October 12, 1936. Since then REA has approved a total of \$1,195,000 in loans to this borrower of which about \$850,000 has been advanced. The loans were made to finance the construction of 738 miles of distribution line to serve 3,014 rural consumers in Marshall and St. Joseph counties.

Portions of La Porte County, also in my district, are included in areas served by the Kankakee Valley REMC of Wanatah, Ind.

REA'S FINE RECORD IN INDIANA

Mr. Speaker, at the time the Rural Electrification Administration was created on May 11, 1935, only 23,476 farms in Indiana, or 11.7 percent, were receiving central station electric service. Current REA estimates show that 152,850 farms in the State, or 99.5 percent of all farms recorded in the 1954 census, were being served by June 30, 1959. REA-financed rural electric systems serve about 64 percent of these electrified farms.

Through April 1, 1960, REA had approved a cumulative total of \$69,989,393 in loans to 47 electric borrowers in Indiana, of which 46 are cooperatives.

The REA loans were made to enable the borrowers to construct 37,726 miles of line, and other electric facilities, to serve 164,584 consumers. Loan funds actually advanced to the borrowers amounted to \$62,565,284 by April 1, 1960. With the help of this financing, the locally owned and managed systems had already placed 38,151 miles of line in operation and were serving 170,513 farms and other rural consumer outlets. The average monthly consumption of electricity by these consumers had increased from 200 kilowatt-hours in 1950, to 427 kilowatt-hours in 1959.

REA electric borrowers in Indiana have repaid \$26,487,077 on the principal of their Government loans. In addition, they have paid \$10,366,710 in interest and \$3,033,659 ahead of schedule. No borrower in the State is overdue in its loan payments.

In 1950, the year the first REA telephone loan was approved, 61.8 percent of the farms in Indiana had telephones. By the end of 1953, it was estimated that 122,000 farms, or 81 percent of all farms in the State had telephone service.

RURAL ELECTRIFICATION HAS HELPED BOTH RURAL AMERICA AND MAIN STREET

Mr. Speaker, rural electrification has meant greatly improved standards of rural living, health, and sanitation and a new and undreamed of efficiency in farm production. The REA loan program has, moreover, generated billions of dollars of business for people who do not live in rural areas. This includes the billions of dollars invested in electric lines and facilities as well as the lengthy list of appliances and equipment for farms and homes.

These purchases and the labor required to build the lines and do the wiring have made jobs for millions, and profits for merchants up and down every main street in America.

Mr. Speaker, the REA program has helped change the face of rural America, and change it for the better. I am proud to be a supporter of the REMC's of my State and I take this opportunity to salute you, Mr. Speaker, for your historic role in bringing locally owned REA to the American people, and to salute as well the members of the REMC's of Indiana for their fine demonstration of democracy in action at the grassroots level.

The Summit Conference

EXTENSION OF REMARKS OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, April 28, 1960

Mr. PHILBIN. Mr. Speaker, the action of the Soviets in scuttling the summit conference and withdrawing the invitation for President Eisenhower to visit the Soviet Union next month, while sensational, is not particularly surprising.

It was also most disappointing to many people who felt the conference might possibly help to ease current tensions and promote peace.

The Marxist formula, being followed by the Soviet, does not desire the easing of tensions or the establishment of peaceful conditions. It is compounded of diplomatic strategy and propaganda tactics designed to encourage and arouse as much agitation, turmoil, and disorder in the world as possible.

We are presently witnessing a large number of incidents, some of them in our own hemisphere and Nation, which indicate the widespread influence of the world Marxist movement.

It is unfortunate that some way cannot be found, through dispassionate discussion and exchange of views, to eliminate some of the basic causes of friction, but so long as the Soviets are intent upon using Marxist tactics and pursuing Marxist goals, we are not likely to develop in diplomatic councils that good faith and that sincerity of purpose which always must be indispensable ingredients of any successful worthwhile diplomatic conference.

Perhaps the breaking up of the conference at this time, if it is broken up as reported, may bring some good results. It would at least avoid a woeful waste of time and energy on the part of our representatives and negotiators and would remove a most important source of communistic propaganda activity leveled against the free world, and particularly against the United States.

It is a real pity that the nations cannot sit down together in an earnest effort to hammer out an agreement for disarmament, control of nuclear energy through inspection safeguards, and the liberation of subject and enslaved peo-

Until these great questions are resolved, there can be no lasting peace in the world. And Mr. Khrushchev will have to take the grave responsibility for this unhappy and dangerous situation.

There are other encouraging aspects, namely, our great military and economic power and our unwillingness to knuckle under Communist threats.

Barring constructive agreements, this power and strength will continue to be the real deterrent to large-scale war and, I hope, to small-scale ones as well.

I hope that the President will speak out strongly for freedom and let Mr. Khrushchev and the world know, by unequivocal language, that we intend to protect our security and our liberties, and we are willing to talk with any nation that honestly and sincerely wants to talk peace and justice.

Federal Aid to Education

EXTENSION OF REMARKS OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. SAYLOR. Mr. Speaker, Wednesday, the 18th of May, the House of Representatives has scheduled the bill now pending before the Committee on Rules, H.R. 10128, the School Construction Assistance Act of 1960.

I urgently request my fellow colleagues to read the comments appearing in the School Board Journal of May 1960, as made by Mr. Robert E. Wilson, associate professor of educational administration of the Temple University in Philadelphia, Pa., which I wish to include as a part of my remarks:

HOW FEDERAL AID WILL SIMPLIFY ADMINIS-TRATION

(By Robert E. Wilson, associate professor of educational administration, Temple University, Philadelphia)

During the current rage over the advisability of Federal aid to education there has been overlooked its potential for simplifying the problems of administering public schools. Assuming that the Federal Government shares the major burden of financing schools in the future, and also shares the concomitant responsibility for operating the schools, by the year A.D. 2000 a superintendent of schools could handle these common administrative problems in the simplified manner in the following manner:

Parent: I want my child's teacher changed. Superintendent: I only work here; see your

Citizen: My school taxes are too high. Superintendent: See your Congressman; finance bills originate in the lower House.

Teacher: Our arithmetic books are worn out; can we order new ones?

Superintendent: This is election year; no additional expenses this year.

Citizen: Kids are cutting across my lawn on the way home from school and have damaged my petunias.

Superintendent: Don't bother me. File your list of damages with the U.S. regional court of claims.

Parent new to the district: What school will my child attend?

Superintendent: The U.S. Office of Education does not distribute its building and pupil allocation until August.

Teacher: When can we start teaching that new unit which we developed for 8th grade history some time ago?

Superintendent: Let's see, we submitted our recommendations for that unit in 1922. They're working on it last I heard,

Janitor: I want a raise.

Superintendent: See your Congressman; finance bills originate in the lower House.

High school student: But why can't we have a pep rally?

Superintendent: This is an election year; White House directive dated January 4 forbids all rallies that might detract from nominating convention rallies.

Parent: How many days will we get for Christmas vacation this year? Superintendent: Maybe I don't have to

answer that question; did you vote in the last national election?

Parent: That teacher kept my child after

school just for throwing a paper wad.
Superintendent: Detention for paper-wad throwing upheld by U.S. Supreme Court, Althouse v. Union School District, Georgia, (11 T. 381, 1976).

Principal: Why didn't I receive my annual supply of writing paper for the third grade? Superintendent: Congressional committee increased military appropriation this year; education budget reduced.

Parent: You're not teaching phonetics like

they used to?

Superintendent: USGPO Bulletin No. 98472-Y eliminated phonetics, especially when they occur in words.

Parent: How do I get the bus to stop in front of my house?

Superintendent: See Senate subcommittee on intrastate communications and transpor-

Board member: Who got our coal order last year?

Superintendent: I can't react to that question; my secretary-clerk, junior grade, misplaced my 1999 copy of manual of superintendent's stock answers to inquisitive board members.

Citizen: As chairman of the local campaign for foot corn research, may I have permission to solicit funds from pupils?

Superintendent: This is an election year: White House directive of January 4 forbids any solicitation of funds from pupils enrolled in public schools (on school time) for other than party campaign chest.

Parent: My child can't eat that lousy food served in the cafeteria.

Superintendent: Why tell me? Write the secretary of agriculture.

Parent: The discipline in this school is too lax.

Superintendent: This is an election year; White House directive of January 4 forbids school officials from alienating any registered voters.

Parent: My little Everett is so smart for his age; why can't you make an exception for him to start first grade even if he won't be 6 until December?

Superintendent: Is he Republican or Democrat?

Farm Program

EXTENSION OF REMARKS

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. DORN of South Carolina. Mr. Speaker, the following is a brief résumé of a talk I made to the Clinton (S.C.) Kiwanis Club's annual farmers night program, April 14, 1960:

FARM PROGRAM

(Address of Congressman William Jennings Bryan Dorn at Kiwanis Club's annual farmers night, April 14, at Clinton, S.C.)

The most serious domestic problem facing the people of the United States is the farm situation. Farm population in the United States has dropped to 11 percent of the total, the lowest percentage in the history of the United States and the lowest of any major world power in the history of the world. This is a dangerously low percentage.

The United States was founded by men with a rural philosophy. The Declaration of Independence, the Constitution, and the Bill of Rights were largely written by rural men. Washington, Jefferson, Madison, and Monroe were all outstanding farmers. The fact that Washington and Jefferson were great farmers made them good Presidents. Nearly all of the Presidents in the history of the United States were born and reared on a farm or associated with a farm. The membership of the Congress for 130 years was overwhelmingly rural. Farmers have initiative. They are independent. They think for themselves. They cannot be herded or coerced to the polls by goons and ward bosses. It is difficult to get up a mob-or overthrow the Government with busy, contented landowning farmers. A man who is busy milking cows and tilling the soil is not going to lead a march on the Nation's Capitol to overthrow representative government.

We do not find Communists and Socialists engaged in the pursuit of agriculture. Our rural areas are no breeding ground for juvenile delinquency. Rural people go to church and support good schools. The rural home is the bedrock of a democratic society.

Under the price-support and acreage-control programs, the American family-size farmer has been reduced to a state of peonage. One-half of the burley-tobacco growers in the United States, under this Government program, are permitted only one-half acre or less-in a nation that originated the culture of tobacco. Under these Government programs, cotton acreage has fallen off in the United States 60 percent since 1930. We have lost cotton markets at home and abroad. One-third of the cotton farmers in the United States grow 5 acres or less. The percentage is even greater in the Southeast. It is impossible for a farmer to clothe, support, and send his children to college with less than 5 acres of cotton or one-half acre of tobacco.

What opportunity is there for a young man with an ambition to be a farmer? He cannot possibly become a farmer unless he inherits a farm or marries into one with allotted acres. Farming is the only business in this so-called free nation that a young man cannot go into—he is not permitted to do so by a government of free people. Under these Government programs, the situation gets worse and worse. Surpluses mount and the rural population decreases, with more and more people on the welfare rolls and more looking to Washington paternalism.

These farm programs could not have served Russia's purpose more if they had been written by the Kremlin's planners of world conquest. America's population is being concentrated in the great cities, easy to annihilate with the atomic bomb, easy to herd into political machines, and easily subjected to propaganda and agitation. In fact, the first farm program inaugurated in the United States was written by questionable characters—one of whom has since served a term in the penitentiary. The farm program was written by Alger Hiss, Nathan Witt, Frank Shea, Rex Tugwell, Lee Pressman, Henry A. Wallace, and Felix Frankfurter, presently a Justice of this notorious U.S. Supreme Court.

These were principally bright young attorneys, most of whom knew nothing whatever about agriculture.

Under the programs these men inaugurated, we grow less and less, our farm population shrinks, while Russia grows more and more and every nation in the world increases her farm acreage. Soviet Russia since 1955 has added over 100 million new acres to agricultural production. Rhodesia exempts her farmers from land taxes to grow more and Turkey exempts her farmers from inmore. come taxes to grow more and more. In this country we passed a soil bank to get our farmers to grow less and less. Incidentally, the average farmer in Rhodesia plants 65 acres of tobacco; in Canada, 30 acres; and in the United States, may I repeat, half of the tobacco farmers are permitted to plant only one-half acre or less. The same is true with cotton and wheat. Foreign nations grow more, with American foreign aid, while we grow less. We send them marketing experts, fertilizer experts, and the net result is to put our own people out of business.

Under the cotton price-support loan program, in the year 1958 358 farmers in the State of California received \$50,000 or more; Arizona, 194; Mississippl, 237; South Carolina, 1; Georgia, none; North Carolina, 2; Alabama, none. Here in the Southeast we are not only being forced and tricked off the land, but we are paying the bill for others to become bigger and bigger. The atmosphere is being carefully created so that someday a campaign of land reform will explode in the United States along the lines of China's and Cuba's agrarian reform. The only segments of our farm economy holding its own, growing; free, and with hope, are those outside of Government control and price supports—for example, livestock, pine trees, citrus fruits, and vegetables.

On my farm I grow beef, pine trees, and grass, because I can do so without Government regulation,

The pressure was put on Congress to put price supports on livestock, but I am so glad today we resisted these pressure groups. The beef surplus simply vanished through increased consumption. Livestock today accounts for 54 percent of the farm income.

Yes, we need a farm program, a new farm program, a positive program, one that looks to the future, one that will offer hope to the youth of this country, one that will becken to the teeming millions in the crowded cities, one that can assure us food and part-time employment for the unemployed during times of depression.

1. The No. 1 plank in this farm program should be gradual elimination of price supports and all acreage controls. Our free Nation cannot long survive as long as its farm population is regimented, controlled, and paid to do less and become weaker.

2. The Government subsidizes certain business operations to stay in business, to expand, grow, and to employ more people. On the other hand, we subsidize the farmer to plant less and less, to employ fewer people and to buy less fertilizer, machinery, and supplies. We are simply paying him directly to go out of business. It would be much better for the Nation if we paid the farmer to grow more, not less, and if we paid him directly to stay on the farm instead of moving toward the overcrowded cities.

 Get rid of the surplus by promoting markets abroad and expanding our markets at home.

4. Develop new crops and new uses through expanded research and advertising. Dr. Herty kept thousands of farmers in business by research on the pine tree.

5. Expand the rural development program.

6. Give the farmer more Federal tax advantages so he can compete with the tax exempt farmers of foreign nations. Give him a break with local taxes by making him pay less for improved rural property. The

policy now is to tax a farmer if he paints his house and improves the appearance of his farm. The local taxes of many farmers have doubled since improving his place by sheer initiative and effort.

7. Imports—the farm problem could be solved in one stroke by prohibiting imports of livestock, cotton goods, and other farm commodities we already have in surplus. Over 100 million new acres could be used in the United States to produce the beef, wool, sugar, cotton, tobacco, grain, and other farm commodities now imported from foreign countries.

South Carolina needs new industry, but more than anything else we need to save our old industry which consumes cotton from our farms. We need new industry, but we also need a South Carolina Planning and Development Board for Agriculture. South Carolina's agriculture development must keep pace with its industrial development. It will be tragic for the future political and social welfare of our State if we become all industrial. We must have a balanced economy. We must preserve our South Carolina rural heritage, traditions, and philosophy.

We have a great agricultural college at Clemson. Clemson's agricultural program needs the full support and backing of all of our citizens, both urban and rural.

Through research and planning, South Carolina was able to switch from indigo to rice, to cotton, and now to livestock and pine trees. South Carolina must and can continue to be largely agricultural.

Congress Should Take a Look at CIA

EXTENSION OF REMARKS

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. EVINS. Mr. Speaker, the events of the past week on the international scene are highly disturbing. They point out dramatically that in the delicate state of relations between the nations of the world it is necessary to maintain the highest degree of responsibility in all actions we take that might affect our international relations.

Mr. Speaker, in view of these recent developments I want to join with others in expressing the hope that Congress will take a look at the CIA and its operations in the public interest as suggested in the editorial of the Nashville Tennessean of May 11 which I ask unanimous consent to insert in the Appendix of the Record. The editorial follows:

IF CIA CHIEF IS ON HIS OWN CONGRESS SHOULD TAKE A LOOK

Days after the spy plane debacle in Russia, the truth is beginning to come out in Washington, and to that extent the United States position is being improved.

Having been mouse-trapped by Mr. Khrushchev, Secretary Herter has clarified the question of authority for the gathering mission which came to such a calamitous end.

The broad policy of aerial espionage, we are told, came from President Eisenhower, acting in accord with the National Security Act of 1947. Since the beginning of his administration, Mr. Herter said, the President has put into effect directives "to gather by every means possible the information required to protect the United States and the free world against surprise attack and to

enable them to make effective preparations for their defense."

Under the President's directives, therefore, various programs have been carried out, including "extensive aerial surveillance by unarmed aircraft," it is revealed. In a burst of candor, it is emphasized that flights over and near Russia will continue as needed.

The earlier claim that there was no responsibility for the U-2 flight as far as Washington was concerned, thus is revealed as double-talk and subterfuge of a kind that has impaired the administration's claim to open dealing in international matters.

We can believe that the President did not press the buttom, as it were, for this particular flight, and that brings up the question of how uncontrolled the Central Intelligence Agency may be just before the summit.

If Mr. Allen Dulles, head of CIA, has not been called on the carpet for his part in the colossal blunder, it would be surprising. For it is obvious that even if he had not been told to cease his activities lest the summit be wrecked, he should have acted to this end on his own.

Yet there is a good deal of evidence that when Mr. Dulles acts on his own judgment, he is very apt to be wrong. Along with General MacArthur, he is charged with having goofed on the Chinese Communist participation in Korea, and his organization allegedly was taken by surprise when Nasser seized the Suez Canal. Other instances of missed signals could be listed.

Regardless, therefore, of whether Mr. Dulles becomes the goat of this particular blunder, there is ample reason for Congress to revive the proposal that a permanent joint committee be established to make continuing studies of the CIA's secret activities, for which it is not accountable to the body which created it and appropriates operating funds estimated at from \$100 million to \$1 billion annually.

While there is general fear lest mistakes

While there is general fear lest mistakes lead to nuclear war, a free-wheeling intelligence agency calls for some sort of scrutiny and direction.

Confidence in White House direction has been hard hit by the latest turn of events. And for this development Columnist James Reston of the New York Times has a simple explanation:

"He [the President] is not even managing his own departments preliminary to the summit, and this, of course, is precisely the trouble."

Insofar as it can help correct this strange situation, the Congress has every right and reason for investigating to the fullest.

Washington Report

EXTENSION OF REMARKS

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of May 14, 1960:

WASHINGTON REPORT

(By Bruce Alger, Fifth District, Texas, May 14, 1960)

The Department of Agriculture appropriation bill, just enacted, presented the contradictory though not too unusual spectacle of Congressmen debating and agreeing to the expenditure of public money for a program that practically everyone, for varying reasons, thought wrong, yet the bill passed

handily without a record vote. called for approximately \$4 billion in various agriculture subsidies. The Appropriation Committee's own report on the bill highlights the inconsistencies. Here are some quotes: "The Federal Government is now spending far more in the name of agriculture than ever before in history * * * yet farm income in 1959 was at the lowest level since World War II. * * * Since 1953 the following 'cures' have been offered, tried, and from the record found wanting, so far as solving the problem is concerned. are listed reduced price supports (lower assured prices), soil bank (to pay farmers for acreage left untilled), Public Law 480 (to give surpluses away at home and abroad), Agriculture Department personnel increase 28 percent, appropriations increase of 300 percent, and production controls lowered (reduced acreage control). And still the problem remains unsolved. "The cost to the problem remains unsolved. Federal Treasury since 1952 now totals \$25.8 billion. * * * Farmers tend to increase their production as farm prices are reduced."

The soil bank failed, according to the report, because we paid farmers for land that already lay idle; further; that if 56 percent of all farms were retired at \$10 per acre per year, costing us \$2.75 billion, we would cut production only 9 percent. The problem, as the report states, "will never be solved until Congress attacks the problem at its base, which is overproduction." The report then shows that the \$13.5 billion in food given away at home and abroad under Public Law 480 since 1954 has not eliminated the surpluses, but rather "has contributed to a constantly deteriorating situation for American agriculture by getting these huge surpluses out of sight abroad and thereby postponing action to prevent the increase in the surplus problem." Also, the report states that Public Law 480 "should be considered a foreign aid program and should be paid for in the mutual security bill." Speaking of acreage controls, the report states, "while efforts to control production through acreage controls have not been effective, it appears unwise to eliminate them." Under the heading, "Corrective Action Urgently Needed", we find, "the situation becomes progressively worse. * * It is imperative the present approaches to this problem be reversed if the agricultural industry of this country is to survive and if we are to prevent a bankrupt agriculture from pulling down the rest of our economy." Yet the bill passed perpetuates the present programs.

The forthright report stopped just short of the truth. The truth is that Federal sub-sidy (Federal money and Federal control) will kill private enterprise ultimately. True, to a degree, industry can live on, through accumulated productive strength, against the debilitating Federal regulation, much as a ship moves despite barnacles. True, taxpayers can survive economically despite the weight of taxation much as a strong man can carry a heavy burden and still do other tasks. But in either case or in combination of the two, subsidy and taxation, free enterprise, private initiative, and individual freedom go down the drain. We are now witnessing the struggle of a dying, free industry, originally a free industry-agriculture-because of the Federal Government. The solution? Get the Federal Government out en-Only then can normal market sunply and demand react and result in the right prices, which in turn will result in a good income to the farmer, balanced against the costs of other commodities. So the effort of Congress should be directed toward freeing the farmer, not regulating and subsidizing him deeper into trouble. The bill passed without a record vote. I voted against it and desire to be so recorded. I predict that if Congress will not take the statesmanlike position, then the people will force action,

just as happened in the labor reform bill, passed despite House leadership opposition. It would be better, and hurt the farmers less, it seems to me, if the Congress and the farm industry effected the changes voluntarily than to have it forced on them.

Russia's propagandistic blustering concerning the American "spy" was answered forthrightly by the chairman of the Appropriations Committee in a floor speech. Mr. Cannon pointed out our failure to anticipate the Communists' Korean attack which cost our own unready troops dearly. So it is that for 4 years CIA (Central Intelligence Agency) by design has been sending planes over Russia to observe in order to protect ourselves, so far as possible, against buildups for surprise attacks. He likened the appropriation of funds for this work to the secret atomic work at Oak Ridge which preceded the atom bomb, unknown to all but a few of the Members of Congress. Espionage is a part of modern warfare and survival. Ours is hardly comparable to Russia's infiltration and subversive efforts. It was a refreshing statement. Russia needs to be told once and for all that we are deadly serious in our intention to protect freedom-loving nations, and if they don't like it, that's just too bad. Tough and direct action is all that blusterers understand. Only as we are strong, tough-minded, and tought-talking, will we prevent war and strengthen and attract the only kind of allies we want, specifically those equally dedicated to preserving freedom for mankind against the godless, slave-state alternative of communism.

Pensions for World War I Veterans

EXTENSION OF REMARKS

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960 .

Mr. ULLMAN. Mr. Speaker, it seems to me that the time has now come when Congress must take action to fulfill its obligations to the veterans of World War I. A most important step toward obtaining a World War I pension is support from the major veterans' organizations. It will therefore be of great interest to the Members of Congress that Willamette Heights Post No. 102 and Ontario Post 67 of the American Legion and Willard Anderson Post 2471 of the Veterans of Foreign Wars, have endorsed the passage of a separate pension program for World War I veterans. Their resolutions follow:

RESOLUTION ASKING THAT THE AMERICAN LE-GION GO ON RECORD AS SUPPORTING A SEPA-RATE PENSION FOR THE VETERANS OF WORLD WAR I

Whereas veterans of the First World War did not participate in the generous postwar benefits afforded veterans of World War II and Korea, nor comparably in social security or retirement, health and insurance plans which were not generally available prior to World War II; and

Whereas it does not seem fair to such veterans of World War I now of an average age level of 65 years, that they be lumped together with the younger veterans of later wars in a single pension program that does not take into consideration their particular needs as is the case with the War Pension Act of 1959; and

Whereas the veterans of First World War now number only a small segment of the total retired veterans of all wars, approximately 2 million, many of whom are already receiving small and inadequate pensions or compensation allowances: Now, therefore, be It

Resolved, That Ontario Post 67 of the American Legion hereby goes on record as supporting the principle that a Federal pension program should be provided for veterans of World War I, separate and apart from that provided for veterans of the United States' later wars, and with such liberalization of pension benefits as may be justified in relation to the fiscal welfare of our Nation; and be it further

Resolved, That a copy of this resolution be sent to each member of the Oregon delegation in Congress of the United States, and a copy to State headquarters, Department of Oregon, the American Legion for considera-tion at the 1960 State convention of said department.

Approved May 11, 1960, Ontario Post 67, the American Legion.

SAM KENNEY, Commander. S. J. MILLIKIN, Adjutant.

Whereas veterans of the First World War did not participate in the generous postwar benefits afforded veterans of World and Korea, nor comparably in social security or retirement, health and insurance

plans which were not generally available prior to World War II; and Whereas it does not seem fair to such veterans of World War I now of an average age level of 65 years, that they be lumped together with the younger veterans of later wars in a single pension program that does not take into consideration their particular needs as is the case with War Veterans Pension Act of 1959; and

Whereas the veterans of the First World War now number only a small segment of the total retired veterans of all wars, approximately 2 million out of 22 million, many of whom are already receiving small and inadequate pensions or compensation allowance: Therefore be it

Resolved, That Willamette Heights Post, No. 102, the American Legion, hereby goes on record as supporting the principle that a Federal pension program should be provided for veterans of World War I, separate and apart from that provided for veterans of the United States later wars, and with such liberalization of pension benefits as may be justified in relation to the fiscal welfare of our Nation; and be it further

Resolved, That a copy of this resolution be sent to each member of the Oregon delegation in the Congress of the United States. and a copy to State headquarters, Department of Oregon, the American Legion, for consideration at the 1960 State convention of said department.

Adopted unanimously, Portland, Oreg., the 21st day of March 1960.

RESOLUTION FOR PENSION PAYMENTS TO WORLD WAR I VETERANS

Whereas H.R. 9336 to amend title 38, United States (Spanish-American War Veteran) Code, by adding section 513, "to provide for payment of a \$100 per month pension to World War I veterans without any restrictions as to income": Now, therefore, be it

Resolved, That we, the members of Willard Anderson Post 2471, Veterans of Foreign Wars, in regular session at The Dalles, Oreg.; do urge our Senators and Congressmen from Oregon, to introduce legislation to amend title 38, United States Code by adding section 513, "To provide for payment of a \$100 per month pension to World War I veterans, without any restrictions as to income"; and be it further

Resolved, That we urge the department of Oregon to concur in this action, and instruct our national convention delegation to support this action; and be it further

Resolved, That a copy of this resolution be sent to the Oregon VFW paper for publication; that our adjutant be instructed to circulate a copy of this resolution to all post members and prospective members, urging them and their families to write to Senator Wayne Morse, Senator Richard Neuberger and to Congressman Al Ullman asking each of them to introduce legislation similar to H.R. 9336, in this session of Congress, on behalf of World War I veterans,

HARRY H. PETERSON. Commander. CLIFFORD L. SMITH. Adjutant.

American Mining Congress

EXTENSION OF REMARKS OF

HON, JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. SAYLOR. Mr. Speaker, the American Mining Congress held its convention in Pittsburgh, Pa., at the Pittsburgh-Hilton Hotel during the week of May 9.

One of the outstanding addresses delivered to that convention was made by the Honorable Fred A. Seaton, Secretary of the Interior.

Secretary Seaton's speech points out many of the items which are of grave importance, not only to the coal industry, but to the Nation during the coming years. I wish to include this address, as a part of my remarks, as follows:

Address by Secretary of the Interior Fred A. SEATON, AMERICAN MINING CONGRESS COAL CONVENTION, PITTSBURGH, PA., MAY 9, 1960

The energy market, like our economy as a whole, is a highly dynamic phenomenon. Viewing its development over the last century, two characteristics stand out with particular clarity.

1. There has been a steady and very substantial rate of overall growth.

2. Within the expanding energy market, a complicated interplay of economic forces has produced an unusually high degree of fluctuation in the demand for different fuels.

The high ratio of demand for coal came in 1901, up to 90 percent of the market, before the curve turned downward under the impact of competition from oil and gas.

It is true that today, oil provides twofifths of the energy used; coal and natural gas, about one-fourth each; with hydropower and natural gas liquids providing the remainder.

It is also true that while your industry's production in 1901 was about 293 million tons, today it is over 430 million tons.

The congressional panel on the Impact of the Peaceful Uses of Atomic Energy forecasts that overall energy consumption in the United States will reach 75,000 trillion British thermal units by 1975. Other authoritative estimates are in substantial agreement.

Thus, the professional consensus is that the United States in 15 years will be using 85 percent again as much energy as 5 years

For coal this could mean an increase of some 75 percent over 1955, with estimated

production levels ranging up to about 750

million tons annually.

Some believe you will do even better than hold the portion of the market you now sup-This optimism is based on the assumption that increased demand for fuel in the United States will be mainly for electrical energy, a field in which coal is at its best as a competitive fuel.

For the competition which is to come, you of the coal industry have already set powerful forces in motion to work in your behalf.

You have mechanized to an astonishing degree. Preliminary estimates for 1959 put the overall average output at more than 12 tons per man per day. By comparison, very few other countries have been able to reach an output level of 2 tons per man per day. Parenthetically, these few exceptions do not include Russia

It is highly significant that at a time when your industry has progressed to the highest efficiency level in the world, you also enjoy the best record for health and safety.

The high plane of sound labor-management relations in your industry has provided a dependable supply of coal at competitive prices. It has also fostered cooperation in your industrial operations, marketing, and public relations.

Through such cooperation, notwithstanding significant increases in the cost of labor, equipment, supplies, and the general effects of inflation, the average price of coal f.o.b. the mine has been less than \$5 a ton throughout the past decade.

On the industrywide organizational front, you have made it clear that you will continue to attack your problems in an aggressive manner. Indicative of that is the work of such organizations as the American Mining Congress, which is our host today.

Important as these achievements are, the master keys to what you have been able to do, in my opinion, have been the varied and imaginative scientific and technologic research in which you have engaged, and the individual initiative you have displayed. It is obvious that without research, the degree of mechanization you now have would still be a dream, not a reality. Without mechanization it would have been absolutely impossible to hold the cost line. Without initiative and the willingness to accept change, you would now be trying to compete in a 20th century market while using the 19th century mining methods.

For an industry in a field as competitive as yours, a continuation, even an acceleration, of research activity is an absolute necessity. I assure you that the Depart-ment of the Interior wants to be both helpful and effective in your endeavors.

That pledge isn't mere talk. We mean it and our actions prove we do. The Department now has underway comprehensive analyses of coal production, distribution, and marketing methods, as well as projects ranging from geologic mapping to the development of new uses for coal.

At this afternoon's meeting, Bureau of Mines' personnel will present a film, showing preliminary work done last fall on hydraulic mining of coal. It will indicate that given certain conditions, coal can be effectively mined by the use of high-pressure, high-velocity water jets.

Recently, Bituminous Coal Research, Inc., made available to us the coal-fired gas turbine with which it had been conducting studies at Dunkirk, N.Y. The Bureau of Mines is working to adapt this equipment to stationary powerplants. If its performance lives up to our expectations, it will greatly increase powerplant efficiency and should prove to be particularly valuable in those arid regions of the West where water is in short supply.

Much as we are doing in coal research, we want to do much more. That is why I have repeatedly urged enactment of H.R. 3375, a bill now pending in the Congress to provide the Secretary of the Interior with much-needed authority to contract for coal research.

It is my firm belief that research programs of an immediate and applied nature can be carried out most efficiently through contracts with appropriate public and private organizations.

We sincerely hope this legislation is approved in this session. I have already announced that once we have the authority, a special office of coal research will immediately be established to serve as our contracting agent.

Greater activity in the field of applied research would complete the research spectrum from the long-medium range to those of the short range, of immediate benefit to the coal industry. Such a three-pronged approach would make possible a united attack of science and technology on many of the problems of the coal industry. You and I will agree that is exactly what we must have, and the sooner, the better.

In developing this new program, the Office of Coal Research will utilize fully the guidance received from advisory committees which would include representation from all segments of your industry. Our experience in this kind of activity with the Office of Saline Water has been highly successful, and we are sure that a similar operation for coal will produce equally significant results.

As you are all aware, the Department of the Interior and the coal industry share other common interests and problems.

In March of 1959, President Eisenhower ordered the imposition of a system of mandatory controls on imports of crude oil and of its principal products, including residual fuel oil. The President made it clear that the purpose of the oil import program was to insure a healthy domestic oil industry capable of exploring for and developing new oil reserves to replace those being depleted.

Understandably, your testimony has a high degree of interest in the level of residual oil imports. One obvious reason is that many industrial installations, particularly electric utilities on the east coast, are able to switch quickly from coal to residual oil to natural gas, depending upon the price and availability of these competing fuels.

I would prefer to believe that we would all agree that the program, as it applies to residual fuel oil, cannot be administered in a manner so as to cause real shortages or result in real hardships to consumers. That would be morally indefensible, even if legally possible.

In April of this year we necessarily made an upward adjustment in the level of allocations for residual imports for the period ending June 30, in order to avert a serious shortage of residual on the east coast, however, that shortage may have been caused. That adjustment, together with the unim-ported portion of the original allocation for the first half of the year, made the total amount available for import in the second quarter of this year almost identical to actual imports in the second quarter of 1957, the base year for the residual part of the mandatory program.

We are engaged in an import control program, and importers and consumers alike should recognize it as just that. In establishing allocation levels we have no intention of creating a set of conditions under which unlimited quantities of residual fuel oil can be imported and sold at distress prices. Nor do we have any intention of allowing the creation of an artificial set of circumstances to accomplish the same end

To further strengthen the administration of the program we have, as you know, recently announced a revision in the allocation period from a semiannual to a quarterly

Coal has been and is now an essential element in the fuel supply picture in the United tSates, and it will continue to be so in the foreseeable future. No one should forget that your industry provided the principal energy base upon which our Nation's great industrial economy was founded. No one should forget that in the face of many obstacles, you satisfied unprecedented demands for energy during two terrible and prolonged World Wars.

To me, a pound of coal means much more than a mere 16 ounces of a hard and black substance which we remove from the earth. In hundreds and thousands of ways it is important in the lives of human beings.

Coal means for those engaged in the industry, a source of livelihood for themselves and their families.

For the consumer, it means everything from heat for the home to electric power for iron lungs or television.

For those who have a role in developing our industrial might, it means a comparatively inexpensive yet reliable source of fuel for everything from chemical plants to steel

For the Nation as a whole, it is one of the keystones which secures our economic system and our national defense.

No one can believe more fervently than do I that for reasons of future national security, if for no other, it is of vital importance that we work together to maintain a healthy

and thriving coal industry.

There is something else I believe. At the overall rate of development and growth of this Nation, it is clear to me that we are going to need in the future all the fuel energy we can get, from whatever source.

There are obvious and clearly defined limits to the amount of hydroelectricity we can produce. There are also limits on the use of oil and gas for many purposes. And there are limits, economic and otherwise, on production and use of coal.

A thriving industry in each case is certainly desirable from a national standpoint, and I believe it is a proper function of Government to help maintain an economic environment within which efficient business enterprises may prosper and contribute to national economic strength.

But it is not, in my opinion, a proper role of government to restrict unnecessarily the right of free economic choice by American consumers of the fuels, or anything else they want to purchase and use. Any other policy can only tend to throw our private enterprise economic system out of gear, and continued in the long run, destroy it altogether.

Aside from the demands of national defense, the consumption of fuels should properly continue to be determined by such factors as relative costs at specific locations. efficiency of use, dependability of supply-in short, a combination of consumer preference and the cost per British thermal unit, delivered at the burner.

Our governmental system is one which gives equal opportunity to every citizen, according to his ability and effort. If we are to have equal opportunity, with freedom, then we cannot have an enforced or guaranteed equality without regard to ability or effort. The one is unalterably antagonistic to the other.

To me, this principle also applies to our economic system. To bind it into a straitjacket where the strings would be pulled from Washington could at best only serve to stifle initiative and progress. The logical and result would inevitably be to destroy the very flexibility which is so essential if

individual initiative is to be encouraged to

make its impact felt.

Admittedly, your industry has some very real problems. Nevertheless coal, as a fuel and as a source material for many other uses, has a perhaps unlimited horizon of opportunities in the future. In the best tradition of economic competition, I am sure you recognize that fact and will seize those opportunities. And again, I assure you of the Department of Interior's sympathetic and helpful interest in your present and future economic health.

"Politics Is Poppin'"

EXTENSION OF REMARKS OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. PUCINSKI, Mr. Speaker, during the past weekend, many of us had an opportunity to attend the Women's National Press Club Annual Dinner and Stunt Party here in Washington, D.C., at which the ladies of the press as part of the program, presented a satire on the current political scene in America titled "Politics Is Poppin'."

We Americans, quite properly, take our politics very seriously. However, and quite fortunately, one thing which dis-tinguishes us as free people from the rest of the world is that from time to time we permit ourselves the luxury of adding a lighter touch to our political battles. The ladies of the Washington Press Club provided just such an interlude during their banquet over the weekend when they presented this yery excellent satire on America's 1960 campaign year.

I am taking the liberty today to include in the Congressional Record the lyrics from this very amusing presentation, "Politics Is Poppin'." We all know what an excellent job the ladies of the press corps do in their day to day serious coverage of the Nation's Capital. I am sure my colleagues will join me in acknowledging the fact that it is most refreshing to learn that these charming ladies also can indulge in the lighter side of the news.

I believe the authors of the lyrics for this musical deserve particular recognition. The script for this musical was prepared by the Misses Patricia Wiggins. Nancy Hanchman, Evelyn Hayes, Frances Lewine, Alyce Moran, Betty Pryor, and Isabelle Shelton.

I hope that those of my colleagues who were unable, for various reasons, to participate in this annual banquet of the Women's National Press Club will enjoy reading the lyrics as much as those of us who were present at the banquet enjoyed hearing them.

I hope, also, that students of history will be able to gather from these lyrics the fact that we Americans were able to find a little humor in our otherwise serious and determined political process.

I should like to point out that this year's Women's National Press Club dinner honored our illustrious Speaker of the House, Mr. Sam RAYBURN, certainly one of the most serious and responsible leaders in America.

The lyrics from the Women's National Press Club musical, "Politics Is Poppin", follow:

ROCKEFELLER

(Tune: "Some One of These Days")

Some one of these days, you're gonna need me badly Some one of these days, you're gonna call

me madly, You'll need my freshness You'll need my style You'll need my money

I've quite a pile! You'll feel so lonely-with Nixon only-But you know, smarties, that you had your

And when you need me, you'll have to plead

You're gonna need your Red Hot Rocky, your Red Hot Rocky,

Some one of these days. Some one of these days, you'll wish you had

not Squeezed me out-like some old bad lot,

You'll need my newness You'll need my grin You'll need my virtue I'm free from sin You'll feel so shamefaced You left me lamefaced

But you know stinkers, that you had your Way

And when you want me, you'll have to haunt me

You're gonna want your Red Hot Rocky, your Red Hot Rocky

Some one of these days.

TO L.A.

(Tune: "On Wisconsin")

On Wisconsin, West Virginia On to Oregon No one else is in there fighting They're the only ones campaigning Let the others try to block them Let them play it rough HUMPHREY and KENNEDY have got the stuff. KENNEDY, KENNEDY He's true blue He's got Sinatra and Spellman, too! HUBERT HUMPHREY, poor man's friend He'll tell you so for hours on end.

J-A-C-K, he's got lots When he runs out, pop's got pots! Strawberry shortcake, pie in the sky A modern Horatio, he's our guy!

(Tune: "Buttons and Bows")

East is East and West is West And his Dixie hardly shows You'll find his brand past the Rio Grande He's a western man, you understand LBJ on buttons and bows.

Night and day he leads the way makin' fillbuster hay

He don't say much but he keeps in touch He corrals the votes, sits back and gloats In the Senate branch of the Johnson ranch He flies high and handsome He's the space man of the age He's staking out the Moon and Mars as two

more Lyndon stars

LYNDON's best in East or West Holding high the yellow rose He ain't said yes, but everyone knows He's a candidate from head to toes LBJ's on buttons and bows.

(Tune: "You Came a Long Way From St. Louie")

He came a long way from St. Louis To climb the ladder of success. He got a lot of mileage out of attacking the gap in the old missile mess.

He came a long way from St. Louie And left the Ivy League behind.

He picked up country ways and votes and

Clark Clifford with politics in mind. He blew in from the Middle West, certainly impressed, some of the people hereabouts.

This may be news to him, and Harry Truman too, that others seem to have their doubts

He's hoping history will make him Missouri's compromise hero.

He came a long way from St. Louie, but Stu'y has still got a long way to go.

(Tune: "Once in Love With Amy")

Once in love with Adlai, always in love with Adlai.

Out of the running, never, never, never. My candidate forever, he'll be.

Once you're charmed by Adlai, give your right arm for Adlai.

Don't talk of Lyndon, Kennedy, or Stuart, none of them can do it-for me.

I couldn't care who else is in the picture for me, he's a fixture.

Don't go chasing after all those others, Just sit tight.

Once you swoon for Adlai. Always you'll moon for Adlai. No one can match him, ever, ever, ever. No more Eisenhower, he's free. Oh, he can be a winner, let him be.

SENATE LADIES

(Tune: "Keep the Home Fires Burning")

Give a campaign balance With domestic talents

Bake a brownie every day till the votes come in

Keep the silver shining, sweep and do the ironing

Make sure the cameras catch it all For the folks back home.

(Tune: "I'm Goin' to Wash That Man Right Out of My Hair")

I'd like to wash campaigns right out of my hair

I'd like to spend my time just reading Voltaire

I'd like to watch the shows I put on the air And be myself again

I'd like to break out singing like any chanteuse

I'd like to go back home and take off my shoes

I'd like to get myself right out of the news And be myself again.

No need for interviews, smiling through all that goo

No need for recipes, ladies' lunch, ladies' tea Handshaking, at crack of dawn-you take it I'd like to wash campaigns right out of my hair

And say goodbye to all the cameras' glare I'd like to tell the world I simply don't care And be myself again.

NIXON

(Tune: "Boy Scout Marching Song")

Be prepared, that's the Nixon marching song Be prepared as the campaign goes along Be prepared to get a headline every day Stick with Eisenhower, long as it will pay Be prepared, to put your new face to the fore Don't admit you've got the old one anymore Keep the bloopers hidden where you're sure that they cannot be found

And be certain to deny them if the word should get around

Almost any broken fence can be repaired: Be prepared

Be prepared, that's the Nixon solemn creed Be prepared, and be clean in word and deed Don't solicit campaign money that's not nice Murray Chotiner did it and he paid the price Be prepared and be careful not to do

Your good deed when there is no one watching you

We've got lots of dandy slogans, paid up television time

We are sure to win the White House if we lay it on the line

Don't be nervous, don't be flustered, don't be scared

Be prepared.

HAGERTY & KLEIN

(Tune: "Gallagher and Shean")

Oh, Mr. Hagerty, Oh, Mr. Hagerty Hello, what's on your mind this morning, Mr.

Everybody's makin' fun, of the way our country's run

All the papers say that things are far from fine

Why Mr. Klein, why Mr. Klein

With peace and progress you know everything's divine

Just don't listen when they yap 'bout that little missile gap

Do you think so Mr. Hagerty? Absolutely Mr. Klein

Oh, Mr. Hagerty, Oh, Mr. Hagerty All those work and play vacations sound sublime

Ironing out the kinks while cavorting on the

Could you fix a junket up for Dick and Klein? Why Mr. Klein, Why Mr. Klein

Those vacations aren't so easy you will find Gotta keep reporters busy or they'll have you in a tizzy

Keep Dick grounded Mr. Klein, keep him off the Columbine.

Oh, Mr. Hagerty, Oh, Mr. Hagerty

What about it when you're heckled all the time?

When they're hot upon your trail and the boss is shooting quail

What's the secret Mr. Hagerty—to keep them all in line?

Why Mr. Klein, Why Mr. Klein

That's the time you have to really rise and shine

Never let your temper go Why I never let mine show Positively Mr. Hagerty Absolutely Mr. Klein

Oh, Mr. Hagerty, Oh, Mr. Hagerty What to do when you can't lay it on the line

When you can't say yes or no, and they're badgering you so

Even Roscoe Drummond asks you all the time?

Oh, Mr. Klein, Oh, Mr. Klein

Don't you panie, don't go into a decline Just turn up something new, launch an

astronaut or two

Change the subject, Mr. Hagerty? Do a snow job, Mr. Klein Absolutely Mr. Hagerty Positively, Mr. Klein

(Tune: "Politics and Poker")

Politics is poppin' Politics is poppin'

Gotta get fixed up, cuz we'll be hoppin' Candidates are running, all around the place Campaigning, campaigning, now ahead, wanna bet, 5 to 1

Who will win-the race. Take a look, make your book

And come pick your man Who's going to be the candidate—and Who's Also Ran

Delegates lining up, watch out for steals Is California standing Pat or open for deals Why not take a poll—we never even read 'em Truman showed us all that winners don't-

need 'em

Politics is poppin' Politics is poppin'

Gotta get fixed up, cuz we'll be hoppin'

Candidates are running, all around the place Campaigning, campaigning

Now who's ahead, wanna bet 5 to 1 Who will win-the race.

THE AND MAMII

(Tune: "How You Gonna Keep Em Down on the Farm?")

How'm I gonna keep you down on the farm After the Presidency How'm I gonna keep you away from Summits Flying around, leavin' the town

How're we gonna keep you satisfied

That's the mystery

You'll find it dull to use a rake or plow After Geneva you'll be bored with cows How'm I gonna keep you down on the farm

Where all you've got is me? How'm I gonna keep you down on the farm So far from Burning Tree

How'm I gonna get on without the White
House

Chauffeurs and yachts and all those what

How'm I gonna stand that rocking chair

Sounds like misery

I thought it would be kind of good at first But coming closer it looks worse and worse How'm I gonna stand it down on the farm How are you gonna stand me?

How we gonna like it down on the farm No one but you and me

How we gonna like it without the fanfare,

no protocol or crisis at all How we gonna like it—Gettysburg All that privacy

Steak on the hoof and no more bills to sign No more receptions with that long, long line How we gonna like it down on the farm We're going to like it just fine.

Script: Patricia Wiggins, Nancy Hanschman, Evelyn Hayes, Frances Lewine, Alyce Moran, Betty Pryor, Isabelle Shelton.

Oregonians in the Fourth Congressional District Comment on Major Issues Before the Congress

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Friday, May 6, 1960

Mr. PORTER. Mr. Speaker, earlier this year I mailed to 131,000 residents of Oregon's Fourth Congressional District a postcard questionnaire, requesting their opinions on major issues concerning them. The response was excellent. A total of 20,349 returns were tallied and each day a few more arrive.

I believe the opinions of my constituents deserve the widest possible distribution. For this reason, under leave to extend my remarks in the Record, I include the following questionnaire results. There were 12 questions. The results by number and by percentage follow each question. My opinion on each question is included.

The results of the poll were sent to members of the press and to each person receiving my newsletter. A copy of the press release appears with the results.

QUESTIONNAIRE RESULTS

I am grateful to the 20,349 constituents who answered my postcard poll. Thank you very much. I'm doing my best to finish answering the many letters sent along with the questionnaires. In case you're interested, my own answer to each question was "yes."

1. Do you favor a national seashore recreation area in the dunes region in the vicinity of Florence and Reedsport? Yes, 10,273 (57 percent); No, 7,909 (43 percent). I think the legislation now being improved will meet most of the objections.

2. Do you favor legislation as proposed in the Forand bill which provides medical care for social security retirees? Yes, 13,410 (73 percent); No. 5,028 (27 percent). My hope and my prediction are that Congress will soon act to meet these urgent needs.

3. Do you believe that the farm price support and crop, control program should be ended? Yes; 14,176 (80 percent); No. 3,455 (20 percent). I am supporting the Poage-Ullman-McGovern farm bill.

4. Do you believe cranberry growers who are suffering as a result of Secretary Flemming's action should receive Federal payment for a portion of their losses? Yes, 10,444 (57 percent); No, 7,885 (43 percent). Almost all the cranberry growers did nothing wrong. Now they will receive some Federal help so they can stay in business.

5. Provided it was concealed by trees and thus entailed no disfigurement of the scenery, and no tax funds were required, would you favor an aerial gondola (i.e., an enclosed chairlift) traveling from the rim to the surface of Crater Lake? Yes, 9,490 (52 percent); No, 8,696 (48 percent). If this device would be a blemish on Crater Lake's incomparable beauty, I would oppose its installation. That is why a model is being built.

6. Do you approve putting labels on shoes listing the materials used? Yes, 16,476 (89 percent); No, 2,033 (11 percent). It is pretty clear that you would like to know what your shoes are.

7. Do you believe Congress should reform the income tax law to equalize the tax burden and eliminate loopholes? Yes, 16.818 (95 percent); No. 981 (5 percent). I told Representative Wilbur Mills (chairman of House Committee on Taxes) that I could show overwhelming sentiment for tax reform.

8. Do you favor Federal financial aid, with no lessening of State and local control, for public schools? Yes, 10,076 (56 percent); No. 8,054 (44 percent). This is no handout, just a recognition that Federal tax collections have to be used along with local taxes to meet this great need.

9. Do you favor Federal assistance for the retraining and relocation of workers thrown out of jobs by automation? Yes, 7,067 (40 percent); No, 10,665 (60 percent). This important subject needs more discussion. How else are we to get displaced workers off welfare rolls and back into productive activity?

10. Do you favor an increase in communication with Red China? Yes, 5,955 (34 percent); No, 11,372 (66 percent). I believe strongly that increased communication with China is essential if we are to have any effective, safeguarded disarmament—and will reduce the chances of world war III breaking out. "Communication" in positive steps, starting with exchange of newsmen and other individuals, in my opinion, is long overdue.

11. Do you favor abolishing the draft? Yes, 4,799 (27 percent); No. 13,088 (73 percent). I disagree with the majority. We should pay our servicemen proper wages and develop more good career men and specialists—they will deter the enemy and win the wars, far better than thousands of boys who ought to be in school or learning jobs.

12. Do you favor an increase in Federal income taxes if it would mean more funds for education and scientific research? Yes, 4,211 (23 percent); no, 13,970 (77 percent). This was a tough one. All these questions tried to put complex issues into a few words. What education? What scientific research? All the questions suffered from this unavoidable defect, but even so I found the re-

sults and accompanying comments and letters useful.

More than 20,000 Oregonians participated in a post card opinion poll sent to 131,000 residents of the Fourth Congressional District by Representative Charles O. Porter, Democrat, of Oregon. They strongly supported legislation providing medical care for social security retirees, ending farm price supports and crop controls, shoe labeling and income tax law revision.

They told Porter they favored the draft, but disapproved any increase in taxes to provide more funds for education and scientific research or for the retraining and relocation of workers displaced by automation. They do not favor an increase in communica-

tion with Red China.

A majority of those responding to the questionnaire approved establishment of the Neuberger National Seashore Park and agreed that cranberry growers should have Federal assistance to help meet their marketing losses. They want Federal financial aid for public schools. By a narrow margin they approved the idea of a chairlift from the rim to the surface of Crater Lake.

Greatest positive response came to the question "Do you believe Congress should reform the income tax law to equalize the tax burden and eliminate loopholes?" The result: Yes, 16,818 (95 percent); no, 981 (5 percent). PORTER said he has informed House Ways and Means Committee Chairman Wilbur Mills of the response to the question.

Southwestern Oregon residents also endorsed Portes's shoe labeling legislation. They were asked, "Do you approve putting labels on shoes listing the materials used?" They replied: Yes, 16,476 (89 percent); no, 2,033 (11 percent). Porter said he felt it was pretty clear that consumers would like to know from what materials their shoes are made. His bill, H.R. 1320, proposes that shoes be labeled as to content. The idea originated with a resident of Porter's district, shoe repairman Wilbur Gardner, of Medford.

PORTER reported that his question "Do you favor an increase in communication with Red China?" drew this response: Yes, 5,955 (34 percent); no, 11,372 (66 percent). He said he believed strongly that increased communication with China "is essential if we are to have any effective, safeguarded disarmament—and that it will reduce the chances of world war III breaking out." He said he felt "communication in positive steps, starting with an exchange of newsmen and other individuals, is long overdue."

Earlier, PORTER released the tabulated results of the 13th question of his poll, which asked his constituents to name their presidential preferences. Vice President RICHARD NIXON and Senator WAYNE MORSE ranked first

and second.

Jobs After 40

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1960

Mr. HOSMER. Mr. Speaker, the Fraternal Order of Eagles has for some time engaged in a campaign to spur the employment of persons over 40 years old. The order is to be highly commended upon its excellent objective. The following is an explanation by the Eagles of specifically what its campaign involves:

JOBS PAST 40

What is the Eagles' "Jobs After 40" program?

To end job discrimination based on age and to enlarge employment opportunities for workers over 40 years of age.

What is the present situation?

U.S. Department of Labor surveys indicate that "probably more than half" of the jobs open are restricted to younger people. some cities as many as 79 percent of the jobs listed with the U.S. Employment Service carry age limitations.

Where is the age prejudice worst?

Changing Times, the Kiplinger magazine, reports that "age prejudice turns up most often in the manufacturing of durable goods. finance, insurance, real estate, and wholesale and retail trade," and less often "in small firms that employ less than a hundred people than in larger companies."

Why don't employers want older workers? All "myths," syndicated columnist Roscoe Drummond says of the reasons usually given: that hiring older workers unduly increase pension costs; that older workers are unskilled; that older workers are not flexible, won't accept changes; that they are unstable: that older workers are less productive than younger workers; that older workers are absent more often than younger workers.

What are the facts on older persons as workers?

Overall performance: Most older persons do as well as, or better, than younger workers.
(A National Association of Manufacturers survey rated 23 percent of older workers superior, 70 percent equal to, and only 1 percent, not equal to younger workers.)
What is the Eagles "Jobs After 40" pro-

1. To urge President Eisenhower to extend his executive order against discrimination in defense industries to include age.

2. To seek State and National legislation (Massachusetts, Pennsylvania, and Rhode Island, have such laws) outlawing discrimination against job seekers based on age.

3. To insist that Government as an employer lead the way by abandoning age limits for applicants for jobs in public service.

4. To carry on a broad educational cam-paign to enlist the support of management, labor, civic organizations, and the general public for increased job opportunities for older workers.

A further comment on the Eagles campaign at the time it was announced was Written by Ray W. Taylor, editor of the AFL Milwaukee Labor Press, on November 7, 1957, as follows:

WILL YOU BE THROUGH AT 40? (By Ray W. Taylor)

The Fraternal Order of Eagles has started a nationwide campaign to wipe out job discrimination based on age.

With the challenging question "Will You Be Through at 40?" the FOE has prepared a series of posters sent to all its affiliates pointing out that a check by the U.S. Department of Labor reveals that 60 percent of all helpwanted ads offer no opportunities for men Over 45.

A typical ad cited is as follows: "Wanted-Machinists, experience all phases of setup on planers, millers, shapers; must be under

The FOE campaign to end arbitrary job age ceilings merits the support of all labor. Discrimination in any form is ugly and injurious, whether it be against race, color, or creed.

But discrimination because of age is the most dangerous of all-because it affects every American worker at some time in his

Age discrimination is particularly widespread in industrial plants where employers operate on the theory that a speedup can best be accomplished by using young men and then, after exhausting them, toss them on the scrap heap and hire still younger men.

In a period of relatively full employment, such as now, the problem of job discrimination based on age is not particularly evident. But upon the first sign of slackening of the Nation's economy, the "No help over 40" signs will mushroom.

The FOE campaign is aimed at winning Federal and State legislation against such discrimination. Every worker has a vital stake in the success of that campaign.

A Firm Position at the Summit

EXTENSION OF REMARKS

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. PUCINSKI. Mr. Speaker, following is a letter which I sent to the President of the United States regarding the summit meeting. I believe the letter is self-explanatory.

I am happy to include a reply which I received today from the White House regarding my original correspondence. They are as follows:

MAY 12, 1960.

THE PRESIDENT, The White House, Washington, D.C.

DEAR MR. PRESIDENT: Since it is quite apparent to many of us here in Congress that you are going to the summit meeting under most difficult conditions in the light of Soviet Premier Khrushchev's activities during the past few days, I thought you would like to see the results of a survey which I have just concluded in the 11th Congressional District of Illinois.

My congressional district, I believe, reflects to a great extent the thinking of most Americans. It is a representative district of the United States, and I am sending you these results with the hope that you will find comfort and strength in the knowledge that the American people support a firm position by the United States in our dealings with the Soviet Union.

Two of the questions from my survey which deal with the summit meeting, to-

gether with the replies, follow:

1. Should the United States yield to Soviet Russia's demand that we abandon our position in West Berlin? Yes, 6 percent; no, 90 percent; undecided, 4 percent.

2. Do you believe the United States should base its dealings with the Soviet Union on a firm and decisive demand that the captive nations of Europe be given the right to free elections? Yes, 85 percent; no, 9 percent; undecided, 6 percent.

Regarding question No. 2, you will recall that the House of Representatives unanimously adopted a resolution urging that the subject of free elections for the captive nations be raised by you at the summit meet-

I am happy to advise you that out of approximately 60,000 lengthy questionnaires mailed to my constituents, about 14 percent took the trouble to respond. This response includes a much larger cross section of my

constituency than many professional surveys.

May I wish you Godspeed in your difficult
journey? I join with my constituents in

expressing a sincere hope that your mission will be successful.

Respectfully yours, ROMAN C. PUCINSKI, Member of Congress.

THE WHITE HOUSE, Washington, D.C., May 13, 1960. The Honorable ROMAN C. PUCINSKI, House of Representatives, Washington, D.C.

DEAR MR. PUCINSKI: The President has asked me to acknowledge with thanks your May 12 letter and to say that he found the responses of your constituency to the questions on your survey relating to the summit meeting very heartening and helpful. Your thought in bringing this information to his attention and your good wishes for the success of his endeavors in Paris are warmly appreciated by the President.

With kind regards. Sincerely yours,

JACK Z. ANDERSON, Administrative Assistant to the President.

Milk Barriers Work a Hardship on Consumers

EXTENSION OF REMARKS OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, on April 28, Miss Sally Butler. director of legislation for the General Federation of Women's Clubs, testified in support of my national milk sanitation legislation at hearings held by the Health and Safety Subcommittee of the House Interstate and Foreign Commerce Committee. She was speaking for the 5 million consumers who belong to the federation's member clubs when she urged the passage of this bill, which would allow high-quality milk to move freely in interstate trade. Under leave to extend my remarks, I would like to include her testimony in the RECORD:

STATEMENT ON NATIONAL MILK SANITATION BY MISS SALLY BUTLER, DIRECTOR OF LEGIS-LATION, GENERAL FEDERATION OF WOMEN'S CLUBS

I am Sally Butler, director of legislation for the General Federation of Women's Clubs, which was chartered by the U.S. Congress in 1901. Today there are approximately 5 million members in the United States. The purpose of the organization is "to unite the women's clubs and like organizations throughout the world for the purpose of mutual benefit, and for the promotion of their common interest in education, philanthropy, public welfare, moral values, civics and fine arts."

As you will note, among other things, that we work for the public welfare, and we believe the welfare of the consumer is indeed public affairs. Our organization has an American home department with a con-sumer division. States likewise have set up these same committees, as have many of the local clubs. The members concern them-selves with problems that come up in their local communities and also with problems that are interstate and affect local communities. The membership of this organization is made up of homemakers across the country and their interest lies in the ecopeople.

Everyone is aware that milk and milk products are a very vital part of the average We want good milk and milk products as well as pure, wholesome food of all kinds. There should be certain standards for all things intended for human consumption. That is why the General Federation of Women's Clubs began years ago to work for a Pure Food and Drug Administration set up by our Federal Government. The Pure Food and Drug Administration has the wholehearted support of the women who are responsible for the foods they prepare for their families. We are aware that the U.S. Public Health Service does have a standard for milk and milk products established. We are grateful and believe this standard is such that it amply protects the health of the consumer. We are also aware that some States have even a higher standard for the milk and milk products for their individual States. We take no issue with this except when it is done for economic reasons favoring the producers and processors. We believe the consumer must be considered at all times.

It surely is not right for any State to prohibit the sale of milk from any other State providing the milk and milk products meet the required U.S. standards. To do so places a hardship economically on the consumer. This country is great because of our free enterprise system, where the competition is the keystone of our Republic. Why should States pass laws to prevent competition in the milk industry? Such seems to us consumers to be the case. No other commodity, that we know of, is so regulated as are the dairy products in interstate commerce.

We are aware of the fact that to transport milk for long distances creates problems for those who wish to ship milk into other States and cities, but if they can meet all Pederal standards and do so, and then sell their milk and milk products at sufficient profit to stay in business, surely the consumer is entitled to the opportunity to buy what they want at the price they wish to pay.

The membership of the General Federation of Women's Clubs as consumers urge that this Congress pass a law that will put milk and milk products into the same category as other essential foods and commodities.

Give us the right to choose our foods on an equitable market. Give us the right of choice that comes with fair competition. We want sanitary milk and milk products. We are convinced that if these products measure up to U.S. Public Health Service standards all consumers will be protected. We will not be deprived of the opportunity to buy on the local markets good foods be cause some States require standards which are more stringent than the U.S. regulations.

We believe that since milk is so necessary to good diets, the consumer should have every advantage that he gets when buying all other necessary food stuff, and that no consumer should be deprived of the chance to secure milk and milk products on local markets if it can be brought to those markets at an economic advantage to the consumer.

The General Federation of Women's Clubs is working with those Congressmen who are trying to make available to the consumer the milk and milk products at the very best economical rates possible. We believe the consumer is entitled to this consideration. believe it is indeed a very unfair proposition to so regulate the sale of such a vital food that is essential to the good health, and particularly to the diet of children, when the products meet the full requirements of U.S. regulations.

We urge you to pass this fair legislation.

nomic welfare as well as the health of the LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44. SECTION 181. CONGRESSIONAL RECORD: ARRANGEMENT, STYLE, CONTENTS, AND INDEXES .- The Joint Committee on Printing shall have control of the arrangement and style of the Congres-SIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Concressional RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUS-TRATIONS, MAPS, DIAGRAMS,-No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. Arrangement of the daily Record .- The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: Provided, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. Type and style .- The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the Congressional Record, in 71/2-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the Record shall be printed in 61/2-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These reunusual indentions be permitted. strictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. Return of manuscript.-When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the Recogn issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. Tabular matter.-The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. Proof furnished .- Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Mem-

bers without charge.
6. Notation of withheld remarks.—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words - addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. Thirty-day limit.—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. Corrections .- The permanent Record is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided; That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the Congressional Record the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to

apply to conference reports.

10. Appendix to daily Record .- When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the Congressional Record.

11. Estimate of cost .- No extranoous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, tele-grams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or with-out individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the Congressional RECORD which is in contravention of this paragraph.

12. Official Reporters.-The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place

in the proceedings.

Appendix

Policy Statement—Africa and the United States, by Midwest Intercollegiate Assembly

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 17, 1960

Mr. WILEY. Mr. President, on the world scene, there are a great many differing, conflicting and newly emerging forces that will increasingly have an effect upon affairs in the international arens

In the fast evolving events of world affairs, we find that, more and more, an analysis of world conditions, influences and powers must take into account not only the currently powerful East-West nations—at a relative stand-off militarily—but also the newly emerging nations of Asia, Africa, and South America. If war can be averted, these nations may well contribute to determining the "balance of power" in the world in the years ahead.

At this time, I would like particularly to call attention to the once so-called, "Dark Continent,"—that is, Africa. On this continent live over 200 million people. In size, Africa is estimated to be as large as the United States, Western Europe, India, and the Chinese mainland, put together. The land is rich in natural resources. The people—estimated to include virtually all races—are on the march toward self-government and independence. The question now is not, "Will it come?" Rather, the only question is, "How soon?"

In the light of this fast developing events we need a reassessment of our role in relation to newly emerging na-

As they appear on the world scene, how will these nations be allied? Will they be Communist? Will they be free countries? Will they be allied with East or West? Or will they, because of their unique conditions, become an independent force? In addition to our tradition-al concern for human progress everywhere-we have a stake in Africa. In our self-interest it is important for us to know which way it will go; and, if possible, to provide such assistance and guidance as is feasible and desirable from our position of free world leadership, (a) to prevent the 200 million Africans from becoming subjugated to international communism, and (b) to secure for these newly emerging countries, if We can, the right of self-determination.

Overall, I believe that we, the Western nations, can continue to neutralize the Communist forces through our tremen-

Policy Statement—Africa and the United dous arsenals of missile-nuclear weap-

As we attempt to help shape the world of tomorrow in the right way, however, we must go one step beyond what has become known as the "anti-Communist effort."

Today, the relatively primitive societies of Africa are going forward as fast as humanly possible, toward transformation into complex modern social, economic, political systems. In our efforts to help them, we cannot expect that dollar aid will alone do the job. These newly emerging nations, in effect, need everything: dollars, yes-but trained personnel for administration in government, industry, education, and other fields; equipment for technological development, and a wide variety of other useful, practical programs for nations forward at unprecedented moving forward at unprecedented speeds. In this new continent of hope, opportunity, struggle, and challenge, we, the United States can play a significant role. A successful effort will require, however, policies and programs designed and adopted to meet the unique needs in these changing times.

Recently, the Midwest Intercollegiate Assembly met at Green Lake, Wis. The conference was sponsored by the Johnson Foundation of Racine, Wis.; Lawrence College, Appleton, Wis.; and the American Assembly of Columbia University.

I was privileged to have a policy statement on "Africa and the United States," forwarded to me by Thomas E. Wenzlau, assistant director of the conference, and associate professor of economics at Lawrence College.

Reflecting the values of the assembly, I ask unanimous consent to have its policy statement on "Africa and the United States" printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

POLICY STATEMENT—AFRICA AND THE UNITED STATES, BY MIDWEST INTERCOLLEGIATE ASSEMBLY, GREEN LAKE, WIS., APRIL 21-24, 1960

I. THE CENERAL OBJECTIVES OF U.S. POLICY

The United States should support the current African political trends which move toward early emancipation of Africans from allen rule.

This means:

- We support the independence of African territories still subject to colonial rule.
- 2. We oppose the continuation of systems of minority racial domination such as in the present rule of the Union of South Africa and the Central African Federation. We believe the Universal Declaration of Human Rights is especially applicable to current problems of racial conflict in Africa.
- 3. We regret any tendency toward oneparty political systems and the abridgement of minority rights. However, we hope that

whatever forms of government emerge will be democratic in spirit.

These positions should be taken as diplomatically as possible but without oversensitivity about the feelings of metropolitan powers. The United Nations should be utilized as much as possible to facilitate these transformations.

II. AFRICAN ECONOMIC DEVELOPMENT

It is in the economic development of Africa that the United States can play its most useful and extensive role. The development of Africa should have as its goal the creation of balanced and expanding economies, and the devising of integrated regional economies and common markets is to be favored. The early stage of this growth should comprise simultaneous development of a more advanced agriculture, of industry, and of such social-overhead capital projects as roads and railroads, dams, irrigation, and power. The development of many light industries and of certain heavy industries in particular regions belongs to this early phase; more general development of heavy industries should await the growth of economies fitted to sustain them. The aim is the development of self-supporting rather than self-contained economies.

If this economic growth is to be rapid and adequate, a great part of the capital must come from without Africa with increasing participation of Africans in their own de velopment. The investment of private capital is desirable, but cannot be expected satisfy the need; public authorities outside Africa (both national and international) must supply most of the requisite capital, and it must be expected that much of this capitalization will be subject to centralized planning and socialized control by African governments. The economic aid and investment funds should be tendered in increased part through agencies of the United Nations, but will also be advanced through direct bilateral and through various multilateral arrangements.

III. SOCIAL OBJECTIVES

Political and economic development entails raising levels of education in order to produce a literate populace and to enable Africans to fulfill more efficiently the multitude of functions of a modernized society. in both its political and its economic aspects. The United States can help by alloting funds to provide scholarships for Africans to pursue study at colleges and universities both in the United States and in their own countries (or even elsewhere). In order, however, to enable African nations themselves to produce the increasing number of college graduates necessary, aid for the establishment and expansion of institutions is desirable. This would include establishments for the training of primary and secondary teachers, a shortage of which is in most areas the most serious educational deficiency.

Some of the changes now taking place in Africa are causing serious dislocation as traditional social and economic structures break down. The United States could well foster increased study of these problems by anthropologists and others. Specific help by members of the American labor unions and cooperative movements wherever Africans seek this aid in establishing organizations

should be encouraged.

Although some of the problems raised by social change are serious, it is the problems caused by lack of social change in some areas of Africa that have given the assembly the greatest concern. We have been especially disturbed by the state of race relations and deprivation of human rights in some territories.

In connection with these problems, the question of jurisdiction inevitably arises. We feel strongly, however, that the United States is morally bound to make unceasingly clear its concern over these matters. Such concern is best expressed through the machinery of the United Nations Organization, since the Charter of that Organization provides for the discussion of questions affecting human rights.

The assembly was particularly disturbed by the cases of the Union of South Africa and of the Portuguese territories of Angola and

Mozambique.

We express strong disapproval of the policies of the South African Government toward its nonwhite population. The United States should study the implications of boycotts, governmental or private, against South African exports.

With respect to Angola and Mozambique, we urge the U.S. Government to give strong support for the moves in the United Nations to press the Portuguese Government to submit information to the United Nations about its territories in Africa.

IV. SPECIFIC RECOMMENDATIONS

1. The role of the United Nations: The United Nations should figure significantly in American policy toward Africa. The standards of human rights and self-determination in the Charter must be repeatedly reaffirmed. The General Assembly should remain a channel for action to promote the principles of the Charter within African countries and the Security Council and International Court of Justice are instruments for settling disputes among African nations. Much greater amounts of development assistance should be administered through the United Nations and associated agencies.

2. European-African relations: The United States should continue to support voluntary economic cooperation between Africa and Eu-

rope.

- 3. Neutralism: The United States should actively support self-government to African nations. While recognizing that it is a disadvantage to have strong ties between the Soviet bloc and African nations, the United States must permit the African nations to devise their own foreign policies. U.S. influence can best be exerted through economic assistance, but it should be an explicit principle of U.S. policy that aid to an independent African nation should not be conditional upon nonacceptance of Soviet aid by that nation.
- 4. Economic Integration: The United States should support economic integration in Africa through membership in the United Nations Regional Economic Committee for Africa.
- 5. Tariff: Tariff considerations represent a part of the much larger problem of international market stability. In this regard, the United States should actively support the General Agreement for Tariff and Trade (GATT).
- 6. Economic assistance: In recognition of the need for U.S. economic assistance to aid newly independent African nations to achieve a standard of living which will support democratic and stable governments and in recognition of the fact that the \$20 million currently suggested for the African Development Fund is woefully inadequate, it is suggested that the U.S. Congress appropriate \$1 billion annually in aid for African economic development.
- 7. Economic development: Be it resolved that studies be conducted to find methods for putting to use vast agricultural surpluses of the United States as a means to contribute to Africa's economic development.

8. Segregation: The United States should abolish segregation at the earliest possible date in all the operations of U.S. embassies. The segregation of social functions should be abolished immediately especially in the Union of South Africa.

9. South African mandate: The United States should take the initiative in investigating the revoking of the mandate which the Union of South Africa exercises over South West Africa. The policy of the Union of South Africa should be censured in the United Nations. All appropriate means should be taken to end this violation of international law.

10. Limitation of armaments: The United States and its allies, the Soviet bloc, and the African nations should attempt to reach an agreement as soon as possible about the limitation of armaments in Africa at a level consistent with the interests of internal African security and domestic peace.

At the close of their discussions in panels, the student participants of the Green Lake Assembly on Africa and the United States, held at the American Baptist Assembly Grounds in Green Lake, Wis., April 21–24, 1960, reviewed as a group the above statement. After considerable revision and some addition, there was general agreement on the final report. It is not the practice of the American Assembly for participants to affix their signatures, and it should not be assumed that every participant necessarily subscribes to every conclusion of this report.

Keenotes

EXTENSION OF REMARKS

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mrs. KEE. Mr. Speaker, under unanimous consent, I include in the Appendix of the Record a copy of my newsletter released May 16, 1960:

KEENOTES

(By Representative ELIZABETH KEE)

Dominating all discussion in Washington is the shooting down of an American plane while on a flight over Russia. This incident has raised serious international questions and its effect could be reflected in the summit conference scheduled for this week, and President Eisenhower's proposed subsequent visit to Russia.

There is no doubt that this country lost considerable prestige abroad over the manner in which the incident was handled. Yet, because Democrats have closed ranks behind the President, the possibility that the incident will be as costly as first feared has been lessened.

Chairman Clarence Cannon of the House Appropriations Committee, a Democrat and one of the three or four most powerful men in the House, took the floor in a dramatic speech to defend this Nation's practice of flying photographic planes over Russia at high altitudes. He was followed by Senator Lyndon Johnson of Texas, the majority leader in the Senate, who called upon the Nation to close ranks at a time of crisis.

Mr. Khrushchev is enjoying a propaganda holiday as a result of the incident. He is going to do all he can to keep the issue alive and at times it seems he is intent upon forcing the President to cancel his planned visit to Russia.

If we had shown a tendency to argue among ourselves at home over this matter,

the damage abroad could have been incalculable. Our allies undoubtedly would have been frightened, possibly to the point of denying to us the further use of bases.

As things worked out, the country is united behind the President, even though no one is particularly happy that we were caught in such embarrassing circumstances. We can at least through a show of unity minimize the damage from the incident.

REA 25 YEARS OLD

Last week marked the 25th anniversary of the Rural Electrification Administration. This is the Federal agency which loans funds to locally owned cooperatives to build and operate electric systems serving rural areas.

The program has been a tremendous success. About 95 percent of all farms are now electrified, enabling farmers to install modern conveniences and laborsaving devices. The life of farm families has been considerably enriched by this program.

REA is universally accepted as a part of the American system. It is an example of what can be accomplished when the Federal Government works with local groups instead of trying to run a program from Washington.

WEST VIRGINIA SPEAKS OUT

The people of West Virginia have demonstrated once more that they make up their own minds about people and issues. The national press devoted several weeks to telling the Nation that our State was composed of people whose judgment would be swayed by blind prejudice. Now the people have spoken. As usual, the people of West Virginia acted in accordance with the dictates of their own conscience. They refused to live up to the picture painted by visiting journalists. They listened to the arguments, they weighed them and then voted as they believed best.

New York State Schedules Cooperstown Conference on Automation

EXTENSION OF REMARKS

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, May 17, 1960

Mr. KEATING. Mr. President, probably the most important and fundamental labor-management issue presently confronting our Nation is the matter of dealing with increased automation and mechanization in the United States. The significance of this issue is clearly shown by the fact that recently a sizable number of major labor-management disputes have centered around differences as to work rules and the assignment and supervision of men on the job.

Both labor and management are well aware of this situation and are actively seeking an overall solution. Two weeks ago the President called for a labor-management summit conference. One of the basic issues which he recommended be considered was the adjustment of labor and management to increased automation.

Both the American labor movement and the relevant representatives of management have in a great many instances recognized the importance of this issue and have sought to work out the differences which have arisen in an atmosphere of cooperation and mutual understanding.

I am pleased by these recent developments and am hopeful that major labormanagement "explosions" over increased automation can be avoided through concerted and sincere efforts along these lines.

I want today to call attention to a forthcoming top-level conference on automation to be held in Cooperstown, N.Y., from June 1 through June 3. It is sponsored by the State of New York and actively championed by Governor Rockefeller. The program for this conference is indeed impressive. Those chosen to address the delegates are among the top people in their respective fields. They include educators, labor leaders, and business executives.

I am certain that all who are able to attend will benefit greatly and that those who are in a position to read and study the various conference reports will find them valuable and enlightening. To this end, I hope in the next few weeks to bring to the attention of the Members various papers and addresses printed in conjunction with the New York State Conference on Automation.

Mr. President, I should like today to ask unanimous consent that an announcement containing the schedule of events to take place at the Cooperstown Conference on Automation be printed in the Appendix of the RECORD.

There being no objection, the program was ordered to be printed in the RECORD, as follows:

STATE OF NEW YORK EXECUTIVE CHAMBER, ALBANY, MAY 10, 1960

Details of the conference on automation which Governor Rockefeller has called in Cooperstown June 1-3 were announced today by the Governor's office. More than 50 leaders in business, labor, education, and government will participate in the discussions. The conference will open with a dinner Wednesday evening, which Governor Rockefeller will address. Three sessions will follow, at which four major aspects of automation will be examined iin depth. Paper on each of these aspects will be circulated to the participants in advance of the conference, and will be summarized by the authors at the Thursday and Friday sessions.

The program follows:

WEDNESDAY, JUNE 1

Reception and dinner, address by Governor Rockefeller,

THURSDAY, JUNE 2

Morning session: "Automation, Its Meaning and Dimensions," prepared and summarized by John T. Dunlop, professor of economics, Graduate School of Business Administration, Harvard University. Discussion leader, Dr. Thomas Hale Hamilton, president of the State University of New York.

Afternoon session: "Basic Economics of Automation," prepared and summarized by John Diebold, John Diebold & Associates, Inc., management consultants, New York City. Discussion leader, Charles Stauffacher, executive vice president, Continental Can Co.

"Manpower for Automation," prepared and summarized by Eli Ginzberg, professor of economics, Graduate School of Business, Columbia University. Discussion leader, Arthur J. Goldberg, general counsel, United Steel Workers of America.

Dinner: speaker, Lt. Gov. Malcolm Wilson.

FRIDAY, JUNE 3

Morning session: "The Community and Automation," prepared and summarized by Solomon Barkin, director of research, Textile Workers Union of America. Discussion leader, Prof. Frederick Harbison, director, industrial relations section, Princeton University.

Summation: Dr. William J. Ronan, secretary to the Governor.

The conference will conclude with a luncheon Friday noon.

Arrangements for the conference are being handled by a committee composed of Industrial Commissioner M. P. Catherwood, Commerce Commissioner Keith McHugh, and Dr. Ronan.

Primary Boost for Nixon Election

EXTENSION OF REMARKS

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article from the Evening Star, May 13, 1960:

PRIMARY BOOST FOR NIXON ELECTION—KEN-NEDY SEEN WINNING NOMINATION AND DE-FEAT BY VICE PRESIDENT

(By David Lawrence)

Analysis of traditional habits in politics and the habits of thought of organization leaders tells far more about who is going to be nominated at a political convention than do polls or primary elections.

Based on just such an analysis this correspondent wrote on March 7, just before the New Hampshire primary, that Senator Kennedy "is likely to win the Democratic nomination" and that, "if he is blocked, the compromise candidate will be Adlai Stevenson."

On April 7, after the Wisconsin primary, this writer said in these dispatches:

"The Wisconsin primary, by all the rules of politics, should mean that Senator Kennery will be regarded as the front-runner from now on. This means that the other candidates will tend to combine against him. There are other primary contests, to be sure, but Senator Kennery will gain ground in all of them, as he has the organization and the finances back of him to win the necessary delegate strength.

What is really meant by "the organization and the finances"? Certainly there is not the slightest basis for any implication that votes are bought. Nor is it to be assumed that the word "organization" means the regular party machinery. In preconvention campaigns, each candidate develops his own organization and, if he has money enough, he will engage precinct workers everywhere to get voters to the polls, transporting them in autos when necessary. More important still, the organization will know where to find the indifferent voters who can be persuaded by friends to vote for the candidate such friends favor.

These "organization" workers carry sample ballots printed in advance, and in a State like West Virginia, where there are few precincts with voting machines, it means that the citizen takes the sample ballot into the voting booth and is not bewildered when confronted with a long list of State and local candidates. He is enabled to go right to the spot on the ballot and put his mark down.

This is an old pattern in American politics, and it takes a lot of money to pay for a big organization that really gets out the vote. The total Kennedy vote in West Virginia was about 220,000, which is less than haif the Democratic vote cast for Adial Stevenson in 1952, when he carried the State against General Eisenhower. It isn't difficult to line up a minority bloc in any State primary if you have the money and the organization. The Kennedy forces can do it hereafter in every primary, and they will confront the Democratic National Convention with the legitimate query: "Since we have won most of the primaries, how can you turn us down?"

This correspondent believes the West Virginia primary result not only has helped Senator Kennedy toward the Democratic nomination but actually has helped toward the election of Vice President Nixon, who is certain to be the Republican nominee.

Once the so-called religious issue is out of the way—and it now will be so viewed by many politicians because West Virginia has a relatively small number of Catholics in its voting population—the tendency will be to appraise the Massachusetts Senator on his merits.

The Republican strategists, for instance, don't want to see the religious issue raised, either. They would rather go before the country with the argument that, in these fateful times, "You don't elect a boy to be President of the United States."

The biggest point the Republicans think they will have in their favor is that Vice President NIXON is trained in and intimately familiar with the tasks of the White House and that Senator Kennedy would have to start from scratch to learn how to function in the Presidency.

But doesn't the voting in the primaries, it will be asked, indicate that Senator Kennedy is popular and a good vote-getter? As against a less colorful and less known candidate, such as Senator Humphrey, it has not been difficult for Senator Kennedy to win the primaries thus far. But the real reason the Massachusetts Senator upset so many observers who were forecasting the outcome of the West Virginia primaries is that they paid more attention to hit-or-miss polls than to two key factors—"the organization and the finances."

In a national election, "the organization and the finances" tend to be balanced as between the parties. As of today, it seems very likely that the Nation's voters will have to choose between Senator Kennedy and Mr. Nixon next November. This writer believes that—on the basis of, first, satisfactory economic condittions in the major part of the country next autumn, and, second, the argument as to the executive experience that the Republican nominee will offer to the public, and, third, the active support of President Eisenhower—the Republicans will win a decisive victory.

Statement of Hon. Robert Lovett to National Policy Machinery Subcommittee

EXTENSION OF REMARKS

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, May 17, 1960

Mr. JAVITS. Mr. President, earlier in this session, Robert A. Lovett testified before the Subcommittee on National Policy Machinery, of which Senator JACKSON is chairman, and of which I have the honor to be a member. This testimony attracted widespread interest and comment when it was subsequently released, but a number of articles published subsequently interpreted certain comments of Mr. Lovett as being critical of President Eisenhower. In order to make clear that Mr. Lovett's testimony was both in word and intent directed at the institution of the Presidency and not at President Eisenhower personally, Senator MUNDT, ranking Republican member of the subcommittee, wrote Mr. Lovett and received a reply making this intent completely clear.

I ask unanimous consent that the exchange of correspondence between Senator Mund and Mr. Lovett, and an article on the subject by Arthur Krock printed in the New York Times of April 14, 1960, may be printed in the Appendix of the Record.

There being no objection, the letters and article were ordered to be printed in the Record, as follows:

MARCH 30, 1960.

Mr. ROBERT LOVETT, Brown Bros., Harriman & Co., New York, N.Y.

DEAR MR. LOVETT: During March you graciously appeared as the leadoff witness before the Subcommittee on National Policy Machinery, of which I am a member. At the close of your appearance, the subcommittee went into executive session to receive your comments on the operations of the National Security Council.

Throughout your discussion of the NSC you referred to "the President." At the time, it was my impression that you were analyzing the position of president. Subsequent published articles have been based on the assumption that you described the activities of the present incumbent of the Presidency, Dwight D. Eisenhower.

One of these articles was a column by Mr. Walter Lippmann on March 1. Several days later I attempted to clarify the matter through a statement for the RECORD. Attached

tached is a copy.

Unfortunately my clarification statement seems to have clarified nothing. Your testimony still is be interpreted as applying to President Eisenhower. I would appreciate very much having a short note from you as to the meaning you intended to give the phrase "the President" in your executive testimony. I hope to insert it in the committee record.

Again may I say that your basic statement before our subcommittee was most interesting and pertinent. With kindest regards, I am, Cordially yours,

KARL E. MUNDT, U.S. Senator.

ROBERT A. LOVETT,
New York, N.Y., April 4, 1960.
Senator Karl E. Mundt,
U.S. Senate,

Washington, D.C.

DEAR SENATOR MUNDT: On my return to the office today from the Pacific coast, I found awaiting me your letter of March 31 requesting clarification of the meaning of certain language in my comments on the National Security Council given in executive session before the Subcommittee on National Policy Machinery.

You are correct in your understanding that my use of the expression "the President" meant "a President," or "any President," and not specifically the present incumbent. I have made this same answer to Gordon Gray, special assistant to the President, who made

the same inquiry of me by telephone while I was in California.

You will recall that, in my opening statement, I said (last sentence, p. 12, of the subcommittee printed record, pt. 1) that "It should be clear, therefore, that none of these observations is intended to be critical of any individuals or of operational decisions." The few paragraphs I had written dealing with NSC were excised from my public statement and were given in executive session in accordance, I am informed, with the terms of an understanding reached at the request of the White House regarding the handling in executive session of questions on NSC matters. The sentence quoted above naturally applies, as you rightly understood, to all my testimony in both open and executive sessions.

In view of the public interest shown in the subcommittee's hearings, it is not surprising to find some agencies or individuals who feel that the shoe might fit. I know of no way to keep them from trying it on for size

With my thanks for your kind letter and cordial personal regards, I am,

Very sincerely yours.

ROBERT A. LOVETT.

How To Make a Shoe Fit Any Foot (By Arthur Krock)

Washington, April 13.—Since Robert A. Lovett testified before Senator Jackson's subcommittee several weeks ago, the impression has been growing that he definitely subscribed to some of the harshest criticisms of President Eisenhower and the National Security Council in their mutual relationship. Some news dispatches and analyses of Lovett's testimony, and a Senate speech by Senator Fulbright, are important sources of this public understanding.

The chairman of the Foreign Relations Committee concluded that the former Secretary of Defense "indicated that the President (meaning Eisenhower) leads a dangerously sheltered life as Chief Executive." Also, that Lovett "said * * * the NSC protects Mr. Eisenhower from the debates that precede policy decisions."

The transcript of Lovett's testimony, both in open and executive session, does not establish either of these conclusions, or the assumptions in the press that when Lovett referred to "the" President, he always meant Eisenhower. What the transcript does establish is this:

1. At the outset of his testimony Lovett stated a caveat. It was that his remarks would be "based for the most part on notes made" during the Truman administration, and that he intended "no direct reference to any individuals or specific decisions."

2. But he did not regularly repeat this caveat. Therefore, when he answered, and agreed with, questions about "NSC procedures" and "the President," so phrased they could have been taken to apply to the Eisenhower tenure, it was possible to assume that the witness replied in kind.

3. But close inspection of the transcript shows that the former Secretary of Defense conceived he was discussing "a" President and the National Security Council as an institution, and he has since said as much. Apparently he relied on his opening caveat to prevent hypothetical exchanges in executive session from being interpreted as applying specifically to Eisenhower and the current procedures of the National Security Council.

QUESTIONS AND ANSWERS

The following are such exchanges: Mr. Jackson. Do you think the Security Council can operate effectively, as it was designed originally, if you have a large number of participants?

Mr. Lovett. I would have very great doubts about its ability to operate in a mass atmosphere. I think it would inhibit fair discussion * * * [and] be an embarassment as regards the vigor with which a man might want to defend his position. I think it would limit the quality of the debate which the President ought to hear.

Mr. Jackson. You do not necessarily lighten the load of the President by bringing to him agreed-upon papers where no decision is involved, other than to say. "We will go ahead with this." Don't you think there is confusion on the point that there is a tendency to help the President, to lighten his load, by trying to do his constitutional work for him?

Mr. Lovett. I think the President in his own protection must insist on being informed and not merely protected by his aides, [it being] a tendency of younger assistant * * * to try to keep the bothersome problems away from the senior's desk.

Probably it was because the witness did not steadily invoke his caveat, like takers of the fifth amendment before racket inquiries, that many concluded Lovett had conceded the points of criticism involved as currently applicable. But if he fears that President Eisenhower's temperament, his military preference for having issues intensely screened for him, and his awesome renown, inevitably have diluted the essential concept and function of the National Security Council in this administration, Lovett neither "said" nor "indicated" this. And the National Security Council's statistical recordof the President in the chair at 90 percent of the National Security Council meetings, sharp debates in his presence over fundamental differences in policy papers-refutes many assumptions on which major criticisms are founded.

Tribute to the Eagle Rock Sentinel

EXTENSION OF REMARKS

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. LIPSCOMB. Mr. Speaker, the 24th Congressional District of California, which it is my privilege to represent in Congress, possesses a number of top quality local newspapers which make an important contribution to the district in reporting news of special interest to the community, expressing area views on matters affecting it, undertaking crusades in behalf of the community where its interest is concerned, and generally performing many other valuable services in behalf of the residents of the community. The 24th district is very fortunate to have these public-spirited institutions.

One of the fine community newspapers serving the 24th District, the Eagle Rock Sentinel, is celebrating its 50th anniversary this year. The Sentinel is a source of pride to the district and I wish to add my heartiest congratulations on this important occasion.

There was no doubt as to what kind of newspaper the Sentinel was to be from the very beginning. When it first appeared, in March 1910, the Sentinel announced that it would defy the then existing trend toward journalistic sen-

sationalism and that it would report community news in a conservative, straightforward manner.

In the intervening 50 years, the Eagle Rock Sentinel has maintained its original position with admirable determination. Throughout a brilliant career the Sentinel has kept to its original purpose and resisted temptations to gain in circulation through sacrifice of its ideals. It has earned a deserved reputation as a leader in its field.

Much credit for the success of the Eagle Rock Sentinel and the position it occupies today is due Mr. Harry Lawson, for many years the owner, and still publisher, of the Sentinel, and Mr. Oran Asa, who purchased the Sentinel several years ago. I am confident that under these extremely capable hands the Sentinel will continue to contribute to the best interests of the community of Eagle Rock for many years to come and I wish it every success in the future.

Need for Extension of Sugar Act

EXTENSION OF REMARKS

HON. HIRAM L. FONG

OF HAWAII

IN THE SENATE OF THE UNITED STATES

Tuesday, May 17, 1960

Mr. FONG. Mr. President, during the past week and a half, three Hawaii daily newspapers have published editorials stressing the tremendous importance of sugar to Hawaii's economy and the need for action on legislation which would extend the Sugar Act.

I ask unanimous consent that the following editorials: "Time Is Running Out" from the Hilo Tribune-Herald of May 6, 1960; "Extend Sugar Act Now" from the Honolulu Advertiser of May 14, and "Of Vital Concern" from the Honolulu Star-Bulletin of May 15, be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Hilo Tribune-Herald, May 6, 1960]
Time Is Running Out

Representatives of the more than 1,200 independent farmers who grow sugarcane on the Island of Hawaii, along with representatives of 10 sugar plantations here, attended the 1960 fair price hearings conducted by members of the U.S. Department of Agriculture in Hilo yesterday.

This yearly public hearing, held under provisions of the Sugar Act, results in the subsequent Department ruling on the price the plantation companies may charge growers for the processing of their cane.

Yesterday's proceedings were held under a pall of uncertainty inasmuch as the Congress has not yet voted to extend the Sugar Act which is due to expire December 31 of this year. With but 7 short weeks left of this election year session, time is clearly running out on this legislation.

Representative Harold D. Cooley, Democrat, of North Carolina, chairman of the House Committee on Agriculture, and for many years the leader in the sugar legislation which has meant so much to Hawaii, Monday announced his intentions to propose a bill extending the act for 1 year. Other congressional leaders have suggested various

amended forms of the bill, due in large measure to the Cuban situation.

President Eisenhower has repeatedly requested a 4-year extension with further provisions giving the executive department the authority to reduce foreign quotas in the national interest. In a renewed request Wednesday he said, "the interests of America require that legislation be enacted before Congress adjourns."

For 25 years the Sugar Act has provided protection and stabilization to the sugar industry of the United States. It has been the cornerstone in the growing, processing, and distributing of this commodity. We in Hawaii, with sugar the major pillar of our economy, are particularly concerned at the possibility of a stalemate which would permit the Sugar Act to expire this year.

It is hard to imagine any single event which would have as disastrous effect on our economy. Hundreds of farmers, 16,000 wage earners, and untold thousands of service industries are all closely dependent upon the swift enactment of this legislation.

As for the Big Island, any threat to the Sugar Act poses a really frightening prospect.

Time, we feel, is running out.

The raising of the 50-star flag over Iolani Palace on July 4 might well prove a somewhat ironic gesture if the Congress doesn't act before then to insure the preservation of this legislation vital to every man, woman, and child in the State.

[From the Honolulu Advertiser, May 14, 1960]

EXTEND SUGAR ACT NOW

Summer will be here soon, and as the heat of the Presidential campaign increases, legislative matters get sort of sticky in Washington.

It's none too soon, then, for Congress to act on extending the Sugar Act. The act is complex, balancing many different interests. It should be weighed calmly and dispassionately.

Earlier, there was talk of hitting at Fidel Castro through the act by cutting Cuba's quota. This talk has died down and the law now can be considered more on its merits.

The Sugar Act is one of the more successful legislative farm programs; it has worked to the benefit of both producers and consumers.

It has provided a steady supply of sugar at stable prices. Consumers have paid less than world prices for sugar during times of shortage; producers have received more than world prices during times of oversupply. It has balanced the interests of the domestic industry with those of oversea suppliers.

The present amended act expires on December 31. It is inconceivable that Congress would allow it to expire, leaving the public and the industry exposed to gyrating world market prices. Chaos would ensue. Hawaii's economy would be in turmoil.

The administration proposes extending the act for 4 years. The bill has only minor revisions, except for a provision permitting the President in the national interest to alter the quota of any country. This would be a club over Castro.

But there is a strong feeling on Capitol Hill for only a 1-year extension. In this way Congress would be telling Castro that his quota could be cut on short notice.

This not only would create uncertainty in Guba, it also would be unsettling for the domestic industry as well. For example, it takes 2 to 3 years to grow a crop of sugarcane in Hawaii. Under a 1-year extension there always would be the danger the rules might be changed in the middle of the growing cycle.

United States-Cuban relations aside, we hope Congress will enact a 4-year extension and that it will do so soon rather than wait

until the 11th hour when wisdom is less likely to prevail.

[From the Sunday Star-Bulletin, May 15, 1960]

OF VITAL CONCERN TO HAWAII

Hawaii has a natural and indeed a vital concern in legislation now pending in Congress and perhaps in danger of stagnation in these closing hectic weeks of a political year session.

This is the national Sugar Act, rated as one of the most successful farm programs in the history of our country's agricultural development.

The purpose of this act is to assure the American people of adequate supplies of sugar at prices both reasonable to consumers and fair to producers.

In operation it helps to provide for a strong and healthy American sugar producing and refining industry

This is important both for the general welfare and for the national security based on a firm economy.

The Sugar Act has been usefully in operation for more than 25 years.

The present amended act is due to expire December 31, 1960, unless this session of Congress acts to extend it.

The act regulates quotas of domestic and foreign suppliers of the American market, providing both protection of the domestic sugar industry and a fair allocation to friendly foreign producers.

Although the American sugar industry is a major factor in our agricultural economy, the Sugar Act also encourages and protects the small farmer.

In Hawali, with a long, successful history of sugar producing, there are about 1,200 independent and for the most part small growers of sugarcane.

The bill offered by the national administration providing for the extension of the Sugar Act is for a 4-year extension with some minor provisions for change.

There is a provision of special importance that permits the President of the United States to alter the quota of any foreign country sending sugar into the United States when such alteration would be in the national interest.

This proposed 4-year extension would be particularly useful in Hawaii as it takes 2 to 3 years to grow a crop of sugarcane.

Hawaii sugar producers are extremely apprehensive that if the Sugar Act is not appropriately extended, the absence of this regulatory legislation would create a chaotic situation affecting the entire domestic industry and gravely damaging to Hawaii.

In addition to the 1,200 small growers, there are 16,000 wage earners and thousands of related service employees who are dependent upon the continued health of Hawaii's sugar industry.

Any factor which cripples a major industry in Hawaii is injurious to our entire Nation.

Hawaii is not only a large contributor through Federal taxes to the Nation's Treasury, but Hawaii as an offshore area midway between Occident and Orient is a bulwark of national defense.

Pennsylvania Dutch

EXTENSION OF REMARKS

HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1960

Mr. MUMMA. Mr. Speaker, just recently I sent to each Member of the House of Representatives, a 76-page

booklet that contained just about that many traditional Pennsylvania Dutch recipes. Along with each copy, I sent a covering letter, written in the Pennsylvania Dutch dialect which is written and spoken in my district. One of the daily papers in my district, the Lebanon Daily News, each day has a column written in that dialect. Not to keep the Members confounded, I also sent along an English translation of my covering letter, mentioning this wonderful area in Pennsylvania, which, from the response I received from the Members, is borne out in their letters to me.

I am grateful to receive the many nice comments from the membership for my effort to impart to them some information about customs of the Pennsylvania Dutch community and particularly their delightful food preparations and combination of Dutch dishes.

I want to include at the end of my remarks typical letters received that reflect the literary effort evoked by the cookbook and its covering letters, and should you be passing through that lovely Pennsylvania country with its well-kept farms, the colorful "hex" signs, and so forth, and overhear expressions like: "Jake is spritzing the grass." "It's just for nice," or "It wonders me," then you will know you are among the nice, hospitable Pennsylvania Dutch.

HOUSE OF REPRESENTATIVES,

Washington, D.C., May 5, 1960. Mie Guder Friend: Ich hob kaird es sawa uft muhls-"Fer wos sella mir Deutsch sie, wun du bisht net dumm." Our, Ich bin recht shure wun do glicklich genunk waersht fuh dirich des land, du daetsch ous finna aus sell net war is.

De shanne un gute-kolta boweri mit schier gute in pharab un mit "hexa" tzana-un de ushtso gute-kolta heiser sin arrick gross un so be-kund.

Ains fum de unner digna fah wos si bekund sin is erie kucha. Si sin grosse esser. Dirich des land sin wotsheiser wu si specializea (in des essa wos unser gross- modder gamacht hut).

Der Biles Horst, Secretary Benson's con-gressional liaison mun, aire is awe fum des land un connet usht des schwetza aire con des ouse acta.

Huff du gleischt das buch un awe dale fum des kucha.

Sincerely yours,

WALTER M. MUMMA. Member of Congress.

[Translation]

HOUSE OF REPRESENTATIVES, Washington, D.C., May 5, 1960.

My DEAR COLLEAGUE: I have heard the expression many times-"What's the use of being Dutch if you are not dumb." Nevertheless, I am quite sure if you have been fortunate enough to get up through this country, you would realize the untruth of that statement.

The beautiful and well-kept farms with barns well painted and with "hex" signsand the equally well kept houses are really terrific and so characteristic.

One of the other things for which they are famous is their cooking. They are stout eaters. Throughout the territory there are hotels where they specialize in these traditional dishes.

I thought you would like to even try such meals in your home. Well, my good friend, Jack Wolfe of the Meggs Company of Harrisburg, who specializes in manufacturing several varieties of the Pennsylvania Dutch noodles, has a recipe book for many such dishes, and has made some of these available

I know you will get hungry just reading these recipes. Have your folks try one. My favorite is "Schnitz un Gnepp" on page 29.

Miles Horst, Secretary Benson's congressional liaison man, is also from this country and cannot only talk it but act it out.

Hope you will enjoy the book and also some of the cooking.

Sincerely yours,

WALTER M. MUMMA. Member of Congress.

HOUSE OF REPRESENTATIVES, Washington, D.C.

WALTER: When the flags go by the train is all! Jacob! Get up! Mamas et herself, pa-pas et hisself, and I have et myself!

Thanks for the noodles!

HOUSE OF REPRESENTATIVES, Washington, D.C., May 10, 1960. Representative Walter M. MUMMA,

House Office Building,

Washington, D.C.
DEAR WALTER: Mine Gott, if your recipe book I take home an elephant mine wife makes me.

That's goot * * * I take home! Thanks so much,

CHARLES E. CHAMBERLAIN.

MEIN LIEBE HERR MUMMA: Ich been gescribblin deser noten to mein Congressenman to asken vass is loss mitten der mailen und envelopen. Mein yungin Erhardt iss mit der trainen gewoerken mit mailen. He vass commenzin mit der grosse hufen puffer mit coal geskupen und now mit der lowdish getooten and stinken dieseler. Ich been ein aulten mann und been not understandern alles. Auber Erhardt is dinken he vill be das job withouten iffen das mailen and envelopin mit desen grosse zoomer boomers is geflylan. He vants I shuld mine Congressenman gescribblin to tellen vas a goodische mann is Herr Cunningham who kompt fun Omaha,

Also ich been vorryin mit das zoomer boomer vas is gerpeepin mit kameran in das backyarden fun diese Kremlin. Varoom he is gettin gecaughten?

Leben zie so viele yahren as da fuchs um schwantz hadt haaren.

Zinserely,

WALTER WIENERWURST.

HOUSE OF REPRESENTATIVES, Washington, D.C., May 10, 1960.

Howdy.

I has just contracted yore cook book and Ise powerful greatful.

Some of the vittles talked of shore sound scrumptus but it is quite a contrasatory to the grub fed in our Ozarks. We'uns air attached to the beans, tatters, maters, pork, cornbread, poke greens, and 'lassus we'uns been fetched up on, but bein' of the sportin' kind-I'll have Ma stew up a batch and try it on tha youngens!

His mark (X) A. S. J. CARNAHAN.

P.S.—Translated from Ozark into English: "We wish to acknowledge receipt of your recipe book and sincerely thank you." A. S. J. CARNAHAN.

Observation in America by Mrs. May Craig

EXTENSION OF REMARKS OF

HON. EDMUND S. MUSKIE

OF MAINE

IN THE SENATE OF THE UNITED STATES Tuesday, May 17, 1960

Mr. MUSKIE. Mr. President, on March 7, 8, and 9, 1960, Mrs. May Craig published three more articles for our Maine newspapers.

In the first Mrs. Craig takes her readers on a tour of the Ivory Coast.

In the second, she introduced us to the new State of Ghana.

In the third, she communicated that the people of Ghana are planning fast and hard for their own future now that they have achieved independence.

I ask unanimous consent that these three articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[Africa on the Move, Mar. 7, 1960] IVORY COAST STAYS IN FRENCH COMMUNITY (By May Craig)

EN ROUTE TO GOLD COAST.—Guinea, Liberia, Ivory Coast, Ghana, Nigeria, are all on the south side of the bulge of eastern Africa, below the Mediterranean Coast to the north. There is the most extreme political contrast between Ivory Coast and Guinea. Ivory stays with the French community; Guinea is bitterly anti-French and is the only one of the former French colonies in Africa which did not elect to stay in the community after it received independence. Guinea will stay poor, it says, to be entirely free.

The Ivory Coast prime minister was in Paris at the moment, with several other officials of French community areas, acutely embarrassed because Guinea President Sekou Toure is preaching that any ties with France shackle the free Africans. We lunched with acting Prime Minister Auguste Denise and we asked him how come Ivory chose to stay in the community.

He said it is a practical matter. Their economic and financial ties are with France. As a small newly free nation it feels it is better to stay with a strong, friendly nation. Naturally, they are embarrassed when their people hear Toure downgrading the former colonies who keep the tie with France.

This is a rather prosperous country. It is called the Ivory Coast because it has a port much used by Arab traders who brought ivory tusks down from the interior, on the backs of Africans who were sold as slaves, along with the ivory.

In the Ivory Coast we visited the National Assembly, elected 85 Africans and 15 French. Many French remain and participate as usual in the business of the country. Three of the twenty ministers are French. Asked if Ivory did not mean to join the proposed African Federation, His Excellency smiled and said, maybe, when there is a federation; for the time being they stay in the French community.

In a little speech to us, His Excellency spoke frankly of what he called the Red threat to Ivory Coast as to the United States. He approved of De Gaulle's firm resolution to hold to his promise of self-determination for Algeria despite rebellion of the French white settlers in Algeria. He thinks this honorable course of De Gaulle will give

confidence to the newly free Africans who stay in the community.

stay in the community.

He said that there is no malnutrition in the Ivory Coast, they raise enough food for themselves. They need sanitation and that is expensive. They do not even have privies, never saw a flush toilet. There are rich people in Guinea, black and white, but most of the people live in utmost squalor. The city of Abidjan is beautiful and modernizing fast. I saw signs of American oil firms. They ship mahogany and fine woods to the United States for furniture veneers. There are many educated Africans here, ambitious for their country and just as determined to be free.

When we got on the bus to leave Connakry in Guinea there was considerable literature from the Government and one pamphlet, written by Fresident Toure was pure Marxism. I asked a knowledgeable American if this made them Communist in the Soviet sense and he said not necessarily. They use the Communist language sometimes, while not meaning it in the tight Soviet meaning. While these new countries are flerce for independence from the white colonialists, they have to have an authoritarian government, at least to start with.

The Acting Prime Minister, Dr. Denise, said that they are cutting down on the maternal and infant mortality—used to be that 25 percent of the pregnant women miscarried. Of those who bore infants, another 20 percent died. We were surprised when he said that while they are working on pure water supply, they have to be careful because the people have acquired an immunity and a sudden change to pure water would upset them physically. The Americans on this trip live with bottled water, even for the teeth, eat nothing raw, except in the American Embassy, an American home, or a hotel where they enforce strict sanitation for the water, and the cooking. I have not had a saiad since I left home.

There is some slight inconsistency in the Africans denouncing racial distinctions in the United States and other white countries and at the same time demanding pan-Africanism, an African Federation, in some of which the whites will not get equal treatment. In the Ivory Coast I saw few mulattoes. But I was told there is legal racial equality: some black men of the upper classes like to take a white wife as a matter of pride. My informant knew of no white man who had taken a black wife, though they took mistresses and had children which they supported. There is not much general intermarriage and some of the pure blacks do not want mixing of the blood, though they do not want any legal bar. Inbreeding of the tribes has caused some frailty of strain, Dr. Denise said. Entirely different problem from the U.S. melting pot. The babies are fat, happy, beautiful, safe on their mothers' backs, sleeping there, piddling when they want to, hauled to the front to nurse when they want to.

[Africa on the Move, Mar. 8, 1960] .
POLITICAL STABILITY REFLECTS WELL-BEING
OF GHANA

(By May Craig)

Accea, Ghana.—Ah, what a thing it is to see the American flag in a strange country, far from home. It was fluttering in a little wind here in Accra when we came to the American Embassy to see our Ambassador, Wilson Flake, Mrs. Flake, and the staff. And the briefing in the cool garden, bright with gay flowers, quieted by backing of low evergreens, small banana palms, shrubs whose names we did not know. There were gay large umbrellas to keep the tropical sun off us, and afterward we went inside the dim, shuttered living room where we had coffee made in the American way—and much trouble it took, too, with the Ghanian house help,

Mrs. F. told us. And homemade sugared doughnuts, too. She said we might like them after traveling in foreign lands, with their unusual foods. Several of our party already have intestinal troubles—they will not be careful and take experienced advice. Ghana has been really independent for several years, but it stays in the (British) Commonwealth. Queen Elizabeth is the Queen of Ghana. In July of this year they will be entirely free and become a republic. The President is Khwame Nkrumah, a hero to his people and chairman of the central committee of the major party here. After July it will be like India, entirely independent except for the link of the Queen and defense if they wish it.

"This is one of the most stable countries in the world," said the Ambassador, "politically and economically." It depends on cocoa which is much in demand and for which it gets a high price. On our travels in Africa we have had the company of an American Negro representing a California firm, buying cocoa for Hershey Chocolate Co., and coffee. The coffee in this area has a fine flavor and a character that is best for instant coffee, so popular in the world today. "The Central Government is strong, has to be to keep it stable and its strong course has been justified by events," the Ambassador said.

Fortunately for us and the free world, Nkrumah was educated in the United States at a missionary school in Pennsylvania, after his early education by missionaries here. So he knows personally the best and worst of the United States.

The idea that American-type democracy could be gained by Africans originated with the teacher of Nkrumah, Dr. Kwaggier Aggrey, a sort of Mahatma Gandhi, of Ghana. He fired the imagination of Nkrumah, who came to the United States, worked his way through college, waited on tables, learned the nature of racial discriminations there, but also our freedoms.

It is said here: "Ghanian freedom was born in the United States."

The Ambassador praised the early missionaries from the United States. While the European whites were coming to Africa for colonization, exploitation, the missionaries came with the gospel, education, medical help. They divided up Africa, we sent the mission schools and hospitals. Nkrumah is one of the mission children.

The economic well-being here—they have no public debt, though all their money is committed to roads, housings, and other national development—is reflected in political stability, which is much more collective than with us. The cocoa was brought by the missionaries—it is not indigenous. And cocoa is the backbone of the economy, which bothers Nkrumah, who wants more varied industries and agriculture. The great dream here is to develop waterpower on the Volta River and the World Bank, which includes the United States, is working on that.

The Government gets 60 percent of its revenue from cocoa, by a heavy export tax, not from the general run of the people, who have little individually. Other sources are gold, industrial diamonds, manganese, fine woods. But they have no source of energy here, no coal, no oil, only the rivers. Nkruma knows that these other resources could run out on him, the wood is being cut down, the manganese supply is not inexhaustible, nobody knows future need of the diamonds, nor the fate of gold in the world. They have bauxite for aluminum and when the big dam is built he hopes for other industries to come.

They are building one of the largest manmade ports here—they have the world's longest sewer outfall into the ocean, from Accra into the sea. There is some unemployment and Nkruma got us to send him one of the veterans of the CCC in our depression days, who designed a CCC for them to soak up the unemployed for the benefit of the country. Nkruma shares the dream of a "United States of Africa." The white man never came to Ghana and adjacent areas to stay-they made their pile and went home. So they do not have the fearful problem of the Union of South Africa, where the whites settled as their home, which they refuse to give up to the encroaching blacks. Nkruma is famous all over Africa as the first African to show that Africa could be free. English is the common language in a melange of native tribal dialects. Most of the people are pagans, though there are Moslems and Christians. The port is being built by British contractors with American equipment-the Soviet does not have much foothold here, but Israel does, helping with agriculture and shipping.

[Africa on the Move, Mar. 9, 1960] PEOPLE OF GHANA ARE PLANNING FAST AND HARD

(By May Craig)

Accea, Ghana .- On a hill a few miles from Accra, the capital city of Ghana, the Legon University College reminded me of Colby College on Mayflower Hill, though it is designed to suit this country and its people, as does It is a vast area, acres of land, and the bulldings are low and stpread out into gardens where peacocks and bright small lizards parade, with shallow ponds of multicolored goldfish-20,000 goldfish. Every one of the 650 students has his or her own room, with a tiny balcony looking on gardens, small but comfortable. To save expense of plumbing they do not each have facilities, but there is a facility for every three or four, so "no queuing up" said Joe Price, professor of history, who also is doing public relations, a simply stupendous big Britisher, with bright red hair and fierce red moustache, one eye lost in war, and only one leg.

They have professors from everywhere, American, French, Indian, Egyptian. This is a national university, with many endowments, some from the cocca industry. They have a passion for education in this new country—they are short now on educated, trained personnel to run the country, but they are full speed ahead to create them at the university. They even have air-condi-

tioned piggeries.

In the laboratory they had just finished, under contract with the Government, was an examination of the fallout from the recent French atomic explosion in the Sahara, so desperately hated by the African peoples. The results have gone to the Ghana Government, so the technicians in the laboratory would not tell us details except that the explosion fallout was less than expected, and well under the tolerance but still it was more than the normal expected at the distance of 1,400 miles from here to the test site. The winds had brought it more quickly and farther than Ghana had expected.

At the port near Accra we saw why they are building that harbor at Tema. There is not deepwater at the port near Accra. Freighters were moored a mile or more from shore. Plying back and forth, bringing in the freight, were canoe-like wooden boats with turned up ends, powered by 20 oars. bend their backs to the chore. The infinite labor of getting the freight off the ships into the boats, back to shore, is not competitive in the modern world. Once in shallow water, the men get out, take loads on their heads or backs and wade to shore with it. They are magnificent men, great muscles rippling under the shining ebony skin, small waisted, and broad shouldered. The shore is lined with warehouses. At Tema harbor when it is finished, there will be every modern harbor and dock facility; they are building a city for the workers and officials, and for the nearby fishing village; eventually for 80,000 people. They are planning fast and hard for the future here.

The evening before we left we were entertained at the Ghana Press Club, the big trees all around it strung with innumerable small colored lights. There are few mosquitoes here, air-conditioning of sketchy nature in the hotel rooms, the giant, whirling wood-bladed fans from every ceiling. The hotel itself, 100 rooms, where they had the famous all-Africa conference 2 years ago, is spread out, lines of columns in front, terraces, and gardens, great bunches of bright flowers everywhere, a tropical atmosphere. It is hard to remember, seeing the hotel, the new city, the college, that back in the interior are the primitive tribes, still using spears.

At the press party we were served drinks and plates of small food were passed around. Several of the officials were in the splendid robes of the country, but Prime Minister Nkruma was in a business suit. We had a press conference with him which was not very satisfactory because it was outdoors, only a small group could get close to him at a time, and on the edges the typical cocktall party noise of talk was going on.

He wants an African federation, but he will not hurry. Their independence will be declared in July, and there is no telling when the federation will come into being or how many of the new African countries will join. "I will not hurry. It will take a great deal of preparation," he said. There are many British here and no apparent hard feeling. At the college there is a tall rectangular, narrow tower with the Black Star of Ghana high up on it. Seems the college and the government agreed to split the cost of erecting the tower. It cost more than they thought and the government wouldn't pay any more than the agreed share. "But we put vertical files in the tower, served by an elevator, and we put a water tank on the top, though you would never suspect it, and thus it serves a purpose far more than it We had many designers come in to design it," Joe said. It is really a miraculous thing-that tower, so stately, so beautifuland useful. Along the four sides from bottom to the place where the Black Star decoration tops it, there are small squares that look like decorations—they are windows into the files. I tell you, these are a great people.

Steel Mills To Cut Output Again for Ninth Drop in 10 Weeks; 71.7-Percent Operating Rate Slated

EXTENSION OF REMARKS

HON. MICHAEL J. KIRWAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks, I wish to enclose therein a chart from the Wall Street Journal, which shows how the production of steel has dropped in the past 10 weeks, throughout the Nation. In my own hometown of Youngstown, Ohio, it is operating this week at only 45 percent.

Steel is one of our most important basic commodities. The slogan has always been "As Steel goes—so goes the economy of our Nation." We have reason to feel real concern:

STEEL MILLS TO CUT OUTPUT AGAIN FOR NINTH DROP IN 10 WEEKS; 71.7-PERCENT OPERAT-ING RATE SLATED

Steel mills will cut production this week to the slowest pace in a non-strike-affected period since Christmas week of 1958, the American Iron and Steel Institute indicated.

The institute reported mills are slating output of 2,402,000 tons of raw steel in the week that began yesterday, an operating rate of 71.7 percent of capacity. That would be off two points from last week's actual rate of 73.8 percent for the ninth cutback in the last 10 weeks. Excluding periods last year affected by the 116-day strike of the Steelworkers Union, it also would be the lowest production, in terms of both tonnage and operating rate, since the week that began December 22, 1958, when the furnaces ran at 63.2 percent of a smaller capacity to turn out 1,840,000 tons of ingots.

Last week's actual production came to 2,102,000 tons, exactly matching the fore-

DROP BEGAN IN MARCH

This week's scheduled operating rate is 24 points under the 1960 high of 95.7 percent, achieved twice in January. Nearly all the subsequent decline has taken place since the week that began March 7, when the actual operating rate was 93.1 percent. The dropoff has been interrupted only once since then, in the week that began April 18, and the rise of less than half a point that occurred that week was due entirely to an abnormal circumstance—a restarting of operations at one big mill that had been closed by a wildcat strike.

The persistence of the decline appears to reflect a switch among steel users to inventory-cutting from inventory-building. While the rate of incoming orders has steadied at many mills in the last 2 months, it has steadied at a point below the rate at which steel men think their metal actually is being consumed. Mill executives at first thought this would be a temporary situation, but it has lasted so long many steel makers have become convinced users are cutting their steel stockpiles.

Since inventory readjustments, once started, usually take menths to run their course, a number of mill men believe the cutback in production will continue through June and into the third quarter, a traditionally slow period. Despite the sharp cuts in output that already have been made, mills are still melting steel faster than they are booking new orders for it.

The Iron and Steel Institute's individual operating-rate forecasts for 11 major steel centers disclose that production will slip because half of capacity this week in the Youngstown district—the first time that has happened anywhere this year. Youngstown mills will lower output this week to 45 percent of capacity, from 50 percent last week, as orders continue to drop on pipe, one of the district's major steel products.

Seven other districts also will trim produc-

Seven other districts also will trim production this week, with the sharpest cut—seven points—scheduled in the Cincinnati area. Reductions of one to three points are slated in the Northeast coast, Buffalo, Pittsburgh, Chicago and southern regions. Detroit-area mills will go down five points, but their scheduled operating rate of 94 percent is still by far the highest in the Nation.

GAIN IN CLEVELAND

Cleveland and St. Louis area mills will speed up production, by one and five points respectively, while west coast mills will hold their operating rate unchanged at 70 percent.

Youngstown Steel & Tube Co., citing generally reduced steel operations, said it laid off "several hundred" workers in recent weeks at its South Chicago and Indiana Harbor

plants. Union sources at the 2 facilities estimated the number at roughly 1,100. Normal employment is about 12,000.

Republic Steel Corp. also is cutting back operations, reducing payrolls at its South Chicago plant by close to 1,000 men, according to Local 1033 of the United Steelworkers. Company officials declined to confirm or deny the report.

And Pittsburgh Steel Co. announced a cutback at its Monessen, Pa., basic steel mill which apparently will lower its operating rate about nine and a half points to about 56 percent of rated capacity.

The slump in steel demand also is bringing some cutbacks in fabricating operations. Republic Steel Corp. announced that its Trucson Steel Division plant in Youngstown, which fabricates building products, will suspend operations next week for 7 days, reopening May 31. This will be the third 1-week shutdown for the plant in the past 3 months. It employs about 550 workers.

Wheeling Steel Corp. had announced previously that its pipeworks at Benwood, Va., will suspend operations again this week.

The American Iron & Steel Institute estimates steel production for the week starting May 16 as follows:

	Net tons production	Index, 1947–49
Week Actual list week Actual month ago Actual year ago	2, 042, 000 2, 102, 000 2, 238, 000 2, 644, 000	127.1 130.9 139.3 164.6

The index of production is based on the average weekly production for 1947-49, or 1,606,377 tons.

Operating rates by districts, including the estimate for the latest period and the actual rate for the preceding week and the year ago period, follow:

	Estimate, week May 16	Actual, week May 9	Actual, year ago week
Northeast coast	75.0	77.0	92.0
Buffalo	76.0	77.0	101.0
Pittsburgh	72.0	75.0	94.0
Youngstown	45.0	50.0	86.0
Cleveland	79.0	78.0	94.0
Detroit	95.0	99.0	99.0
Chicago	73.0	76.0	93.0
Cincinnati	81.0	88.0	8d, 0
ot. Mouls	85.0	80.0	102.0
Southern	72.0	73.0	93.0
Western	70.0	70.0	98.0
Total, industry	71.7	73.8	93.4

West Virginia Newspaper Publisher Appeals for President's Recognition of State's Problems; Area Redevelopment Bill Veto Termed "Shameful" by Labor Leader

EXTENSION OF REMARKS

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 17, 1960

Mr. RANDOLPH. Mr. President, on May 9, 1960, Robert K. Holliday, editor and publisher of the Fayette Tribune of Oak Hill, W. Va., and the Montgomery Herald, Montgomery, W. Va., wrote a letter to the President of the United States, which he published in the Thursday, May 12, 1960, edition of the Tribune.

Mr. Holliday, whose family and journalistic roots are deep in formerly prosperous Fayette County, is an enterprising young man in our State who has devoted much recent attention to the economic and social problems of his home section—one which is feeling severely the impact of chronic unemployment brought about principally by coal mining economics and technological changes in bituminous coal production methods.

This vigorous spokesman has been appealing for improvements in both quantity and quality of items available to needy persons and families under the surplus commodity distribution program. And he has been stressing the need for area redevelopment legislation—in order to enable communities and individuals to better help themselves to overcome the problems growing out of heavy labor surplus conditions.

Mr. Holliday, in his May 9, 1960 communication to the President, urged the Chief Executive to sign the area redevelopment bill, but his appeal—like those of many of us—received the President's unfavorable consideration, as did the measure he vetoed May 13, 1960.

I ask unanimous consent to have printed in the Appendix of the RECORD the column from the Fayette Tribune of Thursday, May 12, 1960.

There being no objection, the column was ordered printed in the RECORD, as follows:

OUR CHAT (By Bob Holliday)

MAY 9, 1960.

The Honorable DWIGHT DAVID EISENHOWER, President of the United States,

Washington, D.C.

DEAR PRESIDENT EISENHOWER: Our Senator,
JENNINGS RANDOLPH, once said, "And when
I told the President of the plight of many
children in West Virginia, I want to say for
the record that I saw a tear in his eye." On

tive to the needs of our people whenever you are informed of their misfortune.

Mr. President, you certainly are the greatest symbol of world peace today. Any thinking person realizes your position of

the basis of such reaction you must be sensi-

World leadership.

But, sir, do you know that 17,000 people in Fayette County (population approximately 82,000) are on Government surplus food commodities?

I have written to Secretary of Agriculture Benson, explaining to him our need for a greater variety of surplus food commodities. The Secretary did not answer my letter, but his Assistant Secretary informed me that congressional statutory limitations prohibited the purchasing of additional surplus food commodities.

Schator Hubert Humphrey is the author of the food stamp plan which would permit any individual to go into a grocery store with food stamps and buy groceries from the shelves. These food stamps would have been like currency. Now there's \$500 million of authorization there untouched. It was also said there are \$424,080,000 of unused funds that have been collected from tariffs on the imports of food stuffs into the United imports of food stuffs into the United States—\$424,080,000 in the Federal Treasury that could be used to balance out this diet for our needy people. The Department of Agriculture uses little of this for the people of West Virginia,

To make my point more vivid, I am including a list of names of local people here in Fayette County who have no income whatsoever. These people, Mr. President, do not think that your policies are adequate.

Now, we in West Virginia feel very strongly about the discrimatory practices which the Federal Government has performed against our people. In West Virginia our State gave first, percentagewise, of men to die in combat in the Korean war and also contributed first, percentagewise, in the number of men that served in the Armed Forces during the Korean war. We rank absolutely on the bottom, 50th, in defense spending in West Virginia. Would it be possible for you to issue an Executive order demanding that defense contracts be let to areas where there is high unemployment? Sir, often the rich under your policies are getting richer and the poor are getting poorer. Believe me, it is true as far as our State is concerned.

I do not believe in a continued system of handouts—our people want jobs—but our Federal Government must help people unable to help themselves. Of course, there is a fallacy that some people never will let go of the crutch. But our Government must do all that it can in a humanitarian spirit of aiding these people until they are able to take care of themselves.

We don't want a crutch. Our unemployed only want a job. Sign the area redevelopment bill and make certain that West Virginia gets its fair share of assistance.

Sincerely,

THE FAYETTE TRIBUNE AND THE MONTGOMERY HERALD, ROBERT K. HOLIDAY,

Publisher.

Mr. RANDOLPH. Mr. President, I ask unanimous consent also to have printed in the Appendix of the Record the text of a statement released May 16, 1960, by James B. Carey, secretary-treasurer of the Industrial Union Department, AFL-CIO, in which he termed President Eisenhower's veto of the distressed areas bill shameful and called upon the congressional majority leadership to rally its forces to override the veto.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The President has called for one-thirdplus-one Government and seems determined to have it. He has again put budget-surplusing ahead of the needs of the American people. It is time for congressional leadership to meet this challenge.

Only a few days ago, Mr. Eisenhower boasted that the economy has passed the \$500 billion mark. Yet in the very next breath the President said that the Nation cannot afford a \$251 million program to aid those of its citizens condemned to unemployment because of advancing technology and economic depression in their areas.

Industrial labor has long supported foreign economic aid because we know that without it freedom may perish. We cannot understand why help of this kind is a necessity abroad, while aid to our own distressed areas on any realistic level would squander the taxpayers' money.

There can be no worse squandering of the Nation's resources than to permit the economic erosion of whole areas of our Nation to continue. The recent West Virginia primary centered attention upon the kind of poverty that exists in this Nation because local economies have been destroyed or permitted to decline.

The problem of depressed areas has been before the Eisenhower administration since it came into office. The administration's answer has been two shameful and cruel vetoes of measures intended to restore local economies and needless suffering in these United States.

The people remembered the veto of the distressed areas bill in the congressional elections of 1958. They will watch any effort to overcome this year's veto and Congressmen on both sides of the aisle are well aware of it. A real fight to overcome the veto is in order. The time has come for the congressional majority leadership to meet the veto challenge and it could not have a more important domestic issue on which to wage the fight.

South's Answer: Get Rich

EXTENSION OF REMARKS

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1960

Mr. ROBERTS. Mr. Speaker, the South is coming into her own, once again, in spite of criticism and agitation from outside the South. The reason is that the South has no time or reason for sitting around feeling sorry for herself, but proceeds to prove that the century belongs to the South.

These thoughts are expressed in an excellent editorial from the Alabama Journal which was recently reprinted in the Piedmont Journal in Piedmont, Ala-

Under leave to extend my remarks, I wish to include this editorial:

SOUTH WINS BY GETTING RICH

"There is no better way for the South to get revenge than to get rich," said a Texas professor of history to a Princeton faculty. Dr. Arthur Prescott Webb suggested that southerners "forget the misfortunes and injustices of the past and drown their bitterness in success."

"It is probable that the next century belongs to the South," the former president of the American Historical Association told his Princeton friends. Dr. Webb is going even further than the Alabama Power Co. which has been proclaiming for the last 10 years that the "last half of the 20th century belongs to the South."

The economic independence of the South has been increasing enormously in the past 10 years and it is due not only to the South's natural advantages and its resources but to its people and to the farsighted men of other sections who have decided to come down here and advance with the South.

There are those who feel that the South's enormous gains industrially and in every other way have more to do with northern criticism of this region than has the race issue which is agitated as the main point of difference between North and South.

As the North has watched the South grow, as it has noted the hundreds of new industries started in the South, as it has seen many of its own industries move down to sunny climates and happier working conditions it has stirred a feeling of envy that has resulted in all sorts of untrue and unfair reference to the South and our way of life.

Dr. Webb has certainly put his finger on one of the main reasons for Northern hostility to this region. It makes them sad to see the growth, the progress, the happy living conditions, the fast-growing market, and purchasing power of millions of Southern consumers. Certainly Northern industrialists and their newspaper spokesmen have long tried to overcome by unfair means the South's industrial advantages. For many years they imposed an unfair freight rate

burden upon us which prevented profitable shipment of our finished products north of the Ohio River.

But it has all been in vain. The South is coming into her own in spite of criticism. Race agitation is merely a minor feature of the northern attitude of hostility. But so great is the South's surge of growth and prosperity that its momentum has not even been slowed down by continual attacks and misrepresentations.

Education by Radio and Television

EXTENSION OF REMARKS

HON. GALE W. McGEE

OF WYOMING

IN THE SENATE OF THE UNITED STATES Tuesday, May 17, 1960

Mr. McGEE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled, "Institute's Bombarded With Ideas," written by Lawrence Laurent and published in the Washington Post of Saturday, May 7, 1960. This article deals

with the subject of education by radio and television.

There being no objection, the article was ordered to be printed in the REC-ORD, as follows:

RADIO AND TELEVISION-INSTITUTE'S BOM-BARDED WITH IDEAS

(By Lawrence Laurent)

COLUMBUS, OHIO, May 6 .- This is the traditionally conservative Middle West, but enough new ideas for broadcasting have been advocated at the 30th Annual Ohio State Institute for Education by Radio and Television to revolutionize completely a young industry.

Broadcasters usually claim that educators are idealists, impractical, visionary men who do not understand the terrible pressures on the commercial broadcasting business. Yet, the cries for change come from every segment of the institute-except the educators.

At last night's question of how to regulate broadcasting, whether through "laws, codes, or czars?" the new ideas came from a U.S. Senator and an official of Consumers

The Senator was GALE W. MCGEE, Democrat, of Wyoming, a member of the Communications Subcommittee of the Interstate and Foreign Commerce Committee. McGEE said he is convinced that a sweeping overhaul of the entire legal structure of munications business will be needed.

McGre wants a study that will give him the theoretical best of all possible broadcasting to compare with the "patched up. jerry-built, tortured concepts that have

emerged over the years."

Mildred E. Bradey, editorial director of
Consumers Union, put forth a 12-point program that would put the viewer in charge of regulation of stations, able to influence the 3-year renewal of station licenses and to shape a station's advertising policy.

This spirit for change has even affected Federal Communications Commission Chairman Frederick W. Ford. In a speech prepared for delivery today at the national convention of American Women in Radio and Television, Ford has raised some serious questions about violence on TV. Here are Ford's words:

Violence on television is sometimes defended by the high ratings some of these programs receive. It is said that these ratings indicate the public is getting what it

The principle purpose of the huge wants. expenditure by advertisers on programs is to draw a crowd to hear his sales message.

"But the question is raised in my mind" Ford continued, "are broadcasters and television writers using violence excessively to draw a crowd without giving thought to the effect that violence may have on immature minds?

"Are there not other ways to draw a crowd? Can this industry afford to take a chance on excessive violence?"

Ford's concern with violence is somewhat unusual. In recent years, FCC members have run from discussions of TV program

Senator McGee quickly stated his "warrant for wisdom in the TV field." He said: "I am a real live resident of Laramie, home of 98 percent of TV."

The most heated debate of the meeting here was touched off by Harry Skornia, president of the National Association of Educational Broadcasters. He asked if TV and radio "have the freedom to deaden and anesthetize democratic man?"

It is Skornia's contention that viewing of TV tends to dry up citizen participation and activity in civic affairs. He particularly objected to radio-TV campaigns to get out the vote. Skornia charged that uninformed voting may be worse than nonvoting. He "Eany-meeny vote casting even by millions, is a perversion of democracy."

Gilbert Seldes, dean of the Annenberg School of Communication at the University

of Pennsylvania, agreed.

Most of the audience however, thought Skornia, was hiding behind clever phrases.

The Depressed Areas Bill

EXTENSION OF REMARKS OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 17, 1960

Mr. WIDNALL. Mr. Speaker, Pennsylvania is one of the States suffering most from pockets of chronic industrial unemployment. There is general agreement that five of the major labor market areas are so-called depressed areas. These are the Altoona, Erie, Johnstown. Scranton, and Wilkes-Barre-Hazleton areas. As of March 1960, unemployment in these five major areas totaled 57,500 persons. In addition there are six smaller industrial areas on which there is general agreement that conditions of chronic unemployment exist. These are the Berwick-Bloomsburg, Clearfield-Du Bois, New Castle, Pottsville, Sunbury-Shamokin-Mount Carmel, and Union-town-Connellsville areas. Unemployment in those six smaller areas totaled 40,850 persons on the basis of most recently available surveys. All 11 of these areas would have been recognized as areas of chronic unemployment under both the administration's and the Senate passed depressed areas bills. Aside from the addition of one smaller industrial area, namely Butler with an unemployed total of 3,100 persons, the bill as it passed the Senate and the administration's bill were in complete agreement that these were the areas of chronic unemployment in Pennsylvania. The unemployed total for these 12 areas totals 101,450 persons.

Now let us see what would happen under the House version of the bill, as amended, which was accepted by the Senate, and sent to the President and vetoed. It would have been mandatory that the administrator designate 23 areas in Pennsylvania as eligible for assistance with an unemployed total of 320,850 or over three times that for the commonly recognized chronic areas. In other words, chronic areas would get only one-third of the assistance intended for them. Other areas, including Philadelphia with 119,300 unemployed and Pittsburgh with 75,700 unemployed would get \$2 of every \$3 of assistance intended for the chronic areas in Pennsylvania.

No wonder the President found it necessary to veto the unfair and unsound depressed areas bill which the Congress sent to him. Failure of this Congress to get busy and pass a good bill at this session can mean only one thing, and that is, that the majority party of this Congress is more interested in a potential political issue than it is in enacting constructive legislation to lessen suffering in hard-hit areas of chronic unemployment.

Oklahoma's Doing Fine for Motoring Tourists

EXTENSION OF REMARKS OF

HON. ROBERT S. KERR

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES Tuesday, May 17, 1960

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Oklahoma's Doing Fine for Motoring Tourists," written by Grace E. Ray, which was published in the New York Sunday Times of May 15, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OKLAHOMA'S DOING FINE FOR MOTORING Tourists

(By Grace E. Ray)

DURANT, OKLA.-Here is a message of reassurance to the great number of motorized eastern families that will be taking the classic routes through the Southwest to the Pacific this summer: They need not worry about crossing Oklahoma. In fact, they may happily pause here.

Instead of "dust bowls" and "Okies," Oklahoma is dotted with many lakes and free State parks for good camping. There are shaded shores and lovely landscapes. Some lie close to the great highways, others need turning off to reach. That, too, can be half the charm for tourists with a little leisure. A splash in the lakes or a fish on the hook for the children is much more fun than grinding along while father sets up his own

personal distance-run record.

When the 89'ers rode into Indian territory, they camped beside their steeds and ate off the land. But 1960 tourists, wheeling into the territory's successor, Oklahoma, may chose from 2,124 free campsites with conveniences. Most of these sites are on shady banks of blue lakes.

With the opening this spring of Black Mesa, Oklahoma has 16 State parks equipped with free conveniences such as picnic tables, cooking grills, modern restrooms, and showers. A \$200,000 program of park im-

provements is being completed.

Oklahoma parks enclose a total of 1,000 square miles of lakes, created by impounding waters on rivers including the Washita, Red. Grand, and Illinois. Oklahoma is no longer a "dry" State, either in reference to refreshments or lake and river water.

Speaking of boats, these parks have 32 free concrete launching ramps for visitors bringing their own craft. For others, there are 1,000 boats for rent at about \$3 a day. Some parks have shelter cabins, all have swimming beaches, and some have pools. All have children's playground equipment.

STREAMS SPRING PED

The parks have clear streams, many being spring fed. In one park, Boiling Springs, near Woodward in northwestern Oklahoma, the springs flow 432,000 gallons of water daily. Lake Texoma State Park on Red River near here offers the biggest expanse of water in the State. It covers 93,085 acres. This park is on U.S. 70.

In some parks and nearby wildlife refuges, the deer and the buffalo roam. Lob cabins, wood-burning fireplaces, and saddle horses are available, and at the proper time and place a man may use his gun and dog. Game birds are plentiful, and for birdwatchers there are bald and golden eagles, water turkeys, great blue herons, pelicans, American and snowy egrets. The egrets are numerous on Lake Texoma, and many nest along Oklahoma City's municipal Lake Overholser.

BISON HERDS HERE

Other wildlife to be seen, but not shot, is found in the Federal Wichita Mountains Game Refuge in the vicinity of several State parks. Here one sees flocks of wild turkeys and greater prairie chickens and also the largest herds of American bison and Texas Longhorn cattle in the world.

Fishing is free except for the license (non-resident 10-day license, \$2.25). In various parks, bass weighing up to 7 pounds have been caught. May and June are among the months when "Sooner"—slang for Oklahoma—fish are gay and carefree, and easily

hooked.

Other recreations are water skiing and jumping, paddle boating, water bleycling, riding, softball, horseshoes, and shuffleboard. Pontoon boats are available.

Larger parks have horseback riding at about \$1.50 an hour, pleasure boat riding at about \$1.50 a trip, marinas for servicing boats and ways for launching them storage stalls for boats, airplane landing strips, youth camps, fishing lodges, square dancing centers, archery ranges, trapshooting, enclosed fishing barges for cool days, orchestral dancing, concerts, television, table tennis, and other games.

One park, Alabaster Caverns near Woodward, has a place for cavemen and women, who can explore a half-mile-long Gypsum Cavern (adult tours, \$1.25; for children, 50 and 75 cents).

All parks have grocery stores, trailer parking space, and modern air-conditioned cabins renting at about \$3 a night per person. Pive parks have luxury lodges, and six have electricity for trailers. Sequoyah State Park on Fort Gibson Lake near Wagoner also has trailer sewer facilities, as does a private resort, Willow Springs on Lake Texoma near Durant.

For facts about the park campsites, address Information Department, Oklahoma Planning and Resources Board, 533 State Capitol, Oklahoma City, Okla. They will shower you with free illustrated brochures listing accommodations, rates, entertainment, and addresses of parks.

MAPS AVAILABLE

This board will also send 1960 road maps, which show not only parks but 142 other publicly owned areas including forests, lakes, fish and game hatcheries, hunting areas, wildlife refuges. The board will send a calendar of 1960 events, listing dates and places of 11 Indian powwows, Indian dances, and Indian expositions, in addition to rodeos, fairs, livestock shows, horse shows, music festivals, and dramatic productions. For \$1 the board will send the "Visit Oklahoma Guidebook," which is an abbreviated history of the State.

Although State parks are scattered throughout Oklahoma, each is on a United States or State route, and within each park there are blacktop or paved driveways. Lake Texoma State Park in south-central Oklahoma, with 198 campsites, is a good headquarters from which to see the State. From here one may drive to interesting points in eastern and western Oklahoma, or simply move bag and baggage from one park to another.

As the eastern half of the State was Indian territory prior to 1907, it has many historical points, including the log cabin home of Sequoyah, inventor of the Cherokee alphabet. It is near Sallisaw. Other points include the restored Murrell House, near Tahlequah, a mansion built in about 1845 for Cherokee chieftains. The Creek chieftains' house is now an Indian museum at Okmulgee. The home of the Choctaw chiefs, built in 1834, near Swink village in Choctaw County, is being restored. Wheelock Mission, oldest church in Oklahoma, built near Millerton for the Choctaws in 1842, is still used weekly for worship.

Other landmarks in eastern Oklahoma include the original capitol building of the Cherokee nation still standing at Tahlequah, serving as the county courthouse; the Indian Museum at Tahlequah, the Cherokee Weavers and Arts and Crafts Building near Tahlequah, the Will Rogers Memorial Shrine and Museum at Claremore, the J. M. Davis collection of 7,000 kinds of guns at Claremore, a totem pole 90 feet high at the town of Foyil, the Cherokees' Old Bitting Water Wheel Mill, still in operation, near Stilwell; Fort Gibson, which was built in 1824; Bacone Indian College, with its Indian artist-professor, Dick West, at Muskogee.

In southeast Oklahoma stands a cypress tree 42 feet in circumference, in the vicinity of lumber mills at Broken Bow and nearby towns. North of Broken Bow is Beavers Bend State Park in a pine forest. Seven miles north is a 16,000-acre State wilderness refuge carpeted by wild flowers, shaded by trees, including holly, and inhabited by wild turkeys, beaver, flying squirrels, wildcats, coyotes, and wolves. North of the wilderness is Quachita National Forest, crossed by scenic U.S. 271.

Other State parks in eastern Oklahoma are Wister, at Poteau; Robbers' Cave, Wilburton, glamorized with stories of bandits; Greenleaf, at Braggs, and Tenkiller, at Gore.

TEEPEES SCARCE

But eastern Oklahoma is scarcely the place to see a teepee—it never was! It was the home of the Five Civilized Tribes, who occupled houses, read Greek and Roman history, and published newspapers (the first being the Cherokee Advocate started in 1844 at Tahlequah).

The tecpees, tomahawks, and similar primitive tools are on exhibit at Indian City near Anadarko in southwestern Oklahoma, where the plains tribes roamed. This was in Oklahoma Territory prior to 1907. There one may see an authentic Indian village constructed by today's house-dwelling bucks, under directions given by University of Oklahoma anthropologists. This village is near Quartz

Mountain State Park, at Lone Wolf, and Red Rock Canyon State Park, near Hinton.

Roman Nose State Park, in northwest Oklahoma, near Watonga, is named for an Indian chief. This park has a swimming pool and lake fed by streams gushing out of cliffs. Great Salt Plains State Park, near Jet, is a paradise for the migrating ocean shore birds, ducks, and geese.

FOR THE ART CONNOISSEUR

North of Lake Texoma State Park is Platt National Park, Sulphur. Near Platt is the Davis Municipal Park, in which Turner Falls is situated.

For those interested in art, there are Woolaroc Museum of Southwestern Art and History, Bartlesville, near Osage State Park; Gilcrease Museum of Indian Art and History and Philbrook Art Center, both in Tulsa, on Will Rogers and Turner Turnpikes; Oklahoma City's new Municipal Art Center, near Turner Turnpike; the University of Oklahoma Oriental Art Collection and Stovall Museum of History and Anthropology at Norman on U.S. 77.

There are still lots of Indians in Oklahoma, but the only detached scalps are in these museums.

In Answer to Soviets: Congressman Curtis of Missouri Urges New Weapons To Fight an Economic War

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1960

Mr. WILSON. Mr. Speaker, during past weeks, the Nation's press has been subject to considerable criticism and analysis. Many news media are, however, doing a thoughtful, careful and constructive reporting job in the public interest. A good example of this is an interview by Sid Goldberg, news editor, NANA, with my colleague, Tom Curtis. Mr. Goldberg, who is an executive of NANA, seldom personally covers news breaks and does interviews because he is in charge of the gathering and transmission of news. However, as an experienced and skilled reporter, occasionally he does do a story of national significance and importance. His thoughtful analysis of the points raised by Congressman Curris in discussing that peace can be maintained both through a strong military defense but also sound economic policies, both at home and abroad, has been very favorably received by the Nation's press. This interview has already been printed in the editorial sections of the St. Louis Globe-Democrat, Atlanta Constitution, Louisville Times, New Haven Register, among others.

I am familiar with the work of NANA because one of my hometown papers, the San Diego Union, carries this service. In days when there is a tendency to publicize the spectacular, I wish to commend Mr. Goldberg, Mr. Curtis, and NANA in presenting to the public a forward looking analysis of economic steps that can and should be taken in our relations with countries overseas and, at the same time, protect the jobs of American workers:

In Answer to Soviets, Lawmaker Urges New Weapons To Fight an "Economic War"

(By Sid Goldberg, North American Newspaper Alliance)

New York, April 16.—A key Congressman, in response to Premier Khrushchev's declaration of economic war, proposes strong countermeasures to Soviet "dumping," a complete revamping of the U.S. tariff system, and creation of a secretary of foreign economics as a full Cabinet member.

"Khrushchev has challenged us to economic war, but our arsenal is empty of effective weapons in this field," says Representative Tom Curns of St. Louis, Mo. "We've got the bombs and missiles to stand up to Russia in a military showdown, but in a battle between economies—the kind we're now being forced into—the United States is almost defenseless."

CURTIS, the only Missouri Republican holding high elective office, is the ranking minority Member of the House-Senate Joint Economic Committee and fourth-ranking Republican in the House Ways and Mcans Committee.

Now completing his fifth term in the House, the 48-year-old Congressman has been mentioned in the press as a running mate for either Vice President Nixon or, should he be drafted, Gov. Nelson Rockefeller of New York.

PROPOSALS NOTED

The first of Curris' unorthodox proposals is the establishment of a U.S. Trading Corpotion (USTC), capitalized by the Government at \$1 billion with a potential of up to \$4 billion. Purpose of the corporation would be to enable U.S. firms to compete with the artificially low prices set by Soviet state trading monopolies. Payments from the corporation would assure a U.S. firm of a fair profit margin if it were forced to drastically lower its prices to meet the monopoly prices of Russia.

of Russia.

"Right now Russia is engaged in the same kind of unscrupulous business practices that were outlawed by our antitrust legislation in the last century," CURTS explained in an interview during a visit here.

"The U.S. exporter, in competing with Soviet monopolies, often is up against the type of unfair competition that many small businessmen faced in American before the Sherman Antitrust Act," he said.

The St. Louis Congressman stresses that the Corporation would be designed as a defense only against totalitarian economies such as Russia's, and would go into action only when U.S. firms could prove they were up against unscrupulous foreign competition.

"There must be built-in safeguards against U.S. firms taking advantage of the Corporation," he continued. "Some firms inevitably would try to blackmail the Corporation into helping them underbid foreign competitors. But payments would be made only when the competition could be shown blantantly unfair"

Tom Curris cites several examples of how Russia cuts corners in its economic war with the West. Two years ago it tried to create anarchy in the world aluminum market by dumping vast quantities of the metal at below-cost prices. At the same time it outbid the United States for Icelandic fish, trying to tie the island's entire foreign trade to Kremlin purchases.

RETALIATION THREAT

He also points out that Poland recently agreed to supply Cuba with textile machinery; yet for several months Poland was negotiating to buy textile machinery from the United States, claiming a serious shortage at home.

"This kind of trade deal often is expenalve economically to the Soviet bloc, and is entered only when an outstanding political goal can be achieved," Curtis said. "Perhaps the mere threat of U.S. retaliation through the trading Corporation would be enough to dissuade the Russians from these practices.

"Just as the possession of the hydrogen bomb works as a deterrent to military aggression, existence of the trading Corporation could work as a deterrent to economic forms of aggression," he suggested.

Curris hopes that the Corporation, if set up, some day could be internationalized, growing into an "economic court of justice" that would elimniate the cutthroat practices that still persis in international trade.

Regarding U.S. tariffs, Curris believes the whole system is outdated. "It regulates but it doesn't stimulate," he said. "The tariff should be an economic wedge that we could use to force an increase in the standard of living around the world."

He believes this could be done by automatically lowering the tariff by a set percentage every time a foreign wage scale goes up. For example, if Japanese textile workers received an increase in pay, the tariff on Japanese textiles would be lowered proportionately. Similarly, when a foreign wage rate goes down, the U.S. tariff would go up.

Curtis says it is inconceivable that we can have healthy trade relations with countries where workers are paid a 10th or a 20th of the U.S. scale. He cites the Peruvian miner, who earns 8 cents an hour—compared to the \$1.50 an hour earned by his American counterpart.

EMPLOYERS COULD PAY MORE

"Our miners may be 10 times more efficient than Peru's, or even 15 times; but I refuse to believe they are 20 times better," he said. "Although employers in underdeveloped countries naturally can't pay U.S.-scale wages, they certainly can afford to pay more than they are. One way to encourage them is through a carrot-and-stick tariff policy."

Curtis says the United States need have no guilty conscience about "meddling" in the wage policies of foreign countries. "If you call this 'interference,' then I'm all for more 'interference' of this kind," he says. "People will eat better."

The Congressman is not dispirited that neither the trading corporation nor the new tariff system has majority support in Congress. He has tried twice without success to push through the necessary legislation. But he believes that, as the Soviet economic threat intensifies, and as the needs and demands of underdeveloped countries continue growing, pressure for a new approach to foreign economic policy will become compelling.

"The problems already have become so vast that the State Department no longer can handle them," he said. "What is needed is a new Cabinet position, a Secretary of Foreign Economics, devoted entirely to the questions of export-import, tariffs, the Soviet economic challenge, and our aid and trade agreements. Several European Governments have had such cabinet posts for many years, and it is time we got around to having one ourselves."

Papa Knows Best

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 17, 1960

Mr. WILEY. Mr. President, over the years, the people of the Nation—unwise-

ly, I believe—have developed a habit of looking to Uncle Sam to meet a great many of their needs,

Perhaps, because of the circuitous route of the taxpayer's dollar, back through Uncle Sam's gift-giving hand to provide Federal aid programs, there is a widespread illusion that Federal support either does not come directly from the taxpayer's pocket, or, perhaps, at least payment can be indefinitely postponed.

Frankly, I believe it is hightime that we dispelled this illusion and put some realism into our public thinking.

In view of this widespread conception, therefore, I always welcome signs that individualistic, free enterprise thinking is still strongly active in the Nation.

Recently, the executive vice president of the National Association of Real Estate Boards published an editorial entitled "Papa Knows Best."

Reflecting the need for getting away from this idea of locking to Uncle Sam to set the goals in too many fields—in this case, housing—I ask unanimous consent to have the editorial printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PAPA KNOWS BEST (By Eugene P. Conser)

People who work in Government like to establish goals. If these can gain acceptance as part of an innocuous appearing bill, the problem of obtaining appropriations for otherwise dubious projects is greatly lessened. A policy already has been established, so the argument goes, and the money must be provided to complete the project—to carry out the will of Congress.

Such an annual goal for housing is being proposed now. It would become the duty of the President to determine how much housing is to be needed each year (and supposedly what type, where located, what price brackets, etc.), and to propose to the Congress how these goals should be reached.

Within the lifetime of many of us, the farmer was persuaded that he should let an agency of Government determine how many acres he should plant, and in return he would be assured of a predetermined price for his crops. It would take the gambling out of farming, and the farmer could be assured a profit. This kind of planning, this setting of goals, would protect the farmer against the vicissitudes of the market.

What the planners did not foresee was the inability—or the unwillingness—of politicians to adjust politically determined goals to the economic facts of life. The result is that the farmers have a political albatross around their collective necks that is costing the taxpayers of the entire country some \$6 billion a year. The farmer is in a strait-jacket from which no one has been able to find for him an escape.

People who build, sell, lease, and manage housing could find themselves with the same kind of a political noose around their necks. Even now, housing construction is thought of as a counter cyclical activity which under politically initiated stimulus, may help turn upward a sag in the economy. It would be easy for politicians to decide upon an arbitrary goal in order to provide added employment and bolster the economy. But if the housing were not occupied—what then? Would it be boarded up and held in an inventory by FHA—just as surplus wheat, cotton, tobacco, pennuts, etc., are held in storage in tens of thousands of bins and

warehouses throughout the country? And what if the economic planners found that the welfare of the country required that additional houses be built to provide continuing employment—meanwhile adding to the inventory of boarded-up houses awalting occupants? Or decided that employment should be boistered by building apartments with Government money to attract tenants out of the privately owned high-rent apartments?

If individuals are to remain free to exercise their own judgment, history tells us that they have not yet found a better economy than the competition and the disciplines of the marketplace. The American farmer realizes it now, but he has become hopelessly entwined in the tentacles of political domination. The realtors and builders will do well to avoid the same fate. The theory that papa knows best doesn't hold true with the "great white father" in Washington or any other capital city. The judgments of bureaucracy are not omnipotent. But they are an opiate to those who fear competition and the hard reality of the collective judgment of a free market. Let us avoid this goal setting by political fiat.

Do We Value Our Free Civilization?

EXTENSION OF REMARKS

HON, JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. DELANEY. Mr. Speaker, the Freedom Institute of St. John's University, Jamaica, N.Y., is designed to inform students at the graduate level of the nature and evils of communism as contrasted to the priceless gift of freedom.

In view of the developments at Paris, the following eloquent address given by Senator Thomas J. Dodd at the convocation of the Freedom Institute on May 14, 1960, is particularly timely, and I commend it to the attention of my colleagues:

Address of Senator Thomas J. Dodd at the Convocation of the Freedom Institute of St. John's University, Jamaica, N.Y., May 14, 1960

On Thursday of this week, during debate on the Senate floor, I had occasion to refer to the Pulitzer Prize-winning novel "Advise and Consent," which pictures an America of a few years hence, an America in which demagogs can inflame huge gatherings and bring them to their feet cheering with the slogan, "I would rather crawl to Moscow on my hands and knees than be killed by an atomic bomb."

Should this book prove prophetic, it will mean that our people have rejected the choice between liberty and death made by Patrick Henry and the Founding Fathers, the choice which drew the cheers of America from 1775 down to the recent past.

The fundamental question before the United States and our free world allies in the coming decade is this: Do we value our free civilization enough to run all the risks and meet all the challenges which the Communists will force upon us in the years ahead? It is in the context of this question that I would like to discuss the subject that has been assigned to me today—"Political freedom under a representative government and in a totalitarian state."

I do not think it likely that an ignoble surrender policy will ever be publicly pro-

claimed by high American officials as their political platform.

Men and nations have frequently betrayed their best interests through fear but they have generally rationalized and disguised their cowardice and not publicly proclaimed it. Surrender, if it comes, will probably come in more subtle ways, but the end result will be the same. We need not look, therefore, for base pronouncements. We must seek out the trend in less obvious signs and guises. And such signs are not wanting.

When the preservation of freedom in West Berlin appeared to run serious risk of war a year ago, there was no dearth of advocates, at home and abroad, for a policy of concession and retreat that would temporarily avoid risk of war at the probable cost of freedom for West Berlin.

There is today a rapidly growing movement, well organized, well represented in the press, movies and TV, in the scientific community and in government, people so fearful of the risks of the cold war, that they are willing to accept nuclear disarmament on almost any terms, with or without an adequate system of detection and enforcement.

These people are not concerned that this could condemn the United States to a military inferiority which would make our eventual surrender or destruction inevitable. They are concerned only with their fears of the present.

And then we have the school of British intellectuals now openly advocating what our own "softies" have heretofore kept below the surface. This group, headed by Lord Bertrand Russell and Philip Toynbee, believes that we must give up nuclear weapons now to assure that they will never be used against us, that we should seek the best terms from the Soviets we can get; but if they should be totally intransigent we should give up nuclear weapons anyway, and submit to Communist control as a preferable alternative to carrying on the present struggle that might lead to nuclear war.

Toynbee states the basic philosophy of this group in the following sentence:

"In the terrible context of nuclear war, even the vital differences between communism and Western freedom become almost unimportant."

Almost unimportant.

This is the neutralist intellectual's equivalent of "I would rather crawl to Moscow on my hands and knees than be killed by an atomic bomb."

It does not matter to these people that by building our strength we maintain a good chance of preserving both our lives and our freedom. It does not matter that the blood bath which historically follows every Communist seizure might take more lives than the A-bomb. It does not matter that the existence they purchased by surrender would be only the exploited existence of a Communist slave.

It matters only that the element of risk is large, and that, to them, any considerable risk to existence is a greater evil than the loss of Christian civilization. They are so overwhelmed at the horror of nuclear destruction that all other values are for them already destroyed and are rendered relatively meaningless.

Whether this neutralist philosophy will remain an isolated view held by an insignificant group, manifesting itself infrequently in test ban rallies or in occasional picketing of Downing Street and the White House; or whether this poisonous creed will seep into the marrow of our national bone structure and paralyze us, will depend upon whether our people really understand, or can be brought to understand, what the loss of national freedom and subjection to Communist tyranny would mean.

There are two basic replies to the neutralist position. The first is that we can avoid

both catastrophies, nuclear war and enslavement, by remaining militarily strong and standing firm against aggression. This is a potent argument. It is a tangible argument. It is a demonstrable argument that has thus far worked. It is the basis of our national policy. It has been exhaustively debated, its tenets are widely known, and I therefore forego discussion of it today in favor of the second argument against neutralism, which is less understood and little discussed.

This argument maintains that the political destruction of Western civilization and its system of free institutions constitutes a death for its people and its nations just as violent, just as hideous, just as final as nuclear destruction itself, that there is little to choose between nuclear physical destruction and Communist political destruction.

The detailed knowledge of communism in all its aspects is available; indeed it is abundant. But the evil of communism is so allen, so appalling, so far removed from anything in our own experience, that our intellectuals and our people ignore the evidence.

and our people ignore the evidence.

By and large, men believe what they are prepared to believe, what is familiar to them, what jibes with their own experience. We ignore the clear signs in order to retain our familiar conceptions. We shield our eyes from the reality of communism or we lack the intellectual curiosity to inquire into it.

On the supernatural level, we have read

On the supernatural level, we have read in the lives of the saints of occasions when they were granted visions of human evil as God sees it, and the sight of this evil in its true light was so loathsome, so horrible that they felt they would die were the visions not instantly withdrawn. And ever after they would die rather than commit evil.

So on the natural level, a true picture of atheistic communism would so repel the freedom-loving peoples of the world could they but see it, that they would risk all that they have to defend themselves and their posterity against it. Our task is to bring this true picture before them in every way we can.

Communism can win only in darkness, deceit, error, and falsehood. Freedom can win only in light, candor, logic, and truth. This struggle must be fought on the intellectual front. Once we have won the intellectual struggle for men's minds, the other battles will be easily won and communism will be remembered in history as just another mental plague and torment that cost men dearly.

Your Freedom Institute is a great and early arsenal of truth and freedom. I congratulate St. John's University for exerting leadership in this field as it has throughout its distinguished history in so many fields of learning.

I hope that the Judiciary Committee of the U.S. Senate will favorably recommend, within the next few weeks, the establishment of a National Freedom Academy, an academy which aims to do on the national level what the Freedom Institute is doing here at St. John's University.

It is a relatively easy thing to imagine the horrors of physical destruction brought on by a nuclear attack. It seems a difficult thing for people to understand the meaning of the political, moral, and social destruction that is involved in the communization of the civilized world. We cannot even grasp the full extent of it by looking at what the Communists have done already in the areas they control. For they have been unable to completely work their will on their subject peoples.

The existence of a great and powerful free community exercises a restraint upon them. The public remembrance of the old order still limits them. The need to concede some things to the wishes of their subjects still restrains them. Should they conquer the world, and thus gain complete security, they could work their terrible will unrestrained

which is as yet only half realized.

Prof. Gerhart Neimeyer of Notre Dame University, has described the meaning of Communist rule in a brilliant essay, a classic, recently appearing in Modern Age.

Dr. Neimeyer says at one point:

"Communism is destructive with a novel quality, not mere injustice or mere unfreedom, but the ravaging of the reality of human life by the spirit of dogmatized unreality. Western intellectuals understand the danger of material destruction, which is, after all, simple and obvious. The quality of communism's destructiveness has so far escaped their grasp. To understand it, one must get oneself to enter a mental world of distortion, reason perverted with the ald of force, half-truth set up as dogma, deceit espoused as norm."

If the Communists sought only to rule the world, then the danger could be judged in the same light as that of previous aggressive tyrannies. But they want more than to rule the world. They want to destroy it and remake it in the image of their insane dogma.

To the Communists, everything that we hold to be true is false. Our ideals, values, customs, loyalties are to him parts of an ugly system he is determined Our concepts of God, the individual, the family, truth, love, freedom, justice are to him objects of hatred and derision.

But our world haunts him. He cannot be content just to deride us and wait for our demise. If our truths are real, then his life is a senseless nightmare. He must banish

our values to vindicate his own. In the long run, therefore, our death becomes essential to his life. He is locked tight in an irrational system which admits of no truth or standard of measurement outside its own dialectic.

To the extent that he is a Communist, he abhors the non-Communist world and is compelled to work for its destruction. To the extent that he is a Communist, he can know no peace. He is driven on by a desperate inner compulsion toward the destruction of the existing world order.

The only priority ahead of the destruction of our system is the building and preservation of his own. The only restraints upon his designs against us are his fears for the

safety of his own system.

The threat of Communist subjugation, therefore, differs from the threat of all previous attempts to conquer the world. Here is no tyranny which seeks domination only for the sake of power, or spoils, or exploitation, or even the gratification of limitless ambition. Here is a depraved Samson which seeks to pull down the pillars of the present world and raise in its place a structure such as man has never seen. How would our lives be changed should the Communists achieve world domination? What would Communist rule mean in America?

The revealed truths of religion would be thoroughly and systematically stamped out. Religious instruction and services, the Sacraments, the means of grace which we hold to be essential for the salvation of the human soul, would be made as unavailable as perverted man can make them. Knowledge of the true goal of our existence, eternal life, would be erased insofar as it is possible for

it to be erased.

The concept of private property, around which so much of our daily life revolves, would be swept away. The fabric of free choice, through which we shape our lives by thousands of our own decisions, would be unraveled. Family life as we know it would disappear. Our free associations would be

Pride of country, respect for law, satisfaction with our basic political and social order, all of which so much conditions our

and put into total practice their dialectic habitual attitudes, our character, our personality-all this would vanish.

Every aspect of our lives, from the sublime to the ridiculous, would be swept away and in its place erected the insane, irrational, antihuman regimentation of every phase of life, which requires not mere submission to evil but active participation in it.

Again to quote Dr. Neimeyer:

"Their rule is 'not of this world,' not of the world of present reality, but of the unreality of speculative fiction. That is why their hostility to the present-day world is so unrelenting. That is why they impose their party line not merely to secure their power, but to combat the expressions of the present-day world in art, poetry, music, philosophy, and religion. That is why they are never contented with mere compliance under their rule, but always seek to break their victim's mind from the world of common humanity, to attach it to the cause of the dialectic future, to bring about its inner transformation by means of self-criticism or public confession. That is why they cannot stop lecturing even to their life-long enemies in the inhuman setting of the prison That is why there can be for them no truth, ethics, wisdom, save in the party's will, why ever act of the party's power is to them hallowed through its service to the dialectic of history. And that is why Communists, in their relations with men and women of the present-day world can never achieve peace, no matter how strong a structure of power they erect."

For the existence that we have known. Communist rule would mean a death as final as the grave. And our despair would be magnified by the sight of our children and grandchildren born into and growing up in a world alien to everything once cherished-a world of darkness, a world without faith, a world dead to either temporal or

eternal realities.

This is the fate which the avant-garde of the neutralists is willing to accept now if they can thereby purchase the guarantee that there will be no war; death of the soul, death of the spirit, death of the heart, if only the body is permitted to live.

Failure to understand the evil of communism is only half of our problem. The other half is that so many free people do not understand the meaning of Government in their lives, nor the significance of free-

They tend to downgrade the importance of our political structure. They think that we work out our destiny, our happiness in the private sphere of life and that the public sphere provides only utilities, peripheral benefits, law, order, safety.

They think that a change of government, or a new system of government, might cause some distress, some inconvenience but it would not reach the heart of our existence, it need not intrude upon the inner sanctum of our lives.

Many of our people regard government as a nuisance, a game of spoils for politicians, a butt for jokes. Many think that whatever degree of contentment and happiness they have achieved has come about independently of, or in spite of our political institutions rather than in large measure because of them.

These assumptions are tragically errone-The extent to which our lives are influenced by public institutions is difficult to Our education, our development, our ideas, goals, hopes, are all heavily influenced by a variety of public institutions. These institutions reflect the basic ideas of our people about God, about the nature of life, the destiny of mankind, the way that life should be lived.

Our public institutions determine whether our home is our refuge or a mere extension of the state; whether we live with our neighbors comfortably as with friends, or fearfully as with spies; whether we raise our children according to our lights, or surrender them to the state; whether we are free to work out a private life of our own making, or have no private life, but only a public existence ordered to serve the all-consuming demands of the state.

If our public institutions reflect our religious, ethical, and social ideals, our personal growth can take place with a certain harmony. If they do not, we are at best dogged with doubt and confusion and, at worst, reduced to hopless frustration and neurotic helplessness.

If there are no religious or ethical convictions reflected in public institutions, but only a ruthless program to exterminate them and replace them with false gods and distorted truth, then the purpose of human life is so frustrated, the goal of life is so obscured, that it is really dehumanized.

And so the uprooting of public order, the destruction of this system of free institutions and its replacement with an order which is totally alien would wholly destroy our mode of existence as we have known it. This is a death as real as physical death

And as the public framework is pulled down, as the churches are destroyed, as our ideals are uprooted, as human knowledge of God and His revelation is blotted out, as all the moral refinements and elevations of human nature wrought by thousands of years of our Judaic-Christian heritage are eroded away, our descendants may be condemned to a death infinitely more final than physical death, for we leave to them a world without the instruction, the aids, the instruments of grace which are necessary to man's eternal salvation.

That is the argument that I would make to the neutralist intellectual. But I would make it with scant hope of success, for in many ways he is little better than the Communist

He is the lukewarm, for whom Christ reserved perhaps the most severe condemnation of the New Testament.

Convinced that there are no moral absolutes, he can wholly commit himself to nothing and he finds nothing worth suffering greatly for or giving his life for. Convinced that there is no life beyond the grave, animal survival is to him the ultimate reality.

Fear blinds him to his own best interests; pettiness robs him of the magnanimous courage to risk all for the sake of posterity; pride compells him to cloak his fear and pettiness in the mantle of high, noble motives. All he can offer the civilization which has given him life and growth is the whimpering counsel of despair and abandonment.

Only history can tell how much of our intellectual community deserves this description. We may fervently hope the portion is small.

Any philosophy or political program which aims at the avoidance of death or destruction is foredoomed to failure.

Death, in the end, comes to all men and destruction comes upon all material things. In the century-old words of Cardinal Newman:

"The world passes, the lofty palace crumbles, the busy city is mute, the ships of Tarshish are sped away; death comes upon the heart and the flesh. The veil is breaking."

It is not the circumstance of death, but the moral quality of life that has eternal significance.

Let us help our countrymen to react to the risk of nuclear death not with a craven terror that prompts the betrayal of all we value in return for the wormlike existence of Communist slaves for ourselves and our descendants. Let us help them to regard death as the time of judgment, the time of

entry into immortality.

Let our people live, and if need be die, in defense of our faith, our freedom and our country, confident that our individual destiny and the survival of our race is yet in the hands of Divine Providence, a Providence which, if we but act our part with courage and loyalty, may yet ordain for us and our children a full, natural life in a world in which the peace of a just political and moral order is extended to all peoples.

Padre Island National Seashore Area Project Support Continues To Grow; the Daily Texan and Corpus Christi Caller-Times Call for Action

EXTENSION OF REMARKS

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES Tuesday, May 17, 1960

Mr. YARBOROUGH. Mr. President, "the vast majority of Texans aware of the proposal ardently desire establishment of a National Seashore Recreation Area on Padre Island."

The words I have just read are not mine. These words are a direct quote from an editorial published in the May 8, 1960, edition of the Corpus Christi Caller-Times. The editorial goes on to urge the Congress for approval this session of the proposal to establish a great new national seashore recreation area on Padre Island, the longest and south-

ernmost beach in the Nation.

The Daily Texan, in its panorama page of May 8, 1960, also published a full page of articles concerning Padre Island, and at one point listed those who are supporting the proposal. The panorama page prepared by students in the Uni-Versity of Texas journalism department under the direction of Prof. Bill Rivers did an outstanding job of presenting this project to their readers. I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from the article by Mr. Bill McReynolds, from the Daily Texan of May 8, 1960, entitled Padre Island, U.S. Longest Isle Seashore, May Become National Park."

I also ask unanimous consent to have printed in the Appendix of the RECORD the editorial from the May 8, 1960, issue of the Corpus Christi Caller-Times en-

titled "National Seashore."

There being no objection, the excerpts and editorial were ordered to be printed in the RECORD, as follows:

[From the Daily Texan, May 8, 1960]

PADRE ISLAND, UNITED STATES LONGEST ISLE SEASHORE, MAY BECOME NATIONAL PARK

"Here's one," exclaimed the little girl as she picked up another sand dollar on the vast Padre Island beach.

In mutual excitement, the brother treaded on her words. "Let's make nickels and pennies."

In their individualistic way, the two youngsters were underlining the capitalistic venture and size squabble that remain just about the only big hurdles left before Padre Island can become a national seashore.

Leading a puffing team for recognition of seashore designation is Texas junior Senator, RALPH YARBOROUGH, who introduced legislation (January 9, 1958) into the U.S. Senate to save this "hem off the vast garment of Texas resources." Only slightly ahead of YARBOR-OUGH, perhaps, is the Texas Observer, a liberal newspaper which gave the seashore plan a dawning and constant support.

But the interest in Padre cannot be confined within a conditioned liberal boundary. Other national and local adherents of preserving this Texas island for public use have

spoken:

1. The late Senator Richard Neuberger, of Oregon, champion of national conservation; Fred A. Seaton, Secretary of the Interior; Texas Gov. Price Daniel (in a lower Rio Grande Valley speech); and Lyndon B. John-son, Texas senior U.S. Senator. 2. Via the editorial route, the New York

Times lent its prestigious endorsement.

3. Public hearings, conducted in Corpus Christi on December 14, revealed overwhelming public support for the proposed seashore.

4. The U.S. Department of Interior's National Park Service has reported favorably. "Padre Island presents one of the last remaining opportunities for this Nation to preserve such a length of beach in its natural state. In future years, America's growing population will have few chances to experience and gain inspiration from a vast sweep of ocean shore unaltered by man."

Proposed size of the national seashore on Padre Island has become another stumbling block in the way of acceptance. Senator YARBOROUGH'S imagination has been captured by the entire length of the 117-milelong island, which stretches its slim size along most of the Texas southeast coast. He has said that he is "opposed to those who want to make a little honky-tonk beach in the middle * * *."

However, since the island already has commercial resort developments at each end, Yarborough stands to lose out. The Park Service, itself, recommends only an 88-mile-long seashore label.

If Padre Island is to become a national seashore, speed is of the utmost importance. Regarding Cape Code, another proposed national seashore, for example, Senator Neuberger reported that a park there would cost about \$16 million for the land alone. "And I understand," he said, "that a few years ago, it would have cost \$5 million." The price for acquiring rights on Padre Island increases annually just as does the rising price on Cape Cod.

WHY SAVE IT?

Why, might be asked, is saving Padre Island for the people so important?

The National Park Service reasons: "To its people, this country has always symbolized bigness and spaciousness * * *. To preserve America's longest beach will provide not only an outstanding area for biological and geological study, but also a place where future generations of Americans can experience a wild spaciousness that is their heritage * * *."

What's more, Padre is what one might call an inviting beach because it occupies the same latitude as the south Florida coast; the average January temperature is 57 degrees (average July temperature, 83); and the prevailing winds are southerly and warm. A national seashore on Padre, then, would have year-round appeal.

As far as business interests are concerned, seashore designation would accent the vast tourist boom that is engulfing the whole nearby Corpus Christi area.

With its beautiful new "High Bridge" acting as a decisive magnet to the cult of construction, Corpus is turning thumbs down on the slum-happy character of North Beach, its ancient playground—ratty appearance is deserting this whole area.

Corpus is priming for a perpetual influx of the tourist dollar. Look what has happened to the primitive Cape Hatteras sea-shore in North Carolina. This area now

commands more than 350,000 tourists each year. Isn't it possible that Padre will do the same for Corpus and the other surrounding, smaller cities?

[From the Corpus Christi Caller-Times, May 8, 1960]

NATIONAL SEASHORE

The vast majority of Texans aware of the proposal ardently desire the establishment of a national seashore area on Padre Island. There are no insurmountable obstacles in the way of early achievement of this worthy projand needless delay will not sit well with public opinion, especially in this area.

Secretary of the Interior Seaton has given the Eisenhower administration's blessing to a bill pending in the U.S. Senate specifically naming Padre Island as one of three seashore areas to be federally acquired for public recreation, wildlife conservation, and preservation of virgin natural beauty for posterity. The plan has been approved in principle by all Federal, State, and local officials whose agreement is essential to the accomplish-

The problems of private property rights, mineral development, naval activities, and administrative jurisdictions remain to be finally negotiated. But the area of agree-ment has broadened on these matters to the point where satisfactory solution appears assured.

The main snag now is the difference between the National Park Service's recommendation that the wilderness park cover an 88mile stretch of the island and the 56th legislature's 50-mile limitation in its 1959 consent resolution. That difference surely can be amicably resolved, or compromised; the concern is that the settlement should not be unnecessarily delayed.

It has been suggested that Congress postpone authorization until the Texas Legislature can consider expanding or removing its 50-mile limitation, but that would waste valuable time. One sees no reason why Congress could not approve an "open end" authorization, and leave it to the Federal administration to negotiate the actual size with State authorities.

There is no doubt that the Federal park officials want to develop what is best for this area and this State, as well as for the national heritage. What the people of Texas, and particularly the gulf coast, should now insist upon is the fullest measure of cooperation from their State officials and representatives in Washington to carry this plan to a speedy and successful conclusion.

Federal Subsidies Inflate School Costs (H.R. 10128)

EXTENSION OF REMARKS

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. FISHER. Mr. Speaker, in considering the question of Federal aid for education, we need to take a close, hard look at the facts. Is such Federal aid actually needed? Is it good business to send a tax dollar to Washington and get back a smaller dollar in the form of socalled Federal aid for school construction? Should we risk a degree of Federal control over education by undertaking a mammoth \$975 million grant and aid program for school construction?

On the question of need, the U.S. Office of Education states that the peak need for new classroom construction has been passed. From that source it can also be assumed that the anticipated annual classroom construction rate, without Federal aid, will more than meet future requirements—even as estimated by the bill's proponents.

That same office, after a recent survey, reports that only 237 school districts in 45 States (embracing 35,000 districts) have exhausted all sources of borrowing for classroom construction. The total classroom need in these 237 "borrowed-up" districts was less than 3,100; and 45 percent of the districts had fewer than 600 pupils enrolled.

It is also significant that almost 50 percent of all classrooms used in 1959 have been built since World War II.

Moreover, it is estimated that on a national average property values for school tax purposes are assessed at 30 percent of real values.

It would seem self-evident, therefore, that in the face of available information the facts do not support the need for this form of Federal aid as proposed.

Second, is it good business from a tax-payer's standpoint to send a tax dollar to Washington and get back only a portion of it, to help build classrooms? Or, on the other hand, would it not be better, from the taxpayer's standpoint, to retain that tax dollar at its source, avoid the shrinking effect of sending it to Washington and then back to its source, and be able to get the full benefit of that tax dollar in the construction of classrooms, and with no strings attached in the use that is made of it?

On this subject of costs, it is necessary for local interests to take into consideration section 8 of the pending bill, H.R. 10128, which provides:

SEC. 8. (a) The State educational agency of each State which receives funds under this Act shall give adequate assurance to the Commissioner that all laborers and mechanics employed by contractors or subcontractors in the performance of work on school construction projects financed in whole or in part under this Act will be paid wages at rates not less than those prevailing on similar construction in the locality as determined by the Davis-Bacon Act.

A difficulty often encountered in the application of the Davis-Bacon Act is that wage rates set by the Secretary of Labor in a given community may reflect prevailing wages in a locality, but not those that prevail in a particular community.

Let me cite one example to illustrate that fact. Two schools were recently built simultaneously in Selma, Ala.—the Edgewood Grade School, upon which no Federal funds were used, and the New Knox Elementary School upon which Federal funds were used.

Here are the wage rates applied to the two construction jobs:

[Per hour]

Job category	Edgewood School (no Federal funds)	Knox School (Federal funds)	
Common labor Carpenter Concrete firisher Concrete mixer and traveling	\$0.75 1.75 1.75	\$1.15 2,25 2.85	
machine operator.	1.50	2.75	

It can be seen that the federally set wages ranged from 40 cents to \$1.25 more per hour than local wages for the same kind of work. It appears from this example that the wage rates set by the Secretary of Labor in that particular community were substantially higher than the prevailing wage that existed there, although it may have reflected the prevailing rates in a locality that perhaps included a metropolitan area.

I have pointed out that the tax dollar that is sent to Washington and comes back later in the form of Federal aid, is a smaller dollar when it returns to its place of origin. I do not know just how much of its true value is lost in this form of Federal aid. In the field of Federal aid for slum clearance, for example, it is said that some 221/2 cents of each dollar is consumed by the Federal overhead expense of making the dollar available and returned to its original source. And in the case of public housing, the brokerage fee paid to the Government on each tax dollar spent amounts to 39.9 cents.

Moreover, Mr. Speaker, I think most people agree with the warning so often given by the late Senator Robert Taft when he said: "Federal aid means Federal control. There is no middle ground."

A study of the history of Federal aid programs reveals that as a general rule such aid entails conditions and terms under which it is to be spent. We begin with it here by the application of the Davis-Bacon Act right at the inception, with Uncle Sam dictating to the local community how much they must pay the laborers who do the work, without regard to the local labor market and the wage rates that may actually prevail in a particular community.

It becomes evident, therefore, that if the taxpayers' money is to be sent to Washington, then returned for local use, it will come back with strings attached. That is one of the elements in the price that the people must pay if they choose to make use of Federal aid on local projects of this nature.

Therefore, while certain Federal aid programs have become accepted in this country, it would seem wise to take a close, hard look at the new ones that are proposed. Unless there are compelling reasons to justify such activities, it would seem the better part of wisdom to allow local communities which can do so to assume this responsibility on a local level, and keep Uncle Sam out of it.

Support by Mutual Savings Banks for the President's Position on Interest Rates

EXTENSION OF REMARKS

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, May 17, 1960

Mr. KEATING. Mr. President, the Sunday, May 8 edition of the New York Herald Tribune contained a section marking the 150th anniversary of the existence of mutual savings banks. Donald I. Rogers, the able and articulate business and financial editor of the Tribune, headed up the team of financial writers who contributed to this undertaking.

One of the articles included in this section and which is of special interest deals with the President's request that the interest rate ceiling on long-term Government bonds be removed. The writer of this particular article indicates that the Nation's savings banks and related thrift institutions favor the removal of the arbitrary and unrealistic 4½ percent curb on the Treasury Department in the financing of the national debt.

I heartily agree with these sentiments and am hopeful that the legislative "log jam" on the interest rate issue will be cleared so that Congress can enact the much needed and widely supported request that the existing ceiling be removed.

Mr. President, I ask unanimous consent that the above referred to article from the New York Herald Tribune be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the Record, as follows:

FOUR-AND-ONE-FOURTH-PERCENT BOND CEILING STIFLES TREASURY

Congressional action to lift the 4¼-percent ceiling on long-term Treasury bonds could be a major factor in determining the flow of savings into the Nation's thrift institutions.

Although the Government expects to have a balanced budget in the current fiscal year and anticipates a surplus of \$4,200 million the following year, the Treasury still faces a major task in refinancing issues falling due.

The Government must refinance \$58 billion of maturing securities during 1960. How much of this can be placed in long-term bonds and how much must be placed in notes or bills will have a great influence in determining short-term rates in the next several months.

Under present market conditions it seems unlikely the Treasury can get much money in the capital market when it must labor under the 4½-percent ceiling on long-term securities. Thus the Treasury could be forced into the short-term sector of the money market, a move that would tend to pressure up interest rates generally.

"At this point, it appears that bond-rateceiling legislation will not be enacted now in view of the recent sharp decline in yields on Government securities," says Kenneth G. Heisler, managing director, National League of Insured Savings Associations.

"However," he adds, "the picture could change without warning." Although he goes on to say, "A rise in the cost of money is not to be discounted this summer and fall. with the possibility that the Treasury may find itself back in the financial stratigacket.

which gripped it through much of 1959."

It was in 1959 when the Treasury was in the "financial straitjacket" described by Mr. Heisler, that the Government issued the

"magic 5s"—notes returning 5 percent yield. The results were anticipated, but perhaps not on the scale which actually took place. Depositors at savings banks and other thrift institutions withdrew funds in order to take advantage of the higher yields being offered

by the Treasury bills.

Thus savings banks found themselves in direct competition with the U.S. Government in the matter of collecting savings of the general public. And it is entirely possible that such a thing could occur again, though

perhaps not involving as great a drain on thrift accounts as occurred in 1959.

However, any estimates of Treasury offerings, of necessity, depend on many factors, including, for instance, the general tempo of business activity. In a period of brisk output and high consumer demand, money would probably continue tight as corporations build up inventories in anticipation of further business. However, if business activity should decline, there would be some easing in the money supply and thus perhaps more funds available to the Treasury and to other borrowers.

Perhaps with this notion in mind or just to prove the case against the 4½ percent ceiling, the Treasury recently offered, 25-year bonds carrying a 4½ percent coupon. The results were disappointing, at the least.

In announcing the bond offering the Treasury said it would be satisfied to sell \$500 million, but would accept up to about \$1,500 million. Investors, apparently none too impressed with the 4¼-percent label, asked for only \$370 million—the Treasury bought \$100 million itself for various Government trust accounts and thus came close to the \$500 million figure.

Still the example tended to prove there was little hope, under present conditions, for the Treasury to do much in the capital market.

"If business turns upward, as is generally expected, the problems of the Treasury will grow in direct proportion, with the result that money may tighten and rates again may rise," says Mr. Heisler. Savings banks can be expected to feel the squeeze.

However, it is now popular to talk about inflation being virtually licked. Observers point to a firm bond market, relatively stable prices, and a declining stock market. Thus, they contend, fixed income securities will be attractive investments. People, they say, will lend money for years, if they are reasonably certain it will not depreciate in value during the period.

Not all observers are as convinced: "Despite reassuring statements from high authorities that both inflation and the fear of it are dead, I remain doubtful because the whole philosophy of the welfare state is against any such optimism," says Robert G. Van Tleave, vice president, research, for the investment firm C. F. Childs & Co.

Probably the only factor which could materially alter the short-term outlook, assuming a business recession does not occur, would be for Congress to lift the 4½ percent ceiling on Government bonds and thereby allow the Treasury to put more of \$58 billion refinancing this year in bonds.

The Plight of the Railroads

EXTENSION OF REMARKS

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, May 17, 1960

Mr. JAVITS. -Mr. President, the plight of our country's railroads has become of major public concern, affecting not only the industry itself, but the very economy of this Nation. According to the recently released report of the Interstate Commerce Commission, Bureau of Transport Economics and Statistics, dated April 3, 1960, the railroads have hit a new low in passenger service. On February 9, in introducing Senate Joint Resolution 158, "To establish a National Advisory Committee on Rail Transpor-

tation," I emphasized that it is in the interest of national security and the growth of our Nation's economy that the combined resources and facilities of the railroads and the Federal Government be channeled into a coordinated, maximum effort in research and development programs to enable this vital industry to modernize its facilities and upgrade its operational efficiency and services.

Realizing the gravity of the situation, Secretary of Labor Mitchell, at a recent AFL-CIO meeting in Chicago, stated:

Whereas in the past Government regulation of the railroads was a protection of the public interest, the protection of the public interest now demands a fresh approach to economic policies, regulation, subsidies, and taxation.

Secretary Mitchell feels that further waiting will only aggravate the continuously deteriorating position and that economic change does not wait.

I ask unanimous consent to have printed in the Appendix of the Record an editorial from the New York Times of April 28, entitled "Antirailroad Subsidies," quoting these remarks of Secretary Mitchell and pointing up the concern being expressed more frequently throughout the Nation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ANTIRAILROAD SUBSIDIES

At an AFI.—CIO meeting in Chicago, Secretary of Labor Mitchell stated some of the facts of life bearing on survival of the railroads. He remarked that the Federal Government subsidizes shipbuilding and losses of American flag lines; it deepens and develops inland waterways; it subsidizes airlines through construction of terminals and mail-carrying; it has subsidized truckers through building public roads. "The railroads remain the great unsubsidized portion of the American transportation system," said Mr. Mitchell.

He went on to suggest "the gradual elimination of all Government subsidies in transportation in America and * * * the introduction of user charges so that each mode of transportation carries its fair share of public expenditures from which they now profit unequally."

We must recognize, as to railroads and Government on all levels, that we no longer deal with a monopoly industry. Not only has the relative position of the railroads in competition with other modes of transport declined, but as Mr. Mitchell said, the growth of the competitors is going to increase rather than diminish. Whereas in the past Government regulation of the railroads was a protection of the public interest, the protection of the public interest now demands a "fresh approach to economic policies, regulations, subsidies, and taxation."

"I suggest that a fundamental overhauling of the Interstate Commerce Commission and the laws that govern transportation is necessary so that Federal regulation produces equality of competition and not an index to the competition of yesterday," said Secretary Mitchell. But does the administration or the Congress need the prodding which Mr. Mitchell invites, in the form of a "joint recommendation on this subject from labor and management," to take the initiative? If, as he warns, economic change does not wait, and the railroads and their employees face a continuously deteriorating position, then Congress, State legislatures, and local governments should not wait, either, for further petitions already innumerable.

Sailing the Arkansas

EXTENSION OF REMARKS

HON. ROBERT S. KERR

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 17, 1960

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article from the Wall Street Journal of Friday, May 13, entitled "Sailing the Arkansas"—a big, new waterway.

Our dreams to sail a prairie fleet across the State of Arkansas and into landlocked Oklahoma are at long last approaching reality. This important new, economic frontier is hailed by the authoritative Wall Street Journal and brought to the attention of the business and industrial world.

Present plans will bring the new waterway to near Tulsa, and efforts are underway to extend it to central Oklahoma. The economic impact will be felt throughout the region, and have a cumulative effect on the entire inland waterway system.

I am particularly gratified over the progress thus far because navigation has been a basic part of my program for land, wood, and water, and I salute the return of commerce on modern barge tows to the once bustling Arkansas so famous in history and so promising for the future.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SAILING THE ARKANSAS—AREA RUSHES TO RE-CRUIT FIRMS AS ARMY PUSHES WORK ON WATERWAY—CITIES TALK OF CHEAP POWER, TRANSPORTATION; RAILROADS FIGHT FUNDS FOR PROJECTS—LINKING OKLAHOMA TO THE

(By Burt Schorr)

CATOOSA, OKLA.—On the edge of this community of 500 people, hard by U.S. Highway 66, a bright yellow sign flashes an intriguing greeting: "Welcome to Catoosa—Oklahoma's Gateway to the Sea."

To travelers with even a casual sense of geography, the sign may cause a start. The nearest "sea" is the Gulf of Mexico, some 500 miles southward. And the only watercourse hereabouts is the shallow, winding Verdigris River, which snakes along about 2 miles east. But Catoosa's claim, though perhaps premature, is no pipedream. For engineers and construction workers now are embarked on an ambitious \$1.2 billion Federal scheme to open the Arkansas River and one of its major tributaries, the Verdigris, to commercial navigation and industrial exploitation.

Development of the Arkansas River—last of the major Mississippi River tributaries to be made navigable—long has been urged by local boosters. And now, with actual construction well underway, they're out recruiting new plants and businesses in a long-term effort to shore up the area's sagging economy. Biggest sales arguments: Cheap barge transportation, hydroelectric power, and plenty of water for industrial uses.

ECONOMIC IMPACT IS BROAD

But the Arkansas River project, like earlier ones in the Missouri and Ohio River Valleys, packs a more-than-local economic punch. For one thing, such benefits as flood control will accrue to the vast Arkansas Basin. Experts insist, too, that the project could alter

historical patterns of commerce and industry in this area, where at least some natural and mineral resources remain untapped. And U.S. taxpayers, who stand to pick up most of the tab, might also find more than passing

interest in this plan.

Key of the plan, of course, is the Arkansas River-which forms in the Colorado Rockies, broadens and slows in the flat Kansas Plains and is nourished anew in the rolling, rainier sections of eastern Oklahoma. It rambles some 1,450 miles before flowing into the Mississippi about 60 miles southeast of Pine Bluff, Ark. Fed by dozens of small, fickle streams, the Arkansas sometimes becomes a savage torrent. But more often it's a docile, sediment-filled river with shoals that have proven treacherous to boatmen since the first white men began exploring it in the 1680's. The French in 1686 established a fur trading post on the Arkansas, using the river to reach Indian settlements upstream.

Under present plans the Arkansas River project calls for a channel 9 feet deep running from Catoosa to the Mississippi, 520 river-miles downstream. Keys to the navigational phase of the project are 10 major dams shown on the map on page 4. [Not printed in the Record.] But there will be other dams, whose primary functions will be officed control and power production. All told, the U.S. Army Corps of Engineers figures to build 22 dams on the river and its tributaries

over a period stretching into 1973.

The \$1.2 billion cost of the project is about one-third of the total sum of \$3.5 billion spent by the Federal Government so far on all previous multiple-purpose navigation projects—of which \$3.2 billion went for 32 dams that provide hydroelectric power, control flooding, and permit navigation in many parts of the country. By comparison the Ohio River project, completed in 1929, cost \$125 million—but bottlenecks at some of the locks now are forcing a modernization program that may eventually run to an additional \$1.1 billion.

WORK PICKS UP SPEED

So far, Congress has appropriated \$122 million to the Arkansas navigation project and, officials say, it's likely to approve the \$53.3 million requested in the President's budget for fiscal 1961. So, with most of the preliminray work out of the way and building contracts signed through 1963, construction at several damsites is picking up speed.

"This is just the beginning here," says the yellow-helmeted supervisor of a work crew at the site of the projected Keystone Dam, 30 miles west of Catoosa, where earth moving machines of Hyde Construction Co., Jackson, Miss., are churning through bottom land gumbo. "When we get rolling, we'll have 800 men working 3 shifts. And before we finish our part of the job 2 years from now, we'll have put in a rail siding to bring in supplies, moved a road, poured 750,000 cubic yards of concrete for the spillway and built a refrigerating plant to cool it while it sets."

Completed, Keystone will stretch 4,570 feet across the Arkansas Valley to form a two-forked lake capable of storing 1.9 million acre-feet of water, plus all sediment deposited for the next 50 years. (An acre-foot of water would cover an area of 1 acre to a depth of 1 foot.) Sixty miles south of Catoosa, bulldozers are chewing out the foundations of Eufaula Dam on the Canadian River; it will back 3.2 million acre-feet of water plus sediment into the Canadian, North Canadian and Deep Fork valleys. North of Catoosa, on the Verdigris, the Oologah Dam spillway is nearly completed and the 4,000-foot earth-filled dam itself is being pushed across the riverbed. Farther upstream, highways, powerlines and pipelines are being relocated and abandoned oil wells plugged off in advance of creation of a million acre-foot reservoir; the reservoir will be filled in 2 years. The three new dams, part of a planned seven-dam upstream system, are price-tagged at \$387 million.

are price-tagged at \$387 million.

With construction started, businessmen and basin development boosters up and down the river are brightening. "For the first time since we began fighting for this thing, we feel we're over the hump," comments Verser Hicks, Tulsa banker and president of the Arkansas Basin Development Association, Inc., leader in local lobbying efforts.

Here in Catoosa, western terminus of the Frisco Railroad in territory days and noted then for its booze, bullets and blondes, townsfolk predict a spurt in land values—even before buildozers chase the wolves and coyotes out of the wooded bottomland below the Highway 66 bridge where engineers plan to excavate a barge turning basin. Catoosa today is primarily a commuters' town; most folks work in Tulsa, 12 miles to the west.

"We're getting a bigger turnout at our monthly chamber of commerce meetings than we've ever seen before," enthuses Waite Twist, chamber secretary and Catoosa's superintendent of schools. "Our first aim is to get an industry here with a payroll. We think water transportation will make a good selling point and we're planning a port authority, but that's a little way off."

PORT LEGISLATION PASSED

Nearby Tulsa, Muskogee, Fort Smith, Ark., and Little Rock are also mulling port plans. A law passed last year by the Oklahoma Legislature permits any combination of cities and counties to create authorities with power to sell bonds and make port improvements. Similar legislation was passed 13 years ago in Arkansas and reinforced in 1959.

Water for navigation and industrial uses is proving a potent argument in the campaign to bring in new industries. Arthur Lindberg, trim, youthful industrial manager of the Tulsa Chamber of Commerce, says the vice president in charge of manufacturing for a large rubber company at first gave him only an hour's time for his sales talk. "When he heard there was going to be water," adds Mr. Lindberg, "he canceled all his other appointments and we talked for 3 hours."

As a result, Mr. Lindberg reports, the rubber company and a large petrochemical concern now are considering locating in Tulsa. "The chemical people want to split the costs on an \$80 million ethylene and polyethylene plant with a petroleum company," he says. "They're still dickering."

Tulsa's courtship of new industry rises out of a concern over a slowdown in growth affecting the entire basin area.

Hailed as the "oil capital of the world," Tulsa serves as headquarters for 850 oil companies and firms an allied activities. But the city has shown little growth since the post-Suez slump hit domestic oil exploration and production. Some oil companies have been shifting operations from Tulsa to Denver and Houston. More disturbing: A recently completed survey disclosed that, of 75 industries which located in Texas, Arkansas, Kansas, and Missouri in the past 2 years, 68 had not even bothered to look for sites in Oklahoma.

"Tulsa has a golden past, a dark present and a tremendous future," sums up L. W. (Bud) Grant, Jr., president of the Home Federal Savings & Loan Association in Tulsa and an enthusiastic navigation booster who will lead a businessmen's barge tour of the Ohio this summer. Evidence of the current problem, he adds, is the sharp slide in 1959 housing starts in the city and further dips expected this year.

FARMING NOT ENOUGH

"Eastern Oklahoma is at the point where agriculture will not support our population," agrees Glade R. Kirkpatrick, owner of the Guaranty Abstract Co. in Tulsa and one of the founders of the Arkansas Basin Development Association. "The same is true for oil. Unless we develop payroll industries, we'll be hurting."

Barge traffic on the projected channel is expected to be the major factor in changing this gloomy economic outlook. Surveys by the Corps of Engineers indicate, in fact, that without it there would be little excuse for the Arkansas-Verdigris project. Of the \$64.5 million in benefits forecast annually when the dams are completed, \$40.5 million would be attributable to navigation, according to the surveys. Other benefits: \$9.2 million from a 3-billion-kilowatt-hour hydroelectric capacity; \$7.2 million from fiood control; \$6.6 million from riverbank land saved through channel stabilization; \$900,000 from use of water by local communities, and \$200,000 from rental of reservoir shoreland.

To determine navigation benefits, Army Engineers first estimate cargo tonnages that would be available to move along the waterway if barge transportation were possible. This figure is then multiplied by the average dollar savings per mile over present transportation. A small allowance also is made for area industrial growth resulting from availability of barge service. In making these estimates, the Engineers draw on the area's economic data, past and present, and on experiences of other areas where rivers have been turned into navigable arteries.

The chief advantage is expected to be the considerable savings anticipated from burge transportation over present rail rates in Oklahoma—ordinarily a high tariff area. I.E. Chenoweth, manager of the Tulsa Chamber of Commerce traffic and transportation department, estimates that transportation charges on coal shipments from eastern Oklahoma to Pittsburgh, for example, would run more than \$15 a ton by rail if Oklahoma coal were being shipped to Pittsburgh. By barge, he figures, the shipping cost would drop to \$6 a ton. Similarly, steel from Pittsburgh to Tulsa would cost around \$8 a ton to ship, compared with the present \$23. Wheat from Tulsa to New Orleans would drop from the present \$17 a ton to around \$4.

RAILROADS BATTLE BACK

With such fierce competition just a few years off, it's not surprising that most railroads are fighting a bitter-end action against spending tax dollars for the benefit of barge lines. And until recently they've had help from conservative forces in western Oklahoma who looked on Arkansas navigation as another example of unnecessary big Federal spending. "Big Dam Foolishness," & book by Elmer T. Peterson, editorial writer for the Oklahoma City Times and the Daily Oklahoman, argued in 1954 that the proposed Arkansas project was further evidence of congressional pork barrelers catering to power-mad Army Engineers. Today, however, many former critics have changed their minds and are talking about extending navigation and water supply all the way to Oklahoma City, some 135 miles further west.

The railroads have concentrated their fire on Corps of Engineers predictions that annual movements of cargo on the Arkansas will total 13 million tons, the tonnage required to justify navigation costs. One study recently completed for the Association of American Railroads even contends that cargoes on the river will total only 1.2 million

tons a year.

One lone railroad president has taken the maverick's role of welcoming the coming of the barges. "We're convinced the overall development in eastern Oklahoma resulting from navigation, will far exceed any loss in rail freight," says Robert H. Lomax, who heads the Kansas, Oklahoma & Gulf, Midland Valley and Oklahoma City-Ada-Atoka, three connecting lines serving Oklahoma and neighboring States. Seated before a rolltop

desk in his high-cellinged Muskogee office, Mr. Lomax tells a visitor:

"In 1958, the Midland Valley hauled 500,000 tons of coal and the Kansas, Oklahoma & Gulf moved nearly 20,000 cars of wheat, torn, and small grains. This is a large share of our income and we're certain to lose much of it to the barges at first—but new industry will help us more than make it up. We'll have plenty of work hauling freight to and from the barges."

MINERALS MEAN TRAFFIC

The U.S. Bureau of Mines estimates that there are more than 60 commercially produceable minerals in the lower Arkansas-White-Red River Basins, which cover parts of three States—Missouri, Oklahoma, and Arkansas—and basin boosters are counting on these resources to build barge traffic.

"Why, there's enough coal alone in eastern Oklahoma and western Arkansas to make navigation worth while," asserts Col. Francis J. Wilson, a retired Corps of Engineers officer who serves as executive vice president of the ABDA. "We've got 55 million tons in reserves. Furthermore, this is a metallurgical or coking coal. It's superior to the steam coal found in Kentucky and southern Illinois," he

Colonel Wilson notes that steel mills in Texas, Utah, Mexico, and California are using Oklahoma coal at the present time. "We're shipping relatively small amounts to them," he says. "We should be able to move it to the Chicago-Gary area, but at present rail rates, we can't get it farther east than Batesville, Ark."

Aluminum producing prospects also are encouraging basin developers. Ninety-six percent of the bauxfte mined in the United States now comes from the Little Rock region. For refining, this is mixed with higher grade grees from the Caribbean.

"It's obvious that the barge trip between Little Rock and the gulf, where the foreign ore arrives by ship, would be cheaper than the trip to the Ohio—where most of the country's aluminum is now being smelted," Colonel Wilson contends. (One Ohio Valley advantage: An estimated 70 percent of the U.S. aluminum market lies within a 500-mile radius of the giant Kaiser aluminum plant at Rayenswood, W. Va.)

Natural gas and crude oil, both for use as fuel or as raw materials in petrochemical operations, are also plentiful in the area of the waterway. It's estimated there are reserves of 75 trillion cubic feet of natural gas and 5 billion barrels of oil in Oklahoma, Kansas, Arkansas, Texas, Colorado, and Louisians. Other resources in and around the Arkansas Basin: Large supplies of salt; glass sands, gravel and building stone: gypsum, tripoli, volcanic ash, special-purpose sands and limestones; and many rarer metals such as columbium and titanium.

San Antonio Citizens Taking Important Lead in Helping Build New Lives for Needy Old Folks in Pioneering Golden Age Center

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 17, 1960

Mr. YARBOROUGH. Mr. President, the people of San Antonio, working through their local housing authority, are taking a nationally important and significant step toward helping their needy elderly people.

Within the next 30 days, the city's \$1,927,000 Golden Age Center—a nine-story apartment building containing 185 apartments—will be formally dedicated, and some 300 senior citizens will take residence there.

Mrs. Marie C. McGuire, executive director of the San Antonio Housing Authority, reports that inquiries concerning construction and planning of the home have been received from public officials and housing authorities in all sections of the Nation. It is an extremely worthy project and I am proud that the people had the vision and dedication to take the lead in this challenging field.

I ask unanimous consent to have printed in the Appendix of the Record an article from the May 1, 1960, edition of the San Antonio Express and News, by Sam Kindrick, entitled "A Bright, New Golden Age Center."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A Bright, New Golden Age Center (By Sam Kindrick)

Three hundred aged San Antonio citizens will begin a new life this summer with completion of one of the most fabulous public service projects this country has seen.

It's the \$1,927,000 Golden Age Center—a nine-story apartment building, to contain 185 apartments—now being completed at Labor and Barrera Streets.

"The center will be finished between May 15 and June 15," said Marie C. McGuire, executive director of the San Antonio Housing Authority, "We expect dedication services around June 1."

Already 700 have applied for space in the new center.

Funds are being received to furnish and equip the 5,600 square foot center on the first floor of the building that will be a veritable USO for the elderly.

Programs covering recreation, counseling, library, indoor and outdoor play and health are now being planned. The art work to adorn the building is fantastic.

ARTISTS HELP MAKE IT UNIQUE

A host of San Antonio artists have joined forces in completing the architecture, making the undertaking unique in the country.

The structure is T-shaped. Flanking the main entrance is Cecil Casebier's mosaic abstraction—a 45-foot-wide theme executed in yellow, gold, gray, black and white, giving a glow to the entire building.

Lobby floor and walls will be gay with

Lobby floor and walls will be gay with multicolored patterns as the light filters through three panels of fused glass executed by Dorothy Steinbomer.

A mural in quiet shades of blue covers one entire wall of the library. Portraying themes from the Old and New Testament, this large mural by Ruth Dunn will be an intrinsic and natural part of the library decor.

Across from the library, June Kroll's sand sculpture, using Genesis as a theme, bedecks a private patio with 8-foot chocolate brown walls.

Also in the patio is a rectangular pool complete with a fishing scene designed by seven San Antonio ceramists.

On the east patio wall, Amy Freeman Lee's "Enchanted Voyages"—two murals 6 feet by 40 inches—depict the theme of fanciful travel through means of imagination.

Leaving the patio through iron gates to the outside, we find a 5-foot sculpture in Texas limstone surrounded by trees and benches and set off by the brown wall background. This is the work of Robert Lancaster, director of the Art Department of South-western University.

Many, many other works of art will decorate the new center.

WILL THEY BE SATISFIED?

But, still the question arises: Will the elderly be satisfied with such modernistic dwelling? Don't most old folks want to return to a rural setting with a garden and a few chickens?

This question has been answered by surveys which indicate that while a few wanted this, the large majority wanted the convenience, comfort, and accessibility of a midtown area.

Residents of the Golden Age Center will pay rent based on 20 percent of their incomes with a \$24 monthly maximum.

"Average income expected is about \$100 monthly," explained Marie McGuire.

In addition to providing a place to study, work, and lead useful lives, the new center provides unequaled comfort facilities.

Since many accidents occur in the bathroom, showers will be equipped with comfortable wooden seats; tempered glass doors that won't break instead of dangerous shower curtains; no curb at shower so that a person in a wheelchair may roll to the shower seat without the sid of an attendant.

Also, there will be an emergency bell 2 feet from the floor near the lavatory.

There will be no stove to fall against. Heat will come from infrared lamps installed in the ceilings.

In the kitchens, all cabinets and shelves are within arm's reach.

Nixon's Stature Pointed Up

EXTENSION OF REMARKS

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1960

Mr. PELLY. Mr. Speaker, the political stature of Vice President Nixon and his mental strength are well pointed up in the attached editorial from this morning's New York Times, which under unanimous consent I include following these brief remarks:

MR. NIXON ON TV

In his television interview Sunday night Vice President Nixon laid considerable emphasis on the difference between the "open society" of the United States and the "closed society" of the Soviet Union. His own appearance on that amizing nationwide broadcast lent point to his argument about the distinction.

No matter what one's personal or political feelings are about Mr. Nixon, one would have to admit that it was an extraordinary and daring thing for the Vice President of the United States to do: To submit to 334 hours (less the many tiresome commercials) of unrehearsed questioning about his views on foreign and domestic affairs, not to mention Presidential politics. In no closed society, and we doubt that in any other open society than the United States, would the second highest officer of the Government be willing to undergo so free-wheeling an interrogation as that to which Mr. Nixon voluntarily subjected himself on the TV program "Open End." The political advantage to him was obvious; but the pitfalls were many, and he acquitted himself well.

Norwegian Independence Day

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 17, 1960

Mr. MULTER. Mr. Speaker, we honor today a milestone in Norway's more-than-thousand-year-old history. Norway's Constitution Day dates from but a century and a half ago—May 17, 1814.

The Norsemen, however, were recognized as a separate nation as early as the 9th century. Political unification of this ancient country is identified with the Viking era; as is, indeed, the first connection with North America. For the intrepid Norsemen were famous for their voyages, reaching as far as Greenland and the coast of the North American Continent. This day May 17, 1814, marks the reemergence of the nation of Norway.

During the intervening centuries the political independence of Norway had more than once been submerged; but the spirit of freedom was unconquerable. It reasserted itself most vigorously after the Napoleonic Wars. The people refused to be dominated either from without or within.

On May 17, 1814, Norway, through a national assembly, was declared independent. The constitution then adopted was based on the ideas which had inspired the American and the French Revolutions, on the principles of Montesquieu and John Locke's doctrine of the sovereignty of the people.

The spirit of independence in Norway was, however, long linked with a spirit of cooperation. During the 19th century Norway was linked with Sweden in a union. Theoretically each country was to preserve its complete, sovereign independence. In fact, however, Sweden became dominant, particularly in the conduct of foreign affairs; and in 1905 the union was dissolved. Norway became an entirely independent nation.

Significantly, the democratic spirit of a people was never more clearly demonstrated than in their election of a king. When, in 1905, King Haakon VII commenced his long reign as a much-loved "First Citizen," he was the first man ever to be elected king by modern democratic processes.

Together with their love of democracy and independence the Norwegians have maintained their willingness to cooperate. Clear evidence of this spirit

exists today in the part that Norway plays in the North Atlantic Treaty

Organization.

Emphasizing the fact that the principal aim of this collective system is to prevent war, Norway has placed great weight on NATO's activities to promote conditions of peace.

Norway has sought to strengthen political contacts between member countries for consultative activity on political problems. Such measures are not only valuable for cooperative purposes—and Norway places emphasis on the nonmili-

tary field—but also contributes to the relaxing of tensions. Such a policy is typical of Norway's traditional avoidance of international conflict.

We in the United States are proud to feel a kinship with Norway—this country of demonstrated faith in the principles of democracy, cooperation, and the promotion of world peace—one which has sent so many of her sons and daughters to our own shores.

Vice President Nixon

EXTENSION OF REMARKS

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. DEROUNIAN. Mr. Speaker, our great Vice President accepted a challenge few men would, or could, take on, and the American people were given an unparalleled opportunity of judging the capabilities of a presidential candidate.

Mr. David Lawrence sums up Vice President Nixon's Sunday night appearance on television, briefly and accurately. I am pleased to submit his article, as it appeared today in the New York Herald Tribune:

TODAY IN NATIONAL AFFAIRS—NIXON'S COM-POSURE, CANDOR IN TV MARATHON PRAISED

(By David Lawrence)

Washington, May 16.—A quiz to end all quizzes took place from 10 o'clock Sunday night until 1:45 Monday morning. Vice President Nixon stood the ordeal of hostile questioning which covered everything from the "spy" incident and the ramifications of international policy to the most delicate question of domestic politics and campaign personalities.

This correspondent watched the television marathon from start to finish and wondered if any other aspirant for the presidency on either ticket could have done as well as the Vice President did.

What was amazing was not only Mr. Nixon's endurance in an interview that ran almost 4 hours, but his calmness and frankness in the face of the sharpest type of criticism in the questions, which were, indeed, provocative.

Not once did the Vice President lose his temper or his poise, and not once did he fail to give an answer to questions relating to the administration's domestic and foreign policies. He refrained from answering only two questions. They were on politics—he wouldn't say whom he would favor as a running mate, and he wouldn't appraise the chances of the various contenders for the Democratic Party nomination.

There was not the slightest trace of resentment over the questions, even when one of them implied that back in his early campaigns in California Mr. Nixon had treated his opponents harshly.

"NEW" AND "OLD" NIXON

The interrogator—David Susskind—wanted to know why there was talk every now and then about a "new Nixon" and an "old Nixon." The Vice President said with a smile that maybe it was because the critics didn't know the "old Nixon." He said that, of course, almost every man matures with years of experience in public life and implied that 7 years of actual contact with the making

of public policies had enabled him to get a wider understanding of many controversial questions.

It was impressive how detailed were Mr. Nixon's answers to questions about such highly controversial matters as medical care for the aged, higher salaries for public school teachers, school construction, civil rights and lunch counter sit-ins, legislation relating to aid for distressed areas, tax reform and tax reduction, as well as labor-management relations. In answer to a question repeating the criticism that the Republican Party favors big business, Mr. Nixon said he thinks the party should be neither anti-big-business nor anti-big-labor, but should be in favor of good business and good unions. He said he doesn't favor unions of the Hoffa type.

DIFFERS ON DEFINITIONS

There was a discussion as to what is meant by conservative and liberal or progressive. Mr. Nixon disagreed vehemently with a definition cited from the dictionary that a conservative is one who opposes all change, while a progressive makes use of new ideas. Vice President drew a distinction between sound and unsound measures, particularly in the conduct of the Nation's finances. He said it is important to have progress and change which will conserve the best of the past and build on that, but it is also important not to follow those so-called liberals who want to scrap everything that we are presently doing in order to solve the problem. This approach he rejected as inefficient and not the best way to solve the problem.

SKILLFUL IN WORLD AFFAIRS

It was in the international arena that the Vice President seemed particularly skillful, especially in his analysis of the Khrushchev tactics. Mr. Nixon explained some of the intricacies of international affairs today and was able to tell firsthand about his visits to 54 different countries and especially about some of his talks with Prime Minister Macmillan, General de Gaulle and Chancellor Adenauer.

Mr. Nixon indicated quite clearly that, if elected, he would pursue President Eisenhower's policies of cooperation with the Democratic Party in Congress. For the Vice President said it was certain that the Senate wouldn't change party control in the coming election, and he might even be faced, if elected, with a Democratic majority in the House.

TV "REPEATS" LIKELY

The Vice President conceded that the Republican Party, from an organization standpoint, is weak and that the administration is stronger than its party. Mr. Nixon indicated that he foresees a tough fight ahead to get Republicans to the polls and that his party is in need of better candidates at the local level, both for Congress and State offices.

While the Vice President said he wouldn't indicate any choice for a running mate, he did say that whoever it was should be in agreement on major policies with the man at the top of the ticket.

All in all, it was a remarkable performance, and many more Americans will have an opportunity to see and hear a "repeat" of the program, which is called "Open End." In addition to the originating station in New York City, WNTA-TV, only two TV and four radio stations carried it "live," but the producers report that a large number of other stations around the country are scheduling a rebroadcast of the video tape of the original show.

It is doubtful whether any future speeches or quizzes will be any more useful in helping the voter form an opinion on the qualifications of Vice President Nixon for the Presidency. Mr. Nixon hinted that he would be glad to debate with a rival candi-

date, but even this could hardly compare in the effectiveness with the technique of hard-hitting, biting, and often cynical questions thrown at Mr. Nixon in the marathon quiz of Sunday night.

Legal Entry of Mexican National Agricultural Workers

EXTENSION OF REMARKS

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. GATHINGS. Mr. Speaker, on May 12 the House Committee on Agriculture reported favorably for early House action legislation to extend the provisions of Public Law 78 for an additional 2 years after 1961.

This is the program which permits the legal entry of Mexican national agricultural workers on a seasonal basis to harvest and work the food and fiber crops so vital to the well-being of the American consuming public. Such workers are certified for use on American farms by the Secretary of Labor only when he finds that there is a shortage of domestic farmworkers available to handle the crops. The legislation approved by the Committee on Agriculture, H.R. 12176, Would continue this essential program.

But, as necessary as this program is to American agriculture and a continued supply of food and fiber to the American public, this program has many other merits. One such benefit is to the economy of our sister Republic to the south, the great Mexican nation. These agricultural workers coming up from Mexico during the harvest season return to Mexico well acquainted with the United States and its people. The money they earn and carry back to Mexico constitutes the third largest segment of the Mexican economy. The friendships they make in the United States constitute the very best kind of international accord. As an illustration of how such friendships and understandings between the citizens of Mexico and the United States are formed, the following letter received from Mrs. W. W. Draper, Jr., of Forrest City, Ark., will be of interest to the Members. Mrs. Draper writes on the operations of Centro Mexicano, which has been formed in St. Francis County, Ark., and which has operated so splendidly for a number of years.

APRIL 27, 1960.

Mr. E. C. Gathings, House of Representatives, Washington, D.C.

DEAR MR. GATHINGS: Centro Mexicano in Forrest City has been sponsored by the Council of Churches and the Ministerial Alliance. A committee with a member from each church has: (1) Secured workers, (2) arranged for facilities, (3) planned programs (movies, speakers, etc.), (4) contacted farmers with invitations to bring workers to the center and coordinated all phases of the center.

From the beginning this has been a project in which the total community has cooperated to the fullest. The building has been donated rent free. The Arkansas Power & Light gave the electric power free. Zero Butane Gas Co. furnished secondhand stoves. Coca-Cola and Nesbitt Bottling Cos. put in soft-drink machines and serviced each machine weekly. Gates Lumber Co. put in benches of concrete blocks and planks, gave paint and brushes and because of these donations expenses have been less than \$25 per year.

Literature printed in Spanish has been donated from various sources. Each church furnished pamphlets. The Arkansas Department of Health sent films in Spanish. The Pan American Union in Washington, D.C., sent most attractive booklets in Spanish. The Mexican consulate gave us colorful posters and maps.

The U.S. Department of Labor has been most helpful. From them we have always secured lists of farmers hiring braceros. Each year members from this Department have visited the center and nearly always a Spanish-speaking employee from this Department has been assigned to help us.

The Mexican consul and his entire staff have visited the center. The consul has thanked us profusely through letters and telegrams for the kindness shown to their fellow countrymen.

All of us who have been workers at the center these few years have had a heart-warming experience. We have found these braceros to be courteous, gentlemanly, and most appreciative of these meager efforts. Since these men come from all parts of Mexico we feel that it has been a measure of cementing a bond of friendship between two neighboring countries—Mexico and the United States.

The farmers of St. Francis County have been helped by having these workers to harvest their crops. In turn the Mexicans have gained monetarily and have gained a knowlodge of good farming practices to take back to their native Mexico.

As chairman of Centro Mexicano I am looking forward to the coming season of working with our neighbors from south of the border.

Yours truly,

Mrs. W. W. DRAPER, Jr.

Hon. Joseph Zaretzki, Minority Leader of New York State Senate, Honored by Jewish War Veterans

EXTENSION OF REMARKS

HON. HERBERT ZELENKO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1960

Mr. ZELENKO. Mr. Speaker, on April 26, 1960, a certificate of merit was presented to a distinguished public servant by the Jewish War Veterans of the United States, Department of New York.

The recipient, Hon. Joseph Zaretzki, represents the 23d District in the New York State senate. He has served with distinction in that body for the past 14 years, the last 4 as the Democratic leader. Senator Zaretzki's constituency covers a large part of the district which I have the honor to represent, the Washington Heights, Inwood, and Marble Hill sections of Manhattan.

Present at the ceremony were commanders and delegates from most of the 250 posts of the Jewish War Veterans in New York State. The ceremony was conducted by Past State Commander Sol Masch and the actual presentation of the certificate by Department Commander Emanuel Targum. The citation upon which the award was based and which was read by Commander Targum follows:

The Jewish War Veterans of the United States, Department of New York, take pleasure in presenting to Hon. Joseph Zaretzki this certificate of merit for his wholehearted support of legislation benefitting war veterans and their families during his seven terms in the State senate. The certificate is issued not only on the basis of the Senator's work for veterans but also upon his service to the entire community. Senator Zaretzki is himself a veteran and is active in all communal, civic, and philanthropic endeavors, in his district, participating in the drives of the U.J.A. Jewish Federation, Catholic Charities. Protestant Council, and all local charities regardless of race or religion. He is a member of the local posts of the American Legion and J.W.V., local trustee of B'nai B'rith and ZOA and a life member of the NAACP. For his dedication to their cause he received distinguished service plaques from the U.J.A. and Federation of Jewish Philanthropies at their annual dinners given in his honor during the past year.

As a result of his courageous leadership the legislature voted more aid for education and for the city of New York than in any other session in the history of the State.

In his own district Senator Zaretzki obtained the free use of elevators at subway stations, replacements for old schools, Public schools 5, 46, 169, and 115, and new additions to public schools 52 and 152. He is now fighting for a huge middle income housing development on the air rights over the depressed roadway to the George Washington Bridge between 178th and 179th Streets on Audubon, St. Nicholas, and Wadsworth Avenues; and for improved subway service to all of Washington Heights and Inwood.

For his devoted service as a State senator and his dynamic and effective leadership of the minority, he has received letters of commendation from Superintendent of Schools John J. Theobald of the New York City Board of Education; Chairman Gustave A. Rosenberg, of the board of higher education, New York State AFL-CIO; United Parents Association; Empire State Chamber of Commerce; police, fire, teachers, and civil service associations; New York Council of Retail Merchants.

Letters of praise have been forwarded to him by retired teachers associations, the American Jewish Congress, the diocesan union of Holy Name societies; YMCA; judicial conference; Catholic Institute of the Press.

All in all, he has done and is doing a tremendous job for the people in his district, in the city, and in the State of New York. Attesting to his great ability as a legislator and as the minority leader, are these excerpts from letters of endorsement and full support from some of the outstanding leaders of the city and State of New York:

Mayor Robert F. Wagner: "Congratulations on a fine job and for your devotion and sympathy for the people. We are fortunate in having you as the Democratic leader in the State senate."

Gov. Averell Harriman: "You are doing a magnificent job as the minority leader in the State senate. The Democratic Party needs you."

Comptroller Arthur Levitt: "The people of our State owe you a debt of gratitude for your efforts to obtain vitally needed legislation. I hope that the people of your district send you back to the senate with an overwhelming vote of confidence."

Former U.S. Postmaster General James A.

Former U.S. Postmaster General James A. Farley: "I appreciate the splendid and effective manner in which you acted as

May 17

Democratic leader in the New York State Senate and extend my best wishes for continued success."

Raymond R. Corbett (legislative chairman, New York AFL-CIO): "On behalf of New York State AFL-CIO our sincere appreciation for your outstanding efforts on behalf of labor in the 1960 legislative session."

Alex Rose (vice president Liberal Party of New York State): "As a State senator and as the minority leader of the State senate you have been diligent, earnest, and conscientious on behalf of the people of New York State."

By reason of all of the foregoing and with the hope that Senator Zaretzki will be able to continue his fine work on behalf of the veterans and the community for many years to come, this certificate of merit is now handed over to him.

The Economic Era We Are Entering Has Been Developing Over the Last Few Years

EXTENSION OF REMARKS

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Friday, May 6, 1960

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by the respected economic writer, Sylvia Porter, as printed in the Evening Star of Washington, May 10, 1960:

This Is a New Era (By Sylvia Porter)

We are now living in an economic era unlike any we've ever known before.

It's really new. Nineteen hundred and sixty has no parallel in the decades before World War II and certainly not in any year since the 1930's.

Actually, this new cycle has been developing for the last few years, but only a comparative few recognize even today how profound the changes have been.

Yet, to every American this new cycle will mean changed circumstances and challenges. It will demand revised attitudes toward the position of and prospects for the U.S. dollar, the value of savings in a bank or high-grade bonds, investments in the stock market, speculation in land, the purchase of a home for profit as well as desirable shelter.

It also will bring benefits to groups who have been at the bottom of the pile for a generation, slash the advantages of those who have had it easiest.

What is this new cycle?

It is an era of no shortages and thus of no need for businessmen or consumers to try to hoard to beat shortages.

Younger Americans living today can't remember anything like this. During World War II, there were shortages of everything from hatpins to houses; during the 1950's, scarcities continued in spots and the fear of them remained dominant. But what is scarce today? Not raw materials or finished materials, not steel or cars, not hatpins or houses. Even in the service fields shortages are drying up. This is new, dictates a new attitude on our part toward stocking up on goods.

It is an era of no inflation.

Neither the pace nor the caliber of the climb in the consumer price level these days may properly be called inflation. A cycle of reasonable price stability has emerged. This change from World War II and its prolonged aftermath is one of the most significant of all changes.

It is an era of few pressures for manpower and therefore of pay raises which are and will continue to be moderate.

While the pressures for manpower aren't present, though, there are built-in forces for annual wage and salary increases and built-in protections against joblessness which vitally distinguish this era from the days before World War II.

It is an era of fierce competition for the consumer's dollar among all domestic businessmen and from foreign producers.

This competitive phase has been developing for years, of course, but competition now is the toughest yet. It demands that businessmen control costs, puts a premium on efficiency. It is a powerful factor working against price increases.

It is an era of boom around the world.

Industrial nations are roaring ahead, producing enough not only to supply themselves but also to move into our market.

It is an era of high money costs, credit controls and still of general availability of credit.

Lenders are getting the best price for cash in decades, savers are being rewarded as they haven't been rewarded in years. But although money is expensive, it is available. This is not a credit expense.

And it is an era of a balanced budget at a record and rising level of spending—including tremendous spending for defense.

Most young adults have known only war and inflation. Most older adults associate peacetime with deflation. This is new, neither war nor inflation nor deflation. In the next few columns I'll give details on what this new era means to you and your family.

Health Care for Elderly Citizens

EXTENSION OF REMARKS

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. ROBERTS. Mr. Speaker, I have long been of the opinion that practical steps need to be taken to overcome one of the most disturbing and ironic facts of our time. It is sadly true that our older people most need hospital insurance; at the same time, they often have the most difficult time obtaining such insurance.

For the first time in history, Congress now seems to be in a mood to do something this year about this problem.

Many approaches to the solution have been offered. In my estimation, some of them are too broad; some, too weak; and some, misguided.

While I am not presently supporting any particular bill, I think most of them have some merit. I feel confident that this Congress will consider carefully all aspects of this problem and will arrive at a sound solution for providing health care for the aged.

I hope some consideration will be given to the legislation which I have introduced on this subject. While I hold no pride of authorship since there are similar and earlier bills, I do think there are worthwhile provisions in the Roberts bill. Doubtless it can be improved upon; I

would not stand in the way of proper improvements, but would welcome them.

For the benefit of Members who are interested in this matter, let me state briefly what my proposal does.

The Roberts bill, H.R. 412, introduced on the opening day of the 86th Congress, provides for insurance against the cost of hospitalization for social security insured aged persons, their dependents and survivors, and for insured disabled persons.

In some respects it is similar both to the Forand bill and to the administration bill. But at the same time the Roberts bill differs on several points and has unique features of its own.

Among the differences are that the Roberts bill would provide only hospital services, excluding tuberculosis or mental hospitals, and not nursing home or surgical services.

The Roberts bill would furnish hospital services to disability beneficiaries as well as to old-age and survivor beneficiaries.

It would limit hospitalization to 60 days in any calendar year rather than in any 12-month period.

any 12-month period.

The Roberts bill would rely primarily on the States, acting as agents of the United States, to administer the program through agreements with the Secretary of Health, Education, and Welfare, rather than on direct utilization by the Secretary of private nonprofit organizations.

It would not amend payroll tax rates in the Internal Revenue Code.

In its report on my bill made October 15, 1959, the Department of Health, Education, and Welfare noted that my bill "differs on certain important points" from the Forand bill, but opposed my bill on the same fundamental grounds as it had opposed the enactment of the Forand bill.

This matter certainly will continue to be pondered in the weeks ahead, as it should be. I hope the features suggested in H.R. 412 will be of some benefit in these considerations, and that we will reach agreement on legislation which will best serve the health needs of a vital segment of the American people.

Mr. Speaker, an informed view on this matter comes from the editorial columns of an outstanding daily newspaper in my district, the Anniston Star.

I certainly think this editorial, which appeared on May 6, 1960, would be helpful to interested Members. Under unanimous consent I insert it at this point in the RECORD.

The editorial follows:

MEDICAL CARE FOR AGED

It seems to us that in the realm of medical care for the aged, new legislation should be in the middle ground between what President Elsenhower proposed yesterday and the Forand bill, which would drain billions of additional dollars from the already heavily burdened social security fund.

The latter measure would amend the Social Security Act to provide insurance against the cost of hospital or nursing home care and the cost of surgical services of all persons for old-age and survivors insurance benefits.

It would impose an additional social security payroll tax of one-fourth of 1 percent each on employers and employees (threeeighths of 1 percent on the self-employed) and raise the ceiling on annual earnings subject to the tax from the present \$4,800 to \$6,000

Twelve months after approval of the amended act, OASI beneficiaries would become eligible to receive the following benefits:

Cost of hospital services (ambulance, staff and laboratory services, drugs, appliances, operating room) and room and board in a semiprivate room for the first 60 days of hospitalization in any 12-month period.

Surgeon's fee for a necessary operation performed in a hospital or emergency or minor surgery performed in the outpatient clinic or in the doctor's office.

Nursing home care (room and board and nursing, medical and personal services) for patients transferred from a hospital for continuation of care for the same or a consequent condition, up to a maximum of 120 days of combined hospital and nursing home care during a 12-month period.

Payments would be made out of the Federal old-age and survivors insurance trust fund directly to suppliers of the service.

Any hospital or nursing home (except tuberculosis or mental institutions) and surgeons or their designated associations could enter into agreements with the Secretary of Health, Education, and Welfare for payments for services furnished to eligible patients.

The amount of payment to hospital or nursing home would be determined "on the basis of the reasonable cost incurred * * * for all bed patients, or, when use of such a basis is impractical * * * or inequitable * * * on a reasonably equivalent basis which takes account of pertinent factors with respect to service furnished. 5

Private nonprofit organizations which offer hospital, nursing home, or surgical services, or which operate voluntary insurance plans covering such services would make agreements with the Government for reimbursement from OASI funds for services to patients qualifying for benefits under the Government program.

Government program.

The bill stipulates that institutions and individuals entering into agreements with the Government must not require additional payments by the patient other than payments for services not covered by the program.

A hospital, for example, would be allowed to collect from a patient wanting a private room the difference between the charge for that accommodation and the charge for the semiprivate room to which the insurance would entitle him.

It is in this connection that we would voice one of several criticims of the Forand bill

Why extend the hospital and surgical coverage to everyone who is listed as a beneficiary of the social security program?

It ought to be enough, in our opinion, that the basic care—not necessarily including semiprivate hospital rooms—is provided for the needy, without incurring all the expenses, administrative, and otherwise, that would be incurred in meeting some part of the cost of medical care for all OASI beneficiaries, including those who are well able to pay.

Roscoe Drummond Comments Cogently on the Berlin Situation

EXTENSION OF REMARKS

HON, KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, May 17, 1960

Mr. KEATING. Mr. President, the Soviet Union's recent outbursts of bluff

and bluster and the crisis at the Summit meeting emphasize once again the vital role Berlin and West Germany will play in shaping the future of world peace. It is especially important, in these tense times, for America to remain stanch and firm in its allegiance to our courageous friends in West Germany.

We can be grateful that Chancellor Adenauer's hand on the tiller remains strong and secure and we can be equally thankful for the tremendous strides his nation has made along the road to economic and political stability. The part Berlin plays today in demonstrating to the Communist world the virtues of democracy and freedom cannot be overlooked.

The astute columnist and student of world affairs, Roscoe Drummond, recently penned two interesting and informative comments on his tour of Germany. Because of their merit and the pertinence of the subject matter, I ask unanimous consent that they be printed in the Appendix of the Record.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune, May 11, 1960]

AFTER ADENAUER? ANSWER TO AN ANXIOUS QUESTION

(By Roscoe Drummond)

BONN.—There is, I find here in Bonn, an unexpected answer to the anxious question so often raised in the United States:

What will happen when the 84-year-old Chancellor Konrad Adenauer, steadfast ally of the West, is no longer at the head of the government?

With Adenauer not on the scene, will leadership slip into weak, more venturesome hands? Will German policy veer into a form of neutralism which could give Moscow new opportunities to divide and draw Western Europe into its orbit?

Obviously everyone will not answer these questions in exactly the same way. But there is a consensus among those inside and outside the government and among European and American correspondents who really know what is going qn. It is this:

1. There is no evident heir-apparent to Chancellor Adenauer. Adenauer himself could not name his successor at this point even if he wanted to—and he doesn't.

No questionable successor to Adenauer is anywhere on the horizon—no successor who would cause trepidation, or even apprehension in the Allied capitals that West German policy might be seriously altered.

3. Finally, this aging but almost ageless German Chancellor, this unbowed oak of German politics who would be 90 at the end of another term, is showing no sign of resigning or fading away. He will run for his fourth term next year and he will not rush to press a successor forward if he is elected.

Nothing could be more welcome than having Dr. Adenauer standing on the middle of Europe as the rocklike mooring for Western policy during the present harsh tension (now menacingly aggravated by the American plane incident) between Russia and the West—and for some time in the future,

Adenauer is used to the purposeful and atroclous attacks on himself by Premier Khrushchev and others in the Kremlin. They keep on branding him without any justification as "a successor to the Nazis, a new Hitler." While he is concerned over the crashing propaganda fury with which Mr. Khrushchev has dealt with the U.S. plane incident—and Mr. K. certainly has legitimate complaint—Adenauer is neither surprised not intimidated. He has never believed that

the Soviets really wanted a relaxation of tension. The manner in which Mr. K. has whipped up Soviet emotions over the airplane persuades many observers here that, seeing little chance of getting the concessions he wanted at the Paris summit next week, Mr. K. has chosen to torpedo it in advance.

Adenauer is a source of continuity and firmness of allied policy in Western Europe. His position within Germany and with the allies, preeminently with De Gaulle, is as strong and, at points, stronger than ever.

The German Chancellor is devoting himself unwaveringly to his three overriding objectives.

He wants to prevent Communist expansion anywhere in Europe.

Finding himself blocked in his efforts to unify Germany, he has turned to building Western Europe into an integrated com-

He hopes to carry Franco-German rapprochement so far forward and imbedded so deeply in action that it will be irreversible.

This Government is far from reactionary. It is dedicated to a vigorous enterprising economy and to high quotient of social welfare in the fields of pensions and social security.

Adenauer was Chancellor of Germany before Mr. Eisenhower was President. He may well be right here at the summit after all the present "Big Four" have left the scene.

[From the New York Herald Tribune, May 14, 1960]

WEST BERLIN-UNWELCOME CHALLENGE TO KHRUSHCHEV

(By Roscoe Drummond)

West Berlin—Nikita Khrushchev is right; you only have to see and feel West Berlin in the flesh to realize why, to the Soviet leader, it is a "cancer" and a "bone stuck in my throat," an "abnormality."

It is all of these things—and more.

It is an annoying, disturbing, depressing vision of Western democratic spirit, visible to the whole Soviet and satellite peoples; a radiant image of what their life could be if it were permitted.

Have no doubt about it, these two-and-aquarter million West Berliners are not gloom-ridden about their future, despite the threats which Mr. Khrushchev has kept up for the past 18 months.

The truth is that West Berlin is a city of light and verve and firm determination.

But Mr. Khrushchev is not willing to look upon West Berlin as a challenge which he will take up and eagerly endeavor to surpass. He can look benignly upon the United States and boast he will soon outdistance us. Not so Berlin. It may be too near at hand, its vision too visible. Berlin's freedom and resilience and prosperity are a "bone in his throat," an "abnormality" which he must try to suffocate.

I feel sure of one thing. The West Berliners are not going to stand quietly by and have their inalienable rights to life, liberty, and the pursuit of happiness suppressed. They will defend their postwar democracy with everything they own including their bare hands.

This is the spirit of West Berlin and it is not declining even if the prospect of recapturing the glory of becoming again the capital of a united Germany has been receding year after year.

To travel by air to Berlin at night is always an exciting experience. For 100 miles you have been flying over East German Communist territory and in every direction there is almost unrelieved darkness, occasionally a lone flicker of light to suggest a sleeping city—a kind of mental darkness as well as visible.

And then you come upon West Berlin as though a massive rainbow had burst through the clouds, a fiashing, animate, multicolored city spread out below you as though proud to be alive and proud to be seen.

The Soviets want it to be dead so that it cannot be seen.

You can theorize all you want to about how West Berlin—a divided city in a divided country, a city surrounded by a regime controlled by Moscow—cannot last. You can look at the facts and say that this city can't exist, can't survive, can't sustain itself. You can remember for a decade after the war the hopes and morale of the West Berliners lifted into being by the feeling that a united Germany might be just around the corner, that it couldn't forever be elusive. And, it hasn't come.

You can believe that West Berlin can surmount the latest Soviet-inspired crisis, but can it survive the next? Or the next? You can see Berlin just as it now is, buoyant, vital, undaunted, 2 years hence. But what of 10 years—and after? And you can "logically" conclude that West Berlin just is not tenable.

Some suggest that West Berlin is a dying city. Perhaps it should be—theoretically. It isn't. Because of the high percentage of elderly people in the city's total population, its population decreased 18,000 last year, Deaths still exceed births. But the birth rate is steadily going up. It mounted from 7.9 to 9.5 in the last 4 years.

Ten years ago no one foresaw the vigor and vitality that are Berlin's today. I submit that no one can dare say that Berlin's future is behind it.

If there is one thing which the Western Powers at the summit conference in Paris must preserve it is the freedom of the 21/4 million West Berliners who are using their freedom so magnificently.

Progress United States of America—Fairfield County, Conn., Roads, Rails, and Rotors

EXTENSION OF REMARKS

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 17, 1960

Mr. IRWIN. Mr. Speaker, I recently inserted in the RECORD a series of articles about my district—the Fourth Congressional, which embraces Fairfield County, Conn.

These articles appeared under the general heading of "Progress U.S.A.—Fair-field County, Conn.: Bright Star in U.S. Industrial Sky."

I would like to make another insertion that points up still further the economic growth and development of my district. As were the other articles, this one is excerpted from the April-May economic newsletter and fact sheet of the Fairfield County Trust Co.

The excerpt:

ROADS, RAILS, AND ROTORS

Fairfield County businesses can look just about everywhere for their markets—just about everywhere is next door. One American in three, and two out of every five manufacturing plants can be spotted within a 500-mile radius of the county.

These are the first line of domestic sales for local producers, whose growth has been especially dramatic in the north and central county. In the anticipation of a populous

and industrialized region within the decade, bulldozers, earthmovers, and cement mixers have already started to give shape to the Connecticut State Highway Department's plan for an extensive network of modern auto-truck expressways.

The lighter nature of the county's industry makes large-scale highway hauling of much of its products practicable. Plastic items, ball bearings, instruments, magnetic tape, pencils, and electronic devices, for instance, move to market mainly in less-thancarload lots. Rapid growth of the area around Danbury will also mean more auto travel.

Keeping pace, Connecticut recently hired team of engineering consultants to do a thoroughgoing study of the State's road system. Goal is to make sure the roads continue to do their job of moving vehicles quickly and safely. Fairfield County, already handling the lion's share of the State's passenger and commercial traffic, will be the hub of this program. Two-thirds of Connecticut Turnpike receipts at present pass through county toll stations. Meanwhile, some \$23.3 million of highway construction is underway in Fairfield County. Currently, \$22 million is being spent on U.S. Interstate 84 as a "north-county Connecticut Turnpike"-a high-speed commercial expressway running from the New York State line, by Danbury, and up through Waterbury and Hartford to the Massachusetts border. This will complement the two southern roads, Connecticut Turnpike and Merritt Parkway.

Other road work will widen Routes 7 and 25, principal north-south arteries in the county, linking the Danbury region with the Norwalk, Stamford, and Bridgeport areas, and turnpike and parkway.

Already big road programs in Connecticut and throughout the East have brought Fairfield County within an hour's driving time of New York City, within 2½ hours of Philadelphia and Boston. Since 1940, 2 and 3 hours have been snipped from Baltimore and Washington runs.

Supplementing the highway network will be expanded helicopter service between Stamford and New York. Plans call for passenger service to Bridgeport later this year, with Danbury next. Fast overnight freight service connects Danbury, Norwalk, Stamford and Bridgeport with New York and Boston. It's 2 days to Baltimore, Buffalo, and Philadelphia. Commutingwise, the New Haven Railroad recently decided to buy 50 new commuter cars through the Port of

New York Authority. They are expected to be in service by early 1961.

Young bloods, young areas: Recent report shows the Danbury area school enrollment up 33 percent between 1955 and 1959, one-third more than county and State gains of 22 percent. The panhandle region—Greenwich-Stamford-Norwalk—matched the county and the State in growth while the older Bridge-port area lagged somewhat. Among the larger towns, Ridgefield's gain of 56 percent in number of schoolchildren leads the list. Wilton, up 50 percent; Weston, up 48 percent; and New Canaan, ahead 41 percent, closely follow.

Who counts: First returns from the April census estimate Fairfield county's population to be around 579,000—15 percent more than the 504,342 for 1950. Census figure is lower than Connecticut Health Department's reckoning of 646,000 by July 1, or Sales Management's estimate of 612,000 last January 1. Differences result from the special ways Connecticut Health Department and Sales Management make projections. Final census figure, whatever it is, will be definitive.

SPRING IN BOOM

Total nonfarm workers in Fairfield County numbered 221,080 in March, a record high for this month. Manufacturing employment remained on a high plateau, while construction jobs—during an unseasonable third-month, continued below year-ago levels. County housing starts for the year-to-date however, are keeping pace with 1959, while nationwide there has been a 17 percent dip.

Further sanguine note is the unemployment picture. Benefit claimants are one-fifth under a year ago. Total jobless—including also noncovered workers, part-timers and retired—were 15,030 in March, 5,060 below last year. They number 5.6 percent of the labor force, down from 7.6 percent in March of 1959. "Labor force" includes store owners, proprietors, doctors, lawyers, farmers, domestics, and others not en ordinary payrolls, as well as those covered by jobless insurance.

Fairfield County continues to outspeed the recovery in the State as a whole, and the Danbury, Norwalk, and Greenwich areas continue to pace the county. In these three regions, jobs continue to look for workers, especially in such fields as metalworking.

Reflecting the signs, Fairfield County Trust's Index of Business Activity in March stood at 222.8 percent of its 1947 base, up 5.5 percent from the same month a year ago.

Fairfield County total labor force, unemployment, and percent unemployed

Labor market area	Total labor force			Unemployment			Percent un- unemployed	
	March 1959	March 1960	Percent change	March 1959	March 1960	Percent change	March 1959	March 1960
Bridgeport	137, 400 24, 920 34, 880 68, 000 265, 200 1, 051, 350	136, 180 27, 910 35, 710 62, 230 269, 030 1, 064, 410	-0.9 +12.0 +2.3 +1.7 +1.4 +1.2	13, 200 2, 190 1, 500 3, 200 20, 090 77, 800	8, 990 1, 840 1, 500 2, 700 15, 030 62, 800	-31.9 -16.0 0 -15.6 -25.2 -19.3	9.6 8.8 4.3 4.7 7.6 7.4	6. 6 6. 6 4. 2 3. 5 5. 6

Source: Connecticut Department of Labor.

Powerhouse: Fairfield County's utilities have doubled their electric sales in the past decade, quadrupled them since 1940. Commercial, residential and industrial consumption ran to 1.7 billion kilowatt-hours last year, 13 percent above 1958. By comparison, the U.S. increase was 10 percent. So far in 1960, sales are well ahead of the same period in 1959.

Underscoring these gains are the capital spending plans of the utilities. Their outlays for facilities in Fairfield County are scheduled to rise 57 percent this year, to \$25 billion, from \$16 billion in 1959.

Mr. Mills' Dilemma

EXTENSION OF REMARKS

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. FRELINGHUYSEN. Mr. Speaker, as has been widely reported in the press.

Mr. Edward K. Mills, Jr., has requested that President Eisenhower withdraw his nomination to the Federal Communications Commission. The President has complied with this request. In my opinion, it is most unfortunate that this step should be necessary. Mr. Mills has had an enviable record of public service, and is eminently qualified to serve on the Federal Communications Commission. He is the former Deputy Di-rector of the General Services Administration, where he served with distinction. He is a former mayor of my home town of Morristown, N.J., and is a man widely respected for his ability and integrity.

The problem which Mr. Mills faced, but which apparently could not be solved, indicates the need for revision and clarification of our laws dealing with conflicts of interest.

The following editorials from today's Washington Post and the Morris County Daily Record of May 14 discuss Mr. Mills' case in some detail:

[From the Washington Post, May 17, 1960]

MR. MILLS' SERVICE

President Eisenhower's decision to withdraw the nomination of Edward K. Mills, Jr., to the Federal Communication Commission was unavoidable under the laws governing qualifications of FCC members. But it deserves more than passing notice, for Mr. Mills has behaved admirably in a situation not of his own making and over which he had no control.

He volunteered the information to the Senate Commerce Committee that he was the beneficiary of a lifetime trust which has in its portfolio some Westinghouse and General Electric shares. An FCC Commissioner may not have a pecuniary interest in the radio and television business, and both companies are in this business. The trustee of the life estate refused to sell the shares. Mr. Mills offered to give the dividends to charity, but his estate still would have benefited from capital gains. Thorough investigation by the Justice Department apparently showed that there was simply no way in which Mr. Mills could shed this disability and legally qualify for the FCC, and so he asked that his name be withdrawn.

Throughout, Mr. Mills' own conduct displayed a keen sense of propriety, in marked contrast to the performance of some Federal officials who have contrived to circumvent the letter or the spirit of the conflict-of-interest laws. In this case, the President's candidate seemed to be an exceptionally well qualified man for the job, and it is a pity that he is unable to serve. But he has performed another kind of service in setting so fine an example of public rectitude and in saving the administration from possible future embarrassment by full candor about his affairs.

[From the Daily Record, May 14, 1960] REMOTE INTEREST CONFLICT

It would indeed be unfortunate for the United States to lose the services of Edward R. Mills, Jr., of Mendham because of the technicality of a "conflict of interest."

The purpose of conflict of interest provisions is to prevent an individual's stock holdings from becoming in any way compromised by his official position, which gives him information that might permit stock manipulation, the possibility of basing decisions or awarding contracts that would be conducive to benefitting the shares of stock owned.

Mr. Mills "conflict" is a very remote one, indeed. He is a beneficiary of a trust fund that owns shares of stock of business in the

communications field. Mr. Mills has absolutely no control over this stock, or the decisions that the trustee might make in administering his charge.

The trustee, who also must protect the interests of the other beneficiaries of the trust, does not wish to dispose of the shares in the trust fund. Therefore, it might be said that under the statute that Mr. Mills has a financial interest in a business in the communications field, which is the field in which the Federal Communications Commission operates.

Acting in a highly praiseworthy manner, Mr. Mills has asked the President to with-

draw his nomination.

Naturally, this is unfortunate because Mr. Mills seems clearly not to have such a conflict of interest as the statute desires to prevent.

We trust that the lawyers of the Justice Department will be able to come up with some solution to this perplexing case. We believe that the nominee is a man of high caliber that can bring a high standard of service to a Federal agency that sadly needs such a man.

Science and Ethics-The Contributions of Greece, India, and Israel

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the text of an address by Israeli Prime Minister David Ben-Gurion delivered at Brandeis University on March 9, 1960, at which time Brandeis University conferred upon him the honorary degree of doctors of laws. Following the address is the text of the diploma:

Science and Ethics—The Contributions of Greece, India, and Israel

FOREWORD

On March 9, 1960, Prime Minister David Ben-Gurion received an honorary degree from Brandeis University at a special convocation.

The address delivered by the Prime Minister upon his dramatic arrival from Israel was a striking illustration of the philosopher-statesman in action. In harmony with the spirit of the occasion, the head of a young, struggling state transcended immediate tensions and problems to examine the universal implications of the true statesman's task. Instead of engaging in a political discussion of urgent questions of the day, in whose solution he is so crucial a factor, he chose to trace the spiritual legacy of the great peoples of antiquity, of which Israel is one. Through his philosophic and ethical awareness of the past he defined the nature of the future. Mr. Ben-Gurion's declaration, "Israel cannot endure without strength and power, but we still hold fast to the faith that has accompanied our people for thousands of years, faith in the supremacy of the spirit," was placed by him in the kind of historic perspective which made it concretely meaningful for the present.

It was eminently fitting that such an address should be delivered at Brandeis University. Established in 1948, the same year that saw the emergence of the State of Israel, Brandeis University, too, on its scale, represented a dynamic, pioneering effort of

American Jewry through the creation of the first Jewish-sponsored, secular university in the United States,

Inevitably, by virtue of its general and particular sympathies, Brandeis University has enjoyed many fruitful contacts with the representatives of Israel. In 1948 the emissary of the newly established state, Mr. Eliahu Elath, took part in the inaugural ceremonies of the newly founded university. In 1951 Prime Minister Ben-Gurion addressed scholars of 24 universities gathered to hear him on this campus. Ambassador Abba Eban was the chief speaker at the celebration marking the 10th anniversary of Brandeis University.

The recent appearance of Prime Minister Ben-Gurion represents a high moment in the life of the university. His address, speaking as it did to all, irrespective of creed or race, voiced those generous intellectual and moral aspirations which men of thought everywhere may cherish in common.

AN ADDRESS BY DAVID BEN-GURION AT BRANDEIS UNIVERSITY, MARCH 9, 1960

I consider it a great privilege to be the guest of the American University that bears the name of the greatest American Jew of our generation: Justice Louis D. Brandeis.

I knew Brandeis from his appointment as Justice of the Supreme Court until a year before his death—and whenever I came in contact with him I felt that I was in the presence of a perfect and harmonious human personality—insofar as a human being can be perfect—as Jew and American, as thinker and man of moral rectitude.

Brandeis' intellect and conscience were strong, clear, and compelling, and governed all his acts; there was a harmonious interaction between them throughout his life, and this fusion was the secret of his greatness, as jurist, judge, American, and Jew. I regard Brandeis as the personality that should be a model for our people—if I were not afraid of being too presumptuous, I would say: for the whole of humanity.

I am one of those who believe whole-heartedly, in the prophecy of Isaiah: "I the Lord, have called thee in righteousness, and have taken hold of thy hand, and kept thee. and set thee for a covenant of the people, for a light of the nations" (42: 6). That is not the only prophecy of his in which I be-lieve. Isaiah said: "I will bring thy seed from the East, and gather thee from the West; I will say to the North: 'Give up' and to the South: 'Keep not back, bring My sons from far, and My daughters from the end of the earth'" (43: 5-6). And he also said: "And it shall come to pass in the end of days, that the mountain of the Lord's house shall be established as the top of the mountains, and shall be exalted above the hills; and all nations shall flow unto it. And they shall beat their swords into ploughshares, and their spears into pruning hooks; nation shall not lift up sword against nation, neither shall they learn war any more" (2: 2-4). One of these prophecies has already begun to be realized in our days, and in the first decade of the resuscitation of the Jewish State in our ancient homeland we have brought in about a million Jews from over a hundred countries, from East and West, from the North and the South. And the vision of general disarmament has also been placed on the agenda of the United Nations Assembly in our day.

Every people is chosen

The Jewish people is a small one, and today Israel numbers only a little more than 15 percent of the Jews of the world. So that the claim that Israel in its land might be a light to the Gentiles, may be regarded as exaggerated and chauvinistic. To dispel this error from the minds of my listeners, I will say that I do not hold that we are a chosen people. Every people, to some extent, is a chosen people—in its own eyes, at any rate;

and, just as there are shadows in the life of every people, so we know that, in past as in present, light radiates from many peoples. "Are ye not as children of the Ethiopians unto Me, O Children of Israel?" saith the Lord. "Have not I brought up Israel out of the land of Egypt? And the Philistines from Caphter, and the Syrians from Kir?" So spake the prophet Amos. Every people has a share in the heritage of the human race, just as every man, without distinction of race, religion or birthplace, is equal in rights and duties, and of equal worth. The relations of men and of peoples must, therefore, be set firm upon equality of rights and duties.

But, equality between men, which lies at the foundation of our political and social consciousness, stands in no contradiction to our wonderment at the greatness of Descartes, Newton, Da Vinci, Rembrandt, Beethoven and Einstein. Similarly, recognition of the equality of peoples cannot lessen our admiration for those few exceptional peoples which have played a uniquely fructifying role in the annals of humanity.

Immortal bequests

To this day, no one has unraveled the riddle of the genius of those divinely blessed personalities, who, by their mighty intellect, have shed light on the mystries of nature or enriched the human treasury with majestic creations of art and literature; nor to this day has the secret been explained of the special greatness of those few exceptional peoples which left their imprint on human culture. The Jewish people in days gone by was privileged to be one of the three ancient peoples that bequeathed immortal values to humankind, and, in large measure, fashioned the pattern of many peoples in all parts of the earth. The three peoples were Israel, Greece and India.

In mentioning India I do not refer to the wisdom of the Brahmins. In the Upanishads, it is true, there may be found jewels of pantheistic metaphysics, but this wisdom was the possession of the few, and did not prevent the perpetuation of the caste system, which degraded millions of human beings to the level of the unclean, nor did it uproot the brutal custom of suttee, the burning of widows alive, which has its origin in the Atarya-Veda.

India's great contribution

India's greatest contribution was the teaching of Buddhism. The founder of this doctrine, Sidarta Gautama, one of the princes of northern India, and known to the world as the Buddha, was in his lifetime a symbol of human nobility and moral purity, and, without doubt, was one of the 10 greatest personalities in human history. Buddha rebelled against the Indian caste tradition. In the Buddhist communitythe Sanga-no caste distinctions are recognized. All men are equal. The Buddha recognized the equality of status of woman with man. The Buddha was indeed convinced of his great personal mission and of the significance of his teachings, but he did not put himself in the central position in the new teaching which he preached. Buddha was on the point of death, he saw his favorite disciple Aranda crying. He said to him: "Do not cry, Aranda. You shall be a light unto yourself. You will have no need of me."

The Buddha rebelled against the Indian tradition of sacrifice, which was the central feature of the Brahminist creed. He rejected the privileged position of the Brahminists. It is not privilege through heredity but the righteousness of a man himself which entitles one to the distinction of being a Brahmin—or a higher man. That was the Buddha's teaching.

To preach this doctrine, 2,500 years ago in an Indian society dominated by Brahminism, called for great spiritual courage and a revolutionary spirit; great creative capacity. It

is remarkable to think that his doctine, which originated in India, has almost disappeared from the land of its birth, but has spread among the peoples of the Far East: Ceylon, Thailand, Cambodia, Laos, Burma, China, and Japan, and, although there is in it much of the negation of the material world, and nirvana is its highest ideal Buddhism overcame the influences of its pessimistic beginnings and preached love, kindness and compassion to every living creature; nor, in the main, are its ethical imperatives different from our Ten Commandments. The Buddha was the educator of the peoples of the Far East, which, for some reason, were not reached by the message of Judaism either in its original form or in its Christian and Moslem versions, and his teaching is still an educative and moral factor of tremendous force for hundreds of millions in the eastern expanses of Asia.

In the days of the Buddha, the leaders of Greek philosophy were active in Greece: Thales of Miletus and his disciples, Pythagoras, Heraclitus, Empedocles, and Parmen-From them and from their disciples, the West-and now the entire world-inherited their systematic philosophical and scientific research. It would unquestionably be a vast exaggeration to say that the conquests of science during the last three or four centuries are exclusively the legacy of classical Greece. It may be said with some degree of truth that modern science was born out of revolt against the Greek scientific tradition. An example of this was Galileo's struggle with the followers of Aristotle in his Even previously we see an example of this in Copernicus' disproof of the Ptolemaic theory-Aristarchus of Samos, who is not mentioned in Copernicus' great work, already knew of the rotation of the earth on its axis and its revolution round the sun, but his teaching was not accepted in ancient Greece. It was left to Copernicus to renew this doctrine. It is impossible, however, to conceive the Renaissance in Italy and in other countries which laid the foundation of modern science, without the rediscovery of ancient Greek literature, brought to Europe in the 15th century from declining Byzantium. And even today, the works of the great ones of Greece, with Plato at their head, are a source of inspiration to the human spirit in its search to understand the order of nature and of the universe-and itself.

Science and everyday life

More and more, however, the accomplishments of science are becoming the estate of all peoples in all parts of the world. is, perhaps, the most universal spiritual triumph of our era, and no second asset is so shared by all the peoples in our time as is science. In one sense, contemporary science differs from what it was in the days of ancient Greece. For the thinkers of ancient Greece, intellectual contemplation, theoria, was the principal thing, and few of them also occupied themselves with praxis, with the practical side, with the integration of science into everyday life. Not so in these our days. Scientific research has become a central, permanent daily factor in the lives of peoples. Economic activity, health, securityall these are now based on what science achieved, and from day to day the vital significance of science in all branches of action shows a progressive increase. Pure science and everyday action are interlocked.

Science, however, with all its spiritual and material importance, by its very essence stands beyond good and evil. By its power we can explain the phenomena of nature—and man is a part of nature, but science is incapable of telling man what path he should choose in life. By means of science it is possible to bestow blessings on humanity: health, prosperity, and intellectual progress. By its power it is also feasible to being about ruin and destruction, and to destroy civilized humanity. The tree of

knowledge of good and evil does not blossom on the soil of science. Science strives to lay bare the secrets of nature, but not to counsel man what he shall do.

There can, however, be no science without scientists, and the scientist is not just a thinking and contemplating machine, but a personality, carrying a lofty moral responsibility. The crisis discussed in our time is not a crisis of science.

Scientists must foster moral values

The scientist, therefore, will not be discharging his mission faithfully or be worthy of his task unless, while yet augmenting the capacity of science and enlarging the bounds of pure knowledge, he makes every effort to foster the moral values on which the relations between men and between peoples must rest. The tree of knowledge of good and evil must be planted in the soul of every man, and first of all in the soul of men of science, so that their creative activity may be a blessing to mankind.

The discovery of scientific truth is a goal in itself, but it is also a means to an exalted end: the advancement of man and of society, the dominion of man over nature for the sake of his spiritual and moral elevation, and the economic and social well-being of each people and of the entire human race. We must not separate the exploits of science, which are the achievements of the human intellect, from the values of ethics, that is to say, from the imperatives of the human conscience, the divine element in man. The secret of man's intelligence, which is capable of comprehending the structure of the cosmos and its host, has never yet been penetrated-and I do not know if it ever will be. Nor has anyone penetrated the secret of the human conscience, which equips man to give up his life for values dearer to him than life itself. But both of them exist, and it is only through their inmost integration that there will flourish for man the great and glorious blessing that is hidden in each of

We shall be doing violence to the truth if we say that the greatness of ancient Greece was restricted to the realms of beauty and intellect alone. In the writings of Plato, Aristotle and Plotinus, we find a profound aspiration for the good and the just. It would equally violate the truth to say that the greatness of ancient Israel was manifest only in the religious and ethical messages of its Prophets. The Books of the Bible are overflowing with sublime beauty and deep wisdom. Likewise, the teachings of the Buddha are not restricted to laying down a noble and redemptive way of life, but radiate profound and original philosophic thought. It is true, however, that the center of gravity of Greek genius was in the realm of art and philosophy, as the center of gravity of Buddhist teaching was fixed on freeing the individual from suffering and tribulations. With the Prophets of Israel the central theme was the supremacy of religious and moral consciousness.

Faith in supremacy of the spirit

The renascence of Israel in our day has not been merely political and material in character. Israel cannot endure without strength and power, but we still hold fast to the faith that has accompanied our people for thousands of years, faith in the supremacy of the spirit. Not the spirit opposed to matter and divorced from it—the duality of matter and spirit was foreign to Jewish outlook in Biblical times, as it is foreign to the science of our present. We believed, and still believe, in the supremacy of the spirit that pervades matter and rules it. On this faith is founded the historio mission and destiny of the State of Israel.

And the supremacy of the spirit implies not only the supremacy of science and intelligence, but also that of conscience and of morality, of which the authentic and practical expression in our lives is halutziuth, the quality of pioneering and personal dedication to man's mission in life. The return of Israel to its land in our time is without parallel in history. We are receiving the fragments of a people scattered throughout the world, to rebuild the ruins of a small and poor country surrounded by enemies, and to establish a model society constructed upon a basis of liberty, equality, cooperation and love of our fellow men.

The great Book, or, more correctly, the collection of great Books, that has given us the prerogative to be known, in honor, as "the people of the Book," was created at a time when our people lived on its own soll and was sovereign in its own right. Though it was a small and poor people, small in numbers and poor in military strength, and in extent of territory, yet from that day to this it fell in no wise behind any nation in its creativity, and it gave to itself and the world Books of the highest spiritual values, of a majestic and enduring expression of poetry and thought, of morality and religion.

Torn from homeland and independence

When we want into exile we continued to live, in our hearts and our minds, within the bounds of this Biblical heritage; but we did not continue to create anew, save for multiplying the making of interpretations and interpretations of interpretations, explanations and explanations of explanations, about our sacred writings. Our spiritual lives, like our material lives, were impoverished and shrivelled. And if, at the commencement of the modern Renaissance period in the 17th century, a great eagle Baruch Spinoza-rose from our midst and in his lofty thought ascended to the skies, he was cast out of our nest, and shed his light on others uttering his profound words in a foreign tongue. We lived in a political, an economic and also a spiritual ghetto. This was not because our creative power Was atrophied-had that been so, it is doubtful if we could have maintained our identity under those terrible conditions—but because We had been torn from the roots of the People's vitality: from homeland and independence.

The new period that began with the renewal of the upbuilding of our homeland 80 years ago, and of our independence during recent years, opened up a new chapter, not only in respect to our status in the World, but also in regard to our spiritual creativity. True, for the first phase of the third restoration of our independence-and we shall, as up to now, indeed, be constrained to invest the better part of our energy and our spiritual and physical forces in Israel in fortifying our security, developing the country, building up its economy, absorbing its immigrants, and laying safe foundations of a free and independent nation, sovereign in its own right. Our independence is still in danger; we are still beleaguered; we still face vital problems in regard to immigrant absorption; our deserts still await redemption. Our primary en-deavor, therefore, must lie in the security, Political and economic spheres. These efforts, however, will not succeed unless sustained by a great spiritual dedication.

Tenacious spirit of our youth

One of the marvels of our generation has been the victory of the Israel Defense Forces; but it was not by its weapons or its numbers that the young Israel Army withstood the onslaughts of the enemy hosts. Its secret weapon was the high moral quality of our youth. The upbuilding of the country, too, the hundreds of villages that sprang up as if overnight in every corner of the land, the discovery of water in a desert left and and

barren since the dawn of creation, the hundreds of thousands of immigrants assembled in the homeland within a brief space of time—all these things were not done by means of technology and finance alone. A decisive factor was also the power of that same tenacious spirit that inspires our people. The Jews of Yemen and Babylon were speeded to Israel by modern aircraft. But the real driving force was the Messianic vision they had preserved in their hearts from the moment they went into exile, over 2,500 years ago. Had it not been for that spirit they would not have clung to their Jewishness; they would never have returned to Israel

All-embracing unity of existence

What is the nature of the spirit we need? First of all, the conquests of science. Our work in Israel is perhaps uniquely difficult, in the internal and external hindrances it faces. Our constructive work will fail unless we know how to mobilize all the achievements of science to the aid of our economy, our education, and our security. We dare not be content with what has been achieved so far; we must reinforce our intellectual capacity, for the sake of new, additional scientific attainments which will help us to overcome the obstacles, to improve the quality and productivity of our work in building our country and defending it.

The value of science, however, lies not merely in its practical uses, but in enhancing the distinctive qualities of man and enriching his spirit. We are few, and few we shall remain; our country is small and small it always will be, though I hope we shall succeed in expanding its economic capacity. The sole greatness which awaits us, one inherent in our character, is greatness of spirit. Science, knowledge of the world and all therein, discovery of the secrets of nature and of existence—through these we shall rise ever higher. There is no limit to the capacity of man to penetrate the secrets of nature and the universe. We have never accepted the discredited theory that the world is composed of blind and crude matter, just as we have never accepted the fallacious opinion that everything we see, feel, and hear is only the disembodied creation of the imagination and spirit.

All the great men of Israel, in days gone by and in our times, whether through religious intuition or scientific comprehension have always recognized the all-embracing unity of existence, the oneness of matter and mind. Man is a part of the marvel of existence, which in all its unity has many manifestations, both material and spiritual; and man, as an organic part of his complex existence, which is both material and spiritual, both natural and divine, has the gift of seeing and observing, of understanding and comprehending the nature of the universe. Man has two means of probing the secret of being: through his internal and his external contemplation. There is no end or bound to man's intellectual capacity, and the peaks to which science has climbed in our day are only the first rungs in a ladder that is set on earth but whose top reaches the sky. Man in Israel is inferior in his qualities and capacity to no man in the world, and nothing will be denied him in the kingdom of science, if he makes the de-liberate effort and boldly and unremittingly presses on upward.

Science needs moral direction

Science in isolation, however, cannot suffice; it needs moral force to direct it. The second spiritual imperative, therefore, is the great and eternal ethical values of Judaism. Not only we, but other ancient peoples as well, have at different epochs given voice to great and sublime moral truths. But, I doubt if there was ever anyone who succeeded in doing so with a mightier vigor or

with a purer and holier passion than did the prophets of Israel. The idea that man was created in the image of God, and that all men are the children of God and therefore brothers, the precept "And thou shalt love thy neighbor as thyself," our prophets' vision of peace and justice—in no ancient or modern literature is there anything to excel or even equal them.

And our prophets found and demanded justice, not only in the life of man, but in the whole world, in the entire cosmos. Isiah, one of the greatest our prophets, envisions justice and peace as imprinted upon the heavens above and on the earth be-neath. He says: "Drop down, ye heavens, from above, and let the skies pour down righteousness: let the earth open, and let them bring forth salvation, and let righteousness spring up together" (45: 8). And when the Psalmist seeks in one short verse to catalog supreme moral values, he says: and truth are met together: righteousness and peace have kissed each other." And he adds: "Truth shall spring out of the earth; and righteousness shall look down from heaven" (85: 10-11). The moral content, in the words of our prophets, is inherent not only in man but in the whole of nature: the skies pour down righteousness, truth springs from the earth.

Only by pursuing the goals of prophetic ethics is it possible to direct the tremendous and fructifying power of science so that it may be a blessing to peoples and to men. Sciences, unguided by moral values, could be dangerous.

Morality must be practiced

Morality itself, however, can be beneficial on one condition alone: not if it is preached to others, not if it is elegantly expounded, but if it is observed not just in theory but in practice also, if it is attended by pioneering that fulfills. Moral values are transformed into a creative revolutionary force that repairs the imperfections of the world and enhances the lift of man, only through the experience of personal pioneering and fulfillment. We have learned this truth through the experience of the pioneering forces which were at work from the beginning of our settlement 80 years ago until our own days.

The ancient Chinese sage called Kung-Tze (Confucius), who lived in the days of Jeremiah, and remained the teacher of the Chinese people for 2,500 years, condensed the whole doctrine of pioneering into one short and incisive saying. One of his disciples asked him: "Master, who is the higher man?" Kung-Tze answered: "The higher man is he who first carries out himself what he demands of others, and then demands of others only what he does himself." The three generations of pioneers who rebuilt our country and established the State of Israel did not preach the return to Zion—they fulfilled it.

The will to pioneer action

The longing and yearning for a Jewish state were alive in the Jewish people all the years and generations since our second temple was destroyed. What produced the miracle in our day? What converted the prayer, the yearning and the longing of the heart into the reality of national independence? It was the will to pioneer action that was awakened in the hearts of the lonely few, who went forth 80 years ago from behind the walls of the old city of Jerusalem and from the distant exile of Hungary. They came together to establish the first Jewish village of our time. They were followed by scores and then by hundreds, and then by thousands and hundreds of thousands. It was they who made the miracle.

It is only pioneering which fulfills that lends force to the moral values to which we adhere. Without pioneering, without personal fulfillment, the values are emptied of their content and are turned into verbiage, which becomes deceptive and hurtful.

The establishment of the third State of Israel in our time has opened a new era. At its establishment, the state comprised some 650,000 Jews. It still comprises less than 2 650,000 Jews. million Jews today. We have yet to consummate the process of rebuilding. The road ahead is long and hard. And while engaged in our national regeneration we must always remember the messianic vision of redemption that preserved us for thousands of years. That vision foresaw not only the complete redemption of the Jewish people, but of all humanity. For there can be no whole and lasting redemption of one people without the redemption of all nations. And we shall discharge the great and difficult task that is laid upon us only if we are true to the great vision of the latter days which Israel's prophets foresaw and which will surely come to pass. The vision will be realized in all its fullness if, side by side with all our practical efforts we also cling tightly to spiritual values: the schievements of science, the ethics of the prophets, and pioneering that fulfills.

TEXT OF THE DIPLOMA

The trustees of Brandeis University, upon the recommendation of the faculty, have conferred on David Ben-Gurion, statesman, scholar, author, Prime Minister of Israel and symbol of her strength and courage, all of whose gifts converge to a single purpose: securing the future of Israel. As head and front of the Jewish agency, a resourceful guide for his people through the horrors of Naziism and the Second World War. In newly created Israel, the leader in a magnificent defense against the onslaughts of misguided neighbors. In the tasks of state building, a modern Ezra, sounding the clarion for the return of the dispersed of his people to a hospitable homeland. Anchored in the prophetic tradition, he reaches out for universal truth. The ideal philosopherstatesman who would have delighted Plato and Isaiah; the honorary degree of doctor of laws and all the rights and privileges thereunto appertaining in witness thereof, they have issued this diploma duly signed and have affixed the seal of the university.

Issued at Brandeis University, Waitham,
Mass., on the 9th day of March, 1960.

ABRAHAM FEINBERG,
President, Board of Trustees.

SAMUEL L. SLOSBERG,
Secretary, Board of Trustees.

ABRAHAM L. SACHAR,
President of the University.

Center for Cultural and Technical Interchange Between East and West

EXTENSION OF REMARKS

HON. DANIEL K. INOUYE

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. INOUYE. Mr. Speaker, on Thursday, May 12, this honorable body adopted the conference report on H.R. 11510 to amend further the Mutual Security Act of 1954. On the same date, the Senate similarly adopted the report, thus clearing it for Presidential action.

Contained in the bill was a chapter dealing with the authorization for the establishment in Hawaii of a Center for Cultural and Technical Interchange between East and West. We in Hawaii are highly enthusiastic about our potential contribution to the betterment of our Nation's foreign relations and are convinced that the East-West Center is a step in the right direction.

One of the many non-Hawaiians who shares our enthusiasm is Edward R. Murrow, CBS news correspondent and moderator of "Small World."

Under leave to extend my remarks in the Record, I would like to include herewith a portion of Mr. Murrow's statement given in Hawaii in an interview on April 18, 1960, on the 6:45 p.m. news program of KGMB-TV. Mr. Murrow sets forth very succinctly a few of the many reasons why the center is ideally to be located in Hawaii. In reply to the question "What do you think of our East-West Center?" Mr. Murrow said:

I think it is one of the biggest progress in education I have heard of in many a long year. I think it will pay great dividends to us. I think it will create what the academicians like to call the cross-fertilization of culture—by which I think in general, the better you get to know a person, the better you like them. The less we know them, the less we like them. What will happen here, I am sure, is that there will be an exchange of ideas, an exchange of experience, and that not only students from Asia who come here will receive a dividend; that American students who come from the mainland will also have exposure that is not available to them on the mainland.

I think that if this project is properly administered—if the staff is of sufficient distinction, no one can calculate what the dividends will do; and in terms of propaganda—and in terms of education in the old-fashioned sense—it seems to me that you have here a more flexible and tolerant society than we have on the mainland. That Asian students coming here will not be flung immediately into this materialistic, mechanistic madhouse that we have in the large metropolitan centers in the States, and that their introduction into America will be a little more gradual than if they went immediately to the mainland.

More About Algeria: The Necessity for Negotiations

EXTENSION OF REMARKS

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Friday, May 6, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of the letter sent last month to the President by the American Committee on Africa on the occasion of the visit to the United States by President Charles de Gaulle of France:

APRIL 21, 1960.

President Dwight D. EISENHOWER, The White House,

Washington, D.C.

DEAR MR. PRESIDENT: On the occasion of the visit of President Charles de Gaulle to the United States, the American Committee on Africa wants to join you in welcoming an old ally of the United States. We hope, however, that you will not let this warm friendship of the American people and yourself for France and for General de Gaulle to deflect you from what must surely be high on your agenda: A firm indication to President de Gaulle that the American people and their Government want him to open negotiations immediately with the Provisional Government of Algeria toward ending the war on the basis of the self-determination of the Algerian people and that America will no longer allow arms or airplanes to be exported to France for use directly or indirectly in Algeria.

While you as President rightly praised General de Gaulle for his announcement last September that independence would be one of the options given to the Algerian people, events have transpired since that time to raise these serious questions: Why has the French Government refused for months to negotiate with Mr. Ferhat Abbas and his associates? Why is French Premier Debre talking of the partition of Algeria? We want you to know, Mr. President, that

We want you to know, Mr. President, that we were deeply disappointed when Ambassador Lodge abstained during the vote last December on the Algerian resolution in the United Nations which merely called for pourparlers leading to a peaceful and just settlement. We Americans can abstain no longer from judgment as the Algerian war continues in its sixth year.

We as Americans are proud of Ambassador Lodge's leadership and vote in the recent debates in the U.N. Security Council on South Africa. If apartheid in South Africa is clearly the concern of the United States after the killing of 72 Africans, certainly war in Algeria can be no less so with hundreds of thousands of Algerians as casualties.

Partition of Algeria is no solution. Continued war is no solution. We urge that you make crystal clear to General de Gaulle that (1) he must begin negotiations at once to end the Algerian war so that there can be self-determination of the Algerian people in a free election; and (2) until there is peace in Algeria, American arms and airplanes will not be sent to France, since it can be presumed that any such shipments in one way or another will be used to kill our friends, the Algerian people.

Sincerely yours,

DONALD HARRINGTON, Chairman.

Gentlemen of Our Economy

EXTENSION OF REMARKS

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. AVERY. Mr. Speaker, those of us representing the great farm States of America are certainly aware that our farm economy does not favorably compare with the other segments in America. There is no justification in the conclusion, however, that the new wealth produced on our Nation's farms has shrunk to a level at which it is no longer significant to our national gross product. gross income in 1959 of over \$46 billion of farmers was second largest to any other year in our history. For these reasons it is the responsibility of Congress to be continually alert to the need for legislation that will more nearly restore the balance in real income between agriculture and the competitive segments in our economy. These factors are impressively set forth in an editorial contained

in the Topeka Capital-Journal on Sunday, May 15, 1960;

GENTLEMEN OF OUR ECONOMY

Latest estimate on the Kansas wheat crop by the State Department of Agriculture is 211 million bushels.

That's a lot of wheat. It means a lot of new money injected into the State's financial bloodstream.

Remember, Kansas farms don't just exchange dollars or "take in someone else's washing" as many businesses do. They create new wealth. Our farms are dynamic in their economic role.

For, while we are talking of new wealth, did you know Kansas farms last year, according to the State Board of Agriculture, created and put in circulation \$1,132,441,000 from the sales of farm products? That doesn't include what was raised and consumed on the farms.

Can you comprehend what a billion dollars means in merchandise, in automobiles, in farm equipment, in appliances, in clothing, in food, and all the other wants that make today's farmer the gentleman of our economy?

The farmer no longer is isolated. He has all the conveniences of the city dweller and much that urban residents do not have.

It's interesting to note from some recent facts and figures gathered by an Eastern publisher based on reports of the U.S. Department of Agriculture that-

Farmers' gross income of \$46.3 billion in 1959 was the second largest in history.

The 1959 average gross income per farm family is 50 percent above the average for all U.S. families.

Gross income per farm family of \$9,978 in 1959 marks a new high.

Farm family net income in 1959 is the

second highest on record.

Farmers now are worth more than ever before. Total assets reach \$208.2 billions.

The average farm family today is worth more than \$43,000.

Yes, the American farmer constitutes the bulkwark of America's free enterprise.

Every Move Has a Purpose-Dancey Looks at Khrushchev

EXTENSION OF REMARKS OF

HON. ROBERT H. MICHEL

OF HAINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 17, 1960

Mr. MICHEL, Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following article from the Peoria Journal Star, May 12, 1960:

EVERY MOVE HAS A PURPOSE-DANCEY LOOKS AT KHRUSHCHEV

(By Charles L. Dancey)

Last summer, I saw an auto, which I was told contained Nikita Khrushchev, enter the Kremlin.

All traffic lights in the area turned redtrame stopped, such as it was, and motorcycle police catapulted around a corner, swung crossways across the normal flow of traffic, along a wide safety lane sort of marketing in the center of the broad street, escorting three big black limousines.

They all charged through pell mell, at high speed, along the virtually empty street and swung into a Kremlin gate scarcely slowing

I was told this was Mr. K. You couldn't prove it by me. I certainly didn't get a

chance to see him and neither did anybody else in the area.

This contrasts somewhat with the photographs exported from Russia showing Mr. Khruschchev as a smiling Santa Claus in the midst of workers there. It contrasts with the smiling Khrushchev who wanted so badly to escape security restrictions and mingle with "common people" during his American tour.

A few months later, I talked at length with the manager of the American fair in Moscow who lived there 6 months. He told me that Khrushchev visited the fair three times, as I recall (not counting the Nixon escort business), and that each time huge crowds of Muscovites turned out to see him.

He discovered that the reason was they had never seen him before. Even rather important people, and staffers associated with the fair and fair arrangements were very excited about the visits and revealed they had never seen the premier in person before.

In short, he is not in the habit of "min-

gling" with the people. Indeed, he is not in the habit of making any sort of public appearance.

Thus, the picture that has remained with many Americans ever since his visit here is a false one. It is the impression he wanted to give, and he is a consummate actor.

He wanted to give that impression for a

When Khrushchev smiles it is for a purpose. When he acts like a good guy, it is for a purpose. And when he talks tough, the same thing is true.

It behooves us to look for the reason.

During my 4 years at college I worked as a sort of secretary, sometimes assistant, and sometimes human guinea pig in physiological research. As such, I took part (writing for my employer) in an exchange of letters and theories with Pavlov, the famous Russian physiologist, shortly before his death. Pavlov's work is the basis of Soviet the-

ories of human behavior, and they reject Western physiological theories. Pavlov was not a psychologist, but a physiologist. He worked with animals, not with men. But Communists regard men as animals—with no soul and no God.

Pavlov's work on conditioned reflexes is the basis of Red tactics in dealing with human beings at every level, from brainwashing an individual to conducting affairs with a nation.

Many experts on Red doctrines have established this connection, and have revealed their set doctrine for destroying the will of a man-or a nation of men-as exposed in their methods as actually practiced against the now captive nations and against us.

The Reds believe that a man, or a people, can adjust to constant pressure and resist it-but that alternating good treatment and bad will keep a man or a people "off balance" for each succeeding blow and will eventually break the will to resist.

Experts have therefore warned us for more than 15 years, that the Communists will blow "hot and cold"-that they will cry out for peace, and then threaten war, and keep testing for signs that we are weakening.

They have bounced us from threats of war at Berlin, to Asia, to the Middle East and back to Berlin-with intervening bids for "peace." Round and round it goes.

They figure that after enough of this, any "peace proposal" they make, regardless of how loaded it may be, will begin to sound good to us.

Mr. Dulles' "brink of war" policy called such bluffs several times, each one followed by a new "peace offensive."

Now, it would seem, after one of the biggest softening up exercises of all-the Khrushchev visit to the United States and its glowing aftermath—the time has come to shock us again. Thus, the plane incident is blown up fantastically big.

This is entirely in the predicted pattern of Soviet policy.

They are trying to "condition" us, a la Pavlov. They are trying to "condition" us for collapse or piece-meal surrender.

Yes, when Mr. Khrushchev smiles it is for a purpose. When he scowls and shouts it is for a purpose. Indeed, both are for the same purpose—to break us down into acceptance of any Red deal that bears the label "peace."

It is the Pavlovian system.

So say the experts. It makes sense to me.

Herbert J. Pascoe Educational Scholarship Foundation

EXTENSION OF REMARKS OF

HON. PETER W. RODINO. JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 17, 1960

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I should like to include a statement which I made at the seventh anniversary dinner of the Herbert J. Pascoe Educational Scholarship Foundation, which was held on Sunday, May 15, in Newark, N.J. The foundation was set up to encourage young people to enter the field of education by awarding scholarships to aspiring young teachers. This year, scholar-ships were awarded to two outstanding students; Joyce Tuzzolo, of Bloomfield, N.J., and Rosalie Notto, of Phillipsburg. Both of these young women were selected because they demonstrated their superior academic ability and excellent potential for the profession which they have chosen for themselves.

The statement follows:

REMARKS BY CONGRESSMAN PETER W. RODING, JR., AT THE HERBERT J. PASCOE EDUCATIONAL SCHOLARSHIP FOUNDATION SEVENTH ANNUAL

It is a great pleasure to greet you once again at this commemoration of 7 years of fruitful activity by the Herbert J. Pascoe Educational Scholarship Foundation.

There could be no more fitting memorial to Herbert J. Pascoe, who himself made a great contribution to education in this State,

than the dedicated work of the Foundation.
The lives of boys and girls throughout the
State of New Jersey are already being affected
and enriched by the leadership of Herbert J. Pascoe scholars who have now graduated and joined the dedicated ranks of their chosen

Through your efforts many young people have become teachers who otherwise might have been attracted elsewhere, and many have attended college who might otherwise not have been able to do so.

The broad problem of higher education has come into sharp focus in recent years as we realize how essential is a college-trained and college-educated citizenry to our very

The complex problems of living in this nuclear age makes bare literacy hardly sufficient. And the challenge of keeping pace with the technological advance of the Soviet Unionchallenge we must meet-further underlines the importance of higher education.

Unfortunately, the recognition of these basic truths has not yet spurred us on to adequate action.

While the Soviet Union is graduating more teachers, more scientists and more engineers than ever before, we complacently permit an appalling wastage of our human resources. It his been estimated that over half, and possibly three-quarters, of our qualified and capable students, with demonstrated academic ability, fall to go on to college.

Perhaps a major reason why so many of these young people do not go to college is because of a lack of adequate personal funds to finance their education. Part of this gap is being filled by the efforts of this foundation, and by similar private groups throughout the country. Another part of this gap is being filled by the National Defense Education Act, which in the 2 years since its passage has enabled many young people to go to college.

But I do not think I shall offend this organization, nor shall I offend the Federal Government, when I say that all of these efforts are only a drop in the bucket. The dimensions of the need are simply too great

and too overwhelming.

And the problem is not alone that of finances. As graduation time approaches I receive dozens of letters every week from high school seniors who plead with me for help in getting into college. It is tragic, but true, that students with A or B averages, with well-rounded and impressive records, are being turned away every day by our colleges and universities. The schools have 5, 10 or even 15 applications for every opening. As a result, even those who could pay their own way are forced to forego their lifetime ambitions.

The problem is becoming more and more acute in New Jersey, which has always exported the majority of its high school graduates to out-of-State institutions. I understand from the press that other State universities have already given notice that the increasing pressures of their local applicants will require them to give less and less consideration to the New Jersey student in the future.

We cannot continue to permit our potential human resources to lie fallow. It is not my purpose, in this brief statement, to suggest the details of a solution. I merely wish to stress that the solution requires the concerted and dedicated efforts of all our citizens on all fronts and on all levels. It requires a program of national scope and with national support. Above all, it requires our united conviction that the need is too urgent to be set aside or ignored.

We in this country, have indeed, bet all our chips on the enlightenment of our people. We have placed all our faith, all our hope, upon the education, the intelligence and the understanding of our body politic. We have said that ours is a Government conducted by its citizens, and from this it follows that our Government can only be properly conducted if our citizens are well educated.

The manner in which we accept the challenge to provide those citizens with educational opportunities may well determine the future course of our destiny.

Soviet-Proposed Confederation Is No Solution

EXTENSION OF REMARKS

HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1960

Mr. BECKER. Mr. Speaker, whenever the German people has raised its voice to demand national unity and the right of self-determination, the Communist side has suggested a "German Confederation," that is, a confederation of the allegedly existing "two German States"—as "the only feasible way to the reunification of Germany."

The Soviet Union officially proposed such a "German Confederation" in January 1959, and reiterated this proposal in May 1959, during the Geneva Conference of the Foreign Ministers of France, the United Kingdom, the United States, and the Soviet Union. Ever since, the Communist rulers of the Soviet-occupied zone of Germany have missed no chance to praise the "German Confederation" as the only solution of the German problem.

What is actually behind this Communist proposal, and why do the German people reject it? The following answer to this question is based on a statement made by Prof. Wilhelm Grewe, the German Ambassador in Washington:

THE AMERICAN EXAMPLE

The Communist champions of a "German Confederation" like to point to the fact that the process of merging the United States into one State started with the foundation of a Confederation in the 18th century.

The Confederation of 1776 comprised those

The Confederation of 1778 comprised those formerly British colonies which in a great revolutionary movement had gained their independence. The inhabitants of those colonies were inspired by the great ideals of liberty, democracy, and human rights formulated in the famous Declaration of Independence of 1776. That Confederation therefore was based—as indeed every confederation must be—on fundamental principles held in common by its members, on basic agreement as regards political convictions, ideals, and moral values. No one can reasonably assert that it would have been possible to admit to that American Confederation a body politic rejecting the principles of the Declaration of Independence.

It is, however, exactly such an obviously unworkable arrangement that is implied in the Soviet proposal of a confederation between the Federal Republic of Germany with its free democratic system of government on the one hand and, on the other, the so-called German Democratic Republic with its system of tyranny and oppressive police state methods.

One cannot confederate a system of freedom with a system of bondage. Anyone making such a proposal exposes himself to the suspicion of pursuing aims which, far from contributing to the merger of the countries so confederated, tend in the opposite direction, namely, toward the prevention of a genuine merger.

The Germans need not, however, rely on American history in order to learn what confederation means. From 1815 to 1866 Germany was a Confederation. This form of governmental organization proved to be extremely weak and inadequate. Its governmental and administrative functions as well as its legislative powers were quite restricted. Under that form of government it was impossible in practice to pursue either a united foreign policy or a constructive internal policy. The only result of that construction was to delay the national unification of Germany for 55 years.

A confederation of communities that are guided by completely opposite political ideas, and whose political institutions are incompatible with each other, can only result in an organization that at best is quite incapable of action. Indeed, it is inherent in the concept of confederation that each of its members has a right of veto in respect of the decisions taken by the common institutions.

Who would benefit by a confereration embodying institutions that were incapable of action? Obviously the only gainer would be the one who in establishing a confederation pursues the aim of paralyzing its members—or one of its members.

one of its members.

Unfortunately it is to be feared that just this intention is hidden in the Communist proposal of a German Confederation.

With the aid of a confederate constitution that in certain fields and for the implementation of certain measures would require the approval of the all-German Council (or whatever may be the name of the central confederate body), the foreign and defense policies of the Federal Republic, to mention only two examples, could be paralyzed for years to come. For that to happen, it would suffice for the all-German Council, blocked as it would be by the right of veto of its members, to fall to reach any decision.

TURNING BACK THE CLOCK

What has become known so far unfortunately leads to the conclusion that an antiquated, hoary concept which never was particularly fruitful anyway, has been resurrected from a dark corner of a political science library—because that concept promises to serve certain political purposes directed against the reunification of Germany. This, however, would mean turning the clock of history back by one and a half centuries.

In view of the forthcoming East-West meetings it should be reiterated that the proposal of a German Confederation would not contribute to the reunification of Germany but to its postponement, its prevention and, over and above this, to the political paralysis of the Federal Republic.

Time for a New Look at an Old Problem

EXTENSION OF REMARKS

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1960

Mr. CHAMBERLAIN. Mr. Speaker, as one who has annually protested the discriminatory excise tax placed on our automobiles, I was very interested in seeing the editorial of Robert B. Powers in Ward's Automotive Yearbook for 1960, just released, calling attention to this injurious tax. It is gratifying indeed to know that such an eminent authority on automotive affairs agrees with me with respect to the devastating effects of this 10-percent tax against our automobile industry. Mr. Powers' editorial, which I commend to the careful study of every Member, is as follows:

Time for a New Look at an Old Problem (By Robert B. Powers)

While 1959 did not prove to be the best of automotive production years, Federal excise tax collections on motor vehicles climbed to an alltime high \$3.675 billion. That's almost enough to finance the annual foreign-aid program.

The Federal excise tax on motor vehicles began in 1917 as a wartime emergency. For the U.S. Treasury the take then was only slightly more than \$40 million. The "emergency" except for 1928-32, has never been lifted. During the years, the automotive industry has collected over \$14 billion from America's 50 million vehicle owners for the Treasury.

Counting the tax on raw materials and components, Federal excise taxes now take approximately 17.3 percent of the wholesale value of a motor vehicle. To a car valued at \$2,000, wholesale, \$346 is added in Federal taxes.

On an automotive production tool such as a \$6,000 dump truck, the purchaser on its wholesale valuation pays a Federal tax of \$450. The \$20,000 power shovel that loads it, however, goes scot free. The 10-percent straight excise tax also does not apply on other production equipment such as farm tractors, lathes, grinders, freight cars, industrial engines.

Over the years, the automotive industry—largely through the Automobile Manufacturers Association—has worked to have this politically immoral, punitive, wartime emergency Federal excise tax removed or reduced. We, too, have had a hand in attempting to

get a change.

It's time again for a new and closer look at this aging discriminatory tax. The dawn of the era of the American compacts and the consequent arrival of direct competition with their European counterparts make this

imperative.

In 1940 only 253 automobiles were imported from Europe. In 1959, 668,070 cars arrived. The price differential between the American product and the European variety had become too great for the budget-minded American buyer to pass up. This, plus some disenchantment with the flambouyant American product and the alertness of the independents to the change in American automotive tastes hastened the arrival en masse of the compact car.

In a matter of months, the American-made compacts, largely at the expense of the standard cars, began to take close to 30 percent of the market. It may not be many years before they will take 60 percent or more, providing the European manufacturers who started it all do not employ some powerful

weapons in their hands.

Three European motor vehicle manufacturers who presently have the lion's share in the American market either are Government-owned or Government controlled. Their sales total more than 40 percent of all imports. Without stockholders clamoring for generous quarterly dividends, they can pretty much set their own sales prices. Conceivably they also have considerable influence in determining the internal taxes on their products. Lower labor costs, smaller and less-costly staffs of management, engineering, styling sales, and marketing offer them a flexibility in the pricing of their products that presently all we can do is envy.

The introduction of an Iron Curtain motorcar at the recent international automobile exhibit in New York shows what could happen. Priced at \$1,550 in the United States of America, the car retails here for \$200 less

than in the country of its origin.

Our postwar administrations have long been committed to a costly policy designed to win and maintain world friendships. It is unthinkable then that we should suddenly and summarily revive outmoded tariff barriers should the time come when our auto industry falters. Some drastic governmental decision certainly would have to be made should sharp price reductions accompany the ever-increasing flow of oversea compacts to our shores.

All agree the American automotive industry must continue to thrive. So much of the economy of our country depends on it. It's an industry whose manufactured motor vehicles alone are worth over \$12 billion a year. One out of every six business firms and one out of every seven workers gain their livelihood from it. It was the American automobile that lifted our country out of the mud at the turn of the century and sped the Nation to unrivaled prosperity.

To bring relief to the industry from the excise tax at some later time when the need may become critical may cost us those friends throughout the world we have worked so diligently and expensively to win and influence,

Washington policymakers, experts and legislative committees surveying Federal tax structures can forestall possible future injury to the industry and prevent national embarrassment and harm by taking positive action now.

Ernest of California Talks About Fishing, Peace, and Dresses

EXTENSION OF REMARKS

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me here-tofore so to do, I present the text of an article which appeared in the California Teachers Consultant Services magazines and which was forwarded to me by one of the school principals in the great 23d District with an expression of interest that you and all the other of my distinguished colleagues might have an opportunity to read the same. So I am very pleased to herewith present it:

Ernest of California Talks About Fishing, Peace—and Dresses

I want to go fishing and catch a little fish, as big as my finger; I want to go fishing and catch a big fish, as big as my arm; I want to go fishing and catch a giant fish, bigger than my whole body.

my whole body.

I want to go fishing and I don't care what I catch. I told myself, "the best time to go fishing is when you feel like it," and I feel

like it

I am fishing in a boat in the harbor. All is quiet. I am not thinking, but thoughts race across my mind like rabbits across a field. The thoughts are mere glimpses, wonderful glimpses of men and women and children, of ages and civilizations, of worlds, of the whole cosmos.

A glimpse of men and women, fine good men and women, quiet, peaceful, smiling, simple men and women, willing to work, wishing to give of themselves to those who

need them.

A glimpse of children, beautiful with the beauty of children, the simplicity, the truth, the wisdom of children. We should watch children closely; we can learn much from them.

A glimpse of nations fighting each other in many ways, nations talking nice, but holding daggers at each other's ribs. Small nations, big nations, giant nations.

Listen, you nations. Listen to the men and women, listen to the children, to those who live in your country and those who live in other countries. Listen to the common man.

Listen, United States. Listen Russia. England and France and Germany, listen. China and India, listen. All the continents, listen.

Listen to the story of Moses, of Jesus, of Buddha, of Mohammed, of Lincoln, of Ghandl, and all the other great ones. They loved freedom and they loved the people. They knew the people.

Listen and learn what the people want. They want bread, they want a home, they want to love a man, to love a woman, to have and love children. They want quiet, and peace, and work, and play. They want to go fishing, and catch a little fish, or a big fish, or nothing.

They want peace. Listen.

ERNEST ZUKIN.

H.R. 5

EXTENSION OF REMARKS

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. BOGGS. Mr. Speaker, the Members of the House have been advised that H.R. 5, the Foreign Investment Tax Act, will be brought up on Thursday of this week so that the House can complete consideration of the bill. Members will recall the debate on H.R. 5 began on March 8 under a closed rule providing for 3 hours of debate. Two and one-half hours of debate were consumed on that day and debate was suspended until a later date. Thus, when consideration of H.R. 5 is resumed on Thursday, there will only remain 30 minutes of debate, 22 minutes of which are reserved to the minority.

The limited amount of time available for debate on Thursday will not permit a full discussion of a number of points which deserve to be brought to the attention of the House for its consideration in connection with the vote on the bill.

I refer particularly to the fact that the Committee on Ways and means has adopted two amendments to the bill which it proposes to offer to the House as committee amendments, as provided for by the rule. On April 28 I inserted in the Appendix of the Record the text of three amendments and the text of the press release of the chairman of the Committee on Ways and Means, the Honorable Wilbur D. Mills, in explanation of the committee amendments.

I want to take this occasion to explain briefly the committee amendments and to commend them and the bill to the House. These amendments were adopted in the light of the debate which took place on March 8 on the bill and are designed to perfect the bill by removing some of the features which evidently gave concern to a number of the Members of the House. I feel confident that the committee amendments successfully accomplish this purpose and that no Member of the House need entertain any reservations about voting for H.R. 5 this Thursday.

I also propose to discuss some of the matters raised by the Members involving general policy questions surrounding H.R. 5. I refer particularly to two matters: First, the question of the impact of H.R. 5 on the U.S. balance of payments and, second, the effect of the bill on American jobs. After giving very careful thought to these questions, I am absolutely convinced that there need not be any concern about H.R. 5 on these two counts.

BASIC PURPOSE OF THE DILL

The basic purpose of H.R. 5 is to permit the deferral—postponement—of the U.S. corporate income tax on income earned abroad by a new type of domestic corporation to be known as the Foreign Business Corporation. The Foreign Business Corporation will be a corporation that earns virtually all of its in-

come outside of the United States and meets a number of very rigorous tests. Under one of the committee amendments, which I will discuss in greater detail below, the Foreign Business Corporation must earn and reinvest its income in the less-developed countries of the world.

Today, under existing law, a great number of American business firms can enjoy tax deferral by setting up foreign corporations and particularly what are known as "foreign base companies." The Foreign Business Corporation would be a domestic base company. As I have indicated, in order to qualify as a Foreign Business Corporation and to enjoy tax deferral on the income earned, a company would have to meet very rigorous tests, more rigorous than those involved in foreign incorporation. addition, as I have also pointed out, the Foreign Business Corporation would have to earn its income in the less-developed countries in order to enjoy tax deferral whereas existing foreign base companies can earn their income anywhere in the world.

The modest character of H.R. 5 is, I think, quite evident. Nevertheless the bill is important. A number of American firms, particularly small business firms, are either not able or not willing to incorporate abroad in order to get tax deferral. Foreign incorporation is generally regarded as a cumbersome and expensive business and often does not lead to rational management of business operations. H.R. 5 would make it possible for these American firms to enjoy parity with other American firms that have been able and willing to go abroadat least so far as operating in the lessdeveloped countries is concerned. H.R. 5 would also-and this is most importantimprove the competitive position of American firms abroad relative to the position of their foreign competitors. The United States stands virtually alone among the major countries of the world in not providing the kind of tax treatment involved in H.R. 5. Finally, H.R. 5 would serve as an incentive to American private investment in the less developed countries and would serve, therefore, to advance our foreign policy objectives which are being met through Government aid. It is only through expanding private investment that the prospect of reducing Government aid to the less developed countries can be realized.

COMMITTEE AMENDMENTS TO H.R. 5

The two amendments to H.R. 5 that will be offered to the House would accomplish three purposes. They would:

First, limit the provisions of H.R. 5 to income earned and reinvested in the less developed countries;

Second, eliminate the so-called grossup with respect to the dividend income received by the foreign business corporation; and

Third, make a corporation ineligible as a foreign business corporation if it has been operating abroad under substandard labor conditions.

Limiting H.R. 5 to investment in the less developed countries means that the provisions of the bill would act as incentives to investment in the less devel-

oped countries only. It is in these areas of the world that private investment is most desperately needed and where the development of private enterprise is essential for long-term economic growth and political stability.

The elimination of gross-up is a highly technical matter. A number of the minority members of the committee, in the floor debate of March 8, objected to the inclusion of this provision in H.R. 5 on the grounds that it is discriminated against the Foreign Business Corporation provided for in H.R. 5. Since that time, the Committee on Ways and Means has held public hearings on gross-up legislation which, if enacted, would apply to all domestic corporations including the Foreign Business Corporation. It was felt that, in view of this pending bill, it was not necessary or desirable to have a separate gross-up provision in H.R. 5.

The committee also adopted an amendment providing that a corporation would be ineligible for the benefits of H.R. 5 for any taxable year in which it was found to be operating abroad under substandard labor conditions. The wage standards involved would be those of the foreign country in which it was operating. The committee felt that, since the expansion of U.S. private investment was essential to the effectuation of important goals of national policy, the positive results of such an investment should not be endangered by a corporation operating in a less developed country under labor standard conditions that were below the minimum standards of the country concerned and still be able to enjoy the advantages of H.R. 5. This provision of the bill will not be administered in a harsh and punitive manner. It is expected that adequate opportunity will be given a corporation to raise its standards in order to conform with the required standards.

REVENUE EFFECTS

The Treasury Department has estimated that, with the amendment limiting H.R. 5 to less developed countries, the revenue effect of the bill will range between \$30 to \$40 million a year. This is a reduction of over 50 percent and, indeed, more like a two-thirds reduction, in the revenue effect that was estimated for the bill as originally reported by the Committee on Ways and Means.

It is important to emphasize that this revenue effect does not involve an ultimate revenue loss for the Treasury. H.R. 5 does not provide for tax reduction; it only provides for the postponement of tax. When the earnings from foreign investments are returned to the United States, as they ultimately must. the full U.S. tax will be paid. Moreover, by promoting investments, H.R. 5 also promotes the future flow of income from investments and hence increases the revenue from such income which the Treasury will collect. I firmly believe that tax deferral should be regarded as a short-term investment by our Government in American private enterprise abroad that will yield good returns to the U.S. Government, to the Treasury Department and to American business in the years ahead.

ADMINISTRATION SUPPORTS H.R. 5

The administration has indicated its support for H.R. 5, as amended, because it gives effect to the President's recommendation, contained in his budget message this year, for the enactment of tax deferral legislation limited to income earned and reinvested in the less developed countries of the world. In a letter from the Treasury Department to the chairman of the Ways and Means Committee it is pointed out that the administration has urged that further steps be taken to encourage private investment in the less developed countries abroad and that H.R. 5 is in accord with this specific recommendation of the Presi-

I also understand that the committee amendments to the bill have satisfactorily met the reservations that a number of groups have had to the enactment of H.R. 5. The AFL-CIO, which indicated its opposition to H.R. 5 when the bill was first brought up, has now urged the passage of H.R. 5, as amended.

H.R. 5 AND THE U.S. BALANCE OF PAYMENTS

There has been some concern expressed about the question of promoting private investment abroad at a time when the U.S. balance of payments has manifested a deficit. It is, therefore, worthwhile to examine briefly the relationship between private investment and the U.S. balance of payments and the effect of H.R. 5 thereon. Before doing so it is useful to take a look at the recent developments in the U.S. balance of payments to see what has been happening and particularly to note whether our balance of payments problem is as serious today as it was a year or two ago.

The evidence is very encouraging. In the Foreign Commerce Weekly, for May 9, 1960, a publication of the U.S. Department of Commerce, there is a detailed discussion of the remarkable improvement in U.S. exports. I quote the lead paragraph in this article:

Sales of U.S. goods abroad displayed considerably increased vigor in the first 3 months of this year, following their rebounds in the second half of 1959. Nonmilitary shipments, totaling \$18.4 billion at a seasonally adjusted annual rate in January-March, as compared with \$15.4 billion a year earlier, showed the greatest strength apparent in more than 2 years.

The improvement in our exports reflected a 20-percent increase over the same period in 1959 and March exports were larger than in any month since June of 1957 when exports were inflated by the post-Suez situation. The gain in exports this year was shared by all major categories of U.S. exports.

It is interesting to note that exports to Western Europe—a prime target for American investors in recent years—rose 40 percent in January and February 1960 above the corresponding months of 1959. Exports to Japan were also higher by 40 percent than for the same period in 1959.

With the improvement in our balance of payments the gold outflow that was of so much concern in 1958 and 1959 has slowed down to a trickle. I understand that there was a smaller gold outflow in the whole first quarter of 1960 than

was recorded on the average for any month in 1959.

Not only has our balance of payments situation shown very encouraging signs of improvement so that we need be less concerned about our balance of payments, but it is also very important to recognize that U.S. direct private investment abroad has not been a factor in our balance of payments troubles. There is one fact about investment and our balance of payments that is not well known and deserves wide attention. It is that year in and year out since the end of World War II, and even before, the income that we have earned from our direct investments abroad has exceeded the outflow of new direct investment

Every year we have been taking in more in income than we have been sending out in new investment. This has been an important plus factor in our balance of payments-almost as important in 1959 as our export surplus. Thus, over the last 5 years, 1955-59, the excess of our direct investment income over our direct investment outgo has totaled \$3.5 billion. Thus, direct investment transactions have on balance supported our balance of payments to the tune of \$3.5 billion over the past 5 years. In 1958 and 1959, the excesses of income over outgo on direct investment account equaled \$1.1 billion and \$0.9 billion respectively.

Nor can it be argued that direct investment outflows helped cause our balance of payments problems in 1958 and 1959. The fact of the matter is that direct investment outflows were lower in 1958 and 1959 than in 1957 which was a year of balance of payments surplus for the United States.

Actually we can look forward to income from our direct investments offering an important support for our balance of payments in the years ahead. Direct investments abroad also help U.S. exports as can be seen in the record of exports to Western Europe this year which I cited earlier.

The "Staff Report on Employment, Growth, and Price Levels" prepared by the staff of the Joint Economic Committee of the U.S. Congress and published on December 24, 1959, confirms these observations. The following quotation is taken from this report:

Taken by itself, the net contribution of private capital investments abroad cannot reasonably be accused of causing balance of payments problems. To say this, however, requires the setting against one another of private foreign investment outflows and private earnings on foreign investment. If, at this period, U.S. business stopped investing abroad, the balance of payments deficit would be reduced to a negligible amount However, if the fruits of past private foreign investment were also eliminated, this proposition would be vitiated. It seems a more reasonable approach to take the net of these two flows, which gives private foreign investments to date a pretty clear bill of health.

A recent interim report by the Committee on Interstate and Foreign Commerce of the U.S. Senate, prepared in

connection with its special study of U.S. foreign commerce and dated April 25, 1960 had this to say in connection with the subject of private foreign investment and our balance of payments:

Reducing the flow of private investment abroad would contradict a major thesis of our economic assistance policy, hobble the competitive power of U.S. industry in world commerce and, in the longer run, diminish the returns from foreign investment which are an important entry on the income side of our international ledger.

JOBS, EXPORTS, AND FOREIGN INVESTMENT

It has been contended that private investment abroad reduces U.S. exports and hence takes away American jobs. What truth is there to this contention? I think the evidence shows that far from reducing American exports and taking away American jobs, private investment abroad creates markets for American exports and hence helps create American jobs.

First, let me say that H.R. 5 would not take away investment money that would otherwise be invested in the United States and induce American corporations to invest that capital abroad. H.R. 5 provides the deferral of U.S. tax on income earned abroad. It, therefore, operates as an incentive to reinvestment abroad of incomes earned abroad. To put it briefly, it promotes the plowingback of foreign earnings. Once the foreign earnings come back to the United States and enter the domestic capital market they will be subject to the full U.S. tax. Thus, H.R. 5 will not take capital away from investment in the United States and from the creation of jobs in the United States. As a matter of fact, if an American corporation has decided to invest abroad, H.R. 5 would make it possible for that corporation to . finance more of the investment out of its foreign earnings and correspondingly less of the investment out of its domestic capital.

Neither would the bill result in a reduction of U.S. exports and the production abroad of goods that were formerly exported from the United States. As we all know, there has been a sizable amount of U.S. investment abroad particularly in Canada and Western Europe in the last few years. Has this investment resulted in a decline of the U.S. exports? Let us take Western Europe for example. There has been a substantial amount of investment by U.S. corporations in the six countries that make up the common market. Yet, despite this fact, our exports to the common market countries have acutally increased. In the first 2 months of this year U.S. exports to the common market amounted to almost \$550 million. This was 52 percent above our exports for the same period in 1959 and 36 percent above our exports for the same period in 1956, a year which we tend to regard as a high export year.

Another test of whether U.S. investment has impaired our exports can be made by examining the decline in our exports that took place in 1958 and 1959 to see whether these declines in exports

were attributable to American investments abroad. Our exports declined in such categories as raw cotton, iron and steel mill products, nonferrous metals, civilian aircraft and petroleum. In no case did our exports decline because the exports markets for these products were being supplied from overseas sources by American companies.

Even in the case of imports into the United States, the increase that we have experienced over the past few years is not attributable to goods produced by American investment abroad. As you know, H.R. 5 contains a provision that would make a corporation ineligible for the benefits of H.R. 5 if it reexported to the United States, directly or indirectly, goods that had been produced by it abroad. The provision in the bill says specifically that a corporation will be ineligible for the benefits of H.R. 5 if more than 10 percent of its gross income is derived from the sale of goods in the United States that were produced abroad.

I think it should be appreciated that the less developed countries of the world are not good markets for U.S. exports for the simple and basic reason that these countries are poor. Investment abroad, as investment at home, creates wealth and income. It is only through investment that production can expand, standards of living rise and markets be developed. Investment by private U.S. companies will produce goods that these countries cannot afford to buy today from the United States. But in the process these countries will become markets for U.S. exports and this will create jobs in the United States.

This is surely the lesson of American history. We export the most to those countries with the highest standards of living and in which American enterprise has the greatest investment. The following table shows this clearly:

	per	Per capita purchases from U.S.
Canada	\$1,436	\$234.0
Great Britain	958	21.0
France	846	13.0
Germany	742	18.0
Italy		14.0
Japan	254	13.0
Egypt	109	1.5
India	61	1.1
Pakistan	52	1.3

I therefore do not think that there is a basis for concern about the effect of H.R. 5 either in terms of what it might do to exports and jobs at home or in terms of the effect that it might have on the balance of payments. On the contrary, it seems to me that through offering this modest, but important, incentive to private investment in the less developed countries we will help these countries to develop and to become good customers. Beyond that we would be advancing important objectives of national policy through the utilization of private enterprise which is our secret weapon in the cold war with the Sino-Soviet bloc.

Addresses of Congressman John Brademas, of Indiana, and Martin Mc-Kneally, National Commander of the American Legion, at Dedication of New Post Home of James Lowell Corey Post 63, American Legion, Argos, Ind., May 15, 1960

EXTENSION OF REMARKS

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1960

Mr. BRADEMAS. Mr. Speaker, on Sunday, May 15, in Argos, Ind., members of the James Lowell Corey Post 68 of the American Legion took part in ceremonies marking the dedication of a new post home to replace one that burned in 1958.

Among the persons participating in this event were the distinguished former Governor of the State of Indiana, the Honorable Henry F. Schricker; the Indiana department commander of the American Legion, Donald Hynes; and the commander of the James Lowell Corey Post, Bruce Van Der Weele.

Of particular interest to the Legionnaires and their families was the moving address of the national commander of the American Legion, Martin B. Mc-Kneally, of New York, who dedicated the new post home.

CONGRESSMAN BRADEMAS PRESENTS AMERICAN FLAG

It was my honor on this occasion to to present to the members of the James Lowell Corey Post a 49-star flag which had flown over the Capitol of the United States on July 4, 1959, the day when the 49-star flag became the official flag of our country. I was also pleased to present the post with four pencil drawings of the "Four Fortresses of Freedom," the White House, the Capitol, the Supreme Court, and the Declaration of Independence.

Mr. Speaker, under unanimous consent I include my own remarks on this occasion and those of National American Legion Commander McKneally:

RUMARKS OF CONGRESSMAN JOHN BRADEMAS ON MAY 15, 1960, ARGOS, IND.

Governor Schricker, Commander McKneally, Commander Hynes, Commander Van Der Weele, fellow Legionnaires and friends, today is a great day not only for members of the James Lowell Corey Post of the American Legion but for all Hoosier Legionnaires. Not often do we have an opportunity to have our distinguished national commander, Martin McKneally, in our midst and we welcome him here today.

I want to congratulate Commander Van Der Weele and all the members of James Lowel Corey Post 68 of Argos for their dedtcated efforts which have made possible the construction of this fine new home.

ARMED FORCES WEEK SLOGAN: POWER FOR PEACE

It is fitting and proper that we should dedicate this new home on the eve of Armed Forces Week, which begins tomorrow and runs through May 22. Commander McKneally has asked all Legionnaires to support the 11th observance of this week and Comman-

der Hynes has been named by the Governor of Indiana to serve as Indiana State chairman of the observance.

The recognition of Armed Forces Week is therefore a splendid symbol of the continuing devotion of the American Legion to the security and defense of our country and to the cause of freedom.

The slogan of Armed Forces Week is "Power for Peace." All Americans want peace. Democrats want peace. Republicans want peace. You want peace and I want peace. Yet you and I know that today the world is standing on a tightrope, with peace depending in large measure on the capacity of a divided world to maintain its balance and not fall into the volcano of nuclear war.

REPUBLICANS AND DEMOCRATS DISCUSS ARMS CONTROL

It is encouraging to see that political leaders of both our great political parties are now discussing the problem of arms control more seriously than it has ever been discussed before. For as Secretary of State Christian Herter made clear in February in his famous speech to the National Press Club in Washington, D.C., the only sure longrun way to defend ourselves in this troubled world is to work out an effective disarmament agreement with our adversaries in the Soviet Union, an agreement which, I hasten to add, will of course require effective inspection guarantees.

WE MUST BE MILITARILY STRONG IN ORDER TO DISCUSS DISARMAMENT

But I am sure Commander McNeally would agree with me that we in America must be strong militarily if we are to have bargaining power in dealing with the Soviet Union, even on the subject of disarmament.

We cannot lead effectively from a position of military weakness.

That is the meaning of the slogan, "Power for Peace."

We must be strong not only militarily but economically and diplomatically as well, for our Communist adversaries do not fight the cold war on one front alone. We have already seen, for example, how Khrushchev has been exploiting the unhappy blunder of the U-2 incident for all the anti-American propaganda he can make of it.

I have no wish to exploit this matter for partisan gain for we want our President to enjoy the united support of the American people as he goes into talks at the summit which may directly affect the destiny and peace of the entire world. We nonetheless must recognize how our Government has been placed on the defensive by this incident and by the way in which Khruchchev has been using it.

AMERICA FACED WITH POWERFUL CHALLENGE IN SOVIET UNION

We must realize more than ever by the events of recent days and by the trip which Khrushchev made across our country last year that in him and in the Soviet people whom he leads we are confronted with the most powerful challenge to our survival as a free society in all the history of the American Republic. We must be prepared to understand the nature of the challenge we face.

We believe in a free society. The Communists believe in a slave society.

We believe in an open society. The Communists believe in a closed society.

If we are effectively to meet the challenge of the Communist world, we must be prepared to sacrifice. We must understand why we must be strong if we are to continue to be free.

WE MUST HAVE POWER IF WE ARE TO HAVE PEACE

Better than most organizations in our country, the American Legion understands the dangers of the Communist challenge to freedom, understands why we must have power if we are to have peace.

I therefore deem it a high honor and a privilege, as your Representative in Congress, in the presence of our national and State commanders and of Commander Van Der Weele and all my fellow Legionnaires to present to the members of the James Lowell Corey Post 68 of the American Legion this American flag which was flown over the Capitol of the United States on July 4, 1959, the day the 49-star flag became the official flag of our country.

fiag of our country.

I have another gift which I am pleased at this time to present to you, four pencil drawings of the Four Fortresses of American Freedom: The White House, the Capitol, the Supreme Court Building and the Declaration

of Independence.

May these drawings and may this flag serve as an ever constant reminder to all members of the American Legion of the greatness of our country and the freedom which is the birthright of the American people.

REMARKS OF NATIONAL COMMANDER MARTIN B.
MCKNEALLY, THE AMERICAN LEGION, AT THE
DEDICATION OF THE NEW HOME OF THE JAMES
LOWELL COREY POST, ARGOS, IND., MAY 15,
1960

I am delighted to be in Argos and to assist in the dedication of this beautiful new building wherein will be housed not only the men and women of James Lowell Corey Post but their ideals as well. This new post home is a fulfillment of the hopes and labors of the men and women of Argos for 40 years. It is a monument and at once a milestone of progress in the history of the American Legion.

The American Legion stands solely as the architect of the rehabilitation program with its network of hospitals across the land which is monument enough for any group of founders, but what of the millions of hours spent in hospital visitations? What of the millions of dollars spent in child welfare? What of the original thinking that chartered the course of the country in ways of preparedness or national security? What of the GI bill, written by the American Legion and sponsored over the protest of professional educators? What of the development of a strong, authentic voice in the field of Americanism? What of the multifarious arts of charity that have become a legend in the land? What a heritage-what a perfect description of this heritage of charity was written by the immortal Shakespeare when he penned the lines which read: far that little candle throws its beams, so shines a good deed in a naughty world."

THE PURPOSE OF THE AMERICAN LEGION

I have said on previous occasions that the American Legion purpose in our day was the sustaining of the doctrine of belief upon which this Nation was founded and without which it must perish, and that is the belief in the existence of God and in the dignity of human personality. I need not point out to you that today it is those twin beliefs which are under the most relentless and the most powerful attack in the history of mankind.

CALLS FOR CONTINUED ATTENTION TO U.S. GRAVES ABROAD

The American Legion holds in high esteem the profession and the office of the soldier. If it were not for the soldier there would be no America and there would be no hope for men who love freedom. In man's ceaseless struggle to be free, he must be willing to pay the enormous costs of war. It is the melancholy record of fallen man, that his motivations conflict and collide. His will to do evil and his baseness must be reckoned with and the reckoning sometimes enslaves and it very frequently kills. I commend to your most reverent attention the thousands of graves abroad in cemeteries cared for by the American Govern-

ment and I direct you to the fact that five new cemeteries are to be dedicated this year. Hardly a word is written, a picture published concerning this subject and I am informed that this is so because the present-day rationale of the American people is not to be reminded of the ugliness of the cost of freedom. Freedom and the cause of America we say to you, must never be computed in the terms of dollars and cents. The only item to be considered is the cost of men's lives. Reminiscence and reminders of this fact must be the No. 1 item on the agenda of our daily lives, depression, and sadness to the contrary notwithstanding.

"WE ARE EITHER FOR FREEDOM OR WE ARE AGAINST IT"

For we have an enemy, an enemy that opposes everything that we hold dear and that enemy makes our age one of tremendous risks. And in this age there is no neutrality, we are either for freedom or we are against it. Fear of atomic destruction does not provide us with the solution of the diemma. There is a considerable body of intellectuals whom the fear of atomic war has obsessed. They have made their objective in life only the preserving of existence. One reads of their thinking with a certain horrifying fascination. Phillip Toynbee states as follows: "In the terrible contest of nuclear war even the vital differences between communism and western freedom become almost unimportant."

The West he declares should, "negotiate at once with the Russians and get the best terms that are available." Since Russia in his estimation is now and will continue to remain stronger there is nothing to do for the West "but to negotiate from comparative weakness." He admits that this may well set up the total domination of the world by Russia in a few years. The Soviets would impose on us a regime which most of us detest but this is better than allowing the human race to destroy itself. And one of Toynbee's confreres observes, "I might not much mind living under Soviet domination."

These men are not Communists but they have lost their will; they have lost it to fear and to despair, in the pursuit of existence. They have lost sight of the truth which is simple enough and that is that we in our day are faced with two destructive forces of incredible dimensions. The bomb represents material devastation, the Communist party political destruction.

THE SOLEMN DILEMMA OF OUR TIME

This is the solemn dilemma of our time and this is the foremost consideration of our people this afternoon. The administra-Washington has chosen by its continuation of nuclear testing, by the flight of the U-2 over the secret territory of the Soviets to pursue the ideal of political freedom. What kind of a nation with the holy mission of preserving its sovereignty, its people, and its freedom, would do less in the face of the gigantic dilemma? To sit by knowing what we know, facing what we face, and do nothing, would make the cemeterless of Figure 2. teries of Europe where our honored dead are entombed, and the whole history of this Republic a gargantuan jest. The administration is charged through its intelligence service with the responsibility of providing for the safety of its people; its duty is plain and it is to gather the facts with which it may discharge that duty. Must we act as if its duty were less? Must we act as if the obtaining of information necessary to our own defense against a secretive and threatening power was to commit a sin? Are we to assume the abasing role of the boy caught with his hand in the cooky jar when we know the food there obtained is the only means of sustaining freedom and hope? I for one American, suffer no embarrassment and highly praise all those in authority who see clearly the bitter dilemma of these days. We of the American Legion do not seek to impose our views but we do propose to all that there is no flight from the serious business of our days and that is the survival of free man.

CONGRESSIONAL RECORD — APPENDIX

MEN OF COURAGE, FAITH, IDEALS NEEDED

The late Albert Camus tells us, "with every dawn an assassin slips into some cell, murder is the question before us." This is the solemn keynote of our time, the murder of men and the murder of ideals. As Americans, let us conduct ourselves as men. Men of courage, men of faith, and men of ideals. There is no other way open to us, for Americans may not be craven, they may not be pacifistic, they may not be men of despair.

In the world there is but one city in which we can dwell, it is the city of the halt, the blind, the malmed, but it is the city of charity, and it is the city of courage, the city of freedom. It is the City of God. Outside it is the night.

Supersonic Transport

EXTENSION OF REMARKS

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, Robert F. Six, dynamic president of Continental Airlines, and the only airline president in the United States who has flown twice the speed of sound, is one of the U.S. aviation leaders who has come to grips with the future. When I called for hearings on the subject of financing supersonic transports for May 17 and 18, Mr. Six responded as follows:

CONTINENTAL AIR LINES, INC., Denver, Colo., May 5, 1960.

Hon. Overton Brooks,

Chairman, House Science and Astronautics Committee, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: My sincere compliments on your foresight in calling public hearings to gather information on the forthcoming supersonic transport.

As you maly know, Continental Air Lines for the past year has had a special team evaluating supersonic transports, for we're convinced that such 2,000-mile-per-hour aircraft will enter scheduled airline service between 1965 and 1970, with 1967 the probable year.

The plane, we believe, will be in the mach 3 to mach 3.5 class (the limit of our present jet engines), weight no more than a present subsonic jet (250,000 pounds) and be able to carry 80 passengers from coast to coast in 1½ hours or halfway around the world in 6 hours.

Financing of the initial prototype, of course, is the biggest stumbling block to production of a supersonic passenger transport. However, the problem is not insurmountable because of the vast sums already expended by the Federal Government in development of air frames and engines for supersonic military planes now flying or in the design stage. Because of these expenditures already made, I believe that only an additional \$75 million to \$100 million would be needed for the prototype, rather than the vast sums some people are quoting; yet even this amount would be too great for either our manufacturers or our airlines to finance.

I believe there is a simple solution to the problem, and one that could not be classed as subsidy. If the Federal Government financed the prototype, then was repaid through royalties on all production aircraft, the end result would be to give this country supersonic transports far earlier than they would otherwise be available, and at no net cost to the taxpayer.

The British Government financed the Vickers Viscount in the same way with royal-ties more than repaying the initial expenditure.

It's obvious that foreign governments, particularly the Russians, will be behind development and production of their own supersonic transports. Since the world market may be no higher than 150 to 200 such transports, only 1 model may be built worldwide. If a foreign manufacturer produces that model, U.S. airlines may have to buy it to maintain their competitive position, seriously injuring our own aircraft manufacturers.

Rest assured that other nations will do everything in their power to be first with a supersonic transport, not only for prestige, but for the chance to dominate world markets.

I sincerely feel that this country cannot afford to let that happen. We cannot afford to be second with a supersonic transport, for in this race there may be no second place. Sincerely.

ROBERT F. SIX, President.

"Rules for Raising Delinquent Children Are Worthy of Note" From the Pen of Tom Goff, Editor, the Huntington Park (Calif.) Daily Signal

EXTENSION OF REMARKS

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I call to your attention and the attention of my other distinguished colleagues a very timely editorial appearing in the Huntington Park Daily Signal, one of the leading newspapers in the great 23d District, Los Angeles County, Calif., which I represent in this great Legislature. Mr. Tom Goff, the distiguished editor, wrote this editorial for his column entitled "Around the Southeast with Tom Goff":

RULES FOR RAISING DELINQUENT CHILDREN
ARE WORTHY OF NOTE

Currently going the rounds is a tonguein-cheek list of "Twelve Rules for Raising Delinquent Children" dreamed up by some wagster or other.

Parents who haven't seen it already—and I hope some you haven't—might find it interesting. Some of the rules should strike a sore spot in many homes in the southeast district and elsewhere. At least a couple of them brought me up rather short. Here are the rules:

"1. Begin with infancy to give the child everything he wants. In this way he will grow up to believe the world owes him a

"2. When he picks up bad words, laugh at him. This will make him think he's cute. It also will encourage him to pick

up 'cuter' phrases that will blow off the top of your head later.

"SELF-DETERMINATION THE KEY

"3. Never give him any spiritual training. Wait until he is 21 and then let him 'decide for himslef."

'4. Avoid use of the word 'wrong.' develop a guilt complex. This will condi-tion him to believe later, when he is arrested for stealing a car, that society is against him and he is being persecuted.

"5. Pick up everything he leaves lying around—books, shoes and clothes. Do everything for him so that he will be experienced in throwing all responsibility on others.

"6. Let him read any printed matter he can get his hands on. Be careful that the silverware and drinking glasses are sterlized, but let his mind feast on garbage.

'7. Quarrel frequently in the presence of your children. In this way they will not be too shocked when the home is broken up later.

"NEVER SAY 'NO'

"8. Give a child all the spending money he wants. Never let him earn his own. Why should he have things as tough as you had them?

"9. Satisfy his every craving for food, drink, and comfort. See that every sensual desire is gratified. Denial may lead to harmful frustration.

"10. Take his part against neighbors, teachers, policemen. They all are prejudiced against your child.

'11. When he gets into real trouble, apologize for yourself by saying, 'I never could do anything with him.'

"12. Prepare for a life of grief. You will be likely to have it."

Good food for thought, I believe. And besides, what else can you write about on election day.

Funds for the Building of Schools and Paying of Teachers

EXTENSION OF REMARKS

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 17, 1960

Mr. BRAY. Mr. Speaker, there has ben much said in our country about the need for good, sound education for American youth. I believe that all of us will agree that we do want such education provided for them. I believe that the State of Indiana has been trying to provide such education.

The building of schools, their maintenance, and the employment of an adequate number of capable teachers are very expensive and such costs will increase as time goes on. The taxes to support this educational system are falling heavily on property owners, especially the owners of homes, farms, and small businesses. In some school districts, especially those where the children live and go to school in one district and their parents are employed in another, the property taxes for the building and maintenance of schools have pushed the local property tax levy to seven, eight, and even as much as nine and ten dollars per hundred dollars of taxable property.

In order to alleviate this burden, taxpayers are considering many alternatives. For years it has been suggested that the Federal Government contribute heavily to the support of our schools, but that, too, entails several problems. One is that the Federal Government is, as we know, heavily in debt, and in the end the taxpayer is also paying for all of the Federal money, plus the expense of Federal bureaucracy. If Federal money is to be used, a problem also arises about the formula for allocating the money among the various States and school districts. Some say that Federal assistance should be according to the need of the respective States. This could lead to a great unfairness, as a State which has refused to tax its citizens to build and maintain its schools, and frankly there are such States, naturally has needs greater than those States which have taxed themselves to give their children a proper education. School districts in Indiana have been leaders in building and maintaining adequate educational systems. Any Federal criteria for either school construction or teachers' salaries that bases that allocation on need would give great advantage to those States which refuse to pay adequate taxes for education. This practice would condone those States which have failed to collect taxes to properly construct and operate their schools, and would encourage these States to rely on the money other States pay into the Federal treasury.

Certain States have encouraged industry to move from Indiana. The State of Indiana has lost considerable industry to these States by giving an exemption on property taxes. That brings about an interesting situation. Several States give industries 10 years freedom from taxes if they will move their factories from Indiana to their State. This industry, which has paid taxes to maintain Indiana schools, goes to another State and pays no taxes. Taxpayers in Indiana employed in that industry lose their jobs and the Indiana school system loses the taxes this industry paid. The industry pays no taxes in its new location so that State has a greater need for the Federal money. If legislation is passed which allocates Federal aid on the basis of need, Indiana would pay taxes to the Federal Government to build schools in these States that take industry away fom Indiana. This situation could go on and on.

However, we must admit that there is a great need to find additional revenue sources to build and support our schools without creating a greater burden on the local property owner.

In addition to these problems arising from proposals for Federal assistance in education, we also have a national fear. and I think a just one, that the Government might dominate our schools and would not exert the same care in spending our tax dollars as the individual States do. It is, fortunately, a problem to which there is a solution.

The Federal Government, through income and excise taxes, has been taking a tremendous tax bite out of our national economy. The Federal Government has. throughout the years, exploited new taxes in an aggressive manner and now dominates the excise, corporation, and personal income tax field. What I propose is that the Federal Government earmark a certain part of the taxes it takes from the citizens of each State to return to that State for educational purposes. The Federal Government would have no claim on this money; there would be no part of it remaining in Washington. The relationship of the Federal Government to this money would be the same as that of the county treasurer in each of the 92 counties in the State of Indiana. If the treasurer is to collect a \$3 levy for schools in a certain township or district, all of it, not just part of it is sent to that district.

I have introduced legislation whereby the Federal Government shall return to each State one-half of the tax it collects on cigarettes sold in that State. The State would be obliged to use this money for teachers' salaries or the construction of school buildings, whichever it determines is most needed. This would not encourage a State to cut down on its property taxes in order to get Federal aid. Each State would get back a certain portion of that which its taxpayers had paid.

I mentioned the possibility of the cigarette tax to an educator friend of mine. He said that it wouldn't be enough. I pointed out to him that if the Federal Government returned to Indiana just one-half of the cigarette tax, that is, 4 cents of every 8 cents tax per pack, it would amount to \$24 million per year, which is three times the amount Indiana would receive under proposed legislation. He readily agreed that this legislation would meet their needs. It would be a simple matter to determine how much each State would receive, for all States except three have imposed State cigarette taxes, which require that accurate sales records are kept.

For more than a decade we have heard many voices raised to provide Federal financial assistance to our schools to relieve the burden on State and local revenue sources. These proposals have varied widely but have inevitably become mired down, owing to the problems stemming from the Federal association with the program. If we really want to provide additional money for school purposes here is a way to do it and leave the authority with the States and communities. This will offset much of the criticism of the other proposals and avoid some of the problems which have prevented enactment of other suggestions.

Furthermore, the several alternative plans for Federal aid which have been before the Congress this year are all temporary "stopgap" measures, or so we are told. A rebate of excise tax collections could provide a steady and permanent source of additional revenue for school purposes. There would be no need for congressional wrangles about the distribution of such funds, for each State would receive what it would be entitled to, based on its own consumption.

This approach need not be limited to one-half of the cigarette tax. It could be a greater or lesser proportion of that tax or it could be related to some similar Federal excise tax or a percentage of a personal income tax paid by each State which would provide adequate funds. It does provide an opportunity for persons concerned about this growing financial problem to meet the need for additional school funds and avoid many of the pitfalls of other Federal school-aid suggestions.

Is the World Our Campus?

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 17, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following synopsis of a newly published book entitled "Is the World Our Campus?" The book was written by Walter Adams and John A. Garraty.

Following the synopsis is a review of the book as it appeared in the New York

Times of May 2, 1960:

IS THE WORLD OUR CAMPUS? BY WALTER ADAMS AND JOHN A. GARRATY

Technical assistance — its challenge, achievements, frustrations, and failures—is the subject of this hard-hitting and candid account of American university programs overseas. Prepared by two distinguished professors, and published by Michigan State University Press, "Is the World Our Campus?" is bound to stimulate discussion, debate, and—most important, perhaps—demands for reform.

American universities, the authors point out, are no longer confined to the ivory tower. Financed by the Federal Government or the large foundations, they have become subcontractors in the dispensing of technical assistance. They have ventured forth to reform business education in France, public administration in Italy, and veterinary medicine in Turkey—to say nothing of other activities in these countries and many others. In a sense, they have made the world their campus.

Has this attempt to export American technical know-how been successful? Have the results justified the investment? Have the universities proved a service to the Nation and still remained true to themselves? Have their emissaries proved that the academic American is a better ambassador than the ugly American or the quiet American?

These are some of the questions this book is designed to answer. It is based on first-hand observation and interviews with more than 300 Americans, Turks, and Europeans; university representatives and government officials; professors and administrators; direct participants and informed observers.

The authors found that not all foreign assistance is worthy of the Nation's private or public purse; that many foreign institutions do not deserve help; that not all American universities are responsible purveyors of technical assistance; that many professors engaged in oversea projects are far from ideal ambassadors; and that the university contract system is not necessarily an effective way to help "underdeveloped" countries. Much as the authors would have liked to conclude that "all is well," they felt obligated to report the facts and "let the chips fall where they may." As scholars, they felt there was no alternative to telling the truth.

This outspoken study was financed under a grant from the Carnegie Corp. of New York, and is a sequel to the authors' "From Main Street to the Left Bank," published late last year.

last year.

Walter Adams, professor of economics in Michigan State University, is an internationally recognized authority on economics and has been visiting lecturer in Salzburg and Geneva. Two of his books have been translated into Japanese and one into Spanish.

John A. Garraty, professor of history in Columbia University, is the distinguished biographer of Silas Wright, Henry Cabot Lodge, and Woodrow Wilson, and the author of "The Nature of Biography."

STAFF SELECTION

"Some projects, to be sure, are staffed by able, conscientious, and hardworking scholars, but the overall average is low. many oversea operatives are mediocrities, fed up with academic routine and in need of extra cash. Having little success at home, they seek status elsewhere . . Overseas, such men may find a sense of belonging, a feeling of importance. Many, once they have had the experience, cannot get it out of their blood. They hire themselves out to different projects in different universities. They join the growing ranks of a new class-what one professor has called 'the expatriate academic bums. They become part of a mercenary army that lacks pur-pose, morale, and zeal. With such men pose, morale, and zeal. With such men America is not putting its best foot forward. These mercenaries are not representative of American higher education, and they should not be sent to represent it abroad" (p. 156).

"What, in the final analysis, makes for a good academic ambassador? According to foreign observers, the American professor is most likely to succeed simply by being himself, by doing what he knows best, by being a good teacher. He does not impress people by trying to 'go native' or emulating the diplomatic corps or flaunting his 'wealth' or bearing the 'white man's burden.' He is most effective when he exemplifies, by what he says and does, the American university tradition. An informal, 'democratic' classroom atmosphere; a 'closeness' with students; a lack of rank consciousness; a refusal to make social distinctions; a tolerance for different points of view; a problemsolving research orientation; a spirit of enthusiasm and optimism-these are the things which strike the foreigner as uniquely American. These are the things which the American professor abroad should dramatize in word and deed" (p. 79).

JUNKETS

"Such trips, it would appear, are a builtin feature of most university technical assistance projects," (p. 108) and have caused
widespread resentment. One American professor put it this way: "These inspection
trips are worthless," he said. "Our administrative brass comes out here. They are
wined and dined. They move from one reception to another. There's a lot of fuss
and bother. But they never really find out
what's going on. They get a false, overoptimistic impression of the progress we have
made. They do too little inspecting on these
inspection trips" (p. 109).

"In theory, an inspection trip could give the visiting administrator a better insight into the project. * * It could improve supervision, guidance, and direction. It could cement relations with the host country authorities. It could bolster morale." But the junket "docs none of these things. It is an inspection trip in name only; it serves no useful purpose. Furthermore, the junket has a corrupting influence. It is physically, intellectually, and morally debilitating for those who participate in it. It destroys whatever missionary zeal the personnel in the field may have had, and makes them cynical about the basic purpose of technical assistance. Finally, it undermines the idealism of our friends abroad

about American aid. If the Americans have their junkets, they reason, 'let us have ours, If it's all right for them to inspect conditions in our country, let us go to America to do the same. Why shouldn't we get as much as we can out of this show while it lasts?'" (p. 111).

ORIENTATION AND BRIEFING

"All the programs we studied suffered from inadequate briefing about the job assignment." After going through the typical orientation procedure, "the professor knows whether or not he needs striped pants, how to adapt his electric appliances, and what drugs are available at the PX * * although he still knows precious little about the job he is supposed to do." These are some typical comments on the orientation process: "This is the only time I have taken a job where I didn't know ahead of time what I was supposed to do." "The briefing I got was inadequate and much of it inaccurate." "The only advice I got was: Make your own job, play it by ear, look over the field and decide what needs to be done" (p. 106).

Many Americans going abroad "are uninformed and ill informed. Their orientation tends to be inaccurate, because 'administrators in the home office don't know what's going on in the field' or because overzealous recruiters paint an unrealistic picture of work and life abroad; often it is also inadequate, because many universities 'don't know what their program is all about' " (p. 107).

PLANNING -

"If technical assistance programs are to be more than a succession of foreign experts, more than 'a flame which burns brightly but briefly,' they must give rise to permanent, self-sustaining institutions operated by natives and for natives" (p. 62).

"If impact is to be lasting, technical assistance should prime the pump but never act as a permanent reservoir. And this requires planning and continuity of effort" (p. 45).

"Concentrated, short-run programs are not likely to have lasting results. Without sustained, carefully planned, properly phased efforts, there is little prospect of permanent impact. As Mr. Dooley said, 'it's like building a bonfire on an ice flow; it burns as long as you keep feeding it'" (p. 49).

"Enthusiasm and a naive desire to 'do good' are no substitutes for hardheaded planning. We must survey a country's needs, arrange them in some order of priority, take stock of our human and material resources, and develop a strategy for committing those resources effectively. The size of a program is less important than its quality and continuity. One expert, professionally competent and capable of getting himself accepted, may accomplish more than a dozen mediocrities. A small team, thoroughly familiar with a country and assigned there for 5 years, is preferable to a succession of large teams with a constantly changing staff. Timing is of the essence. The technical assistance planner must decide how much and what kind of assistance a country can absorb at a particular stage of its economic development. Program contributions must be properly phased." And this requires "more than a haphazard effort and the naive desire to bring some benefits to some people in some way" (p. 62-63).

ACHIEVEMENTS

versity programs in Europe and Turkey are less than impressive. In some instances this is due to stubborn and pervasive resistance. In others, the fault lies mainly in mistakes of conception and execution. Clearly, it takes more than a lying of hands'

on the natives to achieve enduring results" vital oversea academic assistance programs (p. 146).

"If the oversea programs have been bad, as many certainly have, let us locate the mis-takes, admit to them, learn from them, and make the necessary corrections. Let us discount the cynicism of the hard-boiled, destructive critics and the hosannas of the soft-boiled, scatterbrain do-gooders. Let us make an honest self-appraisal-what Madison Avenue calls an 'advertising audit'—to find out why our product has failed to sell, and how we can do better on the next try. Let us eliminate, not foreign aid and technical assistance, but avoidable ignorance and unnecessary blunders."

'One of the first requirements in any technical assistance program is multidi-mensional planning. Too often the United States promotes programs which 'scratch where it does not itch.' Should a country be helped to build superhighways when less than 1 percent of its population has vehicles other than bicycles or oxcarts? Should a country with an oversupply of labor be given huge quantities of labor-saving machinery? Why export giant tractors to people accustomed to wooden hoes? Would not an ordinary plow be good enough, or even better? Why send an IBM data processor to a country which has no statistics to feed into the monster? 'Underdeveloped' or 'less developed' nations do not require the same kind, quality, or quantity of capital as a highly industrialized country. The knowhow commonplace in American industry is not necessarily appropriate to other nations going through a different stage of economic development."

"In planning a university project one should ask: How can the project be integrated with the 'total country program'? What will it accomplish? Is it the proper thing to undertake at this time? Would some other venture be more useful? American resources are not limitless. We cannot afford to scatter them aimlessly or hap-hazardly. We cannot justify financing projects the objectives of which are so unclear that the oversea staff are instructed merely to 'play it by ear' and 'make your own job. Before launching a program, we obviously should have a clearer understanding that is now customary of what the goals are. These should be developed with the country and people involved, so that a project is not imposed from above or outside. The consumers of our know-how ought to be apprised of what they are buying, and the implications of their commitment. There ought to be less false and misleading advertising by project promoters. In some cases, the resistance to a program may be so great and the marginal benefits to be derived so small, that the program is not worth the effort. United States does not believe in cultural imperialism and, therefore, should never be in the position of appearing to force technical assistance on people who do not want

it" (pp. 140-151).
"If foreign aid promotes the best interests of the United States; if technical assistance reflects America's determination to fight poverty, starvation, and disease, we can shoulder the burden. The task is consistent with our ideals and commensurate with our purse. But, for our own sake and the sake of our friends, let us eliminate the mountebanks and parasites. Let us entrust the job to those who will project the true image of America" (p. 160).

[From the New York Times, May 2, 1960] LAG NOTED ABROAD IN U.S. COLLEGE AID-FAULTY PLANNING AND SECOND-RATE PER-SONNEL CITED IN SURVEY OF EUROPE AND NEAR EAST

(By Fred M. Hechinger)

Haphazard planning, second-rate personnel and lack of continuity are damaging many

undertaken by American universities, a twoman survey of such operations in Europe and the Near East will charge in its final report.

The critical analysis hits at what it calls a lack of understanding of foreign needs, unnecessary junketeering and inept leadership. This criticism closely parallels the theme of "The Ugly Americans," a book dealing with the Foreign Service and economic aid.

But in their forthcoming report, "Is the

World Our Campus?" two young academicians, Walter Adams and John A. Garraty, will aim their fire at America's diplomaed rather than diplomatic representatives.

Mr. Garraty is associate professor of history at Columbia University and a biographer, and Mr. Adams is professor of economics at Michigan State University and consultant to several congressional committees.

Last year they prepared an equally criti-cal report on American students studying abroad, which was published in the book, "From Main Street to the Left Bank." Both studies were financed with grants from the Carnegie Corp. of New York but carried out independently of the foundation.

FINDS WEALTH A MENACE

In an interview, Mr. Adams said that although he considered university-sponsored technical assistance more important than ever, too many American academic representatives abroad were corrupted by unaccustomed wealth of personal power and post

On the basis of firsthand observations of American university programs in Europe and Turkey, with heavy emphasis on the latter, during the 1957-58 academic year, Mr. Adams charges:

That many American universities, after accepting commitments of cooperation with educational institutions abroad, merely act as hiring agents for the International Cooperation Administration. Instead of sending abroad carefully selected members from their faculties, they often employ mercen-aries far below the caliber they would tolerate on their own campus, Mr. Adams said.

That projects frequently lack long-range planning and systematic supervision, except for occasional academic junkets by university administrators or foundation officials. Such officials rarely take the time to get a real picture of local facts and needs.

That haphazard selection of foreign counterpart experts, who are either trained under American guidance abroad or sent to the United States for study, leads to considerable waste. This occurs when educational careers are abandoned by such persons who, insufficiently committed in the first place, had been attracted by the promise of a free

That a frequent lack of understanding of totally different economic and academic traditions often leads to unrealistic expectations and to permanently hurt feelings.

SUDDEN AFFLUENCE HARMFUL

Most damaging, said Mr. Adams, is the effect of sudden affluence and personal prestige on all but the first-rate academic American missionaries abroad.

"Too many of them soon get caught up in the diplomatic cocktail circuit and impressed with rubbing shoulders with American congressional visitors," he said.

After a while, many of them are more concerned with diplomatic license plates and American commissary privileges than with their academic missions, he asserted. One professor asked for American flags for his car to assure recognition of his "diplomatic status," Mr. Adams said.

Sometimes, the survey team found, the pressure for change was accompanied by veiled or direct threats of the discontinuation of financial aid.

Mr. Adams contends that such programs as the case-method approach, used so effectively by the Harvard Graduate School of Business Administration at home, suffer in translation to the point of becoming useless. This method uses cases in business practice and lets the student learn by solving them.

But, Mr. Adams asserts, the "case" program in Turkey was administered by some persons who had little knowledge of its operation at home.

Reached at Cambridge, Mass., John Bayley Fox, director of overseas relations of the Graduate School of Business Administration, emphatically denied that the Harvard program in Istanbul was carried out without detailed preparation.

He said that "indigenous material" used for "cases" there had been collected for an entire year prior to the program. Mr. Fox agreed, however, that the director of the program, who had had considerable experience abroad, had not been on Harvard's staff in the United States.

Mr. Adams cites the great impact by some outstanding persons who got to know local problems, people, and languages. He lists successful projects with clear-cut missions. His examples included an N.Y.U.-established training college for commercial teachers in Ankara, the Spring Garden Institute's (Philadelphia) Automotive Repair School in Izmir, some agricultural programs carried out by the University of Nebraska, and a public administration program of the University of California in Italy.

But much of the success is offset, Mr. Adams said, by remarks such as that of an American program director shepherding a foreign group on a visit to the United States.

"Stop reading the Koran," he told a Moslem scholar, "and attend Christian churches so you can get the full benefit of your stay in America."

This, Mr. Adams suggests, is "a flirtation with colonialism."

In asking for more rather than less support of academic technical assistance abroad. Mr. Adams sets down the following guidelines:

Select outstanding persons who want to go abroad to do a job rather than to raise their own standard of living;

Give service abroad the academic acceptance, on par with teaching and research at home, which it still lacks at many univer-

Realize that long-range effort and planning are needed if any impact is to be made on universities and schools abroad and that only vigorous, young foreign teachers and professors, with many years of service ahead of them, can assure such impact;

Understand that the size of a program is less important than its quality and continuity and that "one expert, professionally able and with the personality to get himself accepted, will accomplish more than a dozen mediocrities."

School Aid Legislation

EXTENSION OF REMARKS OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES Monday, May 9, 1960

Mr. UDALL. Mr. Speaker, the House will soon vote on the vitally important legislation to provide needed Federal assistance to education. This issue has been before the Congress for more than 10 years in the form of similar legisla-

However, the concept of Federal responsibility for education actually predates our Constitution and has been reaffirmed many times over the years in

land grants under the Morrill Act, the Bankhead-Jones Act, the Smith-Hughes Vocational Education Act, the George-Barden Act, the Hill-Elliott Act, the GI education bills, the Federal impact school construction and maintenance programs, and the National Defense Education Act. All in all more than 160 different Federal aid bills related to education have been passed by Congress.

Under leave to extend my remarks, I include the following article by Fred M. Hechinger from the New York Times of Sunday, May 15, 1960, summarizing the current status of Federal aid to education legislation.

FEDERAL AID BILL—COMPROMISE MEASURE IN HOUSE MAY AVOID PRESIDENTIAL VETO

(By Fred M. Hechinger)

With the deadline for congressional action around the corner, supporters of Federal aid to education are getting worried. They may see action this week. Whether this will lead to actual aid remains to be seen. But the outlook, though still gloomy, is no longer as

hopeless as it appeared earlier.

Observers predict that the bill which may hold the key to Federal aid may come up for House action on Wednesday. H.R. 10128 is sponsored by Representative Frank Thompson, Jr., Democrat of New Jersey. It is a hybrid bill—far from satisfactory even to some of its own supporters, to say nothing of partisans of all-out Federal aid. But it is slightly stronger than the administration proposal. Its main virtue is that, should it pass, it has a fair chance of being signed by the President.

This is the status of legislation to date:
The Senate defeated the Administration bill, which would have offered Federal funds only to help school districts retire \$3 billion of new construction bonds over a 30-year period. Vice President Nixon then, in his first tie-breaking vote of the session, defeated a strong Democratic proposal. Nevertheless, on Feburary 4, by a vote of 51 to 34, the Senate passed a strong Federal aid bill which would provide \$1,800 million in grants applicable to both school construction and

teachers' salaries.

Later, on March 15, the House Education and Labor Committee approved Mr. Thompson's far more limited aid bill, which provides for \$325 million annually for 3 years. To make the bill acceptable to the White House, the States would be required to match Federal money on a 50-50 basis during the second and third years. But, to overcome the most seriously criticized shortcoming of the administration proposal, no matching would be required during the first year. This would give immediate aid to districts which have already borrowed up to their legal limit and give legislatures time to raise those limits. At present, about 24 percent of the Nation's 45,000 school districts are believed to be in this predicament.

The bill was approved by the committee by a vote of 19 to 11, with Representative Peter Freinghuysen, Jr. of New Jersey its only Republican supporter.

What is likely to happen this week, or soon thereafter, when Federal aid begins to

move in the House?

When Mr. Thompson's bill comes to the foor, an attempt will probably be made to substitute the Senate-approved bill for it. If this happens and the bill passes, it is almost certain to be vetoed by President Eisenhower. This would end this year's attempt to get school aid. This course might provide campaign ammunition to the Democrats, but it would not help the schools.

EXPECTED TO FAIL

Informed observers, however, believe that the attempt to substitute the Senate bill for the Thompson measure will fall on the floor of the House. They are reasonably hopeful that the Thompson bill will then pass and go to the Senate. There it could, of course, be defeated. But it is more likely that it would either be approved in its present form or that it might be referred to a joint House-Senate conference for revision. If this happens, the prediction is that it will be beefed up along the lines of the Senate bill possibly with addition of ald for teachers' salaries. But if this occurs and the resulting bill passes, it will eventually be vetoed—unless the President changes his mind.

This makes the issue fairly simple: Either the Thompson bill passes in its present limited form or there is little hope for Federal

The compromise measure will have the general support of those who agreed with the recommendations of the Committee for Economic Development, which endorsed Federal aid in a report last February. Although its recommendation actually called for more money—an annual expenditure of \$600 million—its general ideological tenor was not very different from this proposal's mixture of direct aid and matching grants.

An even stronger supporter of the Thompson bill is a lobbying group called the "Bipartisan Citizens Committee for Federal Aid for School Construction," headed by George J. Hecht, chairman of the American Parents

Committee.

The committee points to a conservative estimate of the present classroom shortage—132,400. It believes that the Thompson bill would build 40,000 of the most urgently needed classrooms.

needed classrooms.

Representative CLEVELAND M. BAILEY,
Democrat of West Virginia, chairman of the
General Education Subcommittee of the
House, points to the differences of opinions
among those who want Federal aid. He endorsed the Thompson bill because, he felt,
it charts "a common ground for all these divergent views."

NEA OPPOSED

Committed against the compromise bill, at present, is the National Education Association, which is pledged to every effort to revive the Senate measure and specific aid for teachers' salaries.

Thus, the NEA can be expected to do everything in its power to gain support for substitution of the stronger measure. It hopes against hope that, if passed, such a bill might not be vetoed if pressure is strong enough to convince the President that a veto would hurt the Republican campaign. Many observers feel that the NEA overestimates the popular steam behind the issue, or at any rate, the politicians' fear of such steam.

But supporters of the Thompson bill, even those who accept the compromise with realism rather than enthusiasm, predict that, should substitution of the Senate version fail in the House, the NEA might also join the compromise forces and endorse the House measure as better than no aid at all.

What assurance is there that even the Thompson bill, which goes slightly beyond the administration proposal, will be signed by the President? Reliable sources say Vice President Nixon has personally but confidentially told supporters of the bill that he has urged President Elsenhower to sign it. According to this report the President has indicated he would. Mr. Nixon, it is felt, is anxious to wipe out the memory of his crucial vote against the Senate bill.

LITTLE POPULAR SUPPORT

What then is the real chance for Federal aid in this session? One of the worst road-blocks is that, despite desperate need for money, especially in the poor States and in the poor regions of even the wealthier States, the hoped-for massive popular support has never materialized. Even though the White House Conference on Children and Youth

asked for an astronomical tripling of public school expenditure, politicians look to votes from constituents rather than from conferences. They might be influenced by the CED report of influential businessmen; but then there is the continued, violent opposition to all Federal aid by the U.S. Chamber of Commerce to offset much of that gain.

Against these obstacles, there is the realization by many legislators that a true national need is involved and that inaction will not only heighten the crisis but make eventual action more expensive. In addition, even those who find the compromise bill too weak to spark their enthusiasm realize that, once enacted, the law can much more easily be strengthened, improved and made to serve long range plans for better education.

At this point, the best that can be said is that some action during this session looks more likely than it did last year. But even with this slightly more optimistic view, the obstacle course still to be run makes the chances for Federal aid still slightly less than even.

Jobs After 40

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. HOSMER. Mr. Speaker, the Fraternal Order of Eagles has for some time conducted a fine campaign to educate employers to the advantages of hiring older workers. Remarks on the subject a couple of years ago by former Senator Frank A. Barrett were commented upon editorially by the Wyoming Tribune, Apirl 30, 1958, as follows:

JOB HUNTING APTER 40

A lot of people will indeed applaud Senator Frank A. Barrett for questioning, in his newsletter, the callousness of the crack that "Life Begins at 40."

He pointed to the growing and grave concern with the trend among employers to bypass the fellow who has seen 40 summers.

"It is becoming increasingly difficult for men of that age to find jobs," he observed. "Thousands of skilled and experienced workers are unable to earn a living because of this discrimination in employment."

He praised the nationwide drive of the Eagles, which got off to a rousing start at Cheyenne largely through the efforts of W. F. O'Toole.

Legislation is pending before the Senate Labor Committee which would prohibit contractors on a Federal project from discriminating against individuals solely because of age.

"A good many of our citizens find themselves unemployed after working 20 years or more for one employer," the Senator said. "Even though they are in good physical condition and in the prime of life, they cannot find jobs. And yet these people are entirely too young to retire, and most without means to retire.

"They are caught betwixt and between. In my book, it 'ain't' fair and I don't mind saying so."

The seriousness of the situation was pronounced even when the economy was booming. It has become tragic in many respects with the onset of the depression.

The Federal Government, at least, doesn't have to go along with the matter. And, States might also take a cue.

Other favorable comments on the Eagles' campaign have been made by many public figures. Here are samples:

Vice President: "The Fraternal Order of Eagles deserves the gratitude of every American for their 'Jobs After 40' campaign. The all too prevalent practice of discriminating against middle-aged workers is a twofold tragedy. It causes hardship to many of our finest citizens, and it deprives the Nation of skills which it so badly needs these criticay days"—Richard Nixon, Vice President of the United States.

Governor: "It is gratifying to learn that the Fraternal Order of Eagles, of which I am a member, is conducting this active campaign to end job discrimination based on age. I have been very much opposed to practice of shunting aside older folks"— Ernest W. McFarland, Governor of Arizona. U.S. Senator: "In what should be their

'golden years,' altogether too many, now, are shunted more and more to an insecure, dependent, and hopeless position in our society, through deprivation, because of their age, of their opportunity for gainful work"—Warren G. Magnuson, U.S. Senator

from Washington.

Governor: "The Eagles certainly have my Governor: "The Eagles certainly have my support in their efforts to take better advantage of the skills now being neglected in the increasing group of older men and women. I do support the Eagles 'Jobs After 40' campaign"—Albert D. Rosellini, Governor of the State of Washington.

Congressman: "Both public and private employers would be benefited by giving our older workers greater job opportunities and I should like to commend the Eagles for their efforts in this important field"-GEORGE HUDDLESTON, JR., Member of Congress, Ninth District, Alabama.

Governor: "I subscribe wholeheartedly to the objectives of the Eagles 'Jobs After 40' campaign. I will be happy to take steps to evaluate the problem in Maine with a view to developing solutions"-EDMUND S. MUS-KIE, Governor of Maine.

Congressman: "The Fraternal Order of Eagles program for 'Jobs After 40' is a highly meritorious one and it certainly has my full support. Congratulations on this worth-while enterprise"—Lawrence H. Smith, Member of Congress, First District, Wiscon-

Governor: "I am sure that your organization can do a great deal to assist persons over 40 years of age find employment, and I have long been understanding of the problems faced by the middle aged"—Theodore R. McKeldin, Governor of Maryland.

Congressman: "Today too many competent, able-bodied, trained, and experienced workers are being told they are 'too old, even at age 40.' That is why I have pledged my full support to the Fraternal Order of Eagles campaign against age discrimination"— HENRY S. REUSS, Member of Congress, Fifth District, Wisconsin.

Governor: "To the Fraternal Order of Eagles: It has been my experience that people after the age of 40 years have very much to offer in being placed on jobs. Their accumulated experience is valuable, and I find that very often they are more inclined to take an interest in the work and stay on the job longer than younger people"—Charles H. Russell, Governor of Nevada.

U.S. Senator: "The loss of production, as well as of a skilled work force sufficient to meet our national defense needs, require that older workers be given equal status in the competitive job market. The Eagles 'Jobs After 40' campaign is a most commendable and worthy project, and one which deserves wholehearted support. You certainly can count on mine"—HUBERT H. HUMPHREY, U.S. Senator from Minnesota.

Going Up

EXTENSION OF REMARKS OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. ULLMAN. Mr. Speaker, under leave to extend my remarks, I would like to insert in the RECORD the following item relative to the President's refusal to reappoint Mr. Connole to the Federal Power Commission. It appeared in the latest issue of News for Electric Consumers the newsletter of the Electric Consumers Information Committee. This case provides a significant footnote to the history of the continuing weakening of the regulatory commissions.

PRICE OF DISSENT, LIKE PRICE OF GAS, KEEPS GOING UP

President Eisenhower's failure to reappoint William R. Connole to the Federal Power Commission is fast becoming a campaign issue. The lone defender of consumer interests and apparently the lone believer in regulation on the FPC, Connole was fired at the President's press conference on April 27. Asked if he was going to reappoint Connole, President Eisenhower replied:

"First why, this: Because it is my responsibility to appoint people and to get the best people I can. This Mr. Connole came to see one of my staff in December to ask about his reappointment, and they said they'd look into it. I think I can get a better man, that's all "

To date, that is all the President has said. Requests by Senators for an explanation by the White House have gone unanswered, just as pleas to the President to reappoint Con-nole went unheeded. The President was urged to rename Connole by the mayors of large gas consuming cities; by 10 professors of law and government regulation at Columbia, Harvard, Pennsylvania, and Yale Law Schools; by consumer groups; and by major newspapers.

Connole's fine record, his ability, his intelligence, his dissents against unjustified gas rate increases—all were cited. Connole, who comes from Connecticut, was praised by the regulatory commissions of the New England States as "the most preeminently qualified person in New England in the field of regulation."

But as NBC commentator Martin Agronsky said in a recent broadcast, "None of this seems to have registered with the President. The price of dissent, like the price of gas, keeps going up."

Eisenhower announced the name of his "better man" to replace Connole just 5 days later. He appointed Thomas J. Donegan, a member of the Subversive Activities Control Board. Said the New York Times in a pro-file of Donegan:

"If Thomas James Donegan, whom the President appointed to the Federal Power Commission today, has any special qualifica-tion for his new job, even Mr. Donegan does not know what it is."

The Times then quoted Donegan as saying: "I've never had anything to do with utilities outside of paying my gas bill."

Donegan was named for a 5-year term, beginning June 23. The President also appointed Paul A. Sweeney, a Justice Department lawyer, to fill the FPC vacancy caused by the death of John B. Hussey recently.

Among the cries of protest against the firing of Connole was a call by Senator

Price of Dissent, Like Price of Gas, Keeps THOMAS J. DODD, of Connecticut, for the Senate to refuse to confirm the new appointees until the President explained why he'd dumped Connole. Other Senators-including Proxmire, of Wisconsin, Gruening, of Alaska, and Clark, of Pennsylvania, went even further. They called on the Senate to use its power of confirmation to prevent the further deterioration of the independent agencies," as Senator Gruening put it, adding:

"It is my hope that the Senate . . will keep those places vacant so that the next President may have an opportunity to fill the Commission by the appointment of two members who are dedicated to the public interest."

Meanwhile, there have been rumors that the White House staff is split on the dumping of Connole and that Republican Party leaders—particularly in heavy gas consuming areas—view the failure to rename Connole to the FPC as a major political blunder. Senator Monroney, Oklahoma Democrat, brought Vice President Nixon into the dispute, charging that the President has delegated his power of appointment to the Vice President.

Monroney charged that both Donegan and Sweeney were chosen by Nixon and Attorney General Rogers, often mentioned for the second place on the Republican ticket this fall.

Washington observers are also noting that no Republican has yet defended dumping Connole—and that none of the major candidates for the Democratic nomination-HUM-PHREY, JOHNSON, KENNEDY OF SYMINGTON—has yet spoken on the issue at all.

Jobs After 40

EXTENSION OF REMARKS OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 17, 1960

Mr. HOSMER. Mr. Speaker, discrimination against workers over 40 years old, not only creates individual distress for the person affected, but amounts to a senseless waste of the Nation's manpower. The Building Service Employees International Union has prepared educational material on the subject in cooperation with the Fraternal Order of Eagles' campaign to spur employment of the over-40 age group. This excellent brochure contains the following information:

TOO OLD TO WORK AT 40?

Ridiculous, of course.

Building Service Employees' International Union members—250,000 of them—are mostly over 40. They work hard, pull their own weight on the job, and are praised as skilled, dependable workers.

Are BSEIU'ers the exceptions when it comes to workers over 40?

No. Special Government and university studies have shown that the more mature worker is, more likely than not, the better

These facts have been proven:

The older worker produces more, with less spoilage, than the younger, less experienced worker.

His safety record is better; he has fewer accidents.

His judgment is better, and he get along more easily with his fellow workers.

He is more dependable; he is absent from the tob less often.

He is loyal. He stays with the company longer and respects its policies more.

These are not opinions. They are conclusions derived from careful research by experts in the field.

Why, then, do up to 79 percent of a city's employers refuse to hire workers beyond the mid 40's?

Because prejudice, ignorance, and just plain stupidity are creating an employment problem where there should be none.

WE CANNOT AFFORD MANPOWER WASTE

At the present time, skilled manpowerand womanpower-is in great demand. Yet a stenographer looking for a job finds she is too old at 35. A nurse, with the shortage of nurses staring her in the face, is too old for hospital work at 40. A production line worker, with years of experience, is too old at 42, or 43.

Our country simply cannot afford to toss these people into the ashcan and label them "too old."

And yet, employers do just that. The reasons they give show that they are clinging to ideas which have no basis in actuality.

Older workers do not get sick more often than younger workers.

Pension and insurance costs are not significantly greater for the older worker.

Older workers are fully as trainable, as adaptable as younger workers. Their job motivation may be greater because they know the importance of being selfsupporting.

WHO SUFFERS?

First, we all suffer. Our taxes are raised to pay for public assistance and unemployment compensation for people who should be a part of the working force.

Consumers in general suffer. It has been estimated that the value of goods in the United States could be increased by \$5 billion a year if older people who want to work and

are able to do so were given jobs. People over 40-one-third of our population-suffer the fear of unemployment and the respect-shattering experience of being told they are too old—after 40.

BSEIU's President William L. McFetridge "Unemployment of men and women simply because they have attained a certain age represents a real and tragic loss of skill and productive power to the Nation. When corporate custom denies employment to experienced workers in their most productive Years, the loss to America is indeed great."

IT'S GETTING WORSE

This is not a new problem. Employers and personnel men—for reasons best known to themselves-have usually shown a preference for younger people especially when an oversupply of labor was available. Industry spends millions of dollars annually on trainee and apprenticeship programs for these young people, but tends to ignore the fast-growing reservoir of labor that already has training and job experience.

The new element in the situation today is the changing character of the population. In both the United States and Canada, the proportion of over-40 people is increasing, while the group under 40 is declining. By 1960, half of the population will be over 40.

We are faced with a human problem that will rapidly assume serious proportions. Bad enough in normal times, any little business downturn is bound to make the situation more crucial.

The enemy is ignorance. All of us-employers as well as employees-need to become familiar with the facts, and then simply to act in accord with them. The facts are clear: the over-40 worker is at least as good an employee as his younger counterpart. He wants and needs to be productively employed, and the Nation needs his skills and experience, and the goods and services he can produce.

Political Camouflage

EXTENSION OF REMARKS OF

HON. JAMES C. HEALEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. HEALEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following article by Mr. Sanford E. Stanton, which appeared a few days ago in the New York Journal-American:

> THE REFORM LABEL: A POLITICAL CAMOUFLAGE

(By Sanford E. Stanton)

ALBANY .- Now it comes out.

All the hullabaloo about reforming Tammany Hall turns out to be a horse of another color-a ringer they would call it at Aqueduct.

It may well be that the distinguished elders of the Democratic Party, characterized by screaming propagandists as leaders in the reform movement, are victims, along with the general public, of nothing more than a hoax.

The records of the board of elections where nominating petitions for the June 7 primaries have just been filed, throw a sickly green light on the whole thing. They show that-

Three reformers want to go to Congress; Ten reformers are itching to become members of the State assembly;

Two reformers want to sit in the State

Within their rights, as they are, why can't reformers play the game of politics straight? Why try to camouflage legitimate ambitions under a transparent alles? Why not be forthright and tell the public what it is to be reformed?

Do the valiant three hope to reform Congress? Have the embryo State senators and assemblymen designs on the legislature?

Possibly the State and National legislative bodies need a bit of reforming; but, if that is the goal, why not say so?

To throw up a smoke screen labeled "Reform the Organization" around an attempt to gain personal glory is the sheerest kind of bunk-and not new bunk at that.

This kind of deceit should have been banned when the professional baseball leagues outlawed the "spitter."

THING CALLED FUSION

Actually these Barnumlike attempts to delude the public under the guise of "re-form" are on all fours with that other willo-wispy political thing called fusion.

Rip the wrapping off these "reform" and "fusion" packages and you find litters of self-serving individuals who either never knew or have conveniently forgotten that our democratic form of government has survived because of the existence of a twoparty system, sustained by strong political organization. Destroy the organization, which is the "reform" battle cry, and the whole structure may come tumbling down.

To hark back to this mess of primary contests now cluttering New York's political scenes-who will argue that they represent anything more than attempts for personal glorification at the expense of party organ-

It is possible to win a personal victory and in so doing, wreck a party. Somehow the "reformer" tub-thumpers seem to have overlooked that fact.

If these self-glorifying "reformers" don't know it, they should. A year of national elections is one when party loyalty—if that

is not employing a word beyond the understanding of some-demands something better than internal disrupting dissensions.

The Fallacy of High Interest Rates

EXTENSION OF REMARKS

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 17, 1960

Mr. DINGELL. Mr. Speaker. tempts to raise the interest rate on longterm U.S. bonds, will have an adverse impact upon our economy. The tightmoney policy saddles this Nation with one of the most fantastic economic theories ever advanced.

Since 1953, the Eisenhower administration has persistently sought to effectuate higher and higher interest rates. As I have stated before, the rise in interest rates has been nothing less than scandalous. Hiking of interest rates has only one function, to create spirals of increasing costs on every item, transaction, and commodity, sold or purchased in our economy. These in-creased interest rates must be borne by the borrower, while the lender reaps tremendous additional profits for no good reason whatsoever.

The action of the Republican Party. self-professed disciples of the balanced budget, in straight-facedly urging a higher interest rate-which will among other things increase the cost of Government indebtedness-while at the same time, accusing the Democratic leadership of wild, inflationary spending, would be indeed comical if it were not so vicious.

The tight-money policy is dangerous because it tends to restrict our Nation's economic growth. Topflight economists have been quick to point out that pursuit of a policy such as this at a time when our economic growth is already retarded, as evidenced by the high unemployment statistics, serves only to further curb our productive capacity. Unfortunately, inflation is not retarded by increased interest rates. High interest rates accomplish higher costs with no corresponding increase in output. For example: the increased cost to the taxpayer of a quarter of 1 percent rise in interest on \$1 billion worth of Government bonds is \$2.5 million a year. Yet none of this increased cost gives the taxpayers a dime's worth of additional services; rather, it further raises the cost of all the other money borrowed, since this increase is passed along in other loans, mortgages, and financing plans. For instance, such a proposed interest raise would increase the cost of buying a home, and this would make homeownership more difficult.

Recently, Senator WILLIAM PROXMINE illustrated how increased interest rates have raised the cost of each typical elementary school by \$150,000. The results of the tight-money policy in the school program alone have cost the Government an additional \$675 million each year. This increased burden on school construction and education in the United States is directly attributable to the Republican administration's tight-money policy. The additional money did not go toward increased construction costs, or for the wages of workingmen, or even to the building contractors. Instead, this money went to the moneylenders, the financiers and investment corporations, and banks. It was sweated from the hides of our citizens.

The effect of tight money on private housing is already observable. Despite the continued pressing need for decent housing, it is estimated that there will be some 200,000 less homes built this year as compared with the year 1959, in which only 1.3 million new homes were built. The main reasons for fewer new homes: lack of mortgage money and the high interest rates, both the natural result of the Republican tight-money policy.

The more carefully the tight-money policy is analyzed, the more fantastic it becomes. Inflation can be successfully curbed, according to the administration, if the runaway boom in this country is nipped by making money more difficult to obtain. Money can be made more difficult to obtain by making those seeking it pay more interest when they attempt to borrow it. But how can this theory possibly work when the increased interest rate will only affect those who have need of the money markets; namely, the consumer and small business. It is they who must pay the increased interest rate oftentimes for commodities that are necessary to them and vital to our economy. Thus bankers prosper while the consumer staggers under an increased cost for borrowing money or mortgages, while the big corporations go unscathed. Yet it is the huge corporations who can, and do, swell their profits by continuous price hikes, thereby directly contributing to an inflated economy.

Not only has tight money failed to curb inflation, it has directly and unmistakably promoted it. The cost of living has increased in spite of this misguided act of clamping down on the little man. Billions of dollars have been lost as a result of only partial economic productivity. With at least 31/2 million unemployed, and no reduction in sight, there is nothing to justify the currently high interest rates or an increase in them. Certainly we must scrap all economic theories which prevent the economy from developing in a manner that will permit it to support full employment. In Detroit, there are absolutely no signs whatsoever that point to a boom. Indeed, the opposite is true. Unemployment is still a serious problem, small business is in bad shape by any standard of measurement, and taxes and revenue from all branches of government are falling off. This then, is obviously no time to be raising interest rates. Already the number of second land contracts, second mortgages, and other shaky security devices grow more numerous; and at the same time, there has been a drastic increase in the number of foreclosures. These are the results of this artificial scarcity of money that the administration seems determined to accomplish at any cost to the national economy. The tremendous costs of these already high interest rates that have been heaped upon millions of wage earners as well as small businessmen and home buyers, permitting moneylenders to reap a tremendous profit without providing any additional service whatsoever is disgraceful. To surrender to the moneylenders of this country by indulging them in this selfish desire, is unnecessary.

May I point out that since World War I, through the booms, depressions, and crises, this country has successfully met its fiscal needs without the necessity to exceed the 4½-percent interest rate ceiling on long-term U.S. bonds. I believe these bonds can attract buyers as they always have without the necessity of raising the interset rate. Whatever shortage of loanable funds that may arise from time to time, is, at most, a temporary situation.

I further charge the Republican administration with promoting a scare campaign about inflation, which besides being an irresponsible act in itself, operates to discourage investors in longterm bonds of any kind, but rather encourages them to buy stocks. Republicans from the President down have engaged in this inflation scare to justify various policies and results of the present administration. Why should the interest rates on long-term U.S. bonds be increased at a time when these rates are now at an alltime 35-year high? It would only add billions to the tax bill of working Americans, and to make it worse, would operate to further inflate all other interest rates as well.

Ever since Mr. Eisenhower's first Secretary of the Treasury, Mr. Humphrey, boosted interest rates, interest rates in all fields have been steadily increasing. Surely the tight-money policy should prove to its Republican supporters that the inflationary atmosphere created by the gigantic corporations in this Nation cannot be deterred by the tight-money policy, primarily because they have no necessity to go to the moneylenders. The giant industries of steel, oil, automobiles, and drugs, can and do administer their prices upward, without any regard whatever for a tight-money policy that is supposed to curb inflation.

Millions of average American families have been hit hard by tight money. For example, over the last few years, higher interest rates on FHA mortgages have added thousands of dollars to the cost of buying a home.

In the final analysis, high interest rates increase all prices; they inflate the cost of raising a family, of buying a home, car, or appliances, and of raising small business capital. Thus, high interest costs are a major factor in the spiraling prices.

Are not two recessions since the Republican-sponsored tight-money policy sufficient proof of its ineffectiveness?

In my view, the President's recent request for a higher interest rate on U.S. bonds is more than just bad economic judgment. It reflects concern for the bankers and the money lenders in preference to the welfare of the entire Nation. Such callous indifference to the economic

necessities of the day are inexcusable. It is my intention to bring the facts to the American people for it is they who must know who in Government would make them economic pawns of the vested interests of this country.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

The Honorable Dewey Short Delivers Inspiring Address Before the Convention of the National Jewish Welfare Board

EXTENSION OF REMARKS

OF

HON, KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Wednesday, May 18, 1960

Mr. KEATING. Mr. President, all of us are familiar with the important contributions being made to the spiritual and material well-being of the Nation by the National Jewish Welfare Board. organization, whose national headquarters are in New York City, provides moral, religious, and welfare services for men and women of the Jewish faith in the armed services. It is the parent body of the more than 350 Jewish community centers in this country, and is a member agency of the USO.

Many aspects of this great force for good were emphasized in an inspiring address recently delivered by my good friend and former distinguished colleague in the House of Representatives, Assistant Secretary of the Army Dewey Short. In a speech before the bienniel convention of the National Jewish Welfare Board in St. Louis on March 31, he discussed in his usual eloquent manner the work of the Jewish Welfare Board. the importance of loyalty, and some of the moral and spiritual responsibilities Which go with service in our Armed Forces.

So that this splendid address will gain the wide readership it deserves, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD,

as follows:

ADDRESS BY THE HONORABLE DEWEY SHORT, ASSISTANT ASSISTANT SECRETARY OF THE ARMY (M.R. & R.F.) NATIONAL JEWISH WELFARE BOARD CONVENTION, CHASE PARK PLAZA, ST. LOUIS, MO., MARCH 31, 1960

Ladies and gentlemen, I cannot tell you how especially pleased I am to be here with you at this, the blennial meeting of the National Jewish Welfare Board. Not only is it a distinct honor for me to meet with such distinguished group of selfless and dedicated Americans, but it is always a great pleasure for me to return to my home State of Missouri.

Since the inception of the Jewish Welfare Board in 1917, its great works have been indispensable to Jewish Americans in particular, and therefore to America as a whole. Through your community centers and the Young Men's and Young Women's Hebrew Associations, you have nurtured responsible citizenship and a national awareness which are so essential to the continued strength of our Nation today. In serving the religious and welfare needs of our Jewish

armed forces personnel, you are further giving young Americans an example of service to their fellow man, something crucial for our youth to embrace in this complex age of anxiety. It is the cement that binds people to people and nations to nations. As an American, I would thank you for this, and on behalf of Hon. Wilber M. Brucker, Secretary of the Army, I would like to thank you for all you have done to lift the morale of members of your faith serving in the Armed Forces.

At the outset, I would like to take a moment to point up the splendid relationship that the Department of the Army-as well as the other military departments—has en-joyed with your national representative in Washington, my good friend Moe Hoffman. His cooperative spirit and deep understanding of our mutual problems have contributed substantially to our common goals.

The Army, Navy, Air Force, and Marine Corps-all the services-have every reason to be deeply grateful to the National Jewish Welfare Board, and especially its Commission on Jewish Chaplaincy, for its most generous support in furnishing sufficient chaplains to minister to the religious needs of service personnel of the Jewish faith. The commission also is to be commended for its far-sighted plans to immediately enlarge its force of chaplains in the event of a national emergency. The fine work done by your chaplains should be a source of pride to the commission as well as to the board.

Today our Military Establishment is faced with many problems, but there is one which is unique in American history. I refer to the need to maintain a vast military force at a time when we are not actually at war. a phenomenon as unnatural to traditionally peace-loving Americans as it is burdensome

to our economy and manpower. But viewing the stated aims of international communism, and noting the activi-ties of the Sino-Soviet bloc in this framework, I do not believe that any right-thinking American would let down our guard for freedom. Our defensive structure is like a great dam holding back the determined waters. But like a great dam the slightest breakthrough would be opened and exploited by the pent-up waters until the land was laid waste by the oppressive flood. This we cannot allow. That is why so many Americans have willingly given of their lives in defense of the principles for which we stand. And it is because of such self-sacrificing men as these that our Nation is as strong in spirit and determination today as it was at Valley Forge and Verdun and Bastogne and Pork Chop Hill. They died that America might remain strong, and today in the face of a force that threatens our cherished and hard-fought-for freedom again, all of us must be prepared to make the same supreme sacrifice

I believe it was Macaulay who aptly asked:

"And how can man die better Than facing fearful odds For the ashes of his father and The temples of his Gods?"

It is not our pleasure to take 2, 3, or 4 years out of our young men's lives to teach them to wage war. But the alternative— bondage—has always been, and always will be repugnant to all Americans. Granting the necessity of a strong defense,

it is up to you, up to me-up to all of us-

to make the most of it, and instill in our young people an awareness and understanding of why they must fulfill their military obligation. It cannot be denied that the at-titudes of youth toward military service are strongly influenced by their parents. If fathers and mothers look on military service as nothing more than an extremely distasteful inconvenience, then in all probability so will their children. Indeed if this were case with everyone, our guard for freedom would be a shallow and hollow one. In these turbulent times it is up to each and every parent to view military service as their sons essential contribution toward the preservation of human dignity, of liberty, of freedom—in short—of America.

Surely this is not asking too much when

we pause to consider that our democratic society requires that we contribute our just share if we are to enjoy its benefits. great Nation whose blessings we enjoy today serves as a reservoir of liberty to which each generation has made its contribution. As each younger group comes along, it draws refreshments from the vineyards which it did not plant and sips from the cisterns it did not dig. Thus it becomes incumbent on each generation of Americans to make its own contribution toward the overall welfare, the freedom and the human dignity of generations yet unborn. It is such personal sacrifice to the common good that has made our Nation what it is today. Men like George Washington and Abraham Lincoln throughout their lives exemplified this spirit of sacrifice. And each American has an obligation to that inheritance, to keep it strong and to keep it enduring for his children and for his children's children.

Loyalty to the principles for which we stand must be instilled in our children at the earliest possible age. In a way it is a very natural thing, for a child's first loyalties develop in the home. When he is very young, he can do nothing but receive, but as he grows he begins to take part in family activities and learns to share responsibility. If the parents have done their job well, he will learn by practical experience that it is indeed better to give than to receive. Thus does the family become his first locus of

As he grows older, his next loyalty is probably to God and to his religious faith. No matter what his faith, a set of values built on the foundation of the Golden Rule gives him a moral framework which transcends the basic loyalties of the family—to the realm of ideals as well as people.

In his schooling he further learns that he cannot get along without giving of himself, for he will get out of life only what he puts into it. By studying and participating in school activities and sports, he integrates himself into the school community. Thus does he prepare himself for the larger communities of city, State, and country.

Probably the military affords him his first real opportunity to manifest loyalty to his country in a direct way. Military service should thus be a welcome opportunity in that it provides the basis for a deeper and more meaningful relationship between the individual youth and his country. In the United States, military service is not some-thing imposed upon us by a dictatorship for its own selfish ends, but it expresses the will of the American people to protect their ideals and their country. It is not only a

positive value to our society, but even above that it is crucial to the security and well-being of every man, woman, and child that make up our free society. This individual responsibility must be made crystal clear, for it is incumbent upon all of us to shoulder our fair share of the burden of our Nation's defense if we are to preserve our way of life. As one historian has put it, and as all loyal Americans so well know: "The price of liberty is eternal vigilance."

Of course, one must realize that serving in the Armed Forces is not always pleasant, for war itself is not pleasant, but that is what he must be prepared for should it come. The soldier must learn to shoot and learn to protect himself, for to us every human life is precious. We may thank God that we are not like the Chinese Communists who have no respect for human life and who will mercilessly deliver tens of thousands of their troops to be slaughtered on the battlefield. We want our soldiers to come home alive, and so they must be made tough. So, as blisters and soreness give way to hard muscle, and the youth comes to understand the ordered logic of military life, he gains pride, not only in himself, but in his outfit and his country. And this is a very positive value.

is a very positive value.

Our youth is called upon to make a number of decisions in preparation for going into the armed services. If he is to avoid the lack of self-determination of the draft, he may select a time best suited to himself. be it after high school, after college, or whenever it would least interfere with his civilian vocation. Then he may choose the service he wishes to enter and what program to pursue within that service, taking into consideration the time required for each program and where he could best fulfill his potentiality and improve himself. It is a many-faceted decision, to be considered carefully and with deliberation, for the Armed Forces offer a multitude of alternatives to suit almost every individual. There is a need for trained personnel in just about every field one can think of and many skills learned in uniform are readily adaptable to a trade or profession later on in civilian life.

In the Army, for example, we give valuable training to qualified men in such fields as: Electronics, including guided missiles and atomic energy; radar, television, and radio; electrical, chemical, and mechanical technology; dental and medical training; transportation; law; finance; communications; administrative training; drafting and printing; photography; underwater demolition; cooking; or playing an instrument with the Army Band or singing with the Army Chorus. Well, the list is endless, but I think you can see from this partial listing that an intelligent young man may certainly use his service time to good advantage, mastering skills that could well launch him on a successful career either in the Army or as a civilian.

It should also be noted that beyond this direct schooling the Army offers, it also encourages its personnel to continue and further their education. Many soldiers today are taking advantage of this education at little cost, for the Army pays a large part of the cost of the courses the individual might choose.

Beyond these practical considerations of Army life, it must be emphasized that we feel a continuing obligation to maintain and improve the moral and physical fitness of the men who come to us from American homes and communities. As regards his normal fitness, he receives splendid character guidance from the dedicated chaplains of the Army, many of whom are made available through the good offices of the National

Jewish Welfare Board. In this regard, I would like to quote to you from a report made by Dr. Julius Mark, senior rabbi of New York City's Temple Emanu-Bl following his working visit with our troops in Europe last January, again with the fine cooperation and assistance of the Jewish Welfare Board.

Rabbi Mark wrote:

"The concern which the Defense Department of the United States has for the spiritual well-being of our men in uniform is quite without parallel anywhere in the world * * *. I daresay that the upsurge of religious interest, under youthful guidance * * * , which is discernible among all religious denominations, has resulted to a large extent * * * from the contacts which young men in uniform have made with chaplains and with civilian clergymen provided by the Defense Department * * *. My pride in Defense Department * * *. My pride in America is always heightened and strengthened when I think of the sincere desire of our Military Establishment to satisfy the spiritual needs of men of all faiths, when I think of the chaplains-Catholic, Protestant, Jewish-who are serving under God and country with unselfish dedication, and when I think of the American soldier who is learning to live in understanding and fellowship

with his fellow American of another faith." I would thank Rabbi Mark in turn for his continuing contact with and interest in our men in the military. It is such interest as this on the part of our citizens not directly involved in the military that prevents life in the military from becoming a separate entity, and the more this interest is manifested by our citizens, the easier and more pleasant it is for our youth during their time in the Armed Forces. You of the Jewish Welfare Board are certainly outstanding examples of this, and I can tell you, nothing is more important to the morale of our boys in uniform than this interest.

For our part, we associated with the military welcome this contact because we have seen the great good it has done over the years. That is why we allow 30 days leave per year, and encourage our boys to participate in the particular communities where they might be stationed, be it in sports, education, hobbies, or whatever facet they may choose. How many friendships have evolved from this splendid reciprocity is indeterminable, but it is certainly a strong binding force both abroad and within our own borders where so many varied backgrounds are brought together in an atmosphere of mutual friend-liness.

Of course, the citizen-soldier differentiation is only skin deep, for underneath this superficial distinction we find Americans all, and this is to say hearts beating in one accord for peace, justice, and freedom for all mankind. This our youth must realize through experience, and it is my opinion that they indeed do emerge from the military stronger in this knowledge.

I think this knowledge is particularly well expressed in an anonymous creed I came across recently, and I should like to leave you with it. It goes:

"I do not choose to be a common man. It is my right to be uncommon—if I can seek opportunity—not security. I want to take the calculated risk, to dream and to build, to fail and to succeed. I refuse to barter incentive for a dole. I prefer the challenges of life to the guaranteed existence, the thrill of fulfillment to the stale calm of utopla. I will not trade freedom for beneficence nor my dignity for a handout. I will never cower before any master nor bend to any threat. It is my heritage to stand erect, proud and unafraid, to think and act for myself, enjoy the benefit of my creations, to face the world boldly and say, I am an American."

Fred Seaton Becomes More and More Likely the GOP Vice-Presidential Choice

EXTENSION OF REMARKS

HON. PHIL WEAVER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1960

Mr. WEAVER. Mr. Speaker, we in Nebraska are very proud of one of our outstanding citizens who has contributed notably to the growth of this Nation and to the administration of its affairs. I refer to the Honorable Fred A. Seaton, Secretary of the Interior.

Mr. Seaton has a record of able administration and has been a close friend and adviser not only of the President but of the Vice President, Mr. Nixon.

His capabilities have long placed him—in the minds of those of us from the Midwest—in the forefront of those being considered as a possible Republican choice for the Vice-Presidency. So apparent is this that the Nebraska and North Dakota Republican State conventions have already committed themselves to Mr. Seaton.

I am pleased to note that in recent days this interest in Mr. Seaton has spread considerably. In fact, only last Friday, May 13, the Wall Street Journal of New York printed a front page article in which it noted that Mr. Seaton's chances for the Vice Presidential nod are bright. This article points out that Mr. Seaton represents the Midwest where he has gathered a great deal of strength. It also makes mention of his close friendship for Mr. Nixon.

The following day, on Saturday, May 14, the Omaha World Herald printed a very fine editorial commenting on the growing stature of Mr. Seaton in national affairs. This editorial is particularly significant because the World Herald is more than just a hometown Omaha newspaper. It is one of the voices of the Midwestern Plains States and is recognized as such throughout the area. To a great extent it represents the views of its readers.

Because of the significance of this editorial, I would like to incorporate it in these remarks. The editorial from the Omaha World Herald of Saturday, May 14, 1960, follows:

SEATON'S PROSPECTS

Along with popular enthusiasm for Mr. Nixon, as shown by his surprising write-in vote in this State, there has been a strong shower of support among Nebraska Republican leaders for Fred Seaton as the vice-presidential candidate.

It would be a serious mistake to dismiss this support for Mr. Seaton as a polite bow to a popular "favorite son." He is the formal choice of Nebraska and North Dakota Republicans. But Mr. Seaton's prospects amount to considerably more than that. A brief rundown of vice-presidential possibilities in the Wall Street Journal Friday pointed out that Mr. Seaton's cause looks pretty good nationally.

The Journal reasons this way:

The odds are turning against Lodge, of Massachusetts, as Mr. Nixon prepares to write off New England. Nixon men concede most Catholic votes to Kennedy and are not considering Labor Secretary Mitchell, a Catholic. Party leaders are losing hope that Rockefeller will run, and Senator Goldwater's purpose is seen as that of influencing Mr. Nixon to adopt conservative policies rather than that of winning running-mate honors for himself.

That leaves Senator Thruston Morton, of Kentucky, and Mr. Seaton as the best bets, says the Journal. The paper does not judge their strength in relation to each other. The Kentucky man's appeal to the border States and the South is mentioned. As for Mr. Seaton, "the Interior Secretary from Nebraska would add pulling power in the Midwest."

And since the election may very well be won and lost in the Midwest, Mr. Seaton's position as the only midwestern prospect of established reputation is an important conalderation.

Couple that with the facts that Mr. Seaton has conducted his Cabinet duties ably, that he is regarded as a man of moderate views and good sense, that he is a personable and popular figure—and he becomes a very good bet indeed.

The overriding consideration, of course, will be what the presidential nominee wants in a running mate, and here again Mr. Seaton is in a strong position. He is both the political and the personal friend of Mr. Nixon. If Mr. Nixon, as a nominee, is convinced that a midwestern name is needed on the ticket, the Nebraskan becomes an obvious choice.

Nebraska Republican leaders, particularly the convention delegates, are well aware of these considerations but they may not be well known to the average voters. It is time for the Midwest to take note of the fact that Mr. Seaton is a highly regarded prospect for the Vice Presidency.

Address Commemorating 124th Anniversary of the Battle of San Jacinto

EXTENSION OF REMARKS

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, May 18, 1960

Mr. JOHNSON of Texas. Mr. President, April 21 is a very special day for Texans. On the 21st of April, 1836, freemen under the leadership of Sam Houston fought the Battle of San Jacinto which avenged the lives of those heroic men who sacrificed their lives on the altar of Texas freedom at the Alamo.

On this day each year, there is a pilgrimage to the Alamo in connection with the San Jacinto Fiesta celebration. It is in the finest tradition of this great empire of the Southwest and pays tribute to one of the secred shrines of American liberty—the Alamo.

I ask unanimous consent to have printed in the Appendix of the Record the text of an address delivered by Lt. Gen. Edward T. Williams, commanding general, 4th U.S. Army, on the evening of April 18, 1960, celebrating the 124th year which has passed since those Texas heroes died to the man defending their way of life and their search for freedom.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PILGRIMAGE TO THE ALAMO

Mrs. Harral, and members of the Alamo Mission Chapter, Daughters of the Republic of Texas, I am signally honored that you invited me to speak on this solemn occasion.

The pilgrimage to the Alamo, sponsored annually by your organization, is in the finest tradition of this great empire of the Southwest and pays tribute to one of the sacred shrines of American liberty.

One hundred and twenty-four years have passed since the heroic men, whose names are here memorialized, sacrificed their lives on the altar of Texas freedom. Hundreds of years more will pass, but the shadows of time can never dim the glory that is the Alamo.

What took place here, on the very ground we are standing on, was not just a battle, not just a 13-day siege ending in massacre. It has become, and will always be, a great American legend and one of the most heroic epics of all times.

A legend, as you know, is something we have been aware of all our lives, without being conscious of where or how we learned it. So widespread is the fame of what happened here, that the name of the Alamo has passed into the language and become a living part of America's great heritage of valor and sacrifice for freedom. It is a vital spark that has fired the hearts of men for more than a century.

Let us pause for a moment, and think about the events that took place on this spot which is now the center of the great city of San Antonio. Even though all of us know the story well, the highlights of this epic will never grow old in the telling.

It is important, I think, to recall that the fighting men of the Alamo were here because they freely chose to be here. They were not trapped, or outwitted by the enemy, or forced into their heroic stand. When the Alamo commander, Col. William Barret Travis, drew with his sword a deep line in the soft earth and said, "those who will stay, step over to me," these men moved across without a moment's hesitation, carrying with them the intrepid James Bowie who was stricken at the time with typhoid-pneumonia.

In his immortal letter addressed "to the people of Texas and all Americans in the world," Colonel Travis declared, "our flag still waves proudly from the walls—I shall never surrender or retreat."

Keep in mind that he was referring to these very walls you see in front of you at this moment. One hundred and twenty-four years of history look down on us as we stand here.

Picture, if you will, the desperate situation in which Travis and his men found themselves on the night of March 5, as the last hours of the 13-day slege approached.

Just a few days before, Lt. James Butler Bonham had returned from the mission Travis gave him, bringing 32 men who volunteered to fight their way through enemy fire and join the defenders in the last days of the attack. These were the only reinforcements the Alamo received. They knew the situation was hopeless, but they were determined to fight to the last man.

The final attack started in the early morning hours of March 6 with a tremendous concentration of cannon fire from the 5,000 troops under Santa Anna. The Mexican forces brought up scaling ladders and hundreds of them started climbing the walls.

Earlier, Travis had ordered a wooden stockade erected to fill a gap in the south wall. It was there, near the entrance to the church that the famous frontiersman, David Crockett and his men made their stand.

On the church wall, pointing south, James Bonham had emplaced the long cannon, and

Travis stook station with other guns at the corner of the north and west walls. James Bowie, though confined to his cot by a raging fever, was armed with a rifle, two pistols, and his deadly "Bowie knife" which had already become a legend on the frontier.

The stage was set for the final act in this heroic tragedy. And the fighting that followed will live forever on the record of raw courage in the face of overwhelming odds.

Santa Anna's cavalry formed a closed circle outside to prevent escape of the Texans, but not one of them tried to get away. These men—187 of them—fought where they stood, never giving an inch of ground.

They fired their rifles until the last round of ammunition was gone, then grabbed the barrels of their guns and used them as clubs. Years later, one of the 16 children within the walls who were spared in the slaughter, told how Davy Crockett went mad with the fury of his fighting, swinging his rifle like a flail of destruction, was surrounded by broken bodies of the enemy when he finally went down.

All was quiet at dawn. Santa Anna came, accompanied by one of the town officials, to identify the bodies of the four leaders. Bonham lay beside his cannon, on the south wall. Bowie was found on his cot, in a small room of "the long barracks." Crockett was lying before the entrance to the church, and Travis had fallen across one of the cannons on the north wall.

The tragedy was ended—except for a brief epilog of vengeful spite by a tyrant. Santa Anna ordered the burning of the bodies of the Alamo defenders. It was only a short time, however, before Gen. Sam Houston sent Texas soldiers to collect and bury with honor the ashes of these fighting men.

What is the meaning of this epic struggle? What does it mean to us now—in the year of our lord 1960, more than a century after the event? What is the message that Travis, Bowie, Crockett, and Bonham have passed on to us?

The commanders of the Alamo, and the brave men who fought with them, did not die in vain. They set an inspiring example for all succeeding generations of Americans to follow.

After all, what is it that men live by? What are the driving forces, the eternal principles, that give purpose and meaning to life? The symbol of heroic courage is certainly one of them—a most important one. Throughout the ages philosophers have told us that courage is the highest virtue. Without it, the others are meaningless. And the sublime courage demonstrated by these heroes of the Alamo throws a shining light through the gloom of indecision which plagues the world in these troubled times.

Of all the battle cries that have stirred the hearts of American men and women, there is none with the magnetic call to action inspired by those fighting words: "Remember the Alamo."

This battlecry was the driving force which—a scant 46 days after the courageous stand of the Alamo defenders—spurred Gen. Sam Houston's Texan Army to bring about the complete defeat of Santa Anna's forces at the Battle of San Jacinto. It is the anniversary of that day—April 21—which will be observed later this week in the great flests San Jacinto celebration.

As we gather here at this cradle of Texas liberty, it seems to me we should courageously rededicate ourselves to the cause of freedom and justice.

Let us be in the forefront of those who want to encourage Pan-American solidarity, mutual respect, and recognition of the essential worthiness in all men of good will. It is one of the highest goals we should strive for, and certainly the most rewarding in its results for this great empire of the southwest. These are times, I think, which call for understanding, forbearance, and friendliness.

The indomitable spirit and courage of the Alamo heroes are still with us. They constitute a reservoir of great spiritual power, always ready, if we need it. This is the power that has made and will preserve us as a Nation.

Small Business "Plow Back" Tax Relief Bill Needed Now

EXTENSION OF REMARKS

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. EVINS. Mr. Speaker, the small business economy of the Nation needs immediate tax relief. Under the present tax structure it is almost impossible for many small business concerns to acquire sufficient profits above a bare livelihood with which they can replace their inventory, replace their depreciable assets, or expand. Because of this situation many small businesses are being forced out of business and closing each year.

There are presently bills before the Congress which would provide some tax relief for the benefit of small business by providing that a limited amount of earnings which the businessman could best "plow back" into his business and would be tax exempt. This would not only benefit the small businessman, but would encourage expansion and development and stimulate the overall business ecenomy. The Congress should act on this legislation before adjournment.

An example of how businesses, especially small family businesses, can be strangled by the burden of taxation is noted in an article by the president of a small manufacturing company. This article was published in a trade magazine of April-May 1960. This article on the heavy burden of taxation is thought provoking and follows:

TAXATION OF SMALL BUSINESS

When you read in the paper that some communistic country or some country con-trolled by a dictator has confiscated people's property, you hear the expression—"Thank the Lord that I live in America—it can't happen here."

Confiscation of property is happening in the United States. Just like leprosy or cancer, it is slowly but surely destroying our resources and wealth. This confiscation of property is done by unfair, immoral and unconstitutional excessive misapplication of

My property is being confiscated by such taxation. Let me explain this in detail because it has a serious effect on your own futures and property.

A little over 30 years ago, I started a small company that came to be known as Miller Electric Manufacturing Co. I ran this business alone for several years. Then I declded to incorporate because there was more prestige and confidence in the corporate form of doing business.

As it is well known, we had little capital. We had, however, energy, good health, confidence and enthusiasm and each year we built a successfully larger corporation.

We paid no dividends because we used dividend money for working capital. Con-sequently, we did not have to borrow.

Our records will prove that we have paid the Federal and State tax bureaus about 59 percent of our profits as taxes year after year. There was taxation on property al-ready taxed simply because we owned it.

Being a large majority stockholder, I be-lieved I was building a business I could con-sider my own and that I was personally paying taxes on its income year after year.

I had to pay a high tax rate on earnings of the company I owned. The money held by the corporation as dividends was taxed. soon as I received the dividends, they were again taxed. The combined total of tax rates on the dividends was greater than the dividends. In other words, this property was

confiscated by the tax bureaus.

After several years of this type of alleged legal robbery of property, I made a heart-breaking discovery. I could not let my family carry on my business because of the confiscatory inheritance taxes that would be involved. My family could not have enough money to pay the inheritance taxes. This meant my business would have to be liquidated to satisfy the selfish bureaucrats who have wasted billions of dollars of tax money.

Consequently, I started to go around to some of the best tax experts in the country to find a way to solve our problem. Their answer was always the same—"Well, Mr. Miller, you are so right. This is confiscation of your property by the Government bureaus, but at the moment, it is considered

I have been determined to set up some kind of liquid fund to help my heirs pay the inheritance taxes so that my business can continue. However, the confiscatory nature of the taxes involved prevents me

from doing so.

I could sell this corporation and pay a capital gains tax, which would still leave me enough to be in a fairly good financial position. But this would not solve the problem. It would not contribute anything toward destroying this evil confiscation of property through unconstitutional taxation. We have worked too long and too hard to give in to the bureaucrats.

One of the first and important things to do is to eliminate the double taxation on dividends, or at least consider dividends as something other than straight income. The least that could be done would be to permit stockholders to treat dividends the same as capital gains for tax purposes because actu-

ally dividends are capital gains.

It is hard to believe that in the United States of America, confiscation of property by taxation was ever intended to occur. I honestly believe our present Senators and Representatives can and would be willing to clear up the situation of double taxation. However, it must be brought to their close attention.

I am writing this article because I feel so strongly about maintaining the company I have built, and I know that many of my friends are in a similar situation. If we had a concerted action by injured people like myself, I am sure we can get the reputation of the United States of America back where it belongs.

Statement by David A. Hamil, REA Administrator

EXTENSION OF REMARKS

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES Wednesday, May 18, 1960

Mr. AIKEN. Mr. President, I ask

the Appendix of the RECORD the remarks of David A. Hamil, REA Administrator, on the observance of the 25th anniversary of REA, in Washington, D.C., on May 11 of this year.

There being no objection, the statement was ordered to be printed in the

RECORD, as follows:

REMARKS OF DAVID A. HAMIL, REA ADMINIS-TRATOR, AT REA 25TH ANNIVERSARY OBSERV-ANCE, MAY 11, 1960, WASHINGTON, D.C.

The National Archives has furnished us with this photocopy of Executive Order of the President No. 7037, which created REA on May 11, 1935.

This document has historic interest for us, since it is the anniversary of its signing

which we observe today.

You can see that it is very short, only a page and one-half. You may be interested to know that it makes no mention of a lending program. It does not mention cooperatives. It makes no reference to area coverage. It does not say that rural electrification must go on and on until every farm and ranch in America is electrified.

The order grants powers to an Adminis-

trator:

"To initiate, formulate, administer, and supervise a program of approved projects with respect to the generation, transmission, and distribution of electric energy in rural

This is how we began, 25 years ago today. The great program which grew out of that order was shaped by the rural people of this

One year after REA was created, many of the aspirations of farmers were written into the Rural Electrification Act of 1936. The original bills were introduced in the Senate by the late George Norris of Nebraska, and in the House of Representatives by our guest, the Speaker of the House. I think Speaker RAYBURN will agree that the act set up the kind of program that farmers wanted.

Rural Americans did not want free elec-They asked only for a loan program, and they were willing to pay back their

loans with interest.

They asked that cooperatives be permitted to borrow REA funds and build the lines to their farms.

They asked for an authority broad enough to provide a complete electric system, including transmission as well as distribution lines,

and generating facilities if necessary.

They insisted that they should have the right to serve nonfarm rural residents as well as farmers, recognizing that they should and must serve everyone in a rural area to make their projects feasible.

The Rural Electrification Act provided spe-

cifically for all these things.

It wasn't long before REA began to stand for much more than a Government agency in Washington. It stood for a national movement of rural people, united in their common need for electric power.

Rural people were fed up with promises, with conferences, with experiments. They knew that they needed electricity as much, if not more, than town and city people. They knew that it was possible from an engineering standpoint to build lines to their farms. If no one else would undertake construction, they were more than willing to tackle the job themselves.

As a result, cooperatives emerged as the principal borrowers of REA funds. Of the 1,086 organizations which have obtained loans under our electric program, 985 of them have been cooperatives. Nearly all of them were organized after the creation of REA

The people who formed those co-ops faced The people who formed those to be towering difficulties. In most States, entowering difficulties, in head to be approved. The unanimous consent to have printed in organizers had to answer the questions of

their neighbors, collect easements, sign up new consumers. They had to satisfy REA that their project would pay out. All these strange new tasks were undertaken by people without any experience in the electric business.

In each county where a co-op got under way, a handful of rural people supplied the spark, the drive, the faith to make the thing work. Some were aggressive men, powerful speakers, with the talent for arousing the enthusiasm of others. Some didn't talk much, but they made up for that with hard Others had the ability to soothe people's feelings, to help them to understand and to compromise.

All of them were determined to get elec-

tricity into their areas.

These co-op pioneers deserve the greatest share of the credit for the success of rural electrification. There are thousands of them-too many to name even if we knew all of their names. Millions of rural people owe these pioneers a debt of gratitude that

can never be repaid.

The enthusiasm of the early leaders spread to others. Consulting engineers and contractors were caught up in the spirit of the movement, and their devotion to their jobs undoubtedly saved many of the first cooperatives from early extinction. Many manufacturers and suppliers of line equipment also were quick to cooperate. A number of techniques were developed that lowered construction costs and helped to make area coverage feasible. Once the rural electri-fication program was underway, there was no stopping it. The people saw to that.

There is no question in my mind but that REA employees caught the excitement, too. Our employees have had an unusual spirit of dedication. Part of this came from the close working relationship which developed between the REA staff and rural people. Many of the staff had grown up on farms; they understood the problem. They knew that they were engaged in a project of direct benefit to rural America; they could see the tangible results of their efforts spreading

mile by mile across the Nation.

All those who work for REA today-and those who have gone before, beginning with the late Morris L. Cooke, the first Administrator-can take pride in the tremendous accomplishments of the last 25 years. may be too early to assign a place in history to the rural electrification program, but I believe that it will be recorded as an undertaking as significant to the development of America as the transcontinental railroads or our road and highway network. By helping to rub out the sharp line that used to exist between town and country, rural electrification has drawn all of us closer together. It has been another great step forward in uniting all of our people into one nation.

Years ago, REA produced a motion pictre, "The Power and the Land." It showed rural people how they could help themselves to obtain electric power with an REA loan.

Now we have made another motion picture, "The REA Story." It shows some of the ways in which electricity has changed the face of rural America.

You are going to see the premiere of that film now. As its narrator points out, the story of rural electrification is still being written.

I hope that this new generation of rural leaders will do some pioneer work in rural development. With the electric power which their fathers helped provide—and with the modern telephone systems which are being financed under REA's newer telephone loan program-there is no reason why many more factories and business firms and processing plants cannot be built in rural America. Today you can do anything in the country that you can do in the city.

I want you to think about what can be done as you view this film—and I hope that thousands of young men and women in co-op

areas will think about it. too.

As the narrator points out, rural electri-fication has a big, bright, and beautiful future. The vision of the first co-op pioneers has come true. There is no reason why we should not try to make a new vision-the vision of a rural America with stable com-munities and full employment—come true in the next 25 years.

Deer Creek Pilot Wins Award as Best Smalltown Weekly Newspaper

EXTENSION OF REMARKS

HON, FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

SMITH of Mississippi. Mr. Speaker, those of us who are regular readers of the Deer Creek Pilot, of Rolling Fork, Miss., have always known it to be one of the finest smalltown newspapers in the country, but we were very much pleased to see this recognition made by the National Editorial Association, the national organization of weekly newspapers. Under unanimous consent, I include the following news story from the Deer Creek Pilot giving an account of the award, and an editorial signed by Hal DeCell, editor and publisher, and his wife, Carolyn, his coworker on the Pilot: RECOGNIZED AT NEA CONVENTION IN ATLANTA. GA.

Your Deer Creek Pilot has been judged by the National Editorial Association to be the best small weekly newspaper in the entire United States of America for the year

A plague signifying this recognition was presented Editor and Mrs. Hal DeCell last riday night at the awards night banquet of the National Editorial Association convention in Atlanta, Ga.

This was the second National Editorial Association award for your Pilot. The other was a 1952 award for second best column in the Nation which was received by Editor Hal DeCall for his column "Out on a Limb."

Other Mississippi newspapers and editors receiving recognition were Mrs. Lois Anderson, of the Ripley Southern Sentinel, was awarded third place in "Service to Agriculture"; Jim Lacey, Jr., of the Madison County Herald was awarded honorable mention for "Best News Picture"; and Cal Turnner of the Jackson State-Times received honorable mention for his entry in "Best Feature Story.'

In awarding your Pilot first place in General Excellence in the small weekly field, the judges commented, "The Deer Pilot is a thoroughly progressive publica-tion, hardly suggestive of a provincial set-The editorial page, news coverage, advertising display, and general appearance reflect professional management."

The committee of judges was made up of Dean Warrne K. Agee, School of Journalism, West Virginia University; Charles H. Wiseman of Des Moines, Iowa; Dean Earl E. English, School of Journalism, University of Missouri; Prof. Clifton C. Edom, School of Journalism, University of Missouri; Prof. Paul Fisher, School of Journalism, University of Missouri; Prof. Alfred Crowell,

Department of Journalism and Public Relations, University of Maryland; Victor Portmann, School of Journalism, University of Kentucky; Robert Baram, Boston University and New England Weekly Press Association; Dr. H. R. Long, Department of Journalism, Southern Illinois University; Prof. John Stempel, Department of Journalism, Indiana University; John Wolf, Norwood, Ohio; Prof. Charles B. Kopp, Henry W. Grady, School of Journalism, University of Georgia; Dean John E. Drewry, Henry W. Grady School of Journalism, University of Georgia; R. A. Brodhecker, Brownstown, Indiana; Russ Metz, Salem, Indiana; Oliver Knight, Indiana University; Reuben Mehling, Indiana University; Richard W. Lee, Southern Illinois University; Pointer McEvoy, Indiana University; Bernin James, West Virginia University; Werner Severin, University of Maryland; Dr. D. E. Newsom, University of Maryland; and Dr. Carter Byran, University of Maryland.

THAT WHICH PLEASED US MOST (By Hal and Carolyn DeCell)

We were, as could be expected, very pleased and thrilled to receive the plaque last Friday night in Atlanta, Ga. It was a plaque, as you probably know, that proclaimed your Deer Creek Pilot to be, in the judgment of the National Editorial Association, the best small weekly newspaper in the United States of America.

We were even more pleased, however, to receive the next morning a telegram from Rolling Fork's mayor and board of aldermen, which read: "Your hometown folks also agree our weekly newspaper is the best. Congratulations on your outstanding victory."

It means a lot to have the Pilot considered

outstanding by our fellow newspapermen in the Nation. But it means even more to us to be provided with such evidence as that telegram to show that we have succeeded. at least to some extent, in publishing the type of newspaper that you—our friends, neighbors, critics, and fellow citizens—are not ashamed to claims as yours.

That we have perhaps, through our newspapering efforts, achieved for the Pilot a place not only in your homes but in your hearts has for us more meaning than tional honors and recognition—that we can be considered an integral part of our community and county is a much higher accolade than can ever be bestowed upon us elsewhere.

There is, incidentally, one extremely important thing in connection with the recent honor accorded the Pilot which has not yet been done and which we intend to do with

no further delay.

A newspaper is the creative product, week after week, of many persons. And it is un-fortunate that all those persons can never be accorded the full recognition due them for the important parts they play in the publication of the Deer Creek Pilot

In an attempt to correct this, we want to publicly share all of the wonderful congratulations and best wishes with Harry Simmons, who is not only the best backshop foreman in Mississippi, but one of the best friends we have. The Pilot just wouldn't be the Pilot were it not for the highly creative pride and affection which Harry lavishes upon its pages.

And where would we be were it not for the efforts of Mrs. Pete Brown, who in some miraculous manner manages to maintain some semblance of order in the business and circulation departments, while at the same time keeping up with the social doings of the area. The fact that the DeCell children consider "Mrs. Pete" a second mother stands as mute evidence, also, to the personal relationship which helps keep the wheels turning.

We bow deeply in the direction of Miss Ethel Middlebrook, whose patience and per-sistence with our temperamental linotype

machine make possible each week the transforming of thousands of words into type. Not to mention her diligence in catching lacy-trimmed but misspelled words, and her noncomplaining compliance with the pe-culiar typographical ideas of the editor.

We must also point out-and we do so with pride—that the entire Negro community can be justly proud of the part played in the production of the Pilot by Charlie Lewis Sam Bruce. Their work and efforts each week bespeak the pride which they,

too, have in the Pilot.

These are the ones who are responsible for the actual physical production of your Deer Creek Pilot. There are others whose creativeness, energy and efforts also play a most important part in making the Pilot what it is. In recognition of the efforts of those others-our columnists-we extend a warm thank you to Mr. Johnny Joor, Ceach Bob Dunaway, Coach Clarence Wilkinson, Mary Jo Latham, Karen Evans, those two DeCell boys, and most assuredly our wonderful Hollandale editor, Frances Boykin.

Our thanks also to County Agents George Berry and Bill Fleming and their capable and cooperative staffs, and to our community correspondents: Mrs. J. E. Pearce, Mrs. Bill Hammond, Mrs. Johnny Cooper, Mrs. Frank Waren, Mrs. V. E. Stewart, Mrs. Marshall Spiars, Mrs. Gilbert Bennett, and Miss Addle

Lou White.

Most of all do we want to say thanks to each of you—because you make our communities and counties what they are-the most wonderful and warm area in the entire world in which to publish a newspaper. Thank you a million times over for letting us be a part of you.

Wisconsin Agriculturists Honored for Leadership

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Wednesday, May 18, 1960

Mr. WILEY. Mr. President, currently, the Nation is facing serious economic difficulties in agriculture.

Although there have been a wide variety of patent medicines prescribed for the farm economy, none, as yet, has succeeded in substantially improving the situation.

The great challenges in agriculture include the need for establishing a relative supply-demand balance of farm commodities, to carry forward effective research programs, establishing new markets, as well as new ways of utilizing farm products, providing information and educational programs to better enable our rural people to deal with the difficulties, and other such tasks.

A major challenge, too, is to provide the creative, constructive, forwardthinking leadership necessary for progress in agriculture.

Today, I welcome the opportunity to pay tribute to examples of just such leadership. I had the privilege of visiting with my friend Marvin F. Schweers

Recently, four sons of our Badger State received recognition by the Department of Agriculture for leadership in their specific fields.

These leaders include: Dr. Henry L. Ahlgren, of Madison, director of the Wisconsin Cooperative Extension Service: Ned R. Ellis, of Lancaster, Wis., associate director of Animal Husbandry Research at Beltsville, Md.; Werner P. Meyer, of Cedarburg, Wis., assistant director for research communications in Wisconsin; and Marvin F. Schweers, of Madison, Wis., our State conservationist.

Over the years, these outstanding leaders and their associates have contributed much to improving and expanding such constructive programs as extension services, animal husbandry, communications programs, soil and water conservation, and contributing to solution of problems in other aspects of the farm economy.

Reflecting the high caliber of agricultural leadership needed by the country, I ask unanimous consent to have an article from the Milwaukee Journal, giving further details on the specific contribution of these sons of Wisconsin to agriculture, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AHLGREN TO GET HONOR AS EXTENSION LEADER—DIRECTOR OF SERVICE AT UW AMONG FOUR FROM WISCONSIN TO GET AWARDS

Washington, D.C.—Dr. Henry L. Ahlgren, Madison, director of the Wisconsin Cooperative Extension Service, will receive the Federal Agriculture Department's distinguished service award Tuesday.

Dr. Ahlgren is one of seven Department employees who will get this award from Agriculture Secretary Benson in a ceremony at the Washington Monument grounds.

Three other Wisconsin men are among the 82 who will get the Department's annual superior service awards.

A native of Wyoming, Minn., Dr. Ahlgren was cited for outstanding leadership and superb skill in carrying forward a nationwide self-appraisal of extension work as a basis for sound and realistic extension programs.

AT UW SINCE 1929

Throughout his career he has been associated with the University of Wisconsin, where he got a bachelor of science degree in 1931, a master of science in 1933, and a doctor of philosophy in 1935. He has been on the UW faculty since 1929 and a professor of agronomy since 1944. He has been extension director since 1952.

As a member and chairman of the extension committee on organization and policy of the land-grant colleges and State universities, he took the lead in developing an effective nationwide program for extension.

HONORED BY SWEDEN

In 1958 Dr. Ahlgren was named oversea fellow of the Royal Swedish Academy of Agriculture and Forestry.

Superior service awards will go to Ned R. Ellis, a native of Lancaster, Wis.; Werner P. Meyer, who was born in Cedarburg, and Marvin F. Schweers, a native of Shawano.

Ellis, who was educated at UW, has been with the Federal agency for 40 years and for the last 3 years has been associate director of the animal husbandry research division at Beltsville, Md.

His award is for directing research resulting in more effective methods of breeding. feeding, and managing livestock and poultry

and for distinguished research in animal nutrition.

Meyer, assistant director for research com-munications here, got a B.S. degree in agricultural journalism at Wisconsin in 1923 and has been in this field ever since.

WORKED ON FARM JOURNAL

Before joining the Department of Agricul-ture he was on the staff of the Farm Journal and worked at the Wisconsin Agricultural Experiment Station.

Meyer is being honored for leadership and initiative in developing coordinated and cooperative communications programs at the State agricultural experiment stations.

Schweers attended Oshkosh Normal and Ripon Colleges and received a B.S. degree from the University of Wisconsin and an M.S. degree from Iowa State University. He joined the Soil Conservation Service in 1933 and has been State conservationist in Wisconsin since 1942.

Schweers is being recognized for meritorious leadership in advancing soil and water conservation programs in Wisconsin.

Veto of Excesses

EXTENSION OF REMARKS OF

HON. J. ERNEST WHARTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. WHARTON. Mr. Speaker, it is one of the vagaries of politics that some of the people who have lately advocated streamlining the Government and making it more efficient are now voting for new Federal agencies. At least a dozen new bureaus have either been voted upon or are in the process of serious consideration at the hands of the present Congress. Is not it about time that'we stop passing new laws and repeal some of the old boondoggles that have been deceiving the public for years? The labels on some of the new legislation that is coming before us are truly magnificent; but upon closer examination the major provision is usually a new bureau for the taxpayer to support.

Fortunately, the President has again caught up with one of these monstrosities, and I wish to submit herewith an editorial from the Washington Daily News, entitled "Veto of Excesses."

VETO OF EXCESSES

President Eisenhower has vetoed the socalled depressed areas bill because of its excesses. The key jibe in the veto message is that this was an election year measurefrequently the root motive for bad legisla-

For one thing, the bill proposed a new Federal agency in a Government already overrun with duplicate, time-wasting agencies

soaking up the taxpayers' money.

"Lasting solutions to the problems of chronic unemployment," the President said. "can be only forthcoming if local citizensthe people most immediately concernedtake the lead in planning and financing

This bill would have discouraged and stymied such efforts, and thus would have been largely a boondoggle. The Federal Government is in a position to help communities in meeting their local problems—but it never can help by hindering. The veto was an obvious necessity.

W. H. M. Stover Writes of His Mother's Last Prayer as Tribute to Value of Loving and Helpful Parents

EXTENSION OF REMARKS

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 18, 1960

Mr. RANDOLPH. Mr. President, in this period of international tension it seems appropriate that we pause to reflect upon our homes and the loved ones who have shared our joys and our sorrows.

It has been only a short time since Mother's Day was observed, and on that occasion I am sure many beautiful tributes were accorded to these oftentimes unapplauded molders of men.

"My Mother's Last Prayer," written by my friend "Bill" W. H. M. Stover, of Washington, D.C., for Mother's Day, May 8, 1960, has come to my attention.

Mr. President, "Bill" Stover's human document—the touching words of memorial, both to his mother and his father—constitutes a meaningful manifestation of reverence and Christian thoughtfulness. I ask unanimous consent that his tribute be printed in the Appendix of the Record.

There being no objection, the tribute was ordered printed in the RECORD, as

follows:

MY MOTHER'S LAST PRAYER

My mother was an angel of mercy. She taught her children to share. No shaggy dog left her door hungry. Stray cats came to our small farm and stayed. Tramps and beggars, following the nearby railroad, frequently detoured by our back door where they were fed in great abundance.

Since as early as 5, I can remember being sent with my 7-year-old brother to the village frequently to carry a bowl of soup, a bundle of clothing, or a wagon of wood to the village destitute widow we called Aunt Mollie Barrie. I can hear that kindly old woman still saying, "I pray every night that God will richly bless your good mother and you boys." And He did, in much greater abundance than we perhaps deserved.

abundance than we perhaps deserved.

Charlie Murray, the town drunkard and ne'er-do-well, was on her list. When he was dispossessed, she helped her sons build old Charlie a one-room shack on the hill by the woods on our farm, and he lived there, fed mostly by us, until he died. Many were the repeat Sunday visitors, who just happened around, when frying chickns were ripe for plucking. I know for I killed and picked 5 or 6 fryers with regularity on Saturdays. Even the neighbors, with little of life's goods and with much less energy than mother and her brood of six, lived off our garden, our hennery, and our larder.

As a child I used to hear her sing that old song which I shall never forget:

"A mother was bidding a farewell to her boy, He was going to leave her that morn; "Twas hard to depart from the ones that he

loved,
And the old cottage where he was born.
He never returned but he never forgot
The appeal she had made to her boy:

Be faithful and fearless, kindhearted and true,

Be manly in sorrow or joy. In trials remember, 'tis darkest e'er dawn.' 'Twas a mother's appeal to her boy." Later in life, after dad's retirement, I got into financial hot water. Mother and dad, visiting on my farm at the time, were as concerned as I was. I saw them walking around in deep conversation. Finally they came and offered me first their stocks and bonds, then added their meager savings, and after a final conference added their only other possession—their home. They said, "You can sell it and use the money. We don't really need it."

Of course I never accepted their generosity, but their very unselfishness stiffened my backbone, touched my heart, and caused the mental processes to start to work to solve what turned out to be a very simple problem.

We lost mother the 7th of last December. She spent her last 3 days in a hospital under an oxygen tent. Between gasps she'd rally to greet visitors. When her favorite nephew approached her bed she looked up and said, "I promised to make you a pie." Her pastor said, "only last week she sent my wife a birthday cake. Your mother has sent us a cake for Mrs. Ransom's birthday every year since I became her pastor."

Two weeks before her final confinement she pressed two \$100 bills into my hand with such firmness and such an air of finality that I tucked it away in my billfold for later return. Instead I used it as the hospital admission fee, for which apparently it was intended. It was to cover the cost of her last residence here on earth.

In her final hours, between lapses of partial consciousness, she could be heard repeating over and over, that simple prayer which Christ taught, "Our Father who art in heaven." With that prayer on her lips she went down through the valley of the shadow of death, fearing no evil. For the Lord always was her shepherd since as long as I can remember.

My mother was the most generous person I've ever met. And my dad was like unto her. My dad was the finest Christian gentleman I've ever known. He was one of God's great noblemen, and she an angel of mercy. It can truly be said of her: "She didn't know how to cut a small slice of cake."

So today, on this first anniversary when this family celebrates Mother's Day around a vacant chair and with an aching heart, I pay my humble respects to my mother and father, and to all the mothers and fathers of this world.

And I pray that sons and daughters everywhere may daily strive to be faithful and ever worthy of our Christian concept and heritage of parenthood.

By "BILL" W. H. M. STOVER.

San Luis Unit of the Central Valley Project

SPEECH

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 17, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 7155) to authorize the Secretary of the Interior to construct the San Luis unit of the Central Valley project, California, to enter into an agreement with the State of California with respect to the construction and operation of such unit, and for other purposes.

Mr. ASPINALL. Mr. Chairman, I yield 5 minutes to the gentleman from Oregon [Mr. Ullman].

Mr. ULLMAN. Mr. Chairman, let me state at the outset that the San Luis project is a good project and that I support its authorization. The need for San Luis has been clearly demonstrated and its feasibility has been substantiated. The bill before us is the result of extended negotiations and is based on our committee's consideration of the problem over a period of not just weeks or months, but of years. This proposal is a sound compromise stemming from the earlier differing approaches to the situation. It provides for an agreement between the Federal Government and the State for joint use as a first alternative, but provides at the same time that the project shall proceed on an all-Federal basis in the event that agreement on joint-use cannot be reached within a specified time.

In short, Mr. Chairman, except for one section this is an excellent bill. That one exception is section 7, which I believe is unnecessary, unwise and unsound and which I strongly urge be elminated from the bill. At the appropriate time I will offer an amendment to accomplish that purpose.

Why must we delete section 7? The answer to that question must be seen in the context of four aspects of the San Luis proposal before us.

First, the bill authorizes a joint-venture of State and Federal Government. This is made necessary by the fact that the San Luis reservoir site is the only adequate and feasible storage site in the area. For this reason the proposal is to construct, either initially or by subsequent enlargement, facilities sufficient to serve both the recognized Federal needs and those additional needs which the State proposed to meet.

Second, as a part of this joint-venture aspect, there will be a commingling of project facilities and storage supplies. This gives the project a character which is, I believe, unique and which represents a new approach to reclamation development. Third, and of utmost importance, is the fact that the details of joint-use arrangements are not spelled out in the bill before us. They are, of necessity, left to negotiation. The fact that we are moving here into a new area of approach to reclamation problems and that the details of the probable arrangement are to be worked out later in negotiations should alert all of us to the imperative need to move with extreme care-care that we do not in any way undermine Federal interests or the basic concepts of Federal reclamation law.

This concern is given a specific character when we consider the fourth aspect of the situation—the challenge to the tradtional 160-acre limitation in Federal reclamation law. The 1956 data show that, of the 1.4 million acres in the San Luis Valley including the proposed Federal service area and surrounding areas, over 64 percent of the land is held by owners with more than 1,000 acres each. The largest of these, the Southern Pacific Railroad, accounts for 10 percent of the total and the second-largest owner, the Standard Oil Co., accounts for another 7 percent. A similar pattern is to be found in Kern County including possible areas of irrigation service south of the Federal service area. Here, of 1.1 million acres of land, we again find that 64 percent is accounted for by owners of more than 1,000 acres each. The largest owner, the Kern County Land Co., accounts for 16 percent of the total and the various oil companies with large holdings account for another 15 percent.

Mr. Chairman, I do not need to be-labor the point. The basic question is whether or not the 160-acre limitation and other such Federal guideposts of reclamation law shall follow Federal investment. This being the basic question, I think all of us would agree that it should be answered either by the courts or by the Congress considering it on its own merits. I submit that section 7 adheres to neither of these approaches, and that for this reason it must be deleted. It does not consider the question on its merits, as is abundantly clear both from the report of the committee on the bill and from the arguments of those who support its retention. But, at the same time, it clearly implies an answer to the question which may be regarded as binding by the courts. This is not the proper way of either changing fundamental reclamation law or of expressing our opinion as to the intent of such fundamental law.

Section 7 may not in any way alter reclamation law as some suggest. The majority of the committee takes the position that this is the case. Then it is redundancy and should be eliminated.

On the other hand, because of the indefinite nature of Federal-State relations contemplated by this bill-which, as I have pointed out, represents a new approach to reclamation—section 7, if left in the bill, may very well alter directly fundamental reclamation law and abrogate the 160-acre limitation in its legal application. Because of that very distinct and dangerous possibility, this section must be deleted from the bill.

Section 7 is not necessary to the bill. The measure is complete without it.

I ask the opponents of my amendment this question: Is the retention of section 7 necessary to insure that Federal reclamation law will not extend to the socalled State service area? If they answer "no," then they are saying, as some of them do say, that existing law already provides this assurance and they can have no objection to deletion of this admittedly unnecessary action. If they answer "yes," then they are saying, in effect, "we are not sure whether or not existing law would extend to the State service area and we want to insure that it doesn't." If that is their answer, they are clearly asking that we take a position on a question of fundamental Federal reclamation law-a position either expressing our intent as to its interpretation or altering it-and I repeat that such an action by this body should only be carried out through a specific measure in its own right, with all the due consideration and hearings that such a measure must receive.

I ask the Members of this body to protect the 160-acre limitation by supporting my amendment, then to support this project which will add so greatly to the conservation and use of the water resources of our Nation.

Mr. ULLMAN. Mr. Chairman, I want to commend the very able gentleman from California for his untiring efforts on behalf of the San Luis project. And, I want to say here that that is a very excellent example of the type of development that has built America, as the gentleman from Ohio [Mr. KIRWAN] has so ably told us a few minutes ago. This is a feasible project. It is a good project. It has been beset with many difficulties over a number of years because of the fact that involved here is not only Federal reclamation but a State water plan. So, we have had a compromise solution worked out in this bill before us today.

Generally speaking, it is a good solution. We are launching out in some respects in a new direction, an untried direction, but I think it is a sound one and the American way to get the job done.

I am concerned about one section of this bill, as many of my colleagues are, and at the proper time I plan to offer an amendment. It will be a very simple amendment to strike out section 7 of the bill. Section 7 is a very short section.

The provision of the Federal reclamation laws shall not be applicable to water deliveries or to the use of drainage facilities serving lands under contract with the State to receive a water supply, outside of the Federal San Luis unit service area described in the report of the Department of the Interior entitled "San Luis Unit, Central Valley Project," dated December 17, 1956.

The reason that I oppose this section so strongly-and I do strongly oppose it, as do many of my colleagues to the extent that if section 7 is left in the bill we may have to vote against the project. I urge all of you who are sincere believers in this great development to join in eliminating this section.

Mr. YOUNGER. Mr. Chairman, will the gentleman yield?

Mr. ULLMAN. I yield to the gentleman from California.

Mr. YOUNGER. If, as the chairman of the committee states, it makes no difference whether section 7 is in or out. why, if it is left in, would you vote against the bill?

Mr. ULLMAN. Of course, there is a difference of opinion on this point. The committee takes the position that it makes no difference. Therefore I say why not take it out? Under those circumstances it is completely redundant. There were days of debate over in the other body on this same issue. You can read the RECORD. The other body took out this section. The feeling is so strong over there that if you really want a bill, you will be wise to accept the amend-

Mr. YOUNGER. Mr. Chairman, if the gentleman will yield further, if it is redundant and you are in favor of the bill, why would you vote against the bill with something that is redundant in it?

Mr. ULLMAN. The preponents of section 7 take that position. I do not happen to agree. My position is that it does make a difference, that if section 7 remains in the bill, there is every likelihood that what we are doing is changing our basic reclamation law. What I am talking about is the 160-acre limitation. I think you all believe in this principle of spreading benefits to the small landowners and keeping the large operators from getting undue enrichment from our Federal investment. This is basic. I think most of my colleagues acknowledge that the taxpayers, who have through the years supported reclamation, depend upon us to make sure that this basic principle is safeguarded.

Mr. COHELAN. Mr. Chairman, will the gentleman yield?

Mr. ULLMAN. I yield to the gentleman from California.

Mr. COHELAN. On this question of whether it does or does not make any difference, and with all due respect to those who contend otherwise, I am wondering if the gentleman is aware that the Feather River Association on February 12 of this year passed a resolution demanding that if the Congress declined to delete section 7, the State of California should be asked to build San Luis in order to avoid the 160-acre limitation. Somebody obviously feels that this is important. In other words the position is taken just the other way around. The bill is threatened if section 7 does not remain in. This makes me very suspicious, and I am sure the gentleman will agree with me.

Mr. ULLMAN. This is true; a great issue has been made over this section 7. There are many people who cannot support the project if section 7 remains. I say delete section 7. What we seek is to have basic reclamation law apply. We want Federal benefits to follow our Federal investment.

Mr. HAGEN. Mr. Chairman, will the gentleman yield?

Mr. ULLMAN. I yield to the gentle-

Mr. HAGEN. This may be a privileged matter; I think it occurred in the committee at the time of executive consideration of the bill and if the gentleman does not feel it is privileged I should appreciate his answer. Is it not true that in the committee the gentleman from Pennsylvania [Mr. SAYLOR] offered an amendment which would have spelled out the fact that Federal reclamation law did apply to the State project under these circumstances? As I understand, the gentleman was opposed to that amendment; I would like to know why.

Mr. ULLMAN. This is true. In other words, there are some who take the position that all of the water in this joint facility should be under the 160-acre limitation. I take the position that that portion of the water that comes from the Federal investment should be definitely under the 160-acre limitation. What I want to do is to preserve that basic principle. I believe that basic principle will be abrogated with section 7 in the bill and that there is a good likelihood that the benefits from this Federal project will go onto lands without the proper 160-acre limitation.

Mr. HAGEN. One more question, if I may. It is the gentleman's position, then, in offering his amendment, which he will do tomorrow, I assume, to strike

section 7: and it is not his intention that water produced with State funds, let us say, shall be subject to the Federal reclamation law?

Mr. ULLMAN. My intention is that existing Federal reclamation law should apply to that portion of the water resulting from Federal investment. On that basis I feel sure that the Members of the House can and will support the amendment. I is certainly a reasonable position. It is a sound position. It is one that I know the taxpayers of America would support because they do not want to take the chance that part of their investment would go to provide water to unduly enrich large landholders beyond the 160-acre limitation principle.

(Mr. ULLMAN asked and was given permission to revise and extend his re-

marks.)

A Veto Voters Will Remember Next November

EXTENSION OF REMARKS

HON. VANCE HARTKE

OF INDIANA

IN THE SENATE OF THE UNITED STATES Wednesday, May 18, 1960

Mr. HARTKE. Mr. President, a few days ago President Eisenhower in his legislative message to Congress requested enactment of a bill to aid depressed areas. We passed a modest bill authorizing \$251 million in loans and grants to aid local communities suffering by acute and chronic unemployment to help create new jobs. Eighty percent of the authorized sum was for loans. Thirtyone areas of the country need such legislation, including five in my State.

Unfortunately, the President vetoed the bill we passed. This veto was certainly ill advised. I fail to see how an area which has lost its principal industry, such as coal, can be expected to solve its own jobless problems.

The Louisville Courier-Journal commented very astutely on this veto. I ask unanimous consent that its comment be Drinted in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A VETO VOTERS WILL REMEMBER NEXT NOVEMBER

One of the better side effects of the West Virginia primary was the attention given to the depressed coal-producing areas of the State. Not only the candidates, Mr. KENNEDY and Mr. HUMPHREY, but many of the country's news media discovered, somewhat to wallowing in the lap of Mr. Elsenhower's unprecedented prosperity. There are also, they found, great economic backwashes in Which the people live in poverty, hunger, Joblessness and almost despair.

Our only regret is that the reporters and television newsmen had no occasion to come across the line into Kentucky, where they might have found even more widespread and equally desperate conditions. Telecaster David Brinkley did a first-rate job not only of showing the coal-camp misery of West Virginia but of prodding the conscience of a wealthy nation that permits such misery to continue. (He was berated by West Virginia officials, incidentally, for his pains.) We

wish that he could pay equal attention to Kentucky's depressed areas, and emphasize that these conditions are now more than 10 vears old.

NO IMPRESSION OF IKE

Unfortunately, neither the words nor pictures of Mr. Brinkley and his fellows seem to have impressed President Eisenhower, who has again vetoed a bill designed to relieve the suffering and distress of the people of these economically depressed regions and start them on the road to recovery. The veto of this bill was neither humane nor economical. It denies, in effect, the responsibility of the Government to its people. And in the long run it will cost the American taxpayer money. For the longer the relief and recovery of these areas is postponed, the more

it is going to cost.

The bill passed by the Senate Democrats, with the help of five Republicans including Kentucky's John Sherman Cooper, was not a lavish one. It called for \$251 million to be spent to rebuild the basic economy of the areas and to assist efforts to create new jobs. We will spend this year 16 times as much to rebuild the economies and assist the depressed areas of foreign nations. We will spend 155 times as much on defense. In view of such spending, it is preposterous to contend, as does the President, that we cannot afford so minor an expense for our own people without threatening the budget and

our national financial stability.
President Eisenhower, who has achieved no reputation for keeping abreast of the news and who confessed recently that he read only Sunday newspapers, cannot justify his veto with ignorance of the facts. Senator Cooper spoke movingly on the need for this measure, and twice pleaded with the President personally to approve it, pointing out that it was merely an authorization, needing the approval of the Appropriations Committee before any money was actually

Despite this, the President later referred to the bill as "a pork barrel." "I will do what my judgment tells me to do," he said, shortly before he attached his veto. Both his statement and his action indicate that his judgment could stand improvement. A balanced diet for hungry American children is as important as a balanced budget.

Show Your Loyalty to the United States of America by Displaying Old Glory

EXTENSION OF REMARKS

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 18, 1960

Mr. FINO. Mr. Speaker, I am privileged to insert in the Appendix of the CONGRESSIONAL RECORD a statement issued by Floyd I. Silk, commander, New York County, Disabled American Veterans, on displaying the American flag: SHOW YOUR LOYALTY TO THE UNITED STATES

OF AMERICA BY DISPLAYING OLD GLORY

The American flag is the symbol of the United States of America and should be shown by every good American. Display of the American flag shows love of

country and approval of the ideals and principles that our Nation stands for.

Display of the American flag on New Year's Day, January 1, shows love of God and

Display of Our Flag on Lincoln's Birthday, February 12 and Washington's Birthday, February 22-shows admiration and respect for these two great men, who did so much for our Nation and helps to perpetuate the

memory of these two great past Presidents.

Display of Old Glory on Loyalty Day,
April 30—shows loyalty to the United States of America.

Display of The Stars and Stripes on Armed Forces Day, third Saturday of May demonstrates support of our Armed Forces and their efforts to preserve the peace and freedom of our Nation.

Display of the Star-Spangled Banner on Memorial Day, May 30, shows that we, the people of America, have not forgotten those gallant heroes, who served in the Armed Forces to preserve our freedom and who have passed on to their final resting

Display of our national colors on Flag Day, June 14, demonstrates recognition of the Stars and Stripes, as the symbols of our great Nation, and shows pride and love

for our Nation and flag.
Display of Old Glory on Independence Day, July 4—a show of appreciation for our independence and recognition of the rights of all mankind.

Display of the red, white and blue on Labor Day, first Monday of September—shows appreciation for the rights and freedom of all our citizens to seek their own livelihood in their own way in their pursuit of happiness.

Display of the American flag on Columbus Day, October 12—recognizes the discovery of the land that became our great Nation and creates awareness of the many great nationalities that emigrated to and make up our great Nation.

Display of our flag on Theodore Rooseveit's birthday, October 27—also known as Navy Day—helps to perpetuate the memory of this great American and also salutes our great naval service and the boys in navy blue, who serve so well and help keep America strong.

Display of our national colors on Veterans Day, November 11—is a salute to all who served in our Armed Forces and a pledge to continue our efforts to preserve democracy.

Display of the flag of the United States of America on Thanksgiving Day, final Thursday of November, a means of showing gratitude for the blessings that come with being a citizen of the United States of America and the Republic for which it stands.

Display of The Stars and Stripes during the final week of December demonstrates appreciation for the religious freedom we enjoy

in this great country.

These are the special occasions for display of the beloved banner of our land. the patriotic duty of every American citizen to display the fiag at these times. Truly Old Glory should be flown 365 days of each year and the ideal situation for display of love of country would be a flag pole on the property of each home owner and every public edifice in our land. It would be a magnificent sight to see many flags blowing in the breeze daily, instead of the very few that we do see.

FLOYD I. SILK, Commander, New York County, Disabled American Veterans.

A Piece of Parchment

EXTENSION OF REMARKS OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES Wednesday, May 18, 1960

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of the talk made by Miss Dorwayne Phelps, of Houston, Tex., who was one of the 12 finalists in the 1960 American Legion high school oratorical contest. I think the words of this 17-year-old will be an inspiration to all of us as we read her speech on the birth of the Constitution of the United States.

The contest, approved by the National Association of Secondary School Principals, has attracted thousands of high school students throughout the country. This year more than 350,000 students competed in 12 basic regions. Miss Phelps was the winner of the sixth region.

There being no objection, the address was ordered to be printed in the Record, as follows:

A PIECE OF PARCHMENT

(By Dorwayne Phelps, 26 North Wynden Drive, Houston, Tex.)

The men seated around the long mahogany table were tired and hot and a little bit glad that this whole thing was just about over. A long sheet of white parchment lay on the table and each man took up a quill pen and signed his name to it. They were all very weary, and well they should be—for on this sweltry fall afternoon—these men had given birth to the Constitution of the United States. For this was Carpenters' Hall, Philadelphia. And this was the afternoon of September 17, 1787.

The Constitution of the United States. What were the ingredients that went into it? It was made up of 100 days of dispute, argument, discussion; 3 months of planning and toiling; years of confusion; minds filled with doubt; and hearts full of hope and determination—hope for the successful future; determination for a safe and secure present.

For these men had created what Winston Churchlli was to call almost 200 years later ".* * the greatest piece of writing ever to come out of America."

"The greatest piece of writing." But what made it so great was that it was not merely a piece of writing—a dead piece of white parchment—it was a way of life—a living, growing, reproducing organism. It lives to-day almost 200 years after its birth; it has grown constantly through the years; it has seen itself reproduced numerous times in similar foreign replicas.

This "great piece of writing" demands

This "great piece of writing" demands more than just reading. It demands supporting, defending, and most of all—this demands living. Just as it takes a heap of living to make a house a home, so it has taken a heap of living to make this Constitution work. For this is but a useless piece of parchment without people to support and protect it. This Bitl of Rights is but a group of meaningless words without people dedicated to guard it.

George Washington called the Articles of Confederation, the Constitution's predecessor, "a rope of sand." What keeps this Constitution from being a rope of sand—what mysterious threads are woven through it to give it strength and stability? Namely these—the threads of individual rights. But rights are more than gifts. As every coin has tails as well as heads, so every privilege has its corresponding responsibility. But, few people bother to turn the coin over. Too many people are simply working on the basis of paying by credit, accepting privileges with a vague assurance of paying for them later, if they pay at all.

Well, let us turn the coin over and see the corresponding responsibilities that come with the privileges, the responsibilities that must be paid day by day—not in some nebulous future. Just as we have the right to vote, so we also have the responsibility to exercise that right—to give up the bridge party or baseball game to cast our ballot on election day. What a sacrifice. Just as we have the right to worship freely, so we have the responsibility of seeing that this tolerance is extended to all minority groups. Just as we have the right of free speech, so we must extend this same right to others. Just as we enjoy the services and protection of the Government, so we must also pay taxes to maintain that Government.

Yes, each privilege, each right, has its corresponding responsibility. But how few of us ever bother with the responsibility side of the picture. What do we bother with—with being successful, with getting ahead. But we never stop to realize that it is this Constitution—the very foundation of our way of life—that gives us the opportunity to be successful, to get aread. For it is the Constitution that assures us our system of free enterprise.

In today's world, many people hold the idea that patriotism is "corny." In their so-called sophistication, they brand the patriotic as "immature." How tragic—and how very, very shortsighted. How easy it is to forget that it was those corny patriots who fought and died for our freedoms. And it was the immature who gave us our golden heritage—the Constitution. Sometimes it takes a major catastrophe—a war, a depression, or a sputnik to knock us out of our complacency and pseudo-sophistication. The noted historian, Arnold Toynbee, has

The noted historian, Arnold Toynbee, has said that of the 21 greatest civilizations, 19 have dled from within. I imagine it is a very slow but sure process, don't you—dying from within. Its source—neglect and indifference for priceless heritages like constitutions. Its symptoms—apathy, complacency, pseudosophistication.

For this Constitution is quite a heritage—a heritage of freedom—of individual freedom—of individual responsibility. But great as it is, without defending, guarding, and most of all living, it can be destroyed.

The English poet, Shelley, in his poem, "Ozymandias," tells a tale of a giant pyramid, now crumbling, built in honor of the great king Ozymandias at the height of his power. The poem ends like this:

"And on the pedestal these words appear:
'My name is Ozymandias, king of kings;
Look on my works, ye mighty, and despair!'
Nothing beside remains. Round the decay
Of that colossal wreck, boundless and bare
The lone and level sands stretch far away."

No matter how powerful our country is today, the lone and level sands of time can stretch far away from us, if we do not awake to our golden heritage—our Constitution—guard it, defend it, support it, live it.

It is our duty to see that the Constitution of today, and the way of life it represents, will have a present just as safe and secure and a future just as bright as did that piece of white parchment, lying on a table in Philadelphia—1787.

A Bill To Prevent the Use of Stopwatches or Other Measuring Devices in the Postal Service

EXTENSION OF REMARKS

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. DULSKI. Mr. Speaker, I have today introduced a bill to prevent the use

of stopwatches or other measuring devices in the postal service. The purpose of this legislation is self-evident from its title.

Recently the Post Office Department introduced a work-measuring system known as the distribution guides program. So far as I am able to ascertain, this system is based on rule-of-thumb averages which, according to the Postmaster General, were obtained from a study of some 40 post offices differing in size, in physical conditions, such as lighting, the size of distribution cases, or other equipment factors. Everything I have heard about the system indicates that it is neither a scientific nor accurate system, and I subscribe to the view of the employees of the Buffalo Post Office that it is at best a speedup system. It fails to take into consideration the many factors which enter into an effective and honest time study, and particularly fails to take into account the hours of the day during which the work is performed. Dr. Frederic Lee, in his book "The Human Machine and Industrial Efficiency." has the following to say about nightwork in comparison with daywork:

I have shown that nightwork is characterized by certain distinctive features: It imposes on a physiological organism attuned to one sequence of events a different and abnormal sequence; it is characterized by greater fatigue than is daywork; it is interrupted by sleep; its curve of output falls off at an excessive rate in the morning hours; its total output is less than with daywork; its accident rate and its proportion of lost time are in excess over those of the day; it has a deleterious effect on health. All these features are inimical to a high degree of efficiency.

Night work is unnatural, unphysiological, abnormal, and it must ever remain so. It should not be allowed for women, and resort to it for men can only be justified by exceptional circumstances.

This distribution guides program is based on a system of measurement that is faulty in the extreme. The basic measure is 2 feet of mail. Theoretically, 2 feet of mail is supposed to equal 580 pieces. Actually, 2 feet of mail can vary anywhere between 350 pieces and 800 pieces, depending upon the thickness of the mail. The unit of measurement, therefore, is elastic.

The excuse for this system, as stated by the Post Office Department, is:

We believe that any distributor is interested in knowing how well he is doing on the job and how his work production compares. We believe that a distributor has a right to know what the yardstick is in measuring his production and the distribution guides system was developed to let the employee know just how he is doing.

In my judgment, such a statement is just so much hogwash. Whatever other reasons there may have been for the distribution guides system, certainly a desire to let the employee know just how he is doing had to be the least important. The Post Office Department certainly did not take the time, the trouble, and the expense necessary to the development of this system merely to let an employee know just how well he was doing or was not doing

Had the Department been sincerely interested in the employee's welfare, this system or any system of this nature, could only have been developed after adequate consultation with employee representatives and with the employees being represented every step of the way in the development of the program. Time and motion studies in private industry are not made without the consultation and participation of the employees through their union representatives.

According to the Post Office Department the vast majority of the employees readily meet the minimum requirements of the distribution guides program. This being true, it would seem to me that any system which requires that employees be detailed to nonproductive duties concerned principally with weighing, measuring, checking, and tabulating output, removes from productive effort at least as many hours as the system can be expected to save.

I have introduced this legislation after consultation with the officers of Local No. 374 of the National Federation of Post Office Clerks at Buffalo, N.Y., and with their national officers, and I commend it to the serious study of my collegues.

Wisconsin Conference on Aging

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, May 18, 1960

Mr. WILEY. Mr. President, traditionally, my home State of Wisconsin has been vigorous, creative, forward-thinking, in tackling the great gamut of problems that confront a fast-growing, complex society.

This includes such fields as: youth development; industrial progress; conservation of natural resources; stimulating greater patriotism among our citizens; and a wide variety of other constructive activities.

At this time, I refer specifically to the upcoming Conference on Aging, scheduled for June 1-3 at Madison, Wis.

We recognize, of course, that our senlor citizens often face serious, difficult problems, in making social, economic, and other adjustments to changing conditions, as these affect their personal life.

Consequently, there is, I believe, a community responsibility for attempting to establish the climate which can best accommodate these older citizens and, as possible, provide them an opportunity to continue to make their unique and valuable contribution to community projects.

The upcoming conference in Madison proposes to consider a wide scope of problems, including economic security, housing, social services, health and medical care, life adjustments, and a variety of other topics integral with the problems of aging.

Reflecting one more way in which the great State of Wisconsin is moving forward to meet its own problems, and to

deal with the difficulties confronting its citizens, I ask unanimous consent that an article from the May 15 La Crosse Sunday Tribune, entitled "Plans Are Made for Conference on Aging" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PLANS ARE MADE FOR CONFERENCE ON AGING
MADISON —Thirteen special subjects under

Madison.—Thirteen special subjects under the general heading "Health and Medical Care" will receive special attention of discussion panels during the third Governor's Conference on Aging, to be held at the Wisconsin Center in Madison, June 1–3.

The theme of the 3-day conference is "Aging—Everybody's Concern." The conference is open to the public.

The discussions will be a part of a state-wide conference planned as a step in Wisconsin's preparation for the White House Conference on Aging, to be held in January 1961. In addition to health and medical care, conferees will consider economic security, housing, social services, life adjustment, research, organization and organizations and the role and training of professional personnel, the eight major topics for the Governor's conference.

Speakers and discussions will highlight current programs for the aging in the State, identify needs and raise questions about the directions future programs should take, and will include recommendations for action needed in a total State and national effort concerned with aging.

concerned with aging.
Subjects in the health and medical care area to be discussed during the first day of the conference, Wednesday, June I, are: health maintenance and safety for the senior citizen, community level programing for health, long-term illness and the chronically ill, can we rehabilitate the disabled older person, and health insurance for the older

Thursday's discussions in health will include health maintenance and safety for the senior citizen, home and auto safety. long-term illness and the chronically ill, rehabilitation, and health insurance for the older years.

Remaining for Friday's health discussions will be: long-term illness and the chronically ill, rehabilitation, and nutrition.

"Sorry Dad, No Room for You," by Jim Bishop, Depicts Problems Common to Many Senior Citizens

EXTENSION OF REMARKS

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 18, 1960

Mr. RANDOLPH. Mr. President, a stirring vignette by Jim Bishop "Sorry Dad, No Room for You" appeared in the Washington Evening Star of May 11, 1960.

The underlying tragedy of the situation depicted can tug at the conscience of each of us—in terms of personal responsibility to our own parents, as well as the realization of the tragic dilemma of millions of elderly Americans who face a similar problem.

On the surface, it would appear that the problem relates completely to lack of

filial responsibility. But this is not the total story, as revealed in the findings of the Senate Subcommittee on Problems of the Aged and Aging, of which I am a member.

The man in Bishop's syndicated column is beset by problems common to millions of our elderly—inadequate income, substandard housing, lack of preventive health services, and soul searing loneliness. While companionship and financial assistance from children can play an important role in helping to make the later years of parents more comfortable, this is not enough in most instances.

The report of our subcommittee, released earlier this year, lists 12 recommendations for legislative action needed to make it possible for our senior citizens to live comfortable, satisfying, and meaningful lives.

It would be well to keep these facts in mind as we read the story of "the world's greatest dad."

Mr. President, I ask unanimous consent to have Jim Bishop's story, "Sorry Dad, No Room for You," printed in the Appendix of the RECORD.

There being no objection, the article was ordered printed in the RECORD, as follows:

SORRY, DAD, NO ROOM FOR YOU (By Jim Bishop)

The ambulance stood double parked. The blinker winked on and off, on and off. Some little girls stopped skipping rope to watch. It was a cheap neighborhood. On the lawn a sign read: Furnished Rooms. Upstairs, a stout landlady stood in the doorway wringing her hands.

The old man was on the floor. A young intern in white peeled the eyelids back, unbuttoned the old sweater and shirt, and crouched to listen to the fading footsteps of the heart. He refolded the stethoscope while studying the waxed fruit skin, the half-opened eyes, the thin blue lips pulling air against toothless gums. "Cardiac," he said to the policeman. "Could be malnutrition, too."

The intern and the ambulance attendant wrapped the old man in blankets and lifted him easily onto the stretcher and carried him out. Downstairs, the little girls watched and one said: "That's the old guy who gave me a nickel for getting the newspaper."

The cop upstairs dismissed the landlady and examined the room.

The policeman checked his notebook against the photos. Mr. Kenneth T. had been a widower since 1938. He had worked as a compositor on an Ohio newspaper and had not remarried. Apparently, he had brought the children up himself. The record showed the next of kin to be John T., engineering consultant; Mrs. R. K., housewife and former registered nurse; Mrs. Peter Mc., schoolteacher.

The policeman opened the bureau draw-

The policeman opened the bureau drawers. There were three shirts with frayed collars, two ties, a half dozen worsted socks, some shorts and undershirts, an Elks pin,

three pairs of bronzed baby shoes, and a bundle of letters.

He riffled through the letters. A half dozen snapshops fell out. These showed young family groups. On the back, in a shaky hand, the old man had written the names of his grandchildren and their ages and the dates of the pictures.

The letters were signed "Your loving son, Jack" and "Love, Miriam" and "Best, Jane." They were postmarked from nearby and all started off saying that matters had not gone too well lately. A husband needed an operation; the mortgage payments were heavy. Reading them, the policeman gathered that the old man's children didn't want him to come live with them.

come live with them.

One note, signed "Jack," said, "May has enough on her hands with three children. You wouldn't want me to ask her to take care of you, too. You're not young any more, and it would be like having a fourth child." Daughter Miriam wrote: "I wish I could help with a few dollars a month, Dad, but times are difficult for us, too, and George says that your social security should be plenty for your needs."

In the hospital, the nurse searched through the old man's pockets for effects. She found a tiny piece of wood with a mintature loving cup on it.

fature loving cup on it.

It was old and the metal legend had been pitted by time. It said: "To the World's Greatest Dad."

Some Thoughts on the Summit

EXTENSION OF REMARKS

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1960

Mr. DAGUE. Mr. Speaker, like every patriotic American I am incensed over the treatment accorded our President at the now wrecked Paris Conference and herewith set down my reactions, point by point, to the news reports as they have reached us by press and radio.

First. President Eisenhower, under the firm counsel of the late John Foster Dulles, steadfastly resisted the idea of a summit meeting until he was finally pressured into it by Macmillan.

Second. The British are criticizing Ike not because we spied on Russia but

because we got caught at it.

Third. Walter Lippmann, the Olympian oracle, criticizes Ike not because we got caught at spying but rather because

he refused to lie about it.

Fourth. Debate on our "right" to make reconnaisance flights over another nation is academic in the light of the Russian space vehicle presently passing over most of the countries of the world every 90 minutes, plus the obvious fact that in a few short months we will have in orbit observer satellites that can collect all the information, to be gleaned by a U-2 plane and no one will be able to do a thing about it.

Fifth, Mr. Khrushchev came to the summit with his own hands red with bloody repression of free people and with a record of infiltration and espionage not matched by any nation in history. And speaking of aerial surveillance, how do Russian observer planes find their

way over our Sixth Fleet in the Mediterranean without violating the air corridors of other powers?

Sixth, It is reassuring to have confirmed by most editorial writers my firm conviction that Mr. K. is not the unfettered dictator some believe him to be. The wily Russian quite evidently has been brought to book by the military and political hierarchy in back of him and told by them to back away from the summit.

Seventh. Khrushchev, in my opinion, never intended that anything constructive toward peace should come out of the Paris conference. He lives on controversy and unrest and he would stiffe in a peaceful world. The U-2 plane incident gave him an easy way out.

Eighth. The effect of this summit fiasco should be the enhancement of the stature of RICHARD NIXON as our next President since he has already demonstrated his ability to slug it out with Khrushchev toe-to-toe. That the Democrat front runners are equipped neither by temperament or experience for such a slugging contest is quite obvious. As for former Governor Stevenson, in his one conference with Mr. K. he came back to America literally shaken down to his shoes.

Ninth. In summation, let us never forget that the Russian leaders are not reasonable men. They are completely ruthless in the full meaning of that term. They are amenable only to force and as a result it behooves us to keep our defenses intact and our bombers and missiles on the alert. And then as reasonable people let us abandon this fiction of international comity and let's forthwith sever diplomatic relations that we should never have entered into in the first instance.

Tenth. And as a final thought, it is gratifying to see the alacrity with which the American people are uniting in back of their President, that Democrats and Republicans have closed ranks, if not in back of Ike then in opposition to a demagog who insults our intelligence and casts aspersions on our integrity and national honor.

La Crosse, Wis.: Outstanding Symbol of Self-Help for Industrial and Community Progress

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Wednesday, May 18, 1960

Mr. WILEY. Mr. President, nationally, we need ever-wider efforts at community levels to promote greater economic progress, as well as to resolve specific problems confronting a community.

Currently, La Crosse, Wis., is undertaking such a constructive, creative effort to promote industrial progress,

The La Crosse County Industrial Development Council is sponsoring the

establishment of a corporation to secure and administer funds for attracting industry to this splendid community.

We recognize, of course, that such bootstraps operations require a concerted effort of a whole community. The prospect involves taking a look at possible better utilization of local natural resources, finances, and manpower. A public-spirited effort is required, also, to provide the climate, services essential for industrial development, encouraging adoption of local tax policies that will promote, not stymie, industrial progress; and in other ways mustering the human and natural resources of a community. If successfully accomplished, the result is greater industrial development; more jobs for the people; and an improved economy.

A splendid byproduct of such an effort, too, is the uniting of citizens in industry, labor, the professions and other fields in common programs for lifting the level of living to ever-higher plateaus.

Recently, the La Crosse Sunday Tribune published a thought-provoking editorial outlining the splendid way in which La Crosse is undertaking an in-

dustrial self-help program.

Reflecting the kind of community action effort—which, if more widely applied, could promote economic health for a great many communities, not only in Wisconsin, but throughout the country. I ask unanimous consent to have the editorial printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

STAGE IS SET FOR ONE OF LA CROSSE'S FINEST EFFORTS IN INDUSTRIAL SELF HELP

The stage is set for what can become one of La Crosse's finest efforts in industrial and community self help.

The La Crosse County Industrial Development Council is sponsoring a venture to add positiveness to industrial development with funds in hand and acreage to attract industry to this community.

dustry to this community.

Corporate bylaws have been approved authorizing the issuance of \$150,000 capital to be raised by the sale of 15,000 shares of \$10 par value capital stock.

The Development Council is on the right track, sponsoring a corporation to secure and administer funds in the interests of attracting industry.

The fact that La Crosse is one notable exception among cities of comparable size in Wisconsin without industrial acreage ready for immediate occupancy lends urgency to the move under way.

It has oft been argued that industry worth having will choose to stand on its own feet, once a site selection has been made, and in general handle its own financial responsibilities.

Yet there are examples in the State and surrounding communities where municipal help, or assistance from some local source, has attracted industry which might not otherwise have been obtained.

Competition for industry among both the larger and smaller cities in Wisconsin finds respective communities trying to outdistance the other in the matter of attractive proposals. A corporation to assist in the endeavor thus becomes more urgent than ever.

The spread of community development programs has been rapid throughout the State. But the most successful of them have been those willing to make an investment. This is in line with what the local council

now proposes to do.

The strength of this campaign to bring a transformation to La Crosse lies in its appeal to everyone—those able to buy one share and those able to purchase multiple shares of stock.

Labor significantly is taking an active part, joining with all forces in the community to see this investment plan through to ultimate success.

Making industrial park sites available has been under consideration by the council for many months, yet it has been unable to move for lack of a corporation financed and authorized to act. Such a corporation now is in existence.

It is to be hoped that support for its efforts may be readily enlisted, and that the hopes we have envisioned for years may take a turning toward realization.

Soil Stewardship Week in Colorado

EXTENSION OF REMARKS

HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, the conservation of topsoil is essential. We who live with aridity and wind erosion know this. Those who live with abundant rainfall also know the erosive power of water.

Next week is Soil Stewardship Week in Colorado. I take this opportunity to pay tribute to those who more than 25 years ago saw the great need for action to conserve the Nation's soil. As a result of their vision, some 41/2 million farmers and ranchers have united to form 2,822 soil conservation districts. These districts include 1.7 billion acres of land, or a major portion of the United States. These soil conservation districts represent groups of landowners who have joined together to protect our land so that future generations may enjoy its blessings. All America owes them a debt. We are not really the owners of the land—we are but trustees for this generation, and we should view our obligation as involving stewardship.

The work is not finished. It may never be finished. But it is going forward. This Congress or the next one should establish a soil moisture conservation laboratory to help advance this work. The soil moisture conservation laboratory would study the principles involved in increasing the intake of water from the soil, improving the moisture retention characteristics of the soil and increasing the efficiency of soil moisture use by plants. In the great plains area, holding 8 percent of the moisture that now evaporates back in the soil until it can be put to work growing crops is equivalent to adding 3 inches to the scarce rainfall.

Such a laboratory could well be located at Fort Collins, Colo., but wherever located, it is needed.

Similarly, research in weather modification can contribute toward improving the productivity of our soil. The soil

conservation program represents the finest kind of cooperation in research, education, publication and constructive action between Federal, State and local units of government. But even as we commend the soil conservation districts of Colorado, let us press forward to further the cause that they have thus far so nobly advanced.

The Quest for Safeguarded Disarmament

EXTENSION OF REMARKS

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 18, 1960

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address entitled "The Quest for Safeguarded Disarmament Must Be at the Heart of U.S. Foreign Policy." which I delivered in Washington, D.C., April 27, 1960.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE QUEST FOR SAFEGUARDED DISARMAMENT MUST BE AT THE HEART OF U.S. FOREIGN POLICY

(Address delivered by Senator Hubert H. Humphrey, Democrat, of Minnesota, at Washington, D.C., April 27, 1960)

It may seem a long way from the real mountains of West Virginia to the metaphorical summit of next month—but it is not. Like the people of Arizona and Alabama, Wyoming and Wisconsin, like people everywhere, the men and women I have been talking with in West Virginia are deeply concerned with peace.

I have no crystal ball, and I will not attempt to predict what the outcome of the summit meeting will be. I do earnestly hope, however, that the four leaders will give serious and thoughtful consideration to the problems of arms control and disarmament, and will be able to achieve real, even if limited, progress.

I recognize that the armament race and the lack of political settlements are as closely related as, for example, racial prejudice and racial discrimination. Both are vicious circles, and it would be easy to sit down and give up trying on the theory that you can't eliminate one unless you eliminate the other. As a practical and optimistic people, how-

As a practical and optimistic people, nowever, we Americans like to break in on these
vicious circles somewhere. For example, in
recent years we have been enacting laws
against racial discrimination. That does
not mean that we fail to recognize the need
to banish prejudice by education; it does
mean that we recognize that education
alone would take a long, long time to achieve
results, and that having to cease some acts
of discrimination by law has in itself an educational effect.

So it is with disarmament and political settlements. The Soviet leaders have given little ground for hope that they are ready to consider a practical political settlement for Berlin, let alone Germany as a whole. The same is true of other political problems which clutter the international agenda.

OUR MAJOR EFFORT SHOULD BE IN DISARMAMENT

That does not mean that we should forget them, or cease trying. It does mean in my view, however, that our major effort should be in the field of disarmament—a field in which, during recent years, the Soviet leaders have done rather less propaganda and rather more serious negotiation than over political questions. If we do manage to achieve some real progress in disarmament, we can return to the political questions with greater hope of success.

There are obvious reasons for this. Unfortunate as it is that there are—for example—two Germanies, two Koreas, two Vietnams, peace can conceivably survive this division. We can live with it for the time being, even if we do not condone it. But the armaments race threatens both sides with the imminence of mutual annihilation. Furthermore—as the recent news of strikes and riots among Soviet workers emphasizes—the Soviet leaders have urgent domestic reasons for seeking to beat some of their swords into ploughshares.

SOVIET UNION NEEDS PEACE

Over a year ago, on returning from my visit to the Soviet Union, I noted Chairman Khrushchev's urgent need for peace, and predicted that he would launch a big push for disarmament. We should have been prepared—but we weren't.

The four leaders at the summit might well take their text from Shakespeare—who, I understand, is in Boris Pasternak's excellent translations as popular in the Soviet Union as in the Western World. He might have been speaking directly to the summit when he wrote:

"There is a tide in the affairs of men, Which, taken at the full, leads on to fortune:

fortune; Omitted, all the voyage of their life Is bound in shallows and in miseries."

Such a tide is running now for disarmament—and I profoundly hope that the summit leaders will take it at the full.

TWO STEPS AT THE SUMMIT

There are two major steps that they can and should take. One of these is to resolve the most difficult obstacle standing in the way of a nuclear weapons test ban agreement—namely, the number of onsite inspections. The second is to give directions for the future course of the 10-nation disarmament negotiations.

DEFINITE POSSIBILITY OF TEST BAN AGREEMENT

There is a very definite possibility that a test ban agreement—the first real breakthrough toward peace—may be achieved this year, even if it is not concluded in time to be submitted to this session of Congress.

Most of you in this well-informed audience are familiar with the broad features of the proposed test ban treaty. I shall review them briefly:

1. The treaty would ban permanently all nuclear tests in the atmosphere, under water, and in outer space. It would ban underground tests down to a certain level—the level suggested by the United States being 4.75 on the earthquake scale, that is 19 kilotons of TNT in magnitude, roughly the size of the Hiroshima bomb.

2. A minimum of 180 control posts would be erected around the world to monitor shocks to the earth's surface, and to identify them as earthquakes or as nuclear ex-

plosions.

3. Up to a certain number of times each year, a mobile inspection team could make an on-site investigation of an event registered at the control posts which could not be identified as being natural in origin or an earthquake.

4. A coordinated program of research would be conducted by the three nuclear powers to improve the techniques of detecting and identifying nuclear explosions.

There is also the possibility of a separate agreement that, while this research is going on—and at least for a 2-year period—the

nuclear powers would refrain from underground tests.

These four points are the major elements of the proposed treaty. There are other important points, and some of them are as yet unresolved. But, at this stage of the negotiations, the principal obstacle to agreement is the number or quota of "veto-free onsite" inspections to be carried out each year.

The U.S. position is that at least 20 inspections would be needed in the Soviet Union each year to check for possible explosions of 19 kilotons and above. If a lower threshold were to be selected, say 5 or 10 kilotons, a larger number of inspections would be required.

SENATE WOULD NOT SUPPORT INADEQUATE INSPECTIONS

The Soviet Union surely knows that a treaty cannot go into effect without a two-thirds vote of the Senate—we should advise them that a treaty which provides for less than 20 veto-free on-site inspections would have little or no chance of winning Senate ratification.

I hope that they will recognize—on this issue, our negotiators have no room to yield.
WHAT CAN WE EXPECT FROM THE SUMMIT?

The achievement of a test-ban agreement at the summit meeting—or even, to be more realistic about the prospects, the removal of this major obstacle to agreement—would raise a banner of hope for troubled and fearful mankind.

Such hopes, however, might be cruelly disappointed if the summit conference stopped there—and did not make a real effort to move the general disarmament talks off the dead center on which they are presently stuck.

The problem the summit should decide is in what direction to move forward. At present, the Big Four are like the horseman of the Canadian humorist, Stephen Leacock—they want to ride off furiously in all directions.

SOVIET EMPHASIS

The Soviet Union talks of complete disarmament in 4 years. On these occasions when it mutes this particular trumpet and talks of partial measures, it concentrates on proposals for Europe alone and for the elimination of foreign bases—the old Soviet propaganda line.

FRENCH POSITION

France evidently is opposed to any discussion of disarmament measures for Europe. The United States apparently does not want to negotiate about its overseas bases.

France would prefer to talk about nuclear delivery systems rather than nuclear ammunition. The reverse is true for the United States. And any mention of a control system for either ammunition or delivery vehicles seems to send cold shivers up the Soviet spine.

IMPORTANCE OF RESEARCH ON CONTROLS

Indeed, we need to know much more about controls before we can seriously negotiate them. This is primarily an American responsibility. The Soviet Union is allergic to controls, and will accept as little of them as it can. We cannot expect President Khrushchev to authorize a serious effort in this field—any more than he would set up classes to teach shrimps how to whistle.

In the entire area of arms control, only two items could be settled immediately, according to the latest U.S. proposal. One is the freezing of the level of United States and Soviet armed forces at 2.5 million. The other is the prior notification to an international control organization of proposed launchings of space vehicles.

Nothing else could be considered without very serious study. So far as I am aware, no studies have been started on any disarmament measure, other than techniques for detecting nuclear weapons tests—and this study has been proceeding on a substantial scale only for the past 3 months.

RESEARCH FUNDS ABSOLUTELY VITAL

It may be that more thought has been given to these subjects than Congress is permitted to know. But thought is not enough. The expenditure of very substantial funds is required. The Berkner panel estimated \$30 million as the cost of a 2- or 3-year research program in nuclear test detection alone, and \$3 million has been allocated for the first year.

SUMMIT CONFERENCE SHOULD PRODUCE GUIDELINES

One way out of the present impasse is for the summit conference to set forth directives on the next steps in arms control. With such directives, the 10-nation disarmament conferences could concentrate its efforts, instead of riding off in all directions at once. And, with such directives, our own Government would know where to concentrate major study and research in order to be prepared for the next steps in disarmament negotiations.

INADEQUATE U.S. PLANNING

We have not been prepared for such negotiations, as I have been warning for many months. At long last, the State Department itself has acknowledged this fact. I quote Mr. Raymond Hare, the Deputy Under Secretary of State:

"In reviewing our approach to disarmament, it was further found that the most serious deficiency in the U.S. approach has been the lack of adequate planning and studies in the field of disarmament."

At long last, too, there are reports of a possible upgrading of the Office of Disarmament within the Department of State. That is good as far as it goes—but it doesn't go nearly far enough. It comes late—I don't say "too late"—and it is certainly too little.

A MANHATTAN PROJECT FOR PEACE NEEDED

What we really need—as the Senate Disarmament Committee proposed as long ago as September, 1957—is a special agency devoted to the single and comprehensive problem of disarmament—a sort of "Manhattan Project for Peace."

Early in February I introduced legislation to establish a National Peace Agency. It should have the services of some of the ablest and most dedicated people in the country. It should have authority to coordinate the many different projects in the general disarmament field which are presently splintered among the Department of Defense, the Atomic Energy Commission, the Central Intelligence Agency, and the Department of State.

Its single, overriding assignment should be to find a way to end the arms race. In the existing agencies, this is at best a partime or occasional assignment. Then, too, there is a built-in contradiction in expecting any Department of Defense to give whole-hearted enthusiasm to limiting armaments—or any Atomic Energy Commission to show as much zeal for curtailing atom bombs as for developing more effective and varied ones.

The proverb tells us that poachers make poor gamekeepers. I don't apply this proverb in its totality to the Pentagon and the AEC. They can and should provide needed advice and technical services to the National Peace Agency. But, in this field, they should be valued servants and advisers, not masters.

The Department of State would continue, of course, to carry on disarmament negotiations—and I have introduced legislation to upgrade this function by establishing an Assistant Secretary of State for Disarmament and Atomic Energy affairs.

NATIONAL PEACE AGENCY RESEARCH ASSIGNMENTS

The National Peace Agency would provide the State Department, and other Departments concerned, with the fullest information and advice in the field of disarmament and related subjects. Its research assignments should include, among others:

1. The detection and identification of

nuclear weapons tests.

2. The detection of missile tests and of the launching of outer space vehicles.

- 3. Measures to guard against surprise attack, either by long-range or conventional means.
- 4. Control systems to verify the cutoff of the production of nuclear weapons.

 Control measures for reducing or eliminating the production of chemical, biological, and radiological weapons.

and radiological weapons.

6. Studies of the feasibility of demilitarized zones and of the stationing of international police contingents in areas of potential conflict.

7. Political problems concerned with the inclusion of Communist China in an arms control agreement.

 Studies of measures to slow down or embargo the arms traffic to disturbed areas, such as the Middle East.

 Plans for the economic adjustments required in the event of a substantial reduction in armaments manufacture.

All this, and more, will be needed ultimately to achieve genuine disarmament. If the summit conference, as I hope, sets directions for next steps in negotiation, this will be most helpful in establishing priorities.

NEW EMPHASIS ON SAFEGUARDED DISARMAMENT REQUIRED

The quest for safeguarded disarmament must be at the heart and center of American foreign policy. It must be placed as far as possible within the framework of the United Nations—because disarmament is a concern of all countries, and not only of the great powers. By making our statements on disarmament in the forum of the United Nations, we can—if our case is sound—rally behind it the moral force and the conscience of mankind.

We have a better than even chance of making the last four decades of the 20th century decades of peace. The French have a good proverb—amply illustrated by many buildings here in Washington—that nothing is so permanent as the temporary. And, if we can keep the peace for the next 40 years, there is real hope that the habit may take hold for good.

Public Affairs Research Council

EXTENSION OF REMARKS

HON. T. A. THOMPSON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1960

Mr. THOMPSON of Louisiana. Mr. Speaker, former Gov. Sam H. Jones of Louisiana has continued his interest in public affairs over the years and his great interest in further development of our State of Louisiana caused him to be invited to address a prelegislative conference of the Public Affairs Research Council of Louisiana recently. Although my good friend, Governor Jones, began his statement with undue modesty, his words were those of wisdom which reflect extremely well his years of experience and study in governmental affairs.

In addition to being one of the leading attorneys in Louisiana, Governor Jones is, no doubt, the expert of the South in the long-fought battle over southern rate cases. I commend his recent remarks to the membership of this body:

PRZIEGISLATIVE CONTERENCE, PUBLIC AFFAIRS RESEARCH COUNCIL, BATON ROUGE, LA.

(By Sam H. Jones)

The subject assigned to me is, of course, impossible of accomplishment by any one person. No State government is quite so complex and complicated as our own. It would take a staff of experts many hundreds of man-hours to even approach an explanation that would be satisfactory to either the political scientist or the practical politician. It is therefore flattering that I should be called upon to do the impossible.

Some have generously suggested that certain experiences in my career befit me for the task which I accepted with fear and trepidation. But a closer examination indicates such appraisal is not justified.

The fact that I participated in writing our present constitution does not. For this constitution is certainly the longest of any of the 50 States; it is admittedly the most complicated and puzzling; and it has been characterized by some as the worst "Ever struck off at a given time by the brain and purpose of man."

My ill-fated efforts to reorganize the executive branch of the State government back in 1940 would seem to constitute no particular qualification. For although the legislature did succeed in consolidating 174 agencies into 20 departments and five independent agencies, and although the people ratified the idea at the polls, we can legally claim but one distinction: That of establishing something novel in constitutional Jurisprudence, namely, that constitutional amendments can, themselves, be unconstitutional

My participation in the crusade to stop centralization of Government in Washington, through the Federal Commission on Intergovernmental Relations, was something less than a brilliant success. Since our sine die adjournment in 1955, the National Government has proceeded to move out in all directions, grabbing more power and money on the run, and leaving the States and localities much the worse for the noble experiment that was to correct the evils on all three levels of Government.

But there is a brighter side. There are compensations for failures and setbacks. Even the poet has said: "Sweet are the uses of adversity." Another great man has reminded us that "Failure is usually the beginning of success." And we might profit from the philosophy of patience, so eloquently expressed by Woodrow Wilson when he said: "It is the discovery of what they cannot do and ought not to attempt that transforms reformers into statemen."

I have one qualification for my appearance before you today. I am not discouraged. I am as optimistic about the future of Louisiana now as I was 40 years ago when I began my career. There is much in our heritage, and in the genius of our people and in the wealth of our resources that sets us aside and gives our State a special place of preeminence in the constellation of American States.

Never let it be forgotten that the white man came to Louisiana long before he landed at Jamestown and Plymouth Rock. Alonozo Alvarez de Pineda preceded the Mayflower by a full century. Narvaez came to Louisiana in 1529, and DeSota crossed the Mississippi in 1541. We had the benefit of the early mixing of the cultures of the Spanish, the Portuguese, the French, and the Anglo-Saxon which gave to Louisiana the International flavor that exists down to this

day. Ours is an older, a broader, a richer civilization than exists anywhere else in the American Union.

Then 150 years ago there came to our land the immortal Acadians to further enrich our commonwealth. Theirs is an epic which has given a spiritual lift to our people that will never die: Theirs is a saga that will inspire Louisianians and Americans as far down the path of history as men can vision.

We have lived under France and Spain: portions under the rule of Mexico and Great Britain and the West Florida Republic. Our State emerged briefly as an independent nation; then as a part of the Confederacy. For 50 years the Spanish Province of Tejas, or Texas, had its capital well within the present borders of our State. Napoleon was thinking about that part of the larger territory now represented by the State of Louislana, when he referred to its transfer to the United States as the economic and political force which would enable America to surpass in power the British Empire. Finally we came to rest under the stars and stripes.

But we brought with us much to enrich the American Nation. We brought many cultures and varied languages and numerous religions. We brought manners and customs and ways of life of far-off lands. History, for us, was written by the Spanish conquistador, by the intrepid French explorer, for the exiled Acadian in his pirogue, and the Anglo-Saxon in his covered wagon. It was written by the pirate, Jean Lafitte; and by the schemes of the Scotsman, John Law, and the Frenchman, Antoine Crozat, in the promotion called "The Mississippi Bubble." It is still being written by the hillbillies of the North and the Cajuns of the Bayous, as well as by the intellectual aristocracy of a State that, in its versatility and distinctiveness, has no peer.

Then, if you have any doubt about the genius of our people, I would remind you of such artists as John James Audubon, the great naturalist, whose fame is worldwide, and of Caroline Wogan Durleux; of such educators as Elexander Dimitry, and Paul Tulane, and William Preston Johnston, and Thomas D. Boyd; of such great engineers as James Buchanan Eads, and Henry Miller Shreve and Lester Alexander. And in the same field I would mention the Spanish architects, who gave us the charm of the world-renowned Vieux Carre; and of James Gallier and Henry Hobson Richardson, whose architectural gems are scattered throughout the North and East.

I would remind you of the experiments of Etienne De Bore and Valcour Aime, in the culture and refining processes of sugarcane, experiments and discoveries that became a boon to the entire world, and which have caused Louisiana to be the leader in this industry for a century and a half, and to be the trainer of 90 percent of the sugar engineers, chemists and technicians for the entire world. So also of Louisiana's early business leaders and industrial glants such as Daniel Clark and John McDonough and Judah Touro and Julien Poydras,

In the field of medicine Louisiana, since its earliest beginnings, has been an outstanding leader in the Western Hemisphere. Here plagues were conquered. Here tropical medicine found cures that have benefited all mankind. Here was formed the first State department of health in the entire Union. And here great leaders in medicine and surgery, such as Drs. Stanford E. Chaille, Tobias G. Richardson, Edmond Souchon, Rudolph Matas, and Alton Ochsner have caused their names to be known and revered throughout a grateful world. And there were the illustrious philanthropists such as Almonester, Pontalba, Margaret Haugherty, and Poydras, Touro, McDonough, Tulane, and

Onto the field of military battle from the State went such outstanding leaders as Beauregard and Braxton Bragg and Dick Taylor and the "Fighting Bishop" Leonidas Polk. And, at this point, we might remind our Texas friends that Jim Bowie, of Alamo fame, was not a Texan but a Louisianian. And still later John A LeJeune, who became head of the Marines, and "Lightning" Joe Collins, later to be Army Chief of Staff, and Lt. Gen. Thoy H. Middleton, classed by his superiors as one of the great generals of World War II, and Claire Chennault, of Fiying Tiger fame.

Alcee Fortier and Charles Gayarre lead a long list of Louisiana historians. It would be impossible to name all the literary personalities that have lent fame to our State, but we cannot pass without listing George W. Cable, Ruth McEnery Stuart, Alfred Mercier, Eliza Jane Nicholson, Dorothy Dix, Lafcadio Hearn, and Grace King. Nor should we miss the great musician, Louis Moreau Gottschalk, whose fame and concerts led to every land of the world. Nor the great religious leaders like Abbe Adrien Rouquette and Bishop Leonidas Polk.

In the field of law, so closely connected with government, I would remind you of Louisiana's most illustrious lawyer, Judah P. Benjamin, the "brains of the Confederacy;" of Francois Kavier Martin, Christian Roselius; of Pierre Derbigny and Edward Livingston, adopted son of Louisiana, two of the authors of the civil code; and finally, of course, Edward Douglas White, who went on to become Chief Justice of the United States, intellectual giants and great leaders who would do justice to any civilization anywhere.

Now come we to the political leaders of the past: The Spaniards DeSoto, Galvez, Almonester, Carondelet, and Esteban Miro, who where where the grown over advertity, communities only build above themselves upon the dust of their shattered dreams." There were the Frenchmen Lasalle, the LeMoyne brothers, Blenville and Iberville; St. Denis, De Tonti, Cadillac, and the Marquis de Vaudreuil, who conquered the wilderness and brought culture and social graces to the growing empire of Louisiana. Then came the English-speaking Anglo-Saxons, the Claibornes, the Wilkinsons, and the Livingstons whose efforts merged Louisiana as a sovereign State into the American Union, the 18th in order of admission.

From that time until the War Between the States the political control of Louisiana alternated between Frenchman and Anglo-Saxon and, as the historian Chambers said, Louisiana became "America's first melting pot." Not only French and English, but Spanish and German whose names and tradition and influence enrich our civilization today; and the Scotch-Irish who came overland from the East in their covered wagons; and later the Slavs, the Greeks, the Italians, and the Jews, whose business acumen did so much to develop the rich American midlands. And many, from many other nations, and religions and climes.

And, it seems to me, this mixture of peoples and ideas, and customs and religions, make for the greatness of our people. History gives us many examples. There was the British Empire which consisted not only of Englishmen, but of ancient Britons, of Romans, of Vikings, and Danes, and Normans, of Angles and Saxons—of Scots and Picts, and the Gaelic of Ireland. The same may be said of the Greek and Roman Empires. Some of the most stable countries of Europe, today, are the small states of Belgium and Switzerland, who combine mixtures of French and Flemish, and of German and Italian and of descendants of ancient Romans.

Thus, not only through the bloodstreams of our original settlers, but through the media of our distinctive legal system and our specialized medical achievements, and our versatility of land and resources and minerals, and the almost unbelievable diversity of our agriculture, and our connection with the outside world, by our own superior lines of communication with foreign lands-we have carved for Louisiana, a place in the American Union which has not, and never will be duplicated by another American State.

As an American State we have produced men of great political stature: A President of the United States, Zachary Taylor, a Chief Justice Edward Douglas White; great Governors like Villere and Mouton and Francis Tillou Nicholls, and Henry Watkins Allen; great Senators like John Slidell, Pierre Soule, Judah P. Benjamin, and Donaldson Cafferyto name only a few down to the end of the 19th century-lest we travel into the controversial areas of contemporary politics.

If we have been blessed with great leaders and men of genius, we have been even more blessed, by nature itself, with a great outpouring of rich, basic wealth; with fabulous natural resources that make us the envy of our neighbors. As far back as 1850 we were the richest State in the Union, both in per capita wealth and per capita income (including slaves). Seven-eighths of the Nation's millionaires once lived in Natchez, Miss., but made their fortunes across the river in Louisiana. New Orleans was once the Nation's third largest city and for 7 years its financial and banking resources exceeded those of New York City. The com-merce, not only of this Nation, but of the British Empire, was largely controlled from the Crescent City.

All this would seem to have been the fulfillment of the vision of the great leaders of the past. Of Father Charlevolx who, in 1721, said: "Rome and Paris had no beginnings so considerable, nor were they under auspices so happy, nor did their founders meet upon the Seine and upon the Tiber the advantages we find upon the Mississippi.

Of Napoleon who looked upon lower Louisiana, with its undeveloped hinterland, as the economic and political force which would enable America to surpass in power the great British Empire. Of Thomas Jefferson, who, speaking of New Orleans said that it would "forever be, as it is now the mighty mart of merchandise bought from more than a thousand rivers," and would "In the not distant time leave the emporia of the eastern world far behind."

Of Robert R. Livingston who said, on the occasion of the Louisiana Purchase, "the treaty which we have just signed will change vast solitudes into a flourishing country. Today the United States take their place among the powers of first rank," further predicting that: The purchase "will prepare centuries of happiness for innumerable representations of the times." generations of the human race."

There is not the slightest doubt that those of our generation have let the greatness of Louisiana slip; and have failed to properly develop the cornucopia of wealth, resources, and natural advantages that nature has provided. We are the greatest undeveloped agricultural frontier in all of North America. We have been in the past, and we will be again, the leader in forestry—for here we can grow a tree in 40 percent the time required by the climates of the north and of

Canada-and we have 16 million acres of land upon which to do this job.

We have seen our mineral wealth grow to staggering proportions; salt deposits sufficient to outlive the span of the Roman Empire; sulfur supplies of almost unbelievable proportions; shell reefs that have been deposited over thousands of years; oil and gas that already place us in second rank among the States, with additional reservoirs in the Gulf of Mexico, competent geologists say will outproduce the fabulous supplies of the Middle East; waterways that nature gave us. which cannot be equaled anywhere else in the world; and supplies of fresh water that daily flow through our State in quantities greater than is consumed by the Nation, by all its people, for all purposes, domestic, agricultural, and industrial.

Then, too, contemplate our fish and wildlife, the quantity and versatility of which is without equal; a fur-bearing industry that surpasses all the other connected 47 States put together, and a seafoods supply from the Gulf of Mexico and our lakes, bays, and inlets that destines we shall be the leading commercial fisheries State of the Union.

We are thus blessed with products and supplies from the forest, and the farm, and the mine, and the sea that cause us to be the No. 1 example of economic sufficiency, still largely waiting for its development by

the brains and tools of man.

When we repeat the inventory of the wealth which is ours, and hear one of the Nation's great developers say: "The lower Mississippl Valley has the potential to be-come the Ruhr Valley of America," we can only conclude that John Law and Antoine Crozat, with their "Mississippi Bubble," were merely some two centuries ahead of their

Perhaps by now I have convinced you of at least one thing I said earlier: That there is much in our heritage, and in the genius of our people, and in the wealth of our resources that sets us aside and gives our State a special place of preeminence in the American Union. But what, you say, has this to do with the subject, "The Executive Branch of the Louisiana State Government?

That is a fair question, and I shall try to Historically we are stigmatized with the unwanted reputation of encouraging unstable government. In 148 years we have lived under 9 constitutions, an average of 16 years to a constitution. If we eliminate our first and last constitutions, our average has been only 11 years. By reputation we are in much the same position as modern France which, prior to De Gaulle, changed its governments like we change clothes for the seasons.

At long last we seem to have become weary of writing new constitutions and settled down to a new, and even worse, habit of writing amendments, thus compounding the confusion that has brought chaos to our governmental structure. And which spawned, I'm afraid, an attitude of defeatism and a great deal of hopelessness among our people. The constitution of 1821 to nearly 40 years old. But it has been amended

We started out, I think, rather well. reached our golden era prior to the Civil War under the first constitution. Then we were beset with the problems of the War Between the States and the horrifying experience of the Reconstruction, but we must remember that, even since the final ending of the Reconstruction in 1879, we have lived under four constitutions, or one for every 20 years. Having grown weary of writing constitutions, we decided on the amending process, which proved to be relatively easy. For Louisiana, the difference between a statute and a constitutional amendment, from a practical standpoint, is but 90 days.

Our experiment in 1940 used the amending process. We did a thoroughgoing task eliminating useless jobs and of consolidating 174 sprawling agencies into 20 departments and 5 independent agencies. But the Supreme Court said we went too far, too fast, and that our objective was too allembracive. We picked up the pieces in 1942 and reenacted a substantial portion of the reorganization by way of statutory laws. I have never counted them but I estimate that we wound up with some 50 to 75 agencies.

Since then we have grown, like Topsy, without rhyme or reason. Our executive branch embraces a minimum of 217 separate agencies according to Public Affairs Research Council. The Governor is required to make 995 different appointments and holds 24 ex officio positions himself. His appointees hold another 33 positions ex officio. total of 1,052. The constitution says that the Governor "shall take care that the laws be faithfully executed" and empowers him "to require information in writing from the officers in the executive departments upon any subject relating to the duties of their respective offices."

Let us assume that the Governor allots 1 day, each year, for attention to each State agency of the 217; and allots 1 working night. each year, to reading the report of that agency for the year, what would be the result? Using a 5-day working week, he would have only 43 days left. And then when you consider that, under our present system, there are an average of 45 legislative days per year, when he must be available to this coordinate branch, the Governor has less than no time at all for the other duties and obligations of his office.

It is, of course, impossible for a Governor to supervise 995 appointees. A military commander usually has a staff of five, and about that many subordinate commanders. This is workable. A political cabinet of 25 members makes sense and is feasible. A Governor can supervise 25 but not 995 ap-Thus, in Louisiana, he is saddled pointees.

with an insuperable job.

That is the reason why I said, at the outset, that the subject assigned to me, under our present legal setup is impossible. And that is the reason why, I now say, that we must ultimately face up to a task that we cannot escape, just as France faced up to a similar problem under the leadership of De Gaulle, and just as the Founding Fathers of this country did the same thing when they junked the impossible Articles of Confederation and gave to us a government, under a Constitution, which has been praised as the greatest ever devised by the brain and pen

And that is a job, may I remind you, that will require time and patience and courage and genius and leadership, qualities that never have been, and are not now, lacking in the people of Louisiana.

The mere size and number of the 217 State agencies does not tell the whole story of the confusing labyrinth of administrative structure until I remind you of these facts:

We have 13 agencies dealing with fiscal affairs, some elective and some appointive; 8 agencies that handle education: 11 agencies are required to handle 15 hospitals, although 12 of these are, presumably, under the control of a single board. In addition, there are 6 other agencies that have to do with health and sanitation matters, making 17 offices and agencies, plus 15 hospitals, in the field

There are 17 agencies, or groups of agencies, that deal with conservation. These include 1 group of 12 fish and game commissions that are largely local in character. To handle penal and correctional matters we have a total of 10 different agencies and offices and, in addition, 5 wardens or superintendents of institutions. By way of parentheses, most of these agencies will be grouped in one department of corrections, if the report of the Parolee Rehabilitation Committee is acted upon favorably by you in your coming session.

A total of 15 appointive and ex officio boards, commissions, and offices operate in the field of agriculture in addition to the elected commissioner of agriculture. spite of the fact that the commissioner holds his portfolio directly from the voters, he is permitted to control only one of these appointees, namely, the State entomologist. And, while he serves on a number of boards, and is required to work with all of them, a vast majority are appointed by the Governor, without any nomination on the commissioner's part. This gives us a department whose head is elected by the people, yet whose functions can be almost completely hamstrung by the Governor, if he happens

to be unfriendly.

To handle elections we have two elective oficials, the secretary of state and the State custodian of voting machines. Not deeming this sufficient, we also have an ex officio board of registration, a director of registrations and a board for voting machines which is appointive. The first custodian to be elected recently complained that "I was elected by the people. At the same time, I am governed by a board that was not elected by the people." Similar inconsistencies occur so frequently that, to use the vernacular, "they are a dime a dozen."

One would think that a director of highways or a board of highways would be sufficient to handle State highway matters, but when we dig into the governmental structure we find a total of five agencies or offices operating in this field. Six offices and agencies handle welfare matters while it takes four in the field of protection of per-

sons and property.

The State has inherited a system of levee districts which originated long before the flood control act of 1928, by which the Federal Government assumed most of the important functions formerly performed by the levee boards. These districts are financed locally at a cost of \$6 million a year, but the governing authorities are appointed by the Governor. The State department of public works does certain engineering work for the districts, acts in an advisory capacity and is the liaison agency between the boards and the U.S. Corps of Engineers. The department does not exercise general jurisdiction, and the State, itself, exercises no budgetary control or other overall supervision. If these are to be considered State agencies, the State should properly control and direct their overall operations. If, on the other hand, they are to be considered local agencies, they should be reorganized accordingly, and the appointment of their governing authorities should be taken away from the Governor and vested locally.

Somewhat similar situations exist with reference to the 12 fish and game commissions and the 7 port and harbor commissions, the jurisdictional territory being largely local, but the appointments of governing bodies being made by the Governor, usually without restriction, but sometimes on local

nominations.

There are, besides the Governor, 10 elective officials. Some of these are highly important and, as matters of public policy, should be elected. Others head departments that require highly specialized skills and training which, in other States, are considered more appropriately as appointive officials. A few are of relatively minor stature and cannot be compared in importance with such appointive officials as, for instance, the conservation comissioner, who makes decisions, almost monthly, involving properties the value of which runs into the scores of millions of dollars.

There is no easy explanation of the maze of complexity which surrounds the executive branch of the Louisiana State Government. It has been called complex, confusing, and chaotic; and it is all of these. An interesting comment recently appeared in an editorial of the Times Picayune, which said:

"The incongruities of Louisiana government keeps at least one person in the Covernor's office occupied almost full time advising the Governor as to the expiration of commissions and the method he must use in selecting a replacement."

But, so far the problems confronting you

as legislators are concerned, the worst is yet to come. The situation is not getting better; it is getting worse. The speed with which "big government" is moving into the State house is alarming. Sixteen years ago we were spening \$100 million a year. Now we are spending \$800 million a year. In dollars of constant value this means we are spending four times as much for State government as we were four administrations back.

In the early 1940's we operated the State government with 17,000 employees. Now we have 36,000 employees. Certainly we have more State agencies to man and finance, and the old ones have grown in size. But the question for you to answer is: Do we have twice as much government as we had 16 years ago? And if this be so, are we going to have twice as much in 1976 as we have today? And if we do, how are we going to pay for it?

In this connection let me remind you that we have a total of 48 State taxes and our State tax collections—per \$100 of personal income—are already the highest of any State in the Union. This means that we Louisianians pay an average of \$8.82 for State taxes out of every \$100 we make. The national average is \$4.46, while citizens of New Jersey pay only \$2.33. In per capita State tax collections we pay the fourth highest amount among all the States—and while our per capita income has recently dropped to 39th place we rank 10th in total of State tax collections.

While this staggering load of taxation is constantly mounting, the legislature is confronted with the legal fact that over 83 percent of the State taxes have been dedicated by constitutional amendment or statutory enactment to specific uses. This adds up to a system by which you have abdicated your most important controls and powers, and have made the Governor and his appointees and the elected administrative officials all powerful. In fact, the Governor's office in Louislana has been referred to as "one of the most powerful positions in the United States."

May I interpose here the thought that any suggestion for the reduction of the Governor's appointive power is not meant to decrease the importance of his control of strictly executive functions. On the contrary, it is meant to increase the effectiveness of his executive control and at the same time reduce the complexity of operation of the State government. The fact that I endeavored to reduce the Governor's appointive power in 1940 is the best evidence of my sincerity on this point.

In addition to his phenomenal control of the purse strings, and his vast appointive power of nearly a thousand State officials, he has still another weapon of power that is little discussed. That is his authority to make appointments on the local level. This is provided by statute for an exceptional number of positions that are strictly appointive—and for the filling of vacancies in many elective offices of a local nature. The exercise of this power ofttimes upsets the will of the majority in a locality, with serious damage to the principle of local self government. At the same time it is a grave injustice to the Governor, himself, who is thus, unnecessarily, drawn into local controversies, ofttimes among his own friends, and to his own detriment.

Thus you are saddled with a system that is defective down to its very roots—a system that can be corrected only by a complete overhaul of the entire executive branch of the government.

The changes here suggested are intended to promote the Governor's effectiveness, and your own; to strengthen and not to weaken; to remove and not to add burdens; to clarify and not to becloud; and finally to readjust the traditional system of checks and balances—so necessary in our type of government.

Many of them are, by their nature, beyond the scope of your authority to correct except by the intervention and concurrence of the people themselves. This does not mean that you, and the incoming administration, are powerless to cope with the

There is much you can do, and many reasons why the process of remedial legislation, and corrective executive policy should commence now. We have just completed a reorganization of our appellate judiciary which will go into effect on July 1 and which will work substantial improvements in that branch of government. It is only logical that this should be followed by similar reforms in the legislative and executive branches. As an example, you could render great service to the cause of governmental efficiency by eliminating overlapping boards in purely political departments of state. Both Governor Kennon and I tried this experiment, and while I cannot speak for Governor Kennon, I am now convinced that the system is undemocratic and wrong in principle.

The time is appropriate. Our incoming Governor is a man of reason, common sense and good judgment, experienced in the office, and is, thus, in a position to judge the need for proper changes and improvements. Equally as important is the State's good fortune in having one of the best legislatures Louislana has been privileged to boast in the 20th century. Then I think there is an awareness among the people that we must tackle the problems of governmental complexity, of the growing specter of big government, and of excessive taxation which is somewhere near the breaking point; even if we have to practice a little austerity.

Capable analysts believe that savings in expenditures up to \$65 million a year are entirely possible, without sacrificing essential services to the people. There is no legal reason why you should not recapture at least a substantial portion of your power to appropriate funds, heretofore dedicated by statutory enactments. And you might even find that the people would back you in the abolition of at least a portion of the constitutional dedications that have shorn you of much of your legislative powers.

There is ample authority, under the constitution, or abolition of useless offices and for merging and consolidation of scores of others. There is a great field for inauguration of better business practices in the State government. Tremendous improvements have already been made by the division of administration in the budgetary functions. Similar improvements can be made in the field of State purchases. And many of us hope that one of these days the legislature will provide itself with its own auditor to find out just what happens to the funds it appropriates and allocates to the various administrative agencies.

It is an open political secret that, at least some of the numerous State agencies are overstaffed in personnel and that substantial savings can be effected in this field. And since there is a normal turnover of between 20 and 25 percent annually, this can be done without the serious political repercussions one might imagine. May I remind you that in 1939 we had at least two State agencies with more than 3,000 employees. We reduced each of them by more than 2,000; and they have remained at this level ever since.

One of these was the New Orleans Dock Board which, in spite of the fact that it has less than one-third of its 1939 personnel, is handling three times its 1939 business.

But your greatest opportunity to be of service to Louislana, in the next 4 years, is to encourage its economic development by creating a favorable political climate. I am completely objective and completely practical in approaching the solution to our political problems. Most of them will be cured by the correction of our economy. Some tax relief can be achieved by direct legislative action. By far the most will come from a long-range program of encouraging industrial and other economic development.

In this manner we expand our industry and our payrolls; and we will have more people earning more money to pay the same tax load. But to do this you must convince outside capital that you will be fair. The repeal of the Power Use Tax, for example, would lose this State less than \$2 million; yet it would be a signal to the world that we were changing our policies and were welcoming new industry. In my opinion, it would have a dramatic effect on the State's economic future. The repeal of the 1 cent Refining Tax back in 1942 had a spectacular effect in bringing new industry into the State.

Let me use one of many examples to point up our problems of industrial development. In this day and time we hear a lot about the tidelands oil. Nearly all the specula-tion, at least in political circles, centers around one question: How much additional taxes do we stand to get? Not how many new industries do we hope to get. Not how many new jobs we expect to create. Not how many oil refineries and how many petro-chemical plants we hope to locate upon our shores to furnish jobs for our Now don't misunderstand me: would like to see us get title to all the tidelands oil we can reasonably claim.

But whether we get title merely 3 miles out, or 3 leagues out, or to the edge of the Continental Shelf, the future of the State of Louisiana is largely assured no matter who owns the oil, if we induce the producers to bring that oil to our shores and refine and manufacture it here. We have a treasure trove beyond compare, and one that will bring to us full employment, and riches and prosperity, if we can convince the producers and owners to handle the manufacturing processes here.

Now what are we going to do about that? And if New Jersey on the Atlantic coast, and Texas on the gulf coast offer a better political climate and a more favorable tax rate, where do you think the tidelands oil will Are we still going to be merely wind up? the producers of raw materials, merely the hewers of wood and the drawers of water? I choose to think that we are learning our lesson, and that we will not let this opportunity for permanent prosperity slip from our grasp.

Finally, there is the job that all of us know must, eventually, be tackled and accomplished. That is the job of reorganizing completely the executive branch of the State government, and of restoring to the legislature the powers to which it is entitled, under the American system of checks and balances. There are two ways in which this can be done. One is by an immediate constitutional convention. The other is by a Hoover-type study commission which you would authorize.

Frankly, I do not think the constitutional convention is the practical method at this time without much preliminary research. The political factors are such that it is an unpopular approach. The issue of reapportionment, alone (to which I think there are answers), might easily amount to an impossible obstacle. In addition, we have written much fine legislation into the constitution which the people want to remain there. An example of this is civil service. There are many others. There are ways of effectively preserving these political gains while at the same time providing comprehensive reorganization. But this is not the time to make the

But aside from the political factors it would be unwise to jump into a major opera-

tion until the patient's condition has been diagnosed and studied. And our complex governmental structure, plus our long history of uncoordinated constitutional amendments. makes a thorough, exhaustive study of our executive branch an absolute necessity, if we are to avoid the mistakes of the past. this suggests the advisability of a commission to devise a plan of reorganization, a commission that will have ample time and ample funds with which to make a study of the most vital problem that confronts the State of Louisiana today.

Fortunately, the State today has effective and qualified groups to provide technical assistance in such undertakings. Among these are the public affairs research council, the Louisiana Law Institute, the bureau of governmental research, and the Louisiana Legislative Council.

This new administration and this new legislature have no easy task. Some way, somehow, we must put an end to the complexity and confusion that characterizes our government. We must bring order out of chaos. Some way, somehow, we must stop the headiong, skyrocketing, catapulting, astronomical increase in taxation. Some way, somehow, we must clear the way and simplify the methods by which the Governor and the legislature perform their duties. Some way, some how, we must stop the evil trends which, if left unstopped, will do critical, or even fatal, damage to the economy of this State.

Without doubt you have the second toughest job that has confronted a Louisiana government since the reconstruction. It may well become the toughest. We are about to commence the reaping of the harvest from a lot of bad seed we have been planting over the years. But there is a bright side. is a way out. We have the brains and the genius and the leadership to cope with the problem. We have the tools and the resources. And we have a tradition, here in Louisiana, for the solution of great problems.

It's a challenge to Governor Davis and to you. It is a time for greatness. I believe you will rise to the challenge. I envy you in the opportunity that is yours. Louisiana has risen to great heights in meeting similar crises in the past. And with the executive and legislative leadership provided for the next 4 years, I have an abiding faith that you will do so in the days ahead.

Citation of Robert M. Chapman, Ashland, Ohio

EXTENSION OF REMARKS

HON. FRANK J. LAUSCHE

OF OHIO

IN THE SENATE OF THE UNITED STATES Wednesday, May 18, 1960

Mr. LAUSCHE. Mr. President, last week there visited our Nation's Capitol a representative group of school safety patrolmen who were properly recognized and duly cited for heroic actions beyond their usual call to duty.

I am pleased to call attention to the fact that one of these young men to receive the medal citation is Robert M. Chapman, aged 14, of Montgomery School, Ashland, Ohio.

Robert is the son of Mr. and Mrs. Merle Chapman, R.F.D. No. 2, Ashland, Ohio.

I ask unanimous consent that there be printed in the Appendix of the REC-

ORD the citation relating to the outstanding act of heroism by this young man.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

Quick thinking and courageous action by Robert, while on school bus patrol duty the afternoon of March 24, 1960, prevented a tragic accident. The school bus had stopped east of Ashland on U.S. Route 250. Three children were about to cross the road. A heavily loaded tractor-trailer combination bore down on the bus. Being unable to stop, it swerved to one side but nonetheless struck the bus, driving it forward over 25 feet. Robert shoved the three children, two into the ditch, and the other flat onto the pavement. Two of the children were not hit. Robert and the third child, although struck by the bus, fortunately escaped serious in-

Wilkes-Barre General Hospital Receives First Installment of Hill-Burton Funds

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 18, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Wilkes-Barre Times-Leader of May 17, 1960, announcing the receipt by the Wilkes-Barre General Hospital of the first installment, totaling \$261,313, of Federal Hill-Burton funds to be used for construction of a new \$3 million hospital. \$1 million of this total to come from

Hill-Burton funds: GENERAL HOSPITAL RECEIVES PART OF U.S. AID

Wilkes-Barre General Hospital new building fund has received a check in the amount of \$261,313.31, representing the first installment of a \$1 million Federal Hill-Burton grant to help build the \$3 million hospital, it was announced last night by F. E. Parkhurst, hospital president, and Dr. Samuel T. Buckman, campaign general chairman.

The check was received at General Hospital through the State treasurer's office.

It represents approximately one-quarter of the Federal Government's \$1 million pledge to the local hospital, and was based on the fact that, at the time of audit for purposes of payment, the new showplace hospital was 25 percent completed.

Additional installments will be paid as the building program, rapidly underway, at-tains certain stages of completion. The construction schedule, hospital officials stated, will soon reach 50 percent of completion.

The \$1 million Hill-Burton pledge to help build Wyoming Valley a new, fully modernized general hospital was procured originally on the premise the public of the community would itself pay \$2 million, or two-thirds, of the cost of the planned \$3 million medical installation.

A four-phase campaign was launched in the summer of 1958. First phase was an unpublicized drive among General Hospital "family" itself, under the chairmanship of Dr. Lewis T. Buckman. An advance gifts campaign, embarked January 7, 1959, followed by the general campaign kickoff, February 4, 1959, under Dr. Samuel T. Buck-man, general chairman. Contributions and pledges during all phases of the overall drive were lauded as re-

flecting the enthusiastic support and backing

of all segments of the community.

Last year, the campaign's final-phase, "Operation Windup," was launched to complete solicitation of prospects who had not yet been contacted, and to attain the \$2

million local goal.

Hospital officials said pledges and con-tributions are being received at "Operation Windup" headquarters, General Hospital. They urged all who have not yet been contacted, and who wish to be listed as participating in this major community project, to send in their contributions as soon as possible.

The hospital officials lauded receipt of the

Federal Government's first installment.
Parkhurst declared: "Receipt of the \$261," 313.31 check, as first installment of the Hill-Burton \$1 million pledge to the new General Hospital represents a giant stride. It is eloquent tribute to the Federal Government's fulfillment of its promise. We are all delighted."

Dr. Samuel Buckman stated: "We trust that receipt of one-quarter of the Hill-Burton grant will serve to remind all still uncontacted prospective contributors that their pledges and contributions, now more than ever, will be more than welcome at "Operation Windup" headquarters. We still need to attain the full local goal of \$2 million, and potential contributors are urged to make themselves part of this great building program without delay."

Members of General Hospital Building Committee include: Samuel M. Wolfe, Jr., chairman; Frank W. Anderson, Dr. Samuel T. Buckman, F. E. Parkhurst, Dr. Carlos E.

Rodriguez, and William O. Sword.

Joseph W. Barr: Department of Research

EXTENSION OF REMARKS

HON. EARL HOGAN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 18, 1960

Mr. HOGAN. Mr. Speaker, I am submitting a speech which was given by my colleague, Joseph W. Barr, Representative from the 11th District, Indiana, before the Federal Government Accountants' Association at the Naval Weapons Plant in Washington, D.C. on May 13.

The speech, Mr. Speaker, points up the need for coordinated effort on the part of our Government in the field of

In the past 20 years the expenditures of the United States on research have increased about 110 times-from \$74 million in 1940 to \$8,400 million in fiscal 1961. In 1961 research expenditures will use up about 10 cents of every Federal tax dollar collected.

This amazing jump in research appropriations over a 20-year span seems to reflect an awareness by the people that we can survive in the sixties only through research. We do not have the population to field great land armies, so to remain secure in a military sense, we must out-research the rest of the world. Economically, research is probably the best weapon we have in a highly competitive world. Ours is a high-cost economy. From the chairman of the board, through engineering staffs, and on down to the production line, our people demand and get salaries that are very high by world standards. To support these standards and to compete, we must literally turn in a better research performance than our competitors in the world market.

These facts seem apparent and are generally accepted. There is, however, a growing concern from the voters and from the Congress that the expenditure of this \$8,400 million is poorly coordinated, often wasteful, lacking in direction and purpose, and too often based on 'expediency' rather than

logical long-term goals.

Research, unlike other Government functions, is not centered under a department head reporting to the President and through him to the Congress. Research is scattered all over the lot. Defense of course gets the lion's share-\$5,840 million. Over a billion dollars goes to the Atomic Energy Commission, National Aeronautics and Space Administration is next with \$600 million, then the Department of Health, Education, and Welfare with \$375 million (mostly spent in the National Institutes of Health), Department of Agriculture gets \$138 million, the National Science Foundation gets \$101 million, and a group of other agencies gets \$283 million among them.

In spite of the fact that research is a clearly established Government function as clearly defined as defense, labor, or agriculture, in spite of the fact that it uses 10 cents out of every tax dollar, in spite of the fact that it is clearly vital to our continued existence, still there have been no attempts to make sense out of this sprawling mess. There is no clear line of authority to the President and to the Congress. And worst of all there seems to be no attempt to establish national science goals, to coordinate existing programs, or to give the taxpayer a break on this enormous expenditure.

In my opinion there are three areas of management problems involved that must be resolved quickly if our research efforts are to produce a reasonable return:

Some way, somehow, the President or the Congress must decide how much of our resources can be devoted to research. Today money is probably not as much a controlling factor as the sheer availability of scientists.

II

Some way, somehow, the Congress or the President must establish a direction and a goal for our efforts and this expenditure of tax funds. At the moment direction is imparted to research by departments concerned with their particular problems. It is only natural that people in Agriculture would emphasize their particular problems of research. It is only natural that Defense scientists would insist on the overriding importance of their efforts, and the same would be true of the doctors at the National Institutes of Health. Each group has its own ax to grind, and unfortunately the Congress judges research appropriations on this departmental basis. I think this ap-proach is all wrong. It is not as important to argue whether cancer research is more important than research on heart disease, to stack these programs up against the whole range of Government research efforts-space, defense, meteorology, oceanography, communications, etc. There may be some anguished howls, but in my opinion we can no longer afford to consider research efforts in a departmental context; we must line them up and give them priorities on the basis of total national interest.

Finally, the Executive is now faced with a management problem of the first magnitude in getting the most out of the tax dollar—this 8,400 million. As I understand it, management of research involves three basic problems: (1) What projects to start; (2) Continuing evaluation of the work; and

(3) When to quit.

I also understand that the toughest problem is the last—when to throw in the sponge and quit on a line of research that is not panning out.

In the years 1957 to 1959 we probably "blew" about 4 billion in Defense research because no one blew the whistle in time. One weapon system after another was advanced to the production point and then abandoned. Someone should have and could have stopped these projects much earlier in the game when they were obviously not developing properly. This kind of waste is intolerable.

Now that we have laid out the problems, what is the answer. I know that my answer is repugnant to many people, but I predict that we will be driven into a Department of Research with a Cabinet officer reporting directly to the President and collecting under his direction most of the sprawling research efforts of this Nation. Hearings were held on this subject in 1959 and many scientists yelled "tyranny." They may have a point, but I know of no other way for this Government to get a national, not a departmental, direction to our defense efforts. I know of no other way to coordinate these sprawling projects. I know of no other way ot assure the American taxpayer that he will get a fair return from his tax dollars.

Rochester, N.Y.—Senior Citizen Magazine June Travel Target

EXTENSION OF REMARKS

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Wednesday, May 18, 1960

Mr. KEATING. Mr. President, the magazine, Senior Citizen, in its June issue contains an article entitled. "Travel Target of the Month-Rochester, N.Y .: Top Quality Status." This article, written by Lora Kelly, touches on a number of the most important cultural assets and community landmarks of my home city. Miss Kelly's excellent treatment of the history of the founding and development of Rochester is particularly noteworthy.

The author, of course, places special emphasis on the facilities and opportunities available to senior citizens in the Rochester area. Her discussion of the various public and private medical and general care facilities and of the cultural and social activities for the aged indeed indicates that the city of Rochester can take pride in the services and opportunities available to this important and vital age group.

With the problems and needs of senior citizens so much in the news at the present time, I think it is appropriate that attention be called to this article. which demonstrates the great interest that senior citizens themselves have taken in the many and diversified activities of particular concern to them.

Mr. President, I ask unanimous consent that Miss Kelly's article on Rochester be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

TRAVEL TARGET OF THE MONTH-ROCHESTER, N.Y., TOP QUALITY STATUS

(By Lora Kelly)

"May we cultivate the vine and sheaf in this New World and furnish the Old World with bread."

This was the toast to which Revolutionary War veterans raised their tankards in the taverns of the Genesee country of upstate New York after they had exchanged their buff and blue uniforms of conflict for the

drab homespun of peace.

But that optimistic forecast of the future never came true. It remained for the wheatlands of the Far West a century and a half later to "furnish the Old World with bread" in the guise of foreign aid. The vine still grows and area farmers still raise crops of golden grain, but neither commodity is responsible for Rochester's worldwide fame. It took manmade products, now indispensable to modern living, to make it the third largest city in the State. Its diversified industries with 800 plants provide employment for the population of more than half a million, with payrolls running into the millions. Its paramount production of cameras plus supplies, and optical goods alone give it a "quality" status. What else makes Rochester so special? Many things. One is a compatible blend of the material and cultural way of life, coupled with a spirit of independence that goes clear back to its be-ginnings. Another is the warmhearted friendliness of the people which you may readily discover for yourself when you arrive

If you are a stranger you will be well advised to make the first stop at the Danforth Recreation Center, 200 West Avenue, municipally planned and maintained for the enjoyment of mature people. It is open from 10 in the morning until 4 in the afternoon except Saturday and Sunday. "As yet there is no senior citizens center which offers a comprehensive cultural program, but we are working on it," say the sponsors. "But in the meantime, if it's fun and entertainment you're after, you'll find it here." Its program consists of social activities including many special events. To those who wish to cultivate other interests the center recommends the following:

Memorial Art Gallery, 490 University Avenue, which has extensive collections of paintings, sculpture, and decorative arts from Egyptian to modern times. It also sponsors lectures, exhibitions, and creative

art classes for all ages.

Rochester Museum of Arts and Sciences, 657 East Avenue. Tours are conducted at various times. Here you may see unusual Indian, natural science and geological exhibits, local historical dioramas and visual reminders of the city's early days. There are motion pictures and evening lectures which visitors may attend.

Rundel Library, 115 South Avenue, not only has a fine collection of books on all subjects but maintains an art gallery of current exhibits on its second floor. It is the city's public library.

The entire list of points of interest is an exhaustive one but if your memory harks back to the days when "votes for women" were fighting words, you may wish to visit the house at 1 Madison Street where Susan B. Anthony, militant suffrage crusader, lived from 1866 until her death in 1906. The resi-dence contains many mementos of the noted leader's life.

Another stop on your house-to-house tour is the Campbell-Whittlesey at 123 South Fitzhugh Street, built in 1835. Now owned and administered by the Society for the Preservation of Landmarks in Western New York it is a real sightseeing bargain for the admission fee of 50 cents. This early Rochester home of a wealthy miller, Benjamin

Campbell, is completely restored and re-furnished. Another mansion of the same period is Woodside, 485 East Avenue, home of the Rochester Historical Society, which houses many historical objects and much literary information of the area. Both structures are fine examples of lovely Greek revival architecture.

Of course, if you are a camera fan you will find yourself in a shutterbug's paradise, for Rochester is famous as the world capital of photography. In that case you probably will make a beeline to the George House, 900 East Avenue. This Eastman stately white-pillared mansion dedicated in 1949 as a memorial to its former owner, is now a museum and a world center for the study and uses of that graphic art. One of Rochester's most distinguished citizens whose trademark Kodak is known from the jungles of Malay to practically every household in America, Eastman made millions of dollars from the invention he perfected in 1888. He was also the inventor of the flexible film which little Johnny rolls in his box Brownie, to say nothing of its vial function in the movie industry.

When Eastman died in 1932 at the age of 78, it was found that he was a firm believer in sharing the wealth. To this end he had donated more than \$72 million to various projects. Lavish endowments were bestowed upon the University of Rochester, enabling it to establish the Eastman School of Music, also schools of medicine and dentistry. A man of diverse cultural interests who had transformed an expansive hobby into a popular pastime and the mainstay of modern mass entertainment, he was an art connoisseur whose paintings are a part of the museum's exhibits. Conducted tours through Kodak Park, chief plant of the company bearing his name, are available. Consisting of about 80 buildings it is a city in itself. An urn on a pedestal at the memorial plaza entrance contains the founder's ashes.

Those who are old enough to remember Mary Pickford's curls, Charlie Chaplin's swagger stick, screen captions requesting ladies to remove their hats, the inevitable chase of the Keystone Cops, plus the Mack Sennett "bathing beauties" (fully clothed) will recapture some of the thrills of yesteryear at the Dryden Theater: Now a part of the Eastman Home it specializes in showing old silent pictures on Saturday and Sunday afternoons.

In the same neighborhood is the Rochester Museum of Arts and Sciences which features habitat dioramas of the region's features habitate displays of European native wildlife, also displays of European man and American Indians, especially the Seneces, the city's original inhabitants. The Senecas, the city's original inhabitants. reproduced scenes of colonial Rochester, its early homes and stores, are fascinating subjects for the antiquarian.

Although the city is an important manufacturing center you will find none of the grime usually associated with industrial communities. On the contrary, most of its factories are located in parklife settings with gardens abounding in flowers. In fact it gardens abounding in nowers.
was once known as the "Flower City," succeeding the previous nickname of "Flour City" at the time of its incorporation in 1834. Though it now tags itself appropriately enough "The City of Quality Products." its devotion to horticulture has increased correspondently with the rise of great nurseries whose seeds and plants are supplied to growers all over the Nation as well as abroad. Almost any time of the year you can see and sniff the fragrance of the floral displays, indoors in winter, outdoors in sum-The most widely known is the Lilac Festival in late May or early June in Highland Park where more than 500 varieties of lilacs are exhibited along with thousands of azaleas, rhododendrons, and other shrubs.

Maplewood Park, too, is a vast rose garden of no less than 5,000 plants.

All of the well-landscaped parks offer attractions for everyone regardless of age. The entire system of 2,000 acres within the city limits offers ample facilities for recreation. During the summer free band concerts are presented regularly, and the 56 playgrounds sponsor more than a hundred special events a year. Picnickers may enjoy the conven-ience of shelters and grills while three public golf courses are available to the clubswinging set.

This sprawling city which now spreads over 12 miles on the banks of the Genesee River had its beginnings shortly after the close of the Revolutionary War. Rumors of the rich lands of western upstate New York led to what was called Genesee fever attracting a widely varying group of hopeful settlers. Some were humble craftsmen and farmers who had served in Washington's armies and having won national independence now wanted it on an individual basis. Others were promoters who bought up huge acreages with a view toward selling them to wealthy Dutch patroons of the Hudson River Valley or southern aristocrats for feudal estates. It took a combination of both elements to insure progress.

Rochester's first settler was Ebenezer Allen who built a sawmill and a gristmill at the upper falls of the Genesee in 1789. Fourteen years later he sold his tract of a hundred acres to three gentlemen from Maryland, Col. William Fitzhugh, Maj. Charles Carroll, and Col. Nathan Rochester for whom the site was named when lots were offered for sale

in 1811.

By this time the influx of newcomers had begun and during the War of 1812 its 332 residents served as a frontier depot. peace came to the borders of the Great Lakes the spirit of democracy had become so firmly entrenched that there were no less than eight settlements along the river banks, all of which decades later were absorbed by Rochester. The grandiose dreams of the landed gentry from the East never materialized. Instead, the smallscale farmers cultivated the soil with their primitive implements, built their cabins, schools, and churches, and shipped their products in handhewn barges and arks down the waterways to southern markets. Their sturdy toil laid a firm foundation for the increasing prosperity which was to come with the building of the Erie Canal in the early 1830's, Various industries sprang up-shoes, clothing, and other commodities as the machine age began to supplant hand workmanship. But not wholly. Almost half of Rochester's workers are highly skilled artisans on precision instruments. The traffic on Clinton's Ditch enriched Rochester's economy; the growing city was by no means blind and deaf to the forces of religion and education. From its very beginnings most of the established denominations were represented and the need for schools recognized. Appreciation of the arts likewise flourished, finding expression today in the numerous galleries, the fine philharmonic symphony orchestra, also free operas and concerts sponsored by the city during the summer.

Although Rochester maintains nine homes for the aged chiefly under chuch auspices, it is now pioneering in a unique metal housing development in Cobb's Hill Village designed for the comfort of tenants in the upper age brackets. It has already attracted national attention along with another apartment house type of two-story separated units on the Seth Green Drive.

If, as William Lyon Phelps once said, "one of the secrets of life is to keep our intellectual curiosity," you will find yours richly satisfied in Rochester. Genesee fever is still contagious.

Enterprise System, Inc.

EXTENSION OF REMARKS OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES Wednesday, May 18, 1960

Mr. SCOTT. Mr. President, a speech delivered by the Senator from New York [Mr. KEATING], in Philadelphia, May 13, contains so much of general interest and is so soundly reasoned that I believe it should receive much wider attention. I ask unanimous consent to have printed in the Appendix of the RECORD the speech of Senator Keating before the Americans for the Competitive Enterprise System, Inc.-ACES.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH OF SENATOR KENNETH B. KEATING, REPUBLICAN, OF NEW YORK, BEFORE THE AMERICANS FOR THE COMPETITIVE ENTER-PRISE SYSTEM, INC., PHILADELPHIA, MAY 13, 1960

I am delighted to be here this afternoon to talk to the Philadelphia Americans for the Competitive Enterprise System.

The purposes for which your fine organization stands are the greatest ideals of all history-freedom and its many facets. motivates and inspires men, and has done so from the beginning of recorded time. It

is mankind's eternal trump card.

Speaking to the ACES, I suppose should have held on to my trump card, but in 20 minutes or so one can't do too much finessing with a subject as broad as that Which I have chosen for today.

I want to talk today about the attitudes and ideas which people have towards government and towards its impact on our

Let's begin by getting things in the proper

perspective.

All of us with no small anticipation have been watching the recent growth of our gross national product. This is the statistical index which sums up all of the goods and services produced in the United States. The reason for its receiving special attention in recent months is that this index is about to reach 500 billion or one-half trillion dollars. In fact, the annual rate for the January-March quarter was \$498 billion, just 2 bil-lion short of the half trillion mark.

I realize full well that we must not allow ourselves to become hypnotized by the level of this index of national output. There are of this index of national output. still a great many questions as to what will be the course of our economy in the months ahead. However, despite these various uncertainties, there is little doubt that at one time or another we will reach and surpass the half-trillion-dollar rate. In fact, we may have already done so.

It will, I am sure, take a statistical giant to determine at exactly what time this event occurred. Maybe it is happening right now as I am speaking. Perhaps it was just at the moment that the President wound up at Griffith Stadium to throw out the first Amer-

ican League baseball. Perhaps it happened at 3 o'clock in the morning.

I am impressed and excited by this halftrillion-dollar figure, because in my mind it affirms and illustrates the great prosperity of our Nation—a record of which all of us can be proud. We must, of course, look to the future more than we gloat over the past.

Speech by Senator Kenneth B. Keating I know that all of you are concerned, as am I, about the best and most effective route Before the Americans for Competitive to a gross national product of \$600 million then 700-and eventually a trillion

In 1959, total spending by Federal, State, and local governments totaled \$97.9 billion. This represents roughly 20 percent of our gross national product, which means that approximately \$1 out of every \$5 spent in 1959 was spent for government.

On the overall, when you compare national income and total tax revenues an average of 1 day out of every 5-day workweek goes toward providing and maintaining the services of our Federal, State, and local governments. Half a day's wages each week go for national defense alone.

One mustn't take these figures lightly. Because of the high proportion of our time as well as our income which is devoted to government, there is every reason for all taxpaying Americans to take government seriously.

To an unhappily large proportion of Americans, government is like a New Year's Eve party. It comes once a year—as do elec-tions—and the rest of the year is spent wondering blearily why such a fuss is made about it.

As a Member of Congress for over a decade and as an active private citizen for several, I have had a chance to observe and study people's attitudes toward the Federal Government and toward the various uses to which it puts the over \$90 billion each year which we pay in taxes.

want, at this point, to discuss two distinct and certainly extreme attitudes toward government. The first is that of a fellow whom I call the "rant and raver" (he's the nonmusical counterpart of the "rock and roller"). The figures which I have just cited are well known to him. He is all too well aware of them. However, he makes absolutely no attempt to learn about and analyze the ways in which the Government's resources are put to use.

Instead of breaking down the total cost of government and distinguishing between those governmental expenditures which are good and necessary and those which may be bad and unnecessary, he prefers to generalize. To him, government simply costs too much and does too little.

In his mind, the Federal Government is a giant groping carnivorous octopus, reaching in every direction and strangling every living income-receiving thing which it can lay a tentacle one. The only person to whom the octopus of big government responds is the politician-complete with frock coat, plaid pants, and stale cigar.

The politician, deft in the ways of octopi, carefully conditions the beast to spare from his stranglehold just enough voters to get him reelected. Not a happy picture, and fortunately not representative of the attitude of the great majority of informed Americans. The "rant and raver" is most easily re-

vealed by what I call the "exception deception." He's furious about high taxes, huge bureaucracies, and payola. The Government does too much. We ought to break the whole thing up. But, the only thing which gets him madder than the Government, is the refusal of the party or parties in power to make an exception in order to build him a dam, grant him a special pension, or build a monument for his great grandmother's third cousin, a veteran of a battle of long ago.

The second character whom I want to call to your attention is cleverer and perhaps more sophisticated than the "rant and rayer." He is the "gravy train engineer." He starts with the same fundamental assumption as does the "rant and raver," namely that the Government already does too much for too many people. This is his first axiom. corollary is that since everybody is so well

subsidized, the best and only course of action for him is to see to it that he gets his full share-and then some.

You have heard this fellow many times. "Look what so and so gets and how much money goes for something even sillier-why shouldn't I get my fair share of the gravy?

A serious fallacy common to the "gravy train engineer" is the notion that the Federal Government can do anything it wants far more cheaply and easily than anyone else. In his all-unknowing view, since the Federal Government controls and prints money, it has or can get as much as it needs.

The victim of this unfortunate miscon-ception, which for lack of a better term might be called "mint madness," rejects all forms of therapy. He deliberately and blissfully adheres to his strange and illogical belief that the Government is so big and so unique that the only thing one needs to do to make it work is to plead successfully to an Appropriations Committee of the Congress.

The victim of "mint madness" can frequently be cured by a special kind of shock treatment administered on April 15 of each year by the Internal Revenue Service.

These two imaginary and fictional characters, the "rant and raver" and the "gravy train engineer," are, of course, extremes. And yet, isn't it true that we often recognize similar tendencies in people we know? fact-if the whole truth be known-don't we find ourselves falling on occasion into the unfortunate habits of the "rant and raver" and his more sophisticated fictional colleague?

What then is the best and most effective attitude for the private as well as the public citizen in thinking about Government and its impact upon his life?

In my mind, it is important that we focus on the basic question as to what is the proper size, scope, and function of Government in our society. In brief, what should the Government do? What should it not do?

Let me cite some common examples of ways in which these fundamental questions relate to existing and proposed activities of the Federal Government. Should the Federal Government insure home mortgages, pay teachers' salaries, subsidize our farm economy, build public housing, underwrite the merchant marine, finance the Weather Bureau, pay for school lunches, provide electricity, build theaters, and assist private

The answer to these several questions, of course, depends upon the philosophy and ideology of every American, as an individual-and as a free man.

Knowing of the principles and purposes of the ACES, I am sure that it is within this general framework that you appraise both new proposals for governmental action and the performance of the Government in carrying out the various activities with which it is presently charged.

It is not enough merely to think about government and its overall role in our society. It is necessary, in addition, that every effort be made to be kept fully informed as to the intent and mechanics of our various major governmental programs. This is not a subject matter which should be reserved to academicians and politicians. America's vigorous free press puts at the disposal of every citizen the means by which to keep informed of the events of the day and of the objectives and activities of the various agencies of government at all levels. This is an opportunity which cannot and must not be neglected.

I want to make it absolutely clear that I do not mean to be partisan in suggesting that one take as his basic frame of reference an analysis of the proper size, scope, and function of government in our society. There are and must be honest differences of opinion between our two major parties (and amongst individuals within each) as to what

should and should not be the proper functions of government. Today I want merely and primarily to stress the importance of a rational and realistic frame of reference for all informed citizens in understanding and actively participating in the vital business of government. Such a framework avoids the pitfalls experienced by the "rant and raver" and the "gravy-train engineer."

This is by no means all that I intend to say on this subject. I would certainly be short changing you intellectually if I did not address myself to the type of considerations which underlie the frame of reference which I have just described. It is absolutely imperative that every American define in his own mind those principles which are of greatest importance to our Nation and which are crucial in determining the proper size, scope, and function of our Government.

My recipe for good government depends, above all, on the wholesome taste of freedom. This includes freedom of speech, religion, thought, and, certainly of special significance to all of you, freedom of opportunity, which is basic to our American competitive-enterprise system.

The history of our country clearly demonstrates that economic expansion, stemming from the energy and enthusiasm of our American free enterprise system, has made our Nation great and powerful.

Free enterprise does not belong to one social stratum or one political party. It is an inalienable right. It encompasses and supersedes all social, political, and economic groupings.

What is the crux of freedom? Where does it come from?

I can't give you the answers. Freedom is delicate and illusive. Freedom is an intangible. One often cannot appreciate its cost and understand its value until it has been taken away. I am sure the people of Soviet Russia and of her lifeless and downtrodden satellite nations understand this proposition far better than we.

I am confident that, as ACES, your understanding of the proper role of government in our society depends primarily upon the need to maintain a structure of society wherein people can and must do things for themselves. This is freedom in the simplest possible terms. In a nutshell, it is therefore the function of government to do those things which people cannot and would not otherwise take care of on their own.

This need not be an altogether narrow and unyielding concept of a free society. It is a concept which can and must grow and change with the times. As men of vision, it is absolutely imperative that your philosophies of government borrow from the past, conform to the present, and grapple with the future.

The Federal Government does not and cannot stand alone. The relationship between the Federal Government and the governments of our 50 States is a broad and vital subject, which has been all too frequently neglected. Last year I introduced a bill in the Senate calling for the establishment of a congressional committee on Federal-State economic relations charged with the responsibility of studying this entire subject then within a limited time reporting back to Congress with specific proposals for action to modernize and improve the links between Washington and our 50 State capitals. This bill was not approved. In its place, Congress enacted a bill setting up a commission in the executive branch to make a longrun study of this general field.

To me this isn't the solution. The best way to solve a problem is not merely to establish a commission to study it.

There are many important considerations which arise here. Our State governments have not been firm enough in asserting their jurisdictional rights. For a subsidy—they have all too often sold themselves

down the Potomac. On the other hand, the Federal Government, having preempted the best sources of tax revenue, has left the States little choice.

In giving attention, as we are today, to the role of the Federal Government in our society, we must not ignore the role of State governments and their place in the Federal system.

To sum up, in evaluating an existing or proposed governmental program, one must decide whether or not it satisfied his own personal views as to the meaning of our democracy and as to the most desirable size and scope of the activities of government in a free society.

In a democracy, every citizen can and must think about and participate actively in this process of governing if his Nation is to persevere. The vitality and lifeblood of the United States rests on a spirit of active participation in Government on the part of people like yourselves who are sincerely and conscientiously devoted to and concerned about good government.

Political participation is far more than a fine phrase. I have given you some of my own personal thoughts on this subject. Encouraging Americans to be active citizens and to get out and vote is not enough. It is necessary that we also devote attention both to the ways in which citizens should participate in government and to an enlightened and realistic understanding of the major political and governmental issues of our day.

I commend you, as ACES, for your willingness to think about and talk about the most constructive and positive approach for Americans to take to the big and terribly important business of government.

The Arab Boycott and American Jewry

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by A. V. Benjamin, Jerusalem correspondent, as it appeared in the publication Israel Today, April 12, 1960, issue:

THE ARAB BOYCOTT AND AMERICAN JEWRY (By A. V. Benjamin)

When the first news about the action taken by the International Seafarers Union against the Egyptian freighter Cleopatra in New York harbor reached Israel, some of the local newspapers were under the impression that the picketing of Cleopatra was a sequel to Nasser's Suez Canal blockade policy and a direct punishment for disobeying the United Nations and for not fulfilling the gentlemen's agreement with Hammarskjold. But as the statements of the union spokesmen kept coming, everybody realized that although the members of the International Seafarers Union were doing a good deed, and a most impressive one at that, from Israel's point of view, they were nevertheless fighting their own battle and defending the rights of their comrades on the high seas and in foreign

It has also become clear that the Egyptian dictator was caught unawares. According to Cairo, he was absolutely astonished or even dumfounded at the refusal by American dockworkers to unload the freighter Cleopatra in New York. It was a natural thing to expect Egypt to accuse the Zionists of

a plot, and all official assurances from Washington that the picketing did not reflect the official policy of the U.S. Government could hardly change the opinions of the Arab ruler, who found it easier to attribute all evil designs to Zionism and Zionist influences in the United States.

Israelis chuckled at the wrath of the Egyptian dictator, who apparently has forgotten, or has never learned, the rule; don't do unto your neighbor what you would not

have him do unto you. As news kept coming from New York of one Federal judge after another refusing to issue an injunction against the picketing members of the International Seafarers union, the Israelis became more and more interested in the developments, especially since they knew that the Socialist International Conference, slated to open in Haifa within a few days, was expected to urge all seafarers and dockworkers unions in the free world to join the American unions in picketing Egyptian ships. Again, the place of the conference and the sympathy of the Socialists to Israel and Israel's workers were not the only reasons why the leaders of labor from different countries of the world should take such a stand. Here was simply a matter of defending the dignity of the laborer and of the sailor, maltreated by Nasser's soldiers and officials under the pretext of continuing the anti-Israeli boycott and blacklisting 387 ships, 100 of them American, for trading

with Israel.

By denying water, food and fuel to the blacklisted ships, and by blockading them in Arab ports Egypt has committed a willful act of discrimination against the sailors of these ships, depriving them of the services and facilities due them and of freedom of the seas, in accordance with International Maritime Law. Thus, Egypt invited upon itself retallatory action by the maritime unions of the free world. The picketing of Cleopatra was considered in Israel only a beginning, and a very good omen of things to come in all other democratic countries of the West, where free unions exist and are free to act on their own in defending their rights.

At the same time, it was realized in Israel that, politically speaking, the time was not too propitious for any action against Egyptian ships in American harbors which would cause the State Department to feel that American workers' organization are "out to antagonize Nasser." Some foresaw indirect intervention on the part of the State Department and the use of the argument that presently there are 100 American ships in the Near East against a few Egyptian ships in American ports, and Arab counterpicketing may be highly inconvenient.

But the thing that impressed the Israelis most was the violent reaction of rage and confusion evoked in Arab quarters as a result of picketing the Cleopatra by ISU members in New York. For years and years Nasser defied all resolutions by the U.N. Security Council and all the diplomatic interventions by the maritime powers, pleading abolition of the Suez blockade of Icraeli ships, but to no avail. Israel was helpless in this matter, and while it never for a moment gave up its right of passage in the international waters of the Suez Canal, it could not see a way to force the Egyptian dictator to give up the blockade. And so Israel was ready to bow to a compromise worked out by Hammerskjold and agreed to by Nasser at a time when Cairo was eager to please Washington and obtain a loan from the World Bank. Nasser never intended to keep his promise. He detained the SS Astepalea and unloaded its cargo, thus renewing the blockade crisis in all its severity.

Israeli newspapers, as recently as 2 weeks ago, began to question the wisdom of sending more Israeli cargoes through Suez, and facing a certain financial loss without any

promise of betterment in the situation. But everyone realized that Israel's Foreign Minister, Golda Meir, meant what she said when she declared that despite all disappointments Israel would continue to insist on its right to free passage through Suez. Yet everybody asked himself how the change could be brought about.

It was then that the decision by the Israeli Government to take energetic countermeasures against the Arab economic boycott assumed a special significance. The establishment of a department for economic warfare against the Arab boycott was greeted by all Israelis with satisfaction. In fact, most newspapers asked why was nothing done much earlier in this respect, and why did Israel take all these economic blows lying down. The main damage caused by economic boycott was a result of the Suez blockade. It forced oil tankers going to Israel to make long detours at an additional cost of millions of dollars annually. But the weapons of the Arab economic boycott Were many and varied, and the Israeli attitude was passive and in most cases the reaction came too late to be of any effect.

The incidents of Renault and Air France did more than any previous incidents of Arab economic war activities, to shake public opinion in Israel and to awaken the Israelis from their complacency. Just because of the close friendship with France and the French, the shock was all the greater. The Public demanded action and so did the press.

Several weeks passed and a new feeling of unrest made itself felt. Many Israelis could understand that economic warfare requires secrecy. Israel is not out to damage anybody; it wants to defend itself against its enemies. It has to answer Arab boycott with counterboycott. But in order to be effective it cannot publicize its steps in advance. It also cannot mobilize all citizens of Israel for effective, action against Israel's enemies, because economic warfare is so different from military defense, in which each able-bodied man can and must do his part.

It was the Cleopatra incident that raised the question: Are we, Israelis, and are the Jews of the Diaspora, in particular those of America, doing all that can be done to counter the Arab economic boycott in all its cruel and ugly forms? It is the Arab contention that the "technical state of war" between them and Israel permits them all kinds of restrictions and confiscations." In the name of this one-sided and illegal state of war they justify all kinds of acts of piracy, robbery and discrimination, not only against Israel and Israelis, but against Jews everywhere and against all Jewish communities of the world with the convenient contention that they are all Zionists and agents of Israel. All limitations on American Jews in Arab countries (the Aramco case in Saudi Arabia, and the blacklisting of many Jewish business firms, simply because their owners are Jewish, are

the best proof of this policy).

The policy of blacklisting Jewish firms in America and other parts of the world, and discriminating against Jews by boy-cotting them economically and preventing them physically from entering certain Arab countries is, ipso facto, the best proof in the eyes of the Arab rulers led by Nasser, the racist approach of the Nazi era still prevails. In other words, it is not the citizenship of the Jews that counts, but their racial origin and religious beliefs. True, Nasser tolerates Jewish tourists from certain Western countries, because they supply him with dollars. But so did the Nazis before World War II, tolerate Jewish money from abroad while confiscating the properties of their Jewish citizens and planning mass slaughter of the Jews under their rule.

From time to time, the Arab propagandists denied discrimination against Jews as such,

and maintained that they are fighting the Zionists only. But, as time went on, it became more and more apparent that both, in the limitation of the rights of foreign Jews and in the blacklisting of Jewish firms, the Egyptians hardly bothered to find out who is a Zionist and who is not. A positive answer to the questions of the Arab League boycott office questionnaire: "Is the firm Jewish?" and, "are any of the managers of this firm Jews?" sufficed to put these firms on the Arab's trade blacklist.

In view of these facts, many Israelis ask themselves today why the Jews of America and other free countries of the world do not take a more active stand in the fight against the Arab boycott, which is, in the last resource, not only a boycott against Israel, but in essence, a boycott against world Jewry. When the Egyptian Ambassador Jewry. protested, the other day, to the Assistant Secretary of State for Near Eastern Affairs, Mr. G. Lewis Jones, against the picketing of the SS Cleopatra, he argued that this was unfair discrimination, because no state of war exists between America and the United Arab Republic. To all practical purposes, a state of economic war and of unfair dis-crimination does exist between the Arabs, led by the Egyptian dictator Nasser, and world Jewry. It is a state of war forced upon world Jewry by the Arabs against our will, as it is forced upon the Jews of Israel against theirs. But such a unilateral war declaration, followed by acts of discrimina-tion and boycott, must be answered, and the sooner the better.

In the boycott against Israel, we have witnessed how silence and secrecy and re-luctance, on the part of the Israeli Government, to proceed energetically against the Arab boycott has led quite a few private firms, and sometimes even such a potent factor as the U.S. Navy, to acquiesce in the Arab boycott, and to order certain ships not to call at Israeli ports, so as to avoid difficulties with the Arabs. As soon as the matter became public knowledge, American public opinion forced the U.S. Government to act against such procedures. The U.S. Navy contracts which indirectly helped the Arab boycott are now a thing of the past. The battle for the rights of American Jewish citizens to serve in American bases in Saudia is also on the way to be won, thanks to energetic action taken by the American Jewish Congress. Both cases serve as proof that the way to do away with Nasser's tac-tics and discriminatory practices against Israelis, and Jews in general, is to "do unto him what he tries to do unto us!"

The Jews in Israel can appeal to their Government to act on behalf of the Israeli citizens in fending off economic, or any other attacks on the Jewish State. The Jews of the United States of America, the United Kingdom, France, and other free countries of the world, cannot expect their Governments to do more than lodge diplomatic protests against discrimination of their citizens abroad. They cannot give up mili-tary bases in Arab countries for such a reason, and they cannot do much when Jewish firms are boycotted in Arab countries. American and British citizenship and passports are of no avail when it comes to rulers of countries who treat them according to the Nazi criterion of racial origin and religious persuasion. The only answer to Nazism and neo-Nazism, whether Arab or German, is counterboycott and counterdiscrimination, wherever Jewish people live and work.

It is no secret that sales of the Renault cars in the United States of America slumped to a marked degree, when American Jews learned about the shameful way in which this firm was browbeaten into liquidating its assembly plant in Israel, so as to accommodate the Arab Boycott Committee in Cairo. Now, Renault is not a Nazi firm. It is established in a country most friendly to Israel, and

some of its managers are Jewish. But, unfortunately, the management of Renault took the cowardly, or, the so-called practical view, being convinced that the Arab market is more profitable for them than the Israeli one. In their calculations, they forgot Jewish public opinion in the world, and also the strange but confirmed fact that many a non-Jew would not approve of such injustice and cowardice, and would join the ranks of people who do not like to buy from such firms as Renault, no matter what the merit of the product is.

Many Israells wonder if the time has not arrived for the Jews of America, and other free countries, to take an active stand against Arab boycott and discrimination, which is clearly directed against all the Jews of the world, with the exception, maybe, of the Council for Judaism people, whom the Nazis of Hitler's Germany would probably have given the honorary title of useful Jews, and permitted them to live and breathe a while longer than most of their persecuted brethren.

Everybody in Israel is convinced that the Jews of America have all the pride and courage necessary to proceed in this matter with vigor and success. What they need is a determined leadership, to carry out the sacred task of self-defense against Arab depredations and discriminations in the Middle East, on the high seas and on the continent of America.

Citizenship Training in the Realities of Government

EXTENSION OF REMARKS

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 18, 1960

Mr. MUNDT. Mr. President, students of government can find a clue to new avenues of study which are open to them if they read the editorial, "Citizenship Training in the Realities of Government," written in the May 1960 issue of the Catholic School Journal. The writer of the editorial is a distinguished scholar, Dr. Edward A. Fitzpatrick.

Dr. Fitzpatrick has made a realistic revelation of the machinations of bureaucracy—a system that has grown, over the years, and which operates in spite of political administrations or any change in administrators.

He states:

The amazing bureaucracy should be revealed in all its awfulness—a bureaucracy that believes in the infallibility of governmental communications, and considers informal conversation as official action

Describing the need of studies on this new concept of managing a government, the writer again says:

We should reveal clearly the shift of a liberalism with its emphasis on protecting individual rights to a liberalism that is unabashedly statism.

Warning that the bureaucracy can gradually control the entire system of government if we give it the authority, through Federal assistance programs, to set up compulsory standards over activities which we desire to be kept under local leadership, Dr. Fitzpatrick explains:

The important result of Federal aid is not the comparatively small amount of money that is given to each locality, but the aggrandizement of Federal power and the imposition, through a highly camouflaged bribery, of policies which the communities have never adopted.

This editorial is a well thought out discussion of the trends of government. It is realistic and factual—but the truths it contains are too often ignored by the public.

Or, it might be more accurate to say, the truths are never discovered by the

public.

Since I believe this is an important suggestion for students, and teachers in government classes, as well as for people in public life, I ask that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD,

as follows:

CITIZENSHIP TRAINING IN THE REALITIES OF GOVERNMENT

(By Dr. Edward A. Fitzpatrick)

One of the greatest factors in modern life is government, and its directing, controlling, and regimenting power is becoming greater year after year. In more naive days we regarded the government as greatly beneficent and we participated actively in the efforts to make public service a career, and to have universities establish professional schools for the training of public servants. Despite the shame of the cities and the Teapot Domes, the words public servants really meant people with a high sense of dedication to service to the people. We were in the heyday of the Wisconsin social leadership when State Senator Hatton of Wisconsin had earlier expressed the purpose of the Railroad Commission as an instrumentality to which the poorest citizen could write on a postal card his complaint, and have it studied and followed by any necessary action. Now as we see government at closer range we see an imperative need for a teaching of civics in the elementary school and the teaching of political science in the college which is more realistic concerning what is actually happening in government. The structure of government must be taught, and perhaps the salaries of officers, but the amazing bureaucracy should be revealed in all its awfulness a bureaucracy that believes in the infallibility of governmental communications, and considers informal conversation as official action. We must note the subdivision of departments into offices, sections, bureaus, and what not, each little bureaucrat building his empire in order to go higher so that can refer and pass the buck and have the lower echelons do the work. One talks to a Congressman about an obvious injustice. and he is told "why should anyone like that ever have wanted a job in government." Maybe the young man read Father Keller's literature from the Christophers. But even Father Keller might direct his attention to the autocratic personnel departments called in at least one notable agency ax men. The administrative codes often made in the offices to be controlled and included in legislation are major factors in the irresponsibility of what are presumed public servants.

These conditions ordinarily develop slowly, but they are at times deliberate. An extraordinary example is the power of the Administrator of the Veterans' Administration whose action cannot be reviewed by any other official (including the President) nor by any court (including the Supreme Court). In my naivete I assume this is a violation of the Constitution. In a recent case, the U.S. Supreme Court found the Administrator's action "arbitrary and capricious" but

said it could do nothing about it, but added, piously enough, that the Administrator might correct his own error.

There is a great responsibility schools to teach students the actual governments under which they are living. The development of an alert citizenship in a period of excessive and even arbitrary governmental administration is one of the major tasks of all school systems, including the public schools. The citizen is ordinarily powerless in dealing with the bureaucracy, but the possible corrective is with the legislators who make laws and judges who interpret them. Greater emphasis needs to be placed on citizenship training, on legislation, and on judicial interpretation than on executive routine which does not reveal the administrative absolutism. We should reveal clearly the shift of a liberalism with its emphasis on protecting individual rights to a liberalism that is unabashedly statism. need to have students see what the president of the California School of Technology called the "ugly specter of government" as well as its potentially beneficent aspects when well administered. We must realize at least the partial truth in the statement: It is better to have Satan write the laws and have St. Peter administer them than to have St. Peter write the laws and Satan administer them. There is too much satanic spirit in public administration.

This background must be kept in mind as we consider problems of Federal aid to education. Too often communities think they are getting something for nothing. Utah's refusal to take Federal aid is an indication that there may be an awakening. The important result of Federal aid is not the comparatively small amount of money that is given to each locality, but the ag-grandizement of Federal power and the imposition, through a highly camouflaged bribery, of policies which the local com-munities have never adopted. The British Webbs of Fabian fame long ago realized the amazing power of the technique to impose national policies and standards on local communities. They pointed out "The Na-tional Government (British) in the course of three quarters of a century from 1832 successively bought the rights of inspection, audit, supervision, initiative, criticism, and control, in respect to one service after another, by the grant of annual subventions from the National Exchequer in aid of the local finances, and therefore, in relief of the local rate-payer" (p. 5).

The authors comment for Great Britain that grants-in-aid are "the actualities of administration rather than items of pagentry, and no matter what is presumed to be the constitution, this is "becoming the pivot on which the machine really works"—and is to be preferred to French or German bureaucracy or "the American anarchy of local autonomy."

The emphasis on all teaching of government should be on decentralization of power. Lewis Mumford in "The Condition of Man" (p. 419) put the problem well:

"The task of our age is to decentralize power in all its manifestations. To this end, we must build up balanced personalities: personalities that will be capable of drawing upon our immense stores of energy, knowledge, and wealth without being demoralized by them. On this point, Plato's words in "The Laws' cannot be improved: 'If anyone gives too great power to anything, too large a sall to a vessel, too much food to the body, too much authority to the mind, and does not observe the mean, everything is overthrown, and in the wantonness of excess runs in the one case to disorders, and in the other to injustice, which is the child of excess.'"

Religious Persecution Continues in the Ukraine

EXTENSION OF REMARKS

HON. DON L. SHORT

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. SHORT. Mr. Speaker, last April 10 was declared by Ukrainians over the free world as Ukrainian Day of National Solidarity, in tribute to the martyred Ukrainian Catholic Church. Some startling facts regarding persecution of the church in the Ukraine have been brought to my attention by Dr. Anthony Zukowsky, president of the North Dakota branch, Ukrainian Congress Committee of America, Inc.

Under leave to extend my remarks, I include a letter from Dr. Zukowsky and other material on the subject of church

persecution:

OF AMERICA, INC.,
STATE BRANCH OF NORTH DAKOTA,
Bismarck; N. Dak., April 30, 1960.
Hon. Don L. Short,
U.S. Penragentation

UKRAINIAN CONGRESS COMMITTEE

U.S. Representative, House of Representatives Building, Washington, D.C.

Dear Congressman Short: Our organization recalls with sorrow that 15 years ago in April Russian Communists launched their brutal drive to crush the Ukrainian Catholic Church.

The offensive began in April 1945 with an attack in the press. On April 10, 1945, Russian Communist regime arrested all the Ukrainian Catholic bishops, the Archbishop-Metropolitan Joseph Slipy at the head, and imprisoned them.

Archbishop-Metropolitan Joseph Slipy of Lviv was jailed and sentenced, is now seriously ill in Siberia. The latter, who alone of the other 10 bishops is still alive after a term of 15 years' penal servitude in the concentration camps, was recently again sentenced for 7 more years for writing a pastoral letter to his faithful and he continues to be a prisoner and a martyr of the Soviet Union.

Since that memorable date, at the hands of the Russian Communist regime the Ukrainians have lost 3,000 priests, 500 theology students, over a thousand monks and nuns, and over 4,000 churches and chapels, 195 religious premises, 38 Catholic publishing houses, and over 1,000 schools. Millions of the faithful also became victims of the Communist terror.

On this occasion we would like to recall similar destruction of the Ukrainian Autocephalic Orthodox Church in eastern Ukraine where within 10 years, from 1921 to 1931. Russian Communist regime unjustly arrested and annihilated 80 bishops with the Metropolitan Vasyl Lypkiwsky at the head, and also thousands of priests and millions of the faithful.

At the same time our organization recalls similar destruction of Christian churches in Lithuania, Estonia, Latvia, Byelorussia, Rumania, Hungary, and in many other countries subjugated by the Russian Communist regime.

Having removed the shepherds and the clergy the Reds decided to deliver a decisive blow. In March 1946 they declared the Ukrainian church be wiped out and they staged an artificial "synod" which proclaimed

a "union" with the Russian Orthodox Church. This Russian Orthodox Church is now subservient to the Communists, supports Communist regime, and helps Russian imperialism by russification of other non-Russian nations. Therefore the faithful of the Ukrainian Catholic Church went underground and became a "silent church."

The facts stated in this letter indicate that the Russian Communist regime destroys with premeditation the leaders of the Christian churches of the non-Russian nations, persecutes the church and the faithful, seeing in them the only obstacle against its imperialistic expansion without respecting even the simplete principles of ethics and morals.

The Ukrainians all over the free world, and especially in the United States, Canada, Great Britain, and Germany, under the leadership of their hierarchy and their councils, have been united on April 10, 1960, in joint prayers for the persecuted church of Christ and her leaders. The Ukrainians also declared April 10 as "Ukrainian Day of National Solidarity" in tribute to the martyred Ukrainian Catholic Church. They prayed that the free world might understand the Present tragedy of Christ's church in the Ukraine and in other countries subjugated by Communist Russia, and that the free world might preserve itself from similar tragedy.

Enclosed is a copy of the "America," Ukrainian Catholic daily of April 7, 1960, which has an editorial for this event under the title "Destruction of the Ukrainian Catholic Church in Ukraine," by Dr. L. Mydlowsky, and a copy of an editorial of "Register" of April 10, 1960, by Ray Whitehead under the title, "Ukrainian Rite Church Silent, But Not Dead." All of these editorials illustrate the condition of the persecuted church in Ukraine.

Therefore, I respectfully request to present to the U.S. Congress the dreadful situation of the religious persecution in Ukraine. I also request that the Secretary of State propose to the American delegation in the United Nations the condition of the persecuted church in Ukraine be placed on the agenda of the United Nations Assembly

Respectfully yours,

Dr. Anthony Zukowsky, President, UCCA, State Branch of North Dakota, Inc.

An Appeal to the Conscience of the Free World

We follow with great interest the events taking place in South Africa where both Negroes and many whites raised an open rebellion against the racial discriminating policles of their Government. We sympathize deeply on hearing that many suffered bodily injuries and others paid dearly with their lives in defense of their human rights. It was encouraging to hear that the Security Council of the United Nations, on the presentation of the grievances which came from the 29 nations of the Afro-Asian bloc of the U.N., in spite of the protests of the representative of the South African Government, took up the question of the bloody Outbursts in South Africa. The settlement of this question in the spirit of divine and natural law will bring peace not only to South Africa, but it will influence the making of true peace throughout the world.

But true peace in the world will not come from high-sounding meaningless words, nor from the lying phraseology about the broth-

¹P.S. Also enclosed please find "An Appeal to the Conscience of Free World," written by Roman Danylewycz, chief editor of Ukrainian Catholic weekly "Progress" of Winnipeg, Manitoba, Canada.—A. Z.

erhood of nations and world peace carried to the Western World by the wolf in sheep's clothing, the Soviet Premier, the enslaver of human dignity and whole nations—Nikita Khrushchev.

In 1938 Nikita Khrushchev, through the will of Stalin became the appointed commissar of the Ukraine in the role of a secretary of the Communist Party in Ukraine. He followed in the footsteps of his predecessors, Postishev, and Kosior. In bloody letters the history of the Ukraine recorded Khrushchev as the merciless butcher of thousands of Ukrainian political prisoners at the beginning of the German-Soviet war, the formal liquidator of the Ukrainian Catholic Church with the imprisonment of its whole hierarchy and their superior Metropolitan Slipyj, and the murderer of hundreds of priests and thousands of faithful

On Palm Sunday, which falls on April 10, 1980, the Ukrainians of the free world, under the initiative of the Ukrainian Catholic Metropolitan of Canada, His Grace Maxime Hermaniuk, are preparing an All-Ukrainian Day of national solidarity. The occasions for such an expression of common solidarity is the 15th anniversary of the bloody purge of the Ukrainian Catholic Church by the Communists. This persecution is only one link in the long chain of bloody persecutions to which for the last 43 years Communist Moscow subjected Christ's church and her faithful in countries which fell under the Red imperialistic heel.

One of the first countries to fall a victim of the bloody Communist regime was the Ukraine. During the 40 years of domination by the Communists, the Ukrainian history recorded most important events: the millions of victims of the artificially produced famine of 1932–33, the mass imprisonment and shooting of people as happened in Vinnitza, the banishment of thousands of Ukrainian young men and women to work on Asiatic virgin lands, the destruction of the Ukrainian Autocephalic Orthodox Church, and as mentioned previously, the formal destruction of the Ukrainian Catholic Church.

On this All-Ukrainian Day of national solidarity, we appeal to the conscience of the free world, which has in the last few days in the spirit of brotherly love, given voice to the bloody events of South Africa. We call upon all who stand together in this drawn-out struggle against the present Red barbarism. We raise a brother's voice of warning not to overlook what is taking place on the other side of the Iron Curtain, especially in the Ukraine, because the indifference of the free world will truly be the cause of the enslavement of many other nations, and the physical destruction of millions of people. Let us therefore, united in brotherly love, be ever watchful and active in battle with evil—if we wish true peace.

The Role of Politics Today

EXTENSION OF REMARKS

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 18, 1960

Mr. HUMPHREY. Mr. President, it is my privilege to invite the attention of the Senate to an excellent article entitled "Assistant Senator," written by Harry W. Flannery, and published in the magazine Ave Maria of May 14, 1960. The article sets forth the views of Emerson Hynes, legislative assistant to Senator Eugene McCarthy, on politics and its role today. Emerson Hynes, prior to joining the staff of Senator McCarthy in 1959, taught sociology at one of Minnesota's finest institutions of learning—St. John's University, in Collegeville.

I have known Emerson Hynes for many years. I am proud to be able to call him a friend. As a professor and as an active practitioner in the political arena, he has demonstrated great ability and great integrity. We of Minnesota are proud of his good works over many years in promoting the public good. His observations on the role of politics, as presented in the article, deserve wide attention.

Mr. President, I ask unanimous consent that the article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ASSISTANT SENATOR

(By Harry W. Flannery)

(Emerson Hynes, right-hand man for Senator McCarthy, explains politics and its real role today.)

Although "politics" is a dirty word to many people, it should not be. Mr. Emerson Hynes, legislative assistant

Mr. Emerson Hynes, legislative assistant to Minnesota's Eugene McCarthy, believes the true character of politics should be better known by all Americans—especially this year, as the presidential campaigns and elec-

tions near once more.

When Hynes was teaching sociology at St.
John's University in Collegeville, Minn., he
became a close friend of the then Professor
McCarthy, whose specialties were education
and economics. Through his teaching and
previous education Hynes absorbed much
about the intricate—and sometimes delicate—art of politics.

But in the year he has served as Senator McCarthy's legislative assistant in Washington, Hynes has doubled his knowledge of politics—and the word "politics" has taken

on a new meaning for him.

"Unfortunately, many people have a cynical view about politics," the tall, slim, former professor remarked as we talked at his desk, next door to Senator McCarthy's office in the Senate Office Building in Washington. Hynes, 44, is 6 feet tall and weighs only 160 pounds. "I was warned that I would probably end up a cynic after seeing Congress in operation. I am happy to report that my viewpoint is quite the other way. The typical Congressman today is a conscientious citizen, working hard at a hard tob."

Hynes deplored Americans thinking the worst of those who operate the Government. A recent poll showed that 70 percent of American parents are absolutely opposed to their sons making a career of politics; 10 percent are undecided, and only 20 percent think it might be all right. Americans have a dim view of politicians even though some of our greatest heroes are politicians: Abraham Lincoln, Theodore Roosevelt and Franklin D. Roosevelt, for instance, each of whom was a professional politician, rising to the Presidency after having been a member of their State legislature and having served as Governor.

"The family, the church and the state are the basic social institutions," said Hynes. "To defend and support them is an obligation that every man shares. Politics is the dynamic life of the state, and the poli-

tician is as necessary to government as the doctor to medicine.

"Everyone can't hold political office, but parents should look upon politics as one of the worthwhile careers for their children. Youngsters who are interested can begin by entering into community civic life and po-litical party activity at the local level. Of course, every citizen should be concerned with political party activities on a volunteer basis as much as he can. This involves some sacrifices, but it is also interesting and

McCarthy's legislative assistant thinks that the attitudes of young people toward politics is formed mainly in the home, with many reflecting the views of their parents. Conversations at the table and in the living room, as well as attitudes acquired from radio and television, have a fundamental effect.

"Schools and universities also have a responsibility," said Hynes. "Of course, they should inform young people about political abuses and mistakes; but the educational system should not make the exceptions appear to be the rule. It should make young people aware of the way in which our Government works for the common good. Students should be taught to realize that the founders of the Nation and its saviors in the time of crisis were politicians. They need to know that politics is a means for high service."

Senator McCarrhy passed us on his way to his office, paused, waved a hand in greeting, smiled and went on

"Supposing a young man or woman, say a college student or graduate, wants to enter politics, working at the precinct level, should he serve his party and wait until he's called upon to run for office?" I asked.

Hynes smiled. "Should he wait to be drafted? The hard fact is that few people are drafted. So modest and great a man as Lincoln had to assert himself and stand for office a number of times before he was suc-" cessful once. There has to be, however, a willingness to work at the preliminary levels, to rise along the line. In most cases, one cannot seek national office first-or ever. You can aim at it, but work first on the sandlots and in the minors.

"Anyone who aspires to Congress should be warned that Capitol Hill is a place for workers, not political hacks. I think the demands on a Senator are tremendous, the requirements and obligations greater than can be realized from the outside. It is by no means just a post to achieve-and then relax. It is a job at two or three levels, each of which could be considered a full-time occupation. The Congress is in session many hours a day, and if a Senator were on the floor during that time he'd have done a full day's work. In addition, there's committee work almost every day, and that takes con-siderable preparation before and much study afterward. There's contact with the State's

A Senator's day normally begins at 9, though there may have been a breakfast meeting before. He starts by reading and answering mail, having read the papers before he comes down—the Washington Post, the New York Times, New York Herald-Tribune—and at the office marked stories and editorials from the principal papers of the State. Then come personal visits, calls from constituents, delegations from groups visiting the Capitol and other Senators inquiring about legislation. At 10 or 10:30 a.m. there's likely to be a meeting of one of the committee's to which he's assigned. Sometimes more than one of his committees may be in session at the same time and he may have to divide his time between them. Luncheon will usually be with other Senators or constituents on business. Meanwhile, the Senate may be in session; it usually convenes at noon.

I remarked that visitors to the Senate galleries usually see only a few Senators on the floor.

'That may be the case," he said, "unless there's a roll call, an important debate or new material is being brought up in which every Senator is interested.

Senator should not and need not be on the floor at all times," Hynes continued. "He knows what is going on there even when he isn't present, and he is on hand when he feels it advisable to make his views known or when he believes it necessary to take part in a debate. Meanwhile, he has an opportunity to read and evaluate all that is said on the floor, since everything appears in the CONGRESSIONAL RECORD. I agree that when a visitor drops into the gallery for 10 or 15 minutes, the picture would not be what most visitors expect—unless they happen to drop in during a lively debate."

Hynes leaned back in his chair, his hands

grasped behind his head.

'No Senator could do his job properly if he spent all his time on the floor,' clared: "He is available; in his office, ready to respond when a buzzer sounds, warning of a quorum call or a roll call. He may be working in his office on legislative matters, or preparing for his part in debate. Senate is a great forum, where members explore all kinds of problems-some Senators seeking just to make the record clear and others, who feel strongly on a subject, talking for 2, 3 or 4 hours. Senators not directly involved may know the issue and not have to be present at such times.

"They may be familiar with the matter through one of the committees. The committee system is a means for division of labor. The scope of Senate business is so great that no Senator could conceivably be familiar with the details of each issue. He has to consider and act upon matters as diverse as the farm problem and the missile gap, labormanagement reform, and foreign aid in Vietnam, Federal aid for school construction, and continuation of the excise tax on ladies handbags. A Senator has to trust his colleagues to make a complete investigation and to argue out details in committee. Every important bill that comes up for consideration carries with it a summary of the hearings or the judgment of the committee on The Senators learn the verdict of the committee and are able to study their comments.

"Committee judgments may be rejected on the floor, however, even though the majority party has committee control. There were everal occasions in the last session when this occurred. One of the most noteworthy instances was the labor-management reform bill. The Senate Labor Committee worked for months to draw up what it thought was a reasonable and good measure. They heard scores of witnesses, conferred at length and finally had a committee bill printed. As I recall, the bill was debated for 7 days. At one point, Senator McClellan proposed an amendment, and a tie vote resulted. This is the only time the Vice President has an opportunity to vote; it happens rarely, and he voted for the amendment.

"Consequently, the purpose of the original bill was greatly expanded, and the way was opened for a whole series of amendments. The bill that was finally approved was considerably different from the committee measure. And it was substantially changed furthere when the House adopted a substitute measure, which then went to conference with the Senate bill. Finally, the conference compromise had to be voted on by both sides. Senators were obliged to weigh factor against factor and cast their votes on the compromise measure. Those are difficult decisions when the legislators know that both good and bad effects are likely to follow either way. They have to make judgment on what will bring the greater good."

Senator McCarrhy stepped from his office and beckoned to Hynes. "If you don't mind," said the Senator, "this will take just a minute."

When Hynes returned, I asked about the

duties of a Senator's staff.

"The staff, as in any business, assists in the work of an office. We are here to help him in any way we can, to assist him with cases and problems that arise. scarcely a letter that comes in for the Senator's attention that doesn't demand specific information, perhaps involving eixstence of a statute or the bearing on an issue of present law or proposed legislation. In any case, the Senator must have the necessary background and facts to answer such letters. Most legislation that's proposed requires research into existing statutes on the subject and of the hearings that have been held. These facts have to be assembled. The staff should also be familiar with the interests and problems of the State and the particular fields that are the major concern of the Senator. Senator McCarthy, for instance, is a member of the Finance Committee and the Public Works Committee.

'Senate staffs average from 8 to 10 or 12, and even more for larger States. The administrative assistant oversees the operation of the staff and must also be well informed on the problems that the Senator has to deal with. Each Senator also has a secretary, who generally handles appoint-Some have a press and radio or TV secretary, plus the necessary clerks and stenographers."

I remarked that the Senate is usually in session only part of a year. It sat nearly 9 months last year, but may meet only a

little more than 6 this year.

"Yes, but a Senator's business is not confined to the period of a congressional session, nor to his office in Washington," said Hynes. Unlike most workers, he has two offices and has to maintain two homes—one in Washington, the other back in his State or district. In order to do his work effectively here, he has to keep in touch with the problems and people of his State, and this requires returning to the State frequently. Constituents have problems they want to discuss. He wants to get their judgment, too, on the major issues of the day. And when a session is over, he goes back home to talk directly with these people. He also has an obligation to inform them on what is going on, and to help make clear the tasks before the Government and the steps it should take here and abroad. He must talk with people personally and at gatherings of all kinds. The schedule is always heavy.
"At the end of the last session Senator

McCarthy was named chairman of the Special Senate Committee in Unemployment Problems. In addition to his regular tour of cities and rural areas in Minnesota, Senator McCarthy was scheduled to give speeches in San Francisco, Los Angeles, Kansas City, New Orleans; Freeport (III.), Cincinnati, Detroit and other places during October and November. We did manage to work most of them in despite the committee meetings. He had, of course, to do a lot of rescheduling, as did his eight colleagues on the Senate committee. All but one Senator-eight of them-were back in Washington in the first week of October for 3 days of hearings at the national level hear testimony from representatives of the AFL-CIO, the Chamber of Commerce of the United States, the National Association of Manufacturers and the representatives of the Secretaries of Labor, Commerce and Defense.

"After that, field hearings were held in all parts of the country, in West Virginia, Pennsylvania, Illinois, Massachusetts, Oregon, New York, the South. The conditions of unemployment were studied in those areas where it was especially heavy; the causes of Joblessness, its effect on individuals, families and communities, including schools, home owning, business. And a report had to be prepared to make to the Senate early in 1960."

I noted that some of the groups that had testified were known as lobbles, "pressure groups."

"Yes, the first amendment guarantees the right of people to assemble and to petition the Government regarding their grievances. Any group in this country may organize and may petition—may present its position. Legislation affects different segments of the population, and even among similar groups there may be different positions. On a farm bill, for instance, two farm organizations may be on one side, and one on the other. Lobbying, in a broad sense, is a means in a complex society for interested groups to inform Congress how legislation would affect the people they represent, though obviously it can be abused.

"In the case of the unemployment committee hearings, some of the best information came from school superintendents who told what happened to the children of the jobless, and what kind of preparation young people need to enter the labor market. Are we using our educational systems properly to prepare the young—or are we using our educational facilities to retrain older people for new skills when automation has made their old skills useless? Religious leaders, government officials who deal with problems of the unemployed, social welfare workers—all had important testimony to give."

Hynes paused a moment as a buzzer called the Senators for a quorum call. Senator McCarrhy again passed by, smiled and waved.

"I sometimes think of ex-President Tru-man's observation, about the President be-ing a lobbyist for the people," Hynes said. "I thing that's true in a general way, but in fact most people rely on their Representatives and their Senators to help them with problems that have to do with the Government. The Congress in our system of government is the branch where the people get a hearing; they know their interests will be considered with concern. Congress also is a check on the administrative branch of Government, in the activities of the departments of Government. Without Congress, we might have bureaucracy in the bad sense of that word. It might be authoritarian and highhanded, or passive and in-different, and a citizen would feel that he had no means of settling his grievances.

Congress may not be given enough credit for this part of its job."

McCarthy's legislative assistant was called to the telephone. One of the girls

came to us and apologized.

"I don't like to interrupt," she said, "but there's a man here from St. Paul who has time only between trains, and the Senator is over on the floor, and I thought maybe you—"

Hynes excused himself. He is a graduate of St. John's who received his M.A. at Notre Dame in 1939. In 1941, he married Arleen McCarthy, a graduate of St. Catherine's in St. Paul, and librarian. Mrs. Hynes, now national chairman of the Family Life Committee of the National Council of Catholic Women, is no relative of Senator McCarthy. The Hyneses hase 10 children; the oldest, Denis, is a senior at St. John's Preparatory School. There are eight boys and two girls. The youngest is Christopher, who is 2. The family now resides in Arlington, across the river from Washington.

When Hynes returned he said: "I've been impressed with how complex the Federal Government is. The President executes the laws, but Congress decides the policy of the Government, raises funds and decides how those funds are to be disposed. In the past year Congress appropriated approximately

\$80 billion to be spent on a wide variety of bureaus, agencies, and for public matters of various kinds, and it is trying to raise as much in an intricate series of taxes. This is a business that dwarfs any single corporation or any combination of corporations.

"There's a tremendous responsibility in making a judgment as to how to divide the \$80 billion so that the national welfare is promoted—so that one part of society is not treated unfairly as compared with another, to see that the Federal Government does enough and yet not too much, to see that the economy keeps an even keel. There's the whole question of trying to maintain fiscal responsibility, from the standpoint of revenues raised to such items as the interest rate on Government bonds. The art of law-making is not scientific. It involves the virtue of prudence.

"People say, 'We're against inflation.' Or, 'We want justice for the farmer. We want justice for the farmer. We want justice for the taxpayer.' I'm certain there are no Congressman and no one on their staffs who disagree. All are agreed on these general objectives and upon democracy and keeping freedom. The art of legislating involves determining how you prevent inflation, how you secure justice for the farmer, the businessman, the taxpayer. These are all treacherous problems. They're jellylike. You press too hard here, and they squirt out there.

"This is the thing that impresses me since I've been here. I've spent 18 years in school and I've taught school at the college level for 20 years, and I think I can honestly say that I've never studied as hard, or learned as much, as in the past year. It's been exciting, interesting, challenging—even, at times, awesome.

"So much of importance can happen on any day. I think only one day was devoted to debating, and voting on the bill to extend the draft for another 4 years. That was a decision that affected every family in the Nation with a son from 14 to 18 years of age. His life is going to be altered considerably by just that one of the many hundreds of decisions that Congress makes. Nearly every law the Congress passes affects everyone in one way or another. It isn't as though the Federal Government were a long way off in Washington; the Government affects individuals, families and local communities.

"And the laws that are enacted are many. The last session went from January through September 14, a 1,000 hours, 140 days. In the Senate alone, 2,748 bills were introduced and many of the bills had cosponsors so that the name of more than one Senator was on many of the bills. A judgment had to be made on all these bills, at least by a committee if not the whole Senate. Of the 2,748 bills—and other bills were introduced in the House—the Senate passed 1,052 bills and resolutions. Of that number, 383, as I recall, were finally approved by both Houses and signed by the President so that they became public laws.

"Yes, I think that is about average for a first session. More bills will be introduced in the current session.

"When I speak of the number of bills that are considered and passed, I don't want to imply drastic changes. We should realize the innate conservation of Congress. I think of it as a tree with thousands of roots in the ground. The House is made up of Representatives from 437 different sections of land in the United States, each with a population that is supposed to be somewhat the same size. That means there are 437 groups of people who make decisions, each about a particular man to represent them. It isn't the whole Nation rushing this way or that. And the Senate represents 50 different sections of people. This is a wide base; and,

while the Senators and the Representatives take an oath of office to defend the Constitution and to promote the general welfare of the whole Nation, they are answerable only to one four-hundred-and-thirty-seventh or to one-fiftieth of the Nation.

"I'm speaking of conservatism in the best sense of the word: in the sense of responsibility, of balance, of not being stampeded but, rather, having a certain freedom and independence to judge legislation.

"Another thing, much of Congress' work is bipartisan. Partisanship is not as controlling as it sometimes seems to be—though, of course, there are clear differences between the two major parties. In the last Senate there were only 215 rollcall votes. That means a majority of bills were sufficiently bipartisan so there was no strong opposition from either party. And many of the rollcall votes were on the same bill. Even in the rollcall votes, 52 percent of the Senate bills had the support of a majority of both parties in 1959. In 1957, 64 percent of the bills, or two-thirds of those passed on a rollcall vote. had the support of a majority of both parties. Political parties are important, particularly at the State level, to provide a choice between men, trends of political thinking, and platforms. And they are important in Congress, especially for organization, but they can be overstressed. To come back to something we were talking about some time ago: the Senator or Representative cannot forget the reality of American politics back home. We operate in a political party system and there are matters of party politics that have to be tended to if the system is to operate as it should.

· "The Congressman back home listens to teachers, editors, businessmen, and labor people as well as politicians, but he should make his final judgments on his own. He is spending his full time at the business of government just as the man who votes may be spending his full time at farming and knows more about chemical fertilizers and hybrids, and the tradesman knows more about the operation and merchandising of his store. The politician seeks a vote of confidence in his character, his general intelligence, his party platform, his own goals as he explains them and on his record.

"The citizen, on the other hand, cannot assume that if he just votes everything is safe. He should be as active in politics as he can find time to be. He should know about issues and give every candidate a hearing. I think one of our most important responsibilities as human persons is to know the facts about our Government and its people. Not only families and educational systems, as I said, have a responsibility here, but also the press, civic organizations, business groups, the pulpit, and trade unions.

"As more people know about our Government—and the more thay know—the better it is for democratic government. And a good place to start is with a deeper appreciation and knowledge of the Congress."

Mental Problems Expansive

EXTENSION OF REMARKS

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. ULLMAN. Mr. Speaker, under leave to extend my remarks I would like to insert in the RECORD the following editorial from the Central Oregonian on the social responsibility of the community for the field of mental health:

[From the Central Oregonian (Pineville, Oreg.), May 5, 1960]

MENTAL PROBLEMS EXPANSIVE

At least 1 person in every 10-17,500,000 people in all-has some form of mental or emotional illness (from the mild to the severe) needing psychiatric treatment.

There's no better time than Mental Health Week to reflect upon the extent to which mental illness is now affecting our population.

This extends down to our children. in 10 in our public schools have emotional problems requiring psychiatric help. About 11,500 are admitted to public mental hospitals each year.

Mental illness extends into physical illnesses as well. It is an important factor in bringing on cancer, heart disease, and tu-

berculosis.

Each year some 1,240,000 persons receive treatment in mental hospitals to psychiatric

wards of general hospitals.

Compared with the foregoing figures, resources for caring for the mentally ill are sadly lacking. Right now there are about 1,300 psychiatric clinics in the United States. Half of them are part-time and most have long waiting lists. Of these, 50 percent are located in Northeastern cities with 67 percent in cities with populations over 50,000. At least 3,500 full-time clinics are needed if we are to have 1 for every 50,000 population.

The supply of psychiatrists is lacking too. While the average U.S. ratio is one psychiatrist per 16,400 persons, still there are eight States which have only one psychiatrist for every 53,000 to 72,000 persons.

Thanks to research and other progress in this area, at least seven out of ten patients can leave mental hospitals partially or totally recovered with good care and treatmen. Take, for example, Pennsylvania's mental hospitals. Twenty years ago 80 per-cent of the mentally ill died there. The remaining 20 percent were returned to so-ciety. Today the situation is reversed: 80 percent are discharged within a year after admission.

Now the chances of recovery from the most serious mental crippler, schizophrenia, have jumped from 20 to 60 percent in the past forty years. This should be of interest to persons between the ages of 15 and 35, because it is persons in this age category who make up one-fourth the population of mental hospitals. The greater percentage are schizophrenic.

One can say without reservation that we have a very real social responsibility to conquer this number one health problem. And if we realize it or not, the ultimate cost of neglecting the problem is far greater than the cost of solving it.

Grain Storage

EXTENSION OF REMARKS

HON. JOHN KYL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 18, 1960

Mr. KYL. Mr. Speaker, one fallacy of the claim that all private grain storage facilities reap huge profits is demonstrated in the following record submitted to me this day.

An Iowa warehouse had 50,000 bushels of corn in storage. Recently the grain was shipped. Because the grain is now graded "sample" instead of "No. 1" or "No. 2," the warehouseman faces a loss of \$10,000.

Now it should be pointed out that had this grain been stored by the Government there would be no recovery from this reduction in grade.

This factor was not given proper consideration at the time the Yates amendment was adopted, nor was it adequately considered when the politically inspired investigations of storage profits were made. It was this careless mass indictment which pressured the Agriculture Department to cut storage rates so drastically.

It would be beneficial to give this entire matter fresh, unprejudiced consideration.

Should the Public Interest Be Represented?

EXTENSION OF REMARKS

HON. QUENTIN BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 18, 1960

Mr. BURDICK. Mr. Speaker, I never thought the time would come when anyone would tell the American public that they are not the public. Yet that is what this administration is trying to do. It has refused to reappoint to the Federal Power Commission the only member of that Commission, William R. Connole, who has fought consistently and courageously to protect the consumer from unjustified increases in his gas and electric bills. The administration has given as its reason that Mr. Connole is too consumer minded, that he represents a special group, the consumers.

This is indeed a strange distinction. Since when are the public and the consumers two different groups? Since when are the consumers a special group? When Congress authorizes the Food and Drug Administration to protect the public interest against dangerous drugs, whom does Congress mean by the public it not the people who buy those drugs. the consumers? And when Congress tells the Federal Trade Commission to protect the public from misleading advertising, whom does Congress mean if not the people who will be fooled by that advertising, the consumers?

And when the U.S. Supreme Court ruled that the Federal Power Commission's job was to protect the public interest, whom did it mean but the consumers, the users of gas and electricity? Or does not this administration understand that the only function of the Federal Power Commission is to protect the interest of the public? And does it not know that the consumers are the public and that the only way the Federal Power Commission can protect the interest of the public is to protect the consumers? If a man does not understand this-if he is not ready and willing to do thishe does not belong on the Commission. And an administration that does not understand it has no right to make appointments to the Commission.

I am completely amazed by this reason given by the administration for its re-

fusal to reappoint Mr. Connole. I would think that even this administration would know why regulatory commissions have been created. Utilities are given an absolute monopoly to render an essential service for the public. With this monopoly position, if utilities were not regulated or controlled, they could charge almost any prices and give almost any prices and give almost any kind of service. As an example, take an electric utility. People must have their electricity. They can buy it usually only from one source and that source is the power company serving that area. To get that service, they must pay whatever rates the power company charges. Obviously, unless there is some group to control what the companies do and what they charge, the public-the consumers-would be at the complete mercy of the power companies. To protect the public-the consumersregulatory commissions were created. They were created in the States to protect the public as far as intrastate matters are concerned. And the Federal commissions were created to protect the public insofar as interstate transactions are involved. But every commission, State or Federal, was created solely to protect the public. It is perfectly clear that a utility which has a monopoly for rendering an essential service to the public needs no protection from the public-but just as obviously the public needs protection from the utilities. And unless they get that protection from the regulatory commissions, they are at the complete mercy of the utilities.

I saw this at first hand. For years I was counsel for a rural electric cooperative in North Dakota. I know how important good regulation is to the public. I know that because the Federal Power Commission is allowing electric power companies to keep for themselves, and not pass on to the consumers, the savings realized from accelerated depreciation, the consumers are being compelled to pay much higher rates for electricity than they should be paying. I also know that when the Federal Power Commission granted a private power company a license to build 3 small dams instead of one high Hells Canyon Dam it meant that the farmers of North Dakota would be denied the low-cost fertilizer which the high dam would have made possible. These are only two illustrations out of many which show how costly to the consumers-to the public-poor regulation

If the public only realized how important good regulation is to them, they would do everything in their power to insure that only men who had the public interest-the consumer's interestat heart would be appointed or elected to the regulatory commissions. Unfortunately, the average citizen does not realize that he pays with his own hardearned money for the poor appointments made to regulatory commissions. He does not understand that whenever a commission allows a utility to overcharge in its rates-and this happens all too often-every consumer pays more on his utility bill: that when the Federal Power Commission allows increase after increase to the big wholesale gas companies, those companies pass the increases on to the retail gas companies which serve the individual consumer and the individual consumer's gas bill goes up. The same is true in the case of every other type of utility service.

I wish it were possible to carry this message to every one of our citizens. I wish they could be made to realize that they are directly concerned in every action that the Federal Power Commission—and every other regulatory commission—takes. I wish the public could be made to realize that they pay the cost of poor regulation both through unnecessarily high bills for their utility services and through the increased costs of the other things they must buy.

Certainly, the administration should understand these plain facts of life. Even if it did not understand these facts before 1956, it must have known about it since that time. Because in 1956 the Supreme Court of the United States, in two cases decided at the same time. made it unmistakably clear that the sole function of the Federal Power Commission was to protect the public interest. In the cases of United Gas Pipe Line Co. v. Mobile Gas Service Corp, et al. (350 U.S. 332), and Federal Power Commission v. Sierra Pacific Power Company (350 U.S. 348), the Supreme Court emphasized the fact "that the purpose of the power given the Commission is the protection of the public interest, as distinguished from the private interests of the utilities."

These decisions by the U.S. Supreme Court both gratified and shocked me. I was gratified that the U.S. Supreme Court so plainly and clearly told the Federal Power Commission what its function was. On the other hand, I was shocked that it was necessary for the Supreme Court to remind the Federal Power Commission why it was created and why it existed. You would think that the Federal Power Commission would know at least that much. Despite these decisions by the U.S. Supreme Court, however, the administration refuses to reappoint to the Federal Power Commission the only man on it who has demonstrated the ability and desire to perform his duties as they should be performed and to protect the public interest.

I was interested to see, a few months ago, an article in the magazine Fortune. Fortune, you know, is the magazine of big business. It ran an article which reviewed and analyzed the work of our Federal regulatory commissions. When the article discussed the Federal Power Commission it said that of the five Commissioners on that Commission there was only one who was doing his job and that one was William R. Connole. This was not the appraisal or opinion of consumer-minded groups, but it was the conclusion reached by the magazine of big business. I congratulate Fortune for conducting such a study and making such an honest and objective presentation. But this administration, which has proved itself to be the instrument of big business, refuses to go along even with the magazine of big business when that magazine presents an honest and

fair story. Apparently the motto of this administration is: "Whether it be right or wrong, we are always for big business and against the consumer."

In a recent broadcast, NBC Commentator Martin Agronsky noted that many Senators, the mayors of large gas-consuming cities, 10 professors of law and government regulation at Columbia, Harvard, Pennsylvania, and Yale Law Schools, many consumer groups and major newspapers have urged the reappointment of Mr. Connole, and that the regulatory commissioners of Mr. Connole's home area—the New England States—have praised him as being the most preeminently qualified person in New England in the field of regulation, Martin Agronsky then comments:

None of this seems to have registered with the President. The price of dissent, like the price of gas, keeps going up.

I would make only one addition to this splendid statement by Martin Agronsky. I would say that the price of dissent, when the dissent is in favor of the public, like the price of gas, keeps going up. I am sure that if the dissent was in favor of big business, the commissioner who dissented would have guaranteed his reappointment.

Ever since 1953, we have witnessed the deterioration of our regulatory commissions by the appointment of men who have no understanding whatsoever of their duties and functions, of men who often disagree with and disapprove of the very statutes they are to enforce. But the refusal of the administration to reappoint to the Federal Power Commission the only man on it who understands and conscientiously endeavors to do his duty—William R. Connole—and the explanation made for this refusal establish a new low.

I fervently pray that the Senate will not permit this continuing deterioration in the makeup of our Federal regulatory commissions. The Senate, of course, has no appointive powers. Only the President can make the appointment. But I sincerely hope that no man will be confirmed who does not understand that his function as a commissioner is to protect the public interest, or who does not intend to do all that he can to protect the public interest—and that means to protect the consumer.

Letter of Under Secretary of Labor James T. O'Connell Regarding H.R. 9070

EXTENSION OF REMARKS

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1960

Mr. PELLY. Mr. Speaker, I am receiving many inquiries and comments from contractors and building material supply firms with regard to H.R. 9070, the bill to exempt construction situs picketing from the provisions of the Taft-Hartley Act.

In order to clarify some misconceptions as to what the passage of this bill would and would not accomplish, I wrote the Office of the Secretary of Labor for clarification.

Because other Members may be hearing from constituents who are confused as to the intent and purpose of this legislation, I include a letter from Under Secretary of Labor James T. O'Connell which clearly sets forth the correct information:

U.S. DEPARTMENT OF LABOR,
OFFICE OF THE UNDER SECRETARY,
Washington, May 18, 1960.
The Honorable Thomas M. Pelly,

House of Representatives, Washington, D.C.

DEAR CONGRESSMAN PELLY: This is in reply to several letters of opposition to H.R. 9070 which you have brought to our attention.

Much confusion attends interpretations of the purpose and the effect of the proposal embodied in H.R. 9070. It is erroneously viewed either as a device whereby construction unions will be able to coerce employees in the exercise of their free choice to join or not to join a labor union, and therefore as an organizational and recognition picketing bill, or as a bill which will legalize secondary boycotts in the construction industry. Neither interpretation is correct. As you know, the secondary boycott provisions of the Taft-Hartley Act are not intended to shelter a primary employer, nor to protect other than third parties. Those provisions were designed for the protection of innocent third parties wholly unconcerned in a disagreement between an employer and his employees.

The proposed bill recognizes that within the realities of the construction industry joint venturers and subcontractors jointly engaged in construction at a common construction site are not true, innocent, third parties so unconcerned in the dispute at the site that they should be sheltered from the incidental effects of a lawful dispute between one of their members and his employees. The bill would correct the application of the secondary boycott provisions to lawful primary construction situs activity, which resulted from the application of the so-called Denver Building Trades rule. The bill does not make lawful otherwise unlawful organizational and recognition picketing or secondary boycott activities. Simply stated, this proposal would enable construction employees involved in a lawful dispute with their employer over working condi-tions at the site to engage in concerted primary activities against him, without being charged with secondary boycott viola-tions because employees of joint venturers or subcontractors jointly engaged in work at that site choose to respect the primary picket line.

Contrary to some assertions, this bill has been very carefully drafted. It is not intended, nor does the plain language of the bill permit the interpretation, that picketing against the delivery of materials to the site would be legalized by the provisions of this proposal. The bill relates to work done at the site of the construction, to lawful concerted activities directed at any of several employers who are in the construction industry and jointly engaged with others in work at such sites, and to lawful labor disputes concerning wages, hours, and other working conditions of employees employed at such site by any of such employers. Legitimate organizational activities at the construction site would be subject to the recently enacted provisions of the National Labor Relations Act relating to organizational and recognition picketing activities.

I hope these comments will be of assistance to you. If I can be of any further assistance in this or any other matter, please let me know.

Sincerely yours,

JAMES T. O'CONNELL, Under Secretary of Labor.

Report From Paris

EXTENSION OF REMARKS OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 18, 1960

Mr. PUCINSKI. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I would like to call the attention of my colleagues to the excellent article on the summit conference by Mr. Walter Trohan, chief of the Chicago Tribune Washington bureau, which appeared in this morning's Chicago Tribune.

The article follows:

[From the Chicago Tribune, May 18, 1960]

REPORT FROM PARIS

(By Walter Trohan)

Paris, May 17 .- Once again the United States is stumbling groggily in a propaganda bout with Russia. As usual this country has tried to play the bout by ear and as usual has ended up on its ear.

The latest international battle began May

1 when the unarmed photographic reconnaissance U-2 jet was shot down over Russia, evidently while seeking to get pictures of the launching site of the five ton space ship the Russians put into orbit on the eve of the summit conference. The pilot of the plane dipped low, took off upward into space and glided low again. The jet was struck on the second dip by a missile. It is obvious missiles guard any Russian launching site.

Many have blamed the United States for not halting reconnaissance flights during preparations for the summit conference. However, it has been expected that the Russians would launch a new and mightier earth satellite during the chiefs of government meeting. The opportunity was too good to pass by, especially since photographic flights had been underway without mishap for 4 years.

BLAST SHOULD HAVE BEEN EXPECTED

The first propaganda error was to dismiss the U-2 as a weather observation plane. Then the Russians produced not only the pilot and his confession of espionage but also photographs of his spy camera. Not then did the United States seek to justify its flights as part of its responsibility to protect the Western World from surprise attack.

The next propaganda error was to come to the summit meeting in the expectation Khrushchev might forget the incident. It should have been assumed that he would play many variations of "Hearts and Flowers" on this propaganda theme, so that the United States could with propaganda profit have ordered an end to such flights and an investigation into the spy policy.

It is true that President Eisenhower displayed statesmanship when he came face to face with the stumpy, belligerent and ranting Khrushchev. He was calm and cool in the teeth of the Russian tirade. He presented his answer and one which could have been made much of, because of its promise to end overflights. The President accepted responsibility for the flights and could hardly have been expected to punish himself.

IKE'S ANSWER DELAYED TOO LONG

But the wily Russian released his blast about 2 hours ahead of the President's reply. In some quarters it is likely that the American answer never caught up to the accusations. In any case they were sub-ordinated. There is no question but that the American answer should have been released in important parts—the proposal for United Nations overflight inspections as well as the cancellation of American flights-before Khrushchev's attack.

There was an even more serious propaganda defeat for the United States in Khrushchev's withdrawal of his invitation to the President to make a return visit to Russia. President Eisenhower could have forestalled this by following the advice he received from many quarters after the U-2 incident that he call off the Russia visit. He did not do so, evidently because he did not wish to jeopardize the conference, but he has never had any high hopes for accomplishment at the projected meeting.

Khrushchev did maneuver himself into an American invitation, from which he reaped considerable advantage around the world. Now he has scored again by withdrawing his invitation. He wins in inviting the President in and by inviting him out.

Economist Spots Error on Growth

EXTENSION OF REMARKS OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1960

Mr. CURTIS of Missouri. Mr. Speaker, on April 20 of this year there was placed in the Congressional Record a letter by Dr. Seymour Harris to the Washington Post and Times Herald. As this letter dealt with a subject on which there has been much controversy, I think the reply, also published by the Washington Post and Times Herald in its May 4 issue, a letter written by Dr. Charles T. Stewart, Jr., be entered in the RECORD. Dr. Stewart is to be highly commended for his efforts in preparing this reply to point out the weaknesses in Dr. Harris' statement which as he aptly states wins no laurels for the economics profession.

ERROR ON GROWTH

Saymour Harris' letter of April 21 contains a simple error which completely changes the conclusions which he, and the reader, may reach. He contrasts the effects of tight money and loose money on the rate of economic growth, concluding that tight money has slowed down the economy.

Unfortunately his tight-money period is 1953-59, and his loose-money period is 1947-52. This is a mistake. The accord between the Treasury and the Federal Reserve which initiated a tight-money policy was reached in early 1951. I know this is awkward, because President Truman still had nearly 2 years to go in the White House, and because Senator Douglas was instrumental in bringing about the accord. But facts are facts.

The tight-money period, therefore, should be 1951-59. The economic growth rate for this period was 2.8 percent. The loose-money period should be 1945-50. The growth rate during this period was 0.3 percent. But what are the results of this correction? Practically no growth during the loose-money period (and actual decline in income per capita); substantial growth thereafter.

Why does Professor Harris pick on 1947 as the initial year? It is not the first year of the Truman administration, nor of a loose-money policy, nor of peace. In all these regards, 1945 is a better choice.

This abuse of innocents at home wins no laurels for the economics profession.

CHARLES T. STEWART, Jr.

WASHINGTON.

Tax Overhaul Due

EXTENSION OF REMARKS

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. ULLMAN. Mr. Speaker, under leave to extend my remarks I wish to call the attention of my colleagues to the following editorial which appeared in last month's issue of the Oregon-Washington Farmer Union newspaper. The subject is the need for tightening loopholes in our current income tax laws, a matter that is certainly of concern to all of us.

The editorial follows:

TAX OVERHAUL DUE

Sixty million Americans have filed income tax returns this month. Did each pay his fair share? The income tax is the fairest of all taxes-but only if rates are kept in line with income-and if loopholes do not allow the wealthy to escape what the law intends them to pay.

A study of Federal tax returns for 1956 raises some interesting questions. steeply graduated Federal income tax ranges from 20 percent on workers with taxable incomes below \$3,000 to a maximum of 87 percent on a taxable income of \$1 million and over. These are the statutory rates. But what rate was actually paid?

Treasury figures show where the tax schedules require a rate of 20 percent on the wage earner making less than \$3,000, this taxpayer's joint return showed he actually paid 19.9 percent. In other words, his tax rate was 20 cents on each taxable dollar and he paid almost exactly 20 cents.

The worker in the \$3,000 to \$5,000 class had a tax rate of 20.4 percent; he paid 19.9 percent. The worker in the \$5,000 to \$7,000 bracket had a tax rate of 21.2 percent; he paid 20 percent.

As income rises, according to Government figures, the gap widened between the tax called for and the tax paid.

The tax rate for the \$15,000 to \$20,000 class was 30.6 percent; they paid 23 percent.

The \$25,000 to \$50,000 income class had a tax rate of 43.5 percent. The tax this group actually paid for 30.5 percent.

The tax rate for those in the \$200,000 to \$500,000 class was 80.1 percent. They paid 58.3 percent. This group kept 22 cents of each taxable dollar which—in theory under the law-had been earmarked for the public Treasury.

The 80 percent bracket, set out in the income tax law, has dropped to 58 percent. And it's perfectly legal. The income tax laws create special tax benefits for such unearned income as stock dividends and capital gains. Some dividends of private utilities are nontaxable. And there is the gaping oil depletion allowance under which hundreds of millions annually are lost to the Federal Treasury. On capital gains, the effective rate of taxation is a maximum of 25 percent. The AFL-CIO in a recent paper before the House Ways and Means Committee, noting these gaps between principle and practice, called for a complete overhaul of the tax structure. The paper estimated that these loopholes and special benefits have saved for the higher income groups over \$350 million from dividend exclusion and credits; \$2.6 billion from capital gains; over \$1 billion from depletion allowances; some \$500 million from untaxed expense accounts and over \$4 billion from the split-income provisions favoring high income couples.

It would seem that an overhaul of the

tax structure is long overdue.

We Shall Beat Them With Ingenuity

EXTENSION OF REMARKS

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. PUCINSKI. Mr. Speaker, recently I had occasion to discuss the present world situation, particular the increasing pressure that America is experiencing from foreign imports, with one of the Nation's most successful businessmen, who got his start in my district and continues to have his central store in my district.

I was most encouraged to hear Mr. Sol Polk, whose merchandising techniques have attracted nationwide attention and who is now celebrating his 25th anniversary as a retailer, assure me that America will find an answer to the prob-

lems which now confront us.

"We shall beat them with ingenuity," was Mr Polk's confident rejoinder.

I think this is a powerful slogan which we Americans ought to adopt throughout our Nation.

There are few people I know who are more qualified to make this statement with such confidence than Sol Polk. From a very humble beginning, Sol Polk and his family have been able to build a highly impressive retailing institution. I think we all know how thoroughly competitive is the retailing field. Yet, by using the full scope of ingenuity, initiative, and dedication to the highest principles of retailing, Sol Polk today stands out as one of the Nation's most successful businessmen.

I am very concerned that so many Americans look to the future with grave fear and apprehension. The spirit of confidence and dedication, which exemplifies Sol Polk, is too frequently being replaced in many people by an attitude

of despair and lethargy.

If all of us, as Americans, will recognize the full depth of the statement—"We shall beat them with ingenuity"—I feel that we can recapture that precious attribute which has distinguished us as free Americans from all other social orders.

It is true that the world is growing ever smaller. We are now engaged in a great race for conquest of outer space. As a Nation, we are also confronted with a world that is experiencing an industrial revolution. Many areas of the

world, which for centuries have remained dark and totally undeveloped, are today seeing the magic of light. Nations which for centuries have relied on primitive methods of production and satisfied themselves with only an agrarian economy, today are becoming bastions of industrial development.

Many nations whose industrial potential was totally destroyed during World War II, are today again competing for world markets. It should come then as no surprise that competition in our country from foreign imports will mount in an ever increasing degree.

I find comfort in Sol Polk's confident prediction that "We shall beat them with ingenuity," because I believe we can, if we exercise our traditional American initiative.

The aura of fear and uncertainty in this country must be replaced with confidence that we have the ability to solve our problems with ingenuity. It was this ingenuity which has helped make the United States the greatest Nation in the world today. It was this ingenuity which has given our Nation the highest standard of living anywhere in the world today. It was this ingenuity which has given us a productive capacity that has inspired the imagination of people throughout the world.

There are many problems confronting America today, but I am confident that, in the words of Sol Polk, "we will solve

them with ingenuity."

Yes, Mr. Speaker, to those who would predict the collapse of America; to those who would have the world believe we are a decadent Nation; to those who would want to cast doubts about our ability to defend freedom, to those who fear other ideologies will destroy us, I should just like to send this admonition: "We shall beat them with ingenuity."

I feel confident we shall meet the challenge of the sixties not by lowering our own standard of living, but rather by inspiring the rest of the world to raise its own standard; not by surrendering our own liberties but by bringing freedom to others; not by going backward but, instead, by proceeding forward—and all of this we shall do with traditional American ingenuity.

Bomarc B Succeeds Again

EXTENSION OF REMARKS

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1960

Mr. PELLY. Mr. Speaker, Senate hearings begin tomorrow on the military appropriations bill where the Air Force is scheduled to seek restoration of funds cut by the House for procurement of the Bomarc B missile.

As I understand, these cuts resulted in part from the partial fallures of early test firings of this missile.

However, since the House action, the basis of the Air Force's confidence in this program has been justified by two fully successful tests. Therefore, I hope the Senate will go along with the Air Force request and in turn the House conferees will accept any funds restored by the Senate in the light of new developments.

The following news item from the New York Times of May 18, 1960, tells the story in a few words:

BOMARC SUCCESS IN TEST

Valpariso, Fla., May 17.—The second straight successful launching of the Bomarc B interceptor missile from nearby Eglin Air Force Base was announced by the Air Force today. Eight previous attempts from Cape Canaveral, Fla., were failures. The 47-foot missile, launched from the Santa Rosa Island test center, flew more than 270 miles down the Eglin gulf test range.

Wiretapping

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following timely article by Louis H. Pollak, as it appeared in the May 16, 1960, issue of the New Republic:

Wiretapping—Lawlessness in Law Enforcement

(By Louis H. Pollak)

("The widest inquiry into the shortcomings of the administration of justice, which the President enjoined upon this Commission, necessarily involves the duty of investigating the justice of complaints, often made, that in their zeal to accomplish results Government officials themselves frequently lose sight of the fact that they are servants of the law, subject to its mandates and peculiarly charged with the duty to observe its spirit and its letter. They should always remember that there is no more sinister sophism than that the end justifies the employment of illegal means to bring offenders to justice. * * * Respect for law, which is the fundamental prerequisite of law observance, hardly can be expected of people in general if the officers charged with the en-forcement of the law do not set the example of obedience to its precepts."—Wickersham Commission, Lawlessness in Law Enforcement (1931).)

The story of wiretapping as a weapon of law enforcement goes back to prohibition—to the now-it-seems-quaint era when bootlegging was our national crime. In 1928 Justice Brandeis reported that "discovery and invention have made it possible for the Government, by means far more effective than stretching upon the rack, to obtain disclosure in court of what is whispered in the closet." In his view, moreover, wiretapping was equivalent to an unlawful search. But Justice Brandeis, Justice Holmes—who called illegal law enforcement "dirty business"—Justice Stone, and Justice Butler were one shy of a majority of the Supreme Court, and so the challenge to wiretapping as an unconstitutional method of obtaining evidence was unsuccessful.

A decade later, the Supreme Court took another look at the problem and came to the conclusion that Congress had banned the practice which the framers of the Bill of Rights had failed to anticipate. The Court

held that the enactment in 1934 of the Federal Communications Act forbade the dis-closure in a Federal court of information gained by wiretapping, and therefore re-quired the reversal of convictions supported by such illegal evidence or by evidence to which the police were led in consequence of the initial unlawful interceptionof the poisonous tree." For section 605 of the Federal Communications Act emphatically declares that "no person shall intercept any communication and divulge or publish the existence, contents, substance, purport, effect or meaning of such intercepted communication to any person. * * *" Violation of the statutory prohibition is a Federal crime, punishable by fine and imprisonment. The Supreme Court felt that to sustain convictions based on the disclosure in testimony of wiretapped communications would have amounted to condoning the commission of a Federal crime in a Federal

Wiretapping by Federal officials has, however, continued unabated. In describing the wiretapping conducted by the FBI, Mr. J. Edgar Hoover has stated that the practice is confined to "cases involving espionage, sabotage, grave risks to internal security, or when human lives are in jeopardy." Whether or not this limitation is adhered to, it is hard to escape the conclusion that all the wiretapping engaged in by Federal officials is, nevertheless, in blatant defiance of section 605. The practice is rationalized on the basis of an extremely dubious assertion that, under the statute, interception is not in itself unlawful-that no crime is committed until one undertakes to "intercept and . . divulge"-and on the wholly unsupportable further ground that when one Government official reveals an intercepted communication to another Government official, he does not "divulge" the communication within the meaning of the statute. Regrettably, the Supreme Court has not had occasion to untangle these elegant subtleties.

The few attempts to prosecute for the Federal crime of wiretapping seem to have been directed at unofficial wiretapping-e.g., persons engaged in extortion, or "private ears" who for hire will eavesdrop on a spouse or on a business competitor. So far as is known, no Federal prosecutions have been instituted against State police or State prosecutors engaged in wiretapping. seem to share the same blanket of immunity that warms their Federal counterparts. Moreover, the limited evidence at hand suggests that State law enforcement officials engage in wiretapping on an even more widespread basis than Federal officials. To be sure, many States prohibit wiretapping, and some-of which New York is a conspicuous example-permit wiretapping if, only if, law enforcement officials persuade a judge (in a judicial proceeding which does not, of course, involve notice to the prospective tappee) that tapping a particular phone is likely to uncover evidence of a crime. The temptation for State police and prosecutors to tap—even when the tapping is illegal under (rarely enforced) provision of local law—seems to be strong: the communica-tions intercepted may facilitate the gathering of other evidence, and some State courts will admit the communications themselves in evidence notwithstanding the taint which local as well as Federal law attaches to their interception.

At all events, it is a matter of record—documented in a recent study by Samuel Dash, former District Attorney of Philadelphia—that a great deal of wiretapping is done by law enforcement officers in States where none is authorized, and also that a great deal of official but unauthorized wiretapping is done in States which, like New York, have sought to legitimate the practice when carried on under judicial supervision. Just how much tapping goes on is, almost by

definition, unknown. In New York City the police and the several district attorneys acknowledge several hundred authorized wiretaps (each of which may last for several weeks) annually. Mr. Dash estimates that unauthorized wiretaps by law enforcement officers far exceed those which are authorized, bringing the total figure for New York City alone to upwards of 13,000 taps a year.

WIRETAPPING AS A FEDERAL OFFENSE

Viewed from the perspective of section 605 of the Federal Communications Act, it should be said on behalf of State law enforcement officials that, for several years after the Supreme Court had asserted the illegality of Federal wiretapping, it was still at least arguable that State officials were not covered by the Federal statute. Thus, in 1952, the Supreme Court, in sustaining a State robbery conviction, refused to find in section 605 any congressional intention to make wiretapped evidence inadmissible in State criminal trials. On the other hand, the Court was at pains to make clear in its decision that the introduction of the intercepted communications would itself be a violation of the statute," though it concluded, rather lamely, that "this is simply an additional factor for a State to consider in formulating a rule of evidence for use in its own courts." Significantly, the Court added: Enforcement of the statutory prohibition in section 605 can be achieved under the penal provisions of section 501"—the provisions prescribing criminal penalties for those convicted of wiretapping.

Still no Federal prosecutions of State officials have been forthcoming. Nor is the dearth of prosecutions traceable to any noticeable change in the habits of State law enforcement officers. Thus, in a case which reached the Supreme Court 2 years ago, a Federal conviction depended on dence uncovered by New York City policemen who had tapped pursuant to a New York court order. The Court reversed the Federal conviction, and took occasion explicitly to declare the invalidity of the New York statute permitting judicial authorization of wiretaps: "Keeping in mind this compre-hensive system of interstate regulation and the public policy of section 605 as part of the scheme, we find that Congress, setting out a prohibition in plain terms, did not mean to allow State legislation which would contradict that section."

Unabashed, New York police, New York prosecutors, and (with certain distinguished exceptions) New York judges have continued to participate in, or at least to facilitate, flagrant and widespread breach of the congressional mandate—by initiating wiretaps and by sanctioning the disclosure of what has been intercepted as testimony in State criminal trials. And, through the asquiescence of Federal prosecutors, this lawlessness goes unpunished.

This past winter, several defendants in two New York criminal cases, having been apprised at or before their trials that wire-tapped testimony was to be introduced against them, turned to the Federal courts in New York to seek injunctions against the introduction of the testimony. Their requests for the Federal judicial intervention culminated last month in the very important and highly perplexing Pugach decision, handed down by the United States Court of Appeals for the Second Circuit. It is worth careful study.

The obstacles to securing the requested injunctions were clear: As already noted, the Supreme Court had, in 1952, refused to set aside a State court conviction based on wiretapping. And in a 1951 decision, the Supreme Court had refused to restrain State police from introducing in a State criminal trial evidence obtained as a result of an unconstitutional search. But in one seemingly vital respect these precedents were

distinguishable. In the first of these cases the Federal crime of divulging the wire-tapped communication in court had already taken place when the case reached the Supreme Court. And in the second case the unconstitutional search had already taken place and the anticipated introduction of the evidence in court would not, from a Federal point of view, be a further illegal act. By contrast, those seeking injunctions in the Pugach case wanted Federal judicial protection from Federal crimes which were about to be perpetrated against them—the disclosure in their State criminal trials of their intercepted telephone conversations.

One further legal difficulty confronts those seeking Federal judicial protection against the expected disclosures. Conventionally, English and American courts have been most reluctant, except in labor disputes, to issue injunctions against the commission of a crime. Ordinarily, this reluctance is proper. Those who violate injunctions are guilty of contempt of court, and the procedures for trying contempt are, broadly speaking, geared to achieving swift compliance with judicial decrees and are therefore not overly solicitous of the accused. But where the act of contempt is itself a crime, Anglo-American legal tradition suggests the desirability of surrounding the accused with the elaborate safeguards which normally characterize our criminal justice. To avoid this dilemma, judges seldom issue injunctions whose breach would constitute crime tryable in the ordinary courts. However, this understandable reluctance of courts presupposes that the accused would be criminally prosecuted for his acts. And precisely that presupposition is untenable where—as in wiretapping by law enforcement officials-no attempt is ever made to punish the crime once it has been com-

THE PROSECUTION OF VIOLATORS

Nevertheless the Court of Appeals for the Second Circuit refused the requested relief: To grant it would have been an unwarranted intrusion on State criminal processes, said Chief Judge J. Edward Lumbard, speaking for himself, Judge Leonard P. Moore and Judge Henry J. Friendly. Judge Sterry R. Waterman concurred: He felt it would be "presumptuous to assume that any New York State trial judge will acquiesce to the commission of a crime against the United States in his presence in his courtroom by a witness testifying under oath."

Only Judge Charles E. Clark dissented. The veteran of more than 20 years on the second circuit—who once numbered Learned Hand (now retired), the late Augustus Hand and the late Jerome Frank among his colleagues-spoke with the voice of that court's great days: "In sum, it is beyond dispute that there is a general, indeed universal, custom of Federal law violation. Now this is a distressing situation, made not less so that in the eyes of many worthy citizens it is required by the asserted exigencies of successful law administration. But it is not an unusual situation. For actually it is a clash between Federal and State governmental pol-As such it is a recurrent struggle in our history and quite possibly a necessary one to a Federal form of government. the past we have found ways of meeting and solving the problem. Of course there are several forms of remedy; but the one to which there seems continual return when other remedies fail is the resort to the equity powers of the Federal courts to enjoin repeated violations of the criminal law. I ask (as was asked with respect to Little Rock schools, martial law in the Texas oil fields, and other historic Federal-State clashes). When does enough of Federal law violation become too much? The facts rehearsed above demonstrate in my opinion that only

by the course of Federal injunction will the present impasse be resolved."

It is very likely that the Pugach decision itself will not come before the Supreme Court, for certain procedural reasons not germane to the present inquiry. If this proves not to be the case—If the Supreme Court were to review and reverse the second circuit's decision—something salutary would be accomplished. But more is needed than authority to enjoin disclosure of the occasional wiretap whose existence is known in advance of trial.

Thus the Congress could gain substantial ground if it were to amend section 605 so as to invalidate State convictions based on wiretap evidence. But such legislation which would produce howls of anguish from State prosecutors and police, is most unlikely. Conversely, some of the prevalent illegalities of State officials could at least be legitimized if Congress were to amend section 605, as Congressman Celler and Senator Keating now propose, to permit State officials to engage in the discredited New York practice. But Congress has for years turned an encouragingly deaf ear to proposals to give any statutory blessing to wiretapping.

If the Federal statute stays as it is, one can only hope that Federal law enforcement officers will come to recognize their obligation to comply with the congressional mandate and to prosecute every person-public or private-who continues to violate it. At the same time, perhaps more State judges will follow the lead of Justice Samuel H. Hofstadter of the New York Supreme Court and Judge Irwin D. Davidson of New York's Court of General Sessions who had, even before the second circuit's ruling, announced that they would no longer entertain police applications for permission to wiretap. since the Pugach decision, Nassau County Judge Paul J. Widlitz has refused to permit the introduction of wiretapped testimony in a criminal trial pending before him.

Possibly these three New York judges share that insight into the purposes of the Framers of the Bill of Rights which underlay Brandeis' hostility to wiretapping: "They sought to protect Americans in their beliefs, their thoughts, their emotions, and their sensations. They conferred, as against the Government, the right to be let alone—the most comprehensive of rights and that most valued by civilized men."

The Challenge We Face

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1960

Mr. CARNAHAN. Mr. Speaker, in April of this year, the American Federation of Labor and Congress of Industrial Organizations conducted in New York City a 2-day conference on world affairs.

Appearing at this conference, at the invitation of the AFL-CIO, were outstanding authorities on the problems of international diplomacy, national defense and the role of the United States in Germany, Latin America, Africa, and Asia. This was not a partisan conference; it embraced spokesmen for both the present administration and its critics. During the conference, leaders of the labor movement also presented

their views on world affairs. There was a forthright and often lively exchange of ideas, which I am sure was deeply rewarding to all who participated.

I am sure my distinguished colleagues would agree, Mr. Speaker, that in conducting this conference the AFL-CIO displayed a high degree of statesmanship. But this is not the end of the story.

A few weeks later, on May 8, the AFI-CIO caused to be published in the New York Times, as a special supplement, a digest of the conference proceedings, together with very valuable information on the aspirations and activities of American labor, especially with regard to international relations.

I was especially impressed with the statement of George Meany, the president of the AFL-CIO. In less than one page of type, it analyzes and appraises the conflict between the Soviet Union and the free world; sets forth the challenges we face, and proposes a program for the future.

It is one of the few such statements I have read which does not need rewriting as a result of the events in Paris.

Mr. Speaker, because the material in Mr. Meany's article is of such a high order, and of such great value to all of us who are concerned with our Nation's welfare, I ask that the text be inserted in the Record for the benefit of all its readers:

THE CHALLENGE WE FACE (By George Meany)

Our civilization, hour by hour and year by year, is breaking through past barriers that have stood in the way of universal participation in the benefits of progress.

Before too long, every nation can have the power, the material resources, and the industrial know-how to provide decent homes, adequate clothing, and well-paid employment for its people.

In the foreseeable future science will find the answer to the major diseases that victimize millions.

In the course of a generation or two, illiteracy and ignorance can be wiped out.

At this very moment, great masses of people are rising up against economic and political subjugation and reaching for their rights and dignity as human beings. Despite the opposition of colonial powers in lands like Algeria, Angola, Hungary, and Nyasaland, this search for freedom and equality cannot long be denied or suppressed. The stirring events now gripping Africa—and duplicated in a nonviolent manner in our own country—are an inevitable step in the historic march of progress. We are now witnessing the beginning of the end of color as a divisive force in society.

The great negative potential in world affairs today is war—atomic war or cold war, military war or economic war.

That continuing threat to human survival and progress stems from one source and one source only—Soviet Russia.

We Americans want peace. We want to be secure and prosperous. We seek no territorial conquest or aggrandizement of any sort. We do not aim to impose our economic or political system on any other country, small or large. We prize our freedom and we are willing to defend it at any cost. And we would be happy to see all other peoples enjoying freedom, peace, and prosperity.

enjoying freedom, peace, and prosperity.

America has no aggressive designs, now or in the future, against Soviet Russia. No other free nation entertains such foolhardy notions. If there can be any one certainty in international affairs, it is this—that the free world is willing to live and let live.

Now let us look at the Soviet record. During the last World War, it entered into a nefarious pact with Hitler to carve up Poland. It was not until Hitler turned against Russia and invaded her that the Communists retaliated. If it had not been for our intervention in the war, Soviet Rusia might have been utterly crushed.

Since the end of the Second World War, Soviet Russia has repudiated every agreement with her former allies. She seized and dragged behind the Iron Curtain nation after nation along her borders. She suppressed with brutal and overpowering force revolutions of the freedom-loving people of Hungary, Poland and East Germany.

The Kremlin aided and engineered the Communist conquest of China. It instigated and abetted the war in Korea and the capture of vast territories in Indochina. It fomented and financed aggression and tension in the Near East.

At the same time, Soviet Rusisa has carried on an unceasing campaign of subversion and hostile propaganda against freedom throughout Europe, Asia, Africa, Latin America and even in our own country.

Moscow invented and initiated the cold war. It was Russia that forced the first Berlin crisis which we overcame with the airlift. The U.S.R. precipitated the new Berlin crisis to which the summit conference must now address itself.

There have been changes of faces in the Kremlin but not one scrap of evidence of any change in the fundamental Communist determination to dominate the entire world by every available method, even war.

The Soviet's offer of peaceful coexistence rings hollow when Russia's entire national effort is concentrated on achieving superiority in aggressive military production.

Khrushchev's sweeping proposals for world disarmament sound alarming rather than reassuring, when he refuses to permit adequate inspection behind the Iron Curtain to check on compliance.

We in the trade union movement are familiar with the hocus-pocus of the Communists' terminology. They speak in terms of a "people's democracy." They act in terms of ruthless dictatorship. Their system chains the farmer to the soil and freezes the worker to his assigned job. It robs the people of the fruits of their production and their basic liberties. It stifles freedom of conscience and the intellect. It concentrates total economic and political power in the hands of a narrow party dictatorship to which the people at large are enslaved. It takes no stock of either human rights or human life on the theory that the end justifies the means. Today it is desperately concentrating on producing the means to end freedom on earth.

America and the free world cannot afford to underestimate the Soviet military and economic strength, nor should we become overawed by it. We have what it takes to win the struggle for freedom. The greater danger is default, rather than defeat. We cannot bank on any Soviet concessions given in false coin. With this uppermost in mind, the American trade union movement earnestly recommends the following program:

- 1. Our country and the free world must acquire adequate military strength to deter and, if necessary, to defeat any aggressor. What we need, not what it costs, must be the determining factor.
- 2. NATO must be revitalized and broadened into an organization for promoting effective economic scientific and cultural—as well as military—cooperation among its member states.
- 3. America should exert stronger leadership in an international program to promote peaceful uses of atomic energy, harnessed to modern industrial techniques.
- 4. Only an unceasing struggle against racial discrimination in the United States will enable our country to win the full trust and

support of the captive peoples of Africa,

Asia, and Europe.

5. Colonialism must be systematically eliminated and the nations thus gaining independence assisted in raising the living standards of their people through industrial and agricultural development.

6. Every effort must be made to secure even limited reduction of armament, provided effective international inspection is guaranteed. Our goal should be the banning of military atomic tests, an end to production of nuclear and other weapons of mass destruction, and the genuine reduction of land, sea, and air forces.

7. The U.N. should be strengthened as an instrument of world peace, and empowered to implement its decisions on vital inter-

national problems.

8. Under U.N. supervision, free elections should be held in every area or territory in dispute—in Asia and Africa, as well as in Europe. This is the only just and prac-tical method for the reunification of Ger-

many.
9. It is most urgent that the United States cement closer ties with our Latin American neighbors on a basis of equality. By helping to promote economic development and to raise living standards, we can unite the continent as a more effective stronghold of peace, freedom, and well-being.

10. Our Government together with private industry, should pursue a clear-cut policy of stepped-up economic growth. Only thus can we meet the needs of the defense program and our increasing population. Only thus can we carry out our obligations to preserve peace and promote a better way of life for mankind.

Pilots Aren't Obsolete Yet

EXTENSION OF REMARKS OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1960

Mr. HIESTAND. Mr. Speaker, a Saturday Evening Post editor reports on our missile-heavy defense program and tells why the B-70 Valkyrie bomber might be necessary for our survival.

Under previous consent I insert the article in the Appendix of the RECORD:

PILOTS AREN'T OBSOLETE YET

(By Clay Blair, Jr.)

In Norse mythology the Valkyries, lovely handmaidens of the war god Odin, struck terror in the hearts of all warriors. In time of battle the Valkyries soared over the field of conflict and chose the heroes who were to be slain and borne away to the hall of fame, Valhalla. Not long ago when the Air Force sought a name for its dart-wing, 2,000-mile-an-hour bomber, the B-70, Valkyrie was proposed. Air Force generals, marveling at its appropriateness, approved the name. Today the name Valkyrie seems more fitting than ever. Unless some changes are made, the B-70, like its namesake, will never be more than a myth.

This unhappy situation has caused the air generals more genuine concern than the controversial "missile lag" and Soviet space triumphs put together.

The B-70 was conceived to replace the 600mile-an-hour B-52 intercontinental bomber, backbone of the Strategic Air Command's massive deterrent force. The Air Force hoped to begin by building 100 of these behemoth bombers. The planes were scheduled to come into operation in about 1965, lending versatility and a powerful nuclear punch to our ballistic-missile force of Atlas, Titan, Minuteman, and Polaris. In the missile-heavy defense budget now being debated before Congress, funds for the bomber have been slashed from \$461 million to \$75 million, barely enough to sustain a program for two experimental B-70 shells devoid of combat capability. It means, as one four-star Air Force general puts it, "the B-70 has had it.

Why should the air generals be gnashing their teeth about the loss of a single airplane program in this age of glamorous mis-siles? The answer is that there is much more involved than the mere gutting of one more promising deterrent system. Coming hard on the heels of the cancellation, or drastic stretching-out, of the F-108, the B-58, the F-104 and F-106, the decision, if it sticks, spells the end of the era of manned combat aircraft. The decision constitutes a major shift in military strategy from a "mixed" deterrent force of manned and unmanned machines, widely ballyhooed by the Administration, to a one-basket, unmannedmissile force, considered perilous by the most ardent missile proponents. The decision also has tremendous ramifications for the future of our commercial aviation. The industry, already suffering from the blows of one airplane cutback after the other, is no longer in a position to underwrite the cost of developing larger and faster jet transports, which surely must come. Russia will be in a position to move ahead in this field virtually unchallenged.

Although the end of the manned-aircraft era appears to be approaching rapidly, it will not come overnight. Combat airplanes are born only after a prolonged gestation period, and in these days of soaring costs they are made to last for a long time. The United States will continue to build improved versions of the B-52 and its companion jet-powered tanker, the KC-135, for several more years. Economy demands that SAC squeeze a few more years of life from its aging 1,300-plane B-47 force. Mainly because the Air Force could justify it as an Army ground-support plane, the flashy F-105 fighter bomber will remain in production for some time. The Navy will build a handful of planes to stock its costly fleet of Forrestal-class carriers.

The air generals are fighting hard to save the B-70. When word first seeped down through the Secretary of Defense last fall that the plane was doomed, Gen. Thomas D. White, Air Force Chief of Staff, and his rawhide deputy, Gen. Curtis E. LeMay, mounted an impassioned but futile appeal behind closed doors in the Pentagon. By the beginning of the year there were indications that the air staff might stage a rumble reminiscent of the admirals' revolt following the cancellation of their prized supercarrier in 1949.

"It's an ironic mess we're caught up in," a high-ranking air staffer explains. "We had to sell like hell to get the missile programs going. Maybe we oversold. Anyway, now Congress is beating us on the back to build more and more missiles. The way we look at it, missiles are a necessary part of the deter-rent force. But from the retaliation standpoint we need the B-70 as badly as, or worse than, we need the missiles. Yet if we go before Congress now and ask for more airplanes in the middle of this missile hassle, we sound like a bunch of battleship admirals. To really make our case we've got to point up the shortcomings of the missile as a retaliation weapon on which we have spent billionsover \$6 billion this year alone. This makes us look even worse. The trouble is, I guess, us look even worse. The trouble is, I guess, we never really believed a day would come when we would actually have to defend the manned airplane."

The best way to appreciate fully the Air Force's position on the B-70 is to take a hard

look at our present and projected big-war deterrent force. Thus viewed, the missile "shortcomings," which the air generals find too embarrassing to discuss in public, come to light, and the role of the manned aircraft in the missile age, as the Air Force sees it, is brought into clear focus. A close look at our deterrent power also helps to draw the basic issues involved in the great defense debate which, if the Democrats have their way, will become a major issue in this year's political campaign.

Our primary military objective is to prevent the Russians from enslaving any more free people by force of arms. To dissuade them from this course, we have designed two types of military "deterrents," one for the big all-out nuclear war and the other for the limited war, nuclear or nonnuclear. Our big-war deterrent is based around the U.S. Air Force's Strategic Air Command, and, to a certain extent, the Navy's aircraft carriers. The small-war force, tailored to operate in conjunction with the soldiers of the country in which the conflict may arise, is beyond the scope of this report.

To be decisive, our big-war deterrent must be capable of pounding the Soviet Union with nuclear weapons until it yields or is reduced to radioactive ashes. While we held a monopoly on the atomic bomb, the task of maintaining this deterrent was relatively straightforward. We created the Strategic Air Command and equipped it with an alllet bomber fleet. After Russia achieved an atomic capability and showed indications of building a bomber force, the deterrent job for the big war became infinitely more complex. We had then to consider that if Russia launched an all-out war it would include a concerted attempt to nuclearize our SACcatch our bombers flatfooted on the ground. To insure our ability to survive this first blow and to lay Russia waste in a reflex, or "retaliatory," action required many expensive additional measures. We vastly increased our supply of bombs and bombers. The bomber force today numbers some 2,000 planes. We erected a massive air-defense-warning net and interception force of some 2,000 planes and a thin crust of Nike and Bomarc missiles. We dispersed SAC to bases the world over and supplied this network with instantaneous communications, infinitely reducing the chance of being caught by a surprise attack. These measures cost an estimated \$100 million.

Although he concerns us very much the average ictizen began to assume less importance in the deterrent equation. The goal was to prevent a war from happening, and the forces were tailored for that purpose. Thus city busting, and reduction of population by fallout and other fissionable byproducts, gave way to force and counterforce doctrine. Cities would get course, and people, too, by blast and fallout. But their simple destruction was no longer considered decisive. The important thing was to have a military force strong and wily enough to withstand a first blow, and retaliate with overwhelming effectiveness against the enemy's military force.

For many years the United States held an indisputable edge in this so-called delicate balance of terror. One reason was that the Russians did not build a large intercontinental bomber force. Each year our retaliatory capability increased until we had accumulated enough bombs and bombers to pulverize the Soviet Union 10 or 20 times over. Then, in the summer of 1957, the Russians launched an intercontinental ballistic missile. Although the Soviets were then a long way from completing an operational ICBM force of any size, we had to begin planning for this dramatic new factor in the delicate balance.

The greatest single impact of the ICBM was a vast compression of the time element. At first blush it seemed a decisive compression. With its speed the ICBM would give no warning of attack. There was no known counterweapon to the ICBM. In theory the Russians could launch a well coordinated, simultaneous attack not only on our cittes but also upon our deterrent bases, destroying everything within a matter of 30 minutes. Our air-defense system, geared to a bomber threat, was obsolete. Our overseas aircraft carriers and SAC bases, lying within reach of intermediate range ballistic missiles, became not an asset but a liability. Our massive bomber force, which our military had favored over ICBM development, appeared hopelessly inadequate in the missile age.

The obvious answer to so great a threat to our deterrent was twofold; first, to get our own missile force in place as rapidly as possible; second, to develop a means of detecting a Soviet missile attack soon enough to enable our bombers and missles to get into the air. We hurriedly stepped up production of our first-generation ICBM's, Atlas and Titan, striving for a maximum "15-minute reaction time." Next we laid down plans for a second-generation ICBM, Minuteman, with a reaction time of several minutes, and embarked on the Polaris seabased IRBM. At the same time we began building a missile-warning radar lineknown as BMEWS-across the top of the world. One-third of SAC's bombers were ordered into "cocked configuration"-bombedup and fueled, poised at the end of SAC runways, ready to go aloft in 15 minutes or less.

As our planners studied the problem, they realized that any hope of getting warning in time to launch our force before the Rus sion missiles landed was freighted with uncertainty. For one thing, warning devices are subject to jamming or obliteration and would obviously be the first objective of an Then there was the added enemy attack. problem of reaching the President and obtaining his decision to launch in time. We could hope for some warning, but the only safe way-conceding, as we must, the Russion first blow-was to design a missile-age deterrent force that could "ride out" that first blow and survive to retaliate. For our missile force this would require either secret launching areas or sites "hard" enough to weather the enemy attack. Secret bases were out of the question, so the planners studied the idea of putting missiles under-

This new view of deterrence appeared, at first glance, to render SAC's bomber fleet of greater liability than ever. The locations of our 50 bomber bases are well known. It is not feasible to "harden" a bomber base sufficient to weather an enemy missile attack. The best thing that could be said in favor of the bomber was that it could be launched hurriedly-and recalled in case it was all a dreadful mistake. But whether we liked it or not, we were stuck with 2,000 The Russians were given a missile bombers. Until such times as we "caught up," our bomber force was the only deterrent we had. If the Russians did build an ICBM force, the only sure way to protect our bombers would be to put part of them in the air on full-time "alert."

Could a bomber penetrate in the missile age? The answer from SAC was an unqualified "Yes." The offense, SAC says, traditionally holds a tremendous advantage. SAC points out that in 530,000 bomber sorties against the enemy in World War II, including many in flak-heavy areas—but many against no defense—the average attrition rate was only 1.8 percent. In "simulated" exercises against our own antibomber missiles, such as Nike-Ajax and Nike-Hercules, SAC invariably comes off the winner. With the added touch of a few American ICBM's falling into Russia like heavy artillery, destroying enemy radar-warning and communications systems, not 98.2 percent, but nevertheless a high

percentage of our bombers would get to the target. Fifty percent would be more than enough, SAC says.

To make certain, SAC has recently spent hundreds of millions improving the B-52. The latest model has considerably more range, which will enable it to reach many more targets in Russia. It is equipped with a bigger batch of radar-jamming electronics and decoy missiles, which it can fire off to confuse enemy detection equipment. Finally the B-52 is being fitted with two husky "Hound Dogs," air-to-ground nuclear missiles which will help the bomber blaze a path through the most concentrated enemy defenses. These improvements, with new bombing tactics, have greatly increased the efficiency and extended the life of the bomber.

To underestimate the ICBM could be fatal. To overestimate its effectiveness could be equally disastrous. Therefore, our military planners put the missile under a coldly objective microscope. Amidst the missile's great strengths, they found some surprising weeknesses. These are:

weaknesses. These are:

1. Missiles are not very reliable. Missiles are made up of hundreds of thousands of separate parts, and the failure of any one can cause it to go awry. In recent tests at Cape Canaveral missiles fired under laboratory conditions have achieved some remarkable reliability figures. Overall, however, the score has been on the low side. These tests are conducted in ideal weather, only after prolonged preparations by highly skilled engineers. The reliability rate of a missile in the hands of troops, under combat conditions, would be much lower. Perhaps for the next decade the best hope for any missile force is an average of 50 percent reliability.

2. Missiles have comparatively small warheads. The payload of an Atlas is about two megatons. The payload of Minuteman will be one-half megaton, and Polaris even smaller. By comparison, a B-52 bomber can carry something on the order of six or eight times the payload of the Atlas. Russian missiles have larger payloads because they have bigger rocket engines. But for some time the Soviet warhead will not exceed five megatons. A one-megaton blast may seem enough. But in considering military targets, especially those that have been protected, a difference between one and five megatons can make a decisive difference.

3. Missiles are not very accurate. At Cape Canaveral, under ideal conditions, we have achieved an impressive accuracy score with But the precise location of the target must be known. The shape of the earth, its wobble, magnetic field, winds and the relationship between one continent and the other-geodesy-are important. Many Russian targets are only imprecisely known. All these must be considered, as well as the intrinsic accuracy of the missile, which is measured, in military terms, by Circular Error Probable, or CEP. The CEP of Atlas at Cape Canaveral is about 2 miles or slightly less. But overall accuracy is a subject rarely discussed. Combining all the accuracy factors in terms of CEP. 2 miles would be remarkable for a missile fired under combat conditions. More reasonable figures would be a 5-mile CEP for our missiles, a 3-mile CEP for Soviet missiles.

4. Missiles are very expensive. The only realistic way to determine costs is to include the stupendous research and development tag every missile generates, plus an additional huge sum for bases. By this reckoning one combat-ready Atlas or Titan, for example, costs \$35 million. Minuteman, bought in quantity—over 500—will cost much less. A B-52 bomber, including research and development, now costs about \$14 million. In strictly economic terms, a B-52 can carry about six times the megaton yield of an Atlas to the target for about half the capital investment in the vehicle. A missile, of course, is a one-shot proposition. It cannot

be used again, nor can it be used on more than one target.

5. Vast numbers of missiles are needed to do the job. Today the accuracy, mechanical reliability and warhead yield of a missile can be assembled in a formula designed to measure the precise extent of the missile threat to a target or group of targets. An important factor in the formula is the degree of hardness of the target. All targets are divided roughly into three categories—soft, semihard, and hard. A soft target is one that is unprotected, such as a SAC bomber base or city. A semihard target is one shielded to some degree by reinforced concrete, such as a windowless office building. In the language of the planners a semihard target is capable of withstanding 25 pounds per square inch (p.s.i.) of pressure above normal atmospheric pressure. To the layman, this is a near miss. A hard target is an underground structure of concrete topped by a heavy layer of earth. It is capable of holding up under a withering 100-p.s.i. blast, or all but a direct hit.

One such formula, since refined, was published in the spring, 1958, edition of the Air University Quarterly Review by Air Force Col. Robert D. Bowers, now a member of the Joint Chiefs' Weapons Systems Evaluation Group. By this formula we see that the number of missiles required to kill—or insure 90-percent destruction of—a soft fixed target is relatively small. But as the fixed target is hardened, the requirement increases spectacularly. When a target is mobile, the requirement approaches infinity.

The number of targets and their hardness in our present and projected deterrent system has been published. Thus with the help of Colonel Bowers' formula, a slide rule and certain reasonable assumptions about Soviet missiles, it is possible to determine nearly the exact number of Soviet missiles required on a first strike to wipe out the United States deterrent. Assumptions about Russian missiles—those generally used by military planners—give them every benefit of the doubt. The Russian missile is presumed to have a warhead yield of 5 megatons, mechanical reliability of 50 percent and a CEP of 2 miles.

By the formula our present 50 SAC bases in the United States could be destroyed with 166 5-megaton missiles. The first Atlas squadrons, which are closely grouped and soft, would require about another 50 missiles, for a total of about 216. The additional Atlases and Titans, a total of 23 squadrons, mustering about 200 missiles on the firing line, are to be semihard and hard, and dispersed so that each missile in the squadron represents a separate target. kill the 1961 Atlas force of 3 semihard squadrons would take an additional 225 5megaton missiles. To knock out the com-plete Atlas force of 13 squadrons, scheduled to be completed in 1963, would take a grand total of about 1,600 5-megaton ICBM's. To destroy the 1963 force of 14 Titan squadrons, dispersed and hardened to 100 pounds per square inch, would require an additional 4,000 5-megaton ICBM's. When all 27 squadrons of Atlas and Titan are in place, the enemy's missile requirement to insure 90 percent destruction would be increased to more than 5,500 5-megaton ICBM's.
"Missile mathematics" is even more start-

"Missile mathematics" is even more startling when applied to the two additional U.S.
strategic-delivery systems scheduled for 1963,
Minuteman and Polaris. By the formula, the
seaborne Polaris, always on the move, nearly
defies destruction by missiles alone. In
theory, tens of thousands of missiles would
be required to kill one Polaris sub. Minuteman, which will be placed in hard underground silos—and perhaps mounted on moving railway cars—is almost as impressive.
Under present plans 400 Minutemen will be
buried in U.S. soil. To destroy 90 percent
of this force would take no less than 11,000

5-megaton enemy ICBM's. Thus, to render our modest missile deterrent impotent would require a grand total of some 16,000 enemy ICBM's. That many missiles, counting expensive warheads and bases, would cost perhaps \$500 billion.

The laws of missile mathematics apply to us, as an aggressor, as well as to the Russians. Unhapply they work to our disadvantage. The reason is twofold: Our warheads are smaller, and our knowledge of target location is imprecise and compounded by the associated problem of geodesy. In Bowers' formula, a slight decrease in warhead size and missile accuracy demands a substantial increase in numbers of missiles.

For example, if the Soviets attacked Europe and we wished to respond by launching a surprise attack on Russia, our missile requirement to insure 90 percent destruction of Soviet retaliatory missiles would be enormous. For example, if the Russians had only a small force of 200 missiles in hard sites, it conceivably might require 10,000 or 15,000 of our missiles to destroy them. Looking toward a day when the United States could pinpoint Russian missile targets and achieve 100 percent mechanical reliability with a 5-megaton warhead, it would still take something like 2,000 ICBM's to "kill" 200 hard Russian missile sites. To knock out conventional Soviet military forces would require additional missiles, depending on the hardness of the target and degree of dispersal. Thus we can never hope to destroy anything with our missiles except known soft Soviet targets-that is, cities.

In calculating the number of ICBM's needed to destroy the U.S. deterrent, we used numbers of missiles that apply to near-total destruction of our force, and thus near-zero risk to the Russians. This is, of course, merely a textbook exercise. If the Soviets actually reached a decision to attack us, they would no doubt already have determined to accept certain retaliatory damage. Because of the large numbers involved in reducing our missile force. it is conceivable that the Russians might ignore it altogether and concentrate on obliterating the manned-bomber fleet and our Thus an attack could be launched with far fewer missiles, depending on how much damage the Russians were willing to take on their cities. At the same time, we must realize that for the aggressor the figures are minimal mathematical computations. It is highly unlikely that any military commander, however eager, would launch an attack on so slim a margin. For example, mathematics demonstrates that only 166 ICBM's would be required to destroy 50 soft SAC bases. More likely the aggressor would demand double that number-or 332-before launching an attack. Thus the one fact offsets the other, and in the final analysis the textbook figures become a realistic yard-

When viewed in this light, the missile loses some of its glamor. In time, many of its mechanical weaknesses might be overcome. However, there are fixed factors which will never change. In sum, we see that for an aggressor against modest hardened defending missile force, large-almost prohibitive-numbers of missiles are required to launch an attack entirely free of a devastating counterattack. Because the United States will always be the defender, it is not only unnecessary to match an aggressor, missile for missile, but also foolhardy. By this reasoning, incredible as it may seem, our planned missile force may already be excessive. At the same time, as a retaliatory weapon in our arsenal, it would be disastrous to rely on the missile to do the whole job. As we have seen, the missile cannot deal at all with Soviet targets other than soft cities. The massive Soviet conventional military machine-Army, Navy, Air

Force—underground industry and perhaps most of the population, forewarned to shelters, could survive to fight on after the fallout had subsided.

After this hard analysis our massive bomber fleet was viewed differently. Far from being a liability or stopgap deterrent in the missile age, it seemed an incalculable asset. It proved a relief from the fixed laws of missile mathematics, lending flexibility, mobility and a big added punch to our deterrent system. If there was any warning at all-even a mysterious blackout of our warning system-the bomber could be launched and, if it was only a blown fuse, recalled. In the unlikely event of a catastrophic missile exchange, our missiles would get Soviet cities. But a surviving bomber fleet would be the only force capable of dealing decisively with surviving Soviet conventional military forces. With its big-loadcarrying, staying and restriking capability, the bomber force could also be used to blast hard enemy missile sites to preclude any further salvos. It would bring back some word of the progress of the grim battlehave they run up the white flag? Bombers would ferret out the last vestiges of enemy resistance and police the ashes of civilization. They would claim the hollow victory.

With no warning, to be capable of surviving the initial blow, it was already clear that the bomber force would have to be airborne in the face of a known enemy missile threat. Thus our planners made every effort to determine the extent of that threat-in short, Soviet ICBM production rates. The results were interesting. Following the first rocket-rattling in the fall of 1957, Soviet ICBM testing, curiously was suspended for a period of about 9 months. It was resumed in the spring of 1959 on a moderate scale of one, sometimes two, missiles a month. In early 1960 the Russians plopped two very long-range rockets into a Pacific testing ground. But overall the test rate was very slow. Hence our estimates of a Soviet ICBM readiness date were sharply cut back. To-day, even by the gloomiest administration predictions, the Soviets are still a long way from obtaining the margin required by Bowers' formula to launch a decisive missile attack against the United States. We have begun buying necessary spare parts, but SAC has not yet been placed on a full or partial air alert. But it will be ready any time the Soviet ICBM production rate moves into high gear.

Convinced then that the manned bomber was here to stay, Air Force planners turned their thoughts far into the future-to 1965 and beyond. They envisioned every conceivable situation. These included a time when the Soviet Union might have 10,000 or 15,000 ICBM's, buried in hard targets, zeroed in on U.S. cities and missile bases. A time when the Soviets might have no ICBM's at all, but a huge force of missile-launching nuclear submarines. A time when the Soviets might have a combination ICBM and mach 3 or mach 5 bomber force. A time when the Soviets might leapfrog to some unforeseeable weapon. No matter how they looked at the future, the planners still concluded that the United States could profit decisively by a manned-bomber force--for many of the same reasons that it is an incalculable asset between now and 1965.

Thus the Air Force pressed ahead with plans for its B-70 Valkyrie, a bomber which was eventually scheduled to replace the B-52. A contract—the last of the Air Force manned-combat-aircraft contracts—was awarded to North American Aviation, builders of the Sabrejet and the 4,000-mile-an-hour X-15 experimental rocket plane. Subcontracts were spread throughout the aviation industry. By last summer the plane—no dream—had advanced to preproduction mockup at a cost of \$360 million.

From a design standpoint, the B-70 represents an enormous technological jump over all existing military airplanes. It makes use of a revolutionary aeronautical advance called compression lift, which enables the bomber-about the same size as the B-52to cruise at mach 3 (2,000 miles per hour) for 7.000 miles nonstop. It is designed to ride on its own supersonic shock wave, like a hydroplane on its step. Using existing B-52 bases, it can reach any point on the globe in 6 hours-21/2 hours to most Soviet targets-carrying an impressive 20-ton payload, the equivalent of 6 Atlas or 10 Minuteman warheads. It can be fitted with air-toground missiles, decoys, and electronicjamming equipment, to enable it to penetrate from any point of the compass at subsonic speed on the deck, or 33 miles every 60 seconds at 80,000 feet. To stop the B-70 the Russians would have to build an entirely new air-defense system requiring a scientific effort on the scale of an ICBM developmentor better.

Then, last fall, came the stunning news that the B-70 program had been gutted to two experimental shells. The :eason advanced by the National Security Council was that the Valkyrie was competitive with Atlas, Tital, Polaris, and Minuteman, that it failed to measure up. President Eisenhower an-nounced this major shift from the mixed deterrent not in the state of the message but in a few lines in his budget message to wit: "* * * the need for the B-70 as a strategic weapon system is doubtful." In testimony before Congress Secretary of Defense Gates said the B-70 would require the development of new metals. Aeronautical engineers replied that this was simply not true. Most Washington strategists, including top-level air generals, confided privately that the B-70 was cut for purely economy reasons, and said, "If the President really understood the factors involved, it wouldn't have happened. The basic laws of missiles don't change day by day. What's true in the missile age today is true tomorrow.

These are times when every man has a right—indeed a duty—to probe for flaws in our deterrent shield. Thus many people of good will have seriously questioned the adequacy of our deterrent. Understandably confounded, administration critics, in their frustration, have demanded accelerated Atlas, Minuteman, and Polaris missile production, a defensive missile against an ICBM, immediate appropriations to place SAC into the air full time, a cancellation of Titan, and other extreme measures.

If all these suggestions—some politically inspired-are followed up, the air generals believe, we might well find ourselves overdressed, facing the wrong threat at the wrong time with the wrong weapons. The Congress has been trying to make an honest appraisal of our national defense in the budget hearings, delving into this weapon and that, dealing with a bewildering array of proposals and counterproposals. As the air generals see it, this is a futile exercise conducted by men preoccupied with other matters (such as a \$140,000 appropriation to the Air Force for diaper service). What's needed, they think, is a new special investigation by a handpicked blue-ribbon committee, which could hear witnesses such as Colonel Bowers and other specialists of the missile-age deterrent, in a completely dispassionate nonpolitical atmosphere, with full disclosure of the missile facts by the administration. In such an investigation the air generals believe that not the last but the first point of business ought to be a reexamination of the gutting of the B-70. Says one, "If the present administration's stand on manned bombers is indeed sound, its stand on the B-70 is indefensible."

Jobs After 40

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1960

Mr. HOSMER. Mr. Speaker, persuasive reasons why workers over 40 should not be discriminated against were set out by Albert Q. Maisel in the American Weekly several years ago. These reasons still are valid and the Maisel article deserves not to be forgotten. The following is a condensation which appeared in the Catholic Digest:

THROUGH AT DJ-INDUSTRY IS SAWING OFF THE BRANCH ON WHICH IT IS SITTING

(By Albert Q. Maisel)

He was a well-dressed, dignified man who had never before found it hard to put his ideas over convincingly. But as he sat uncomfortably before an interviewer's desk in an office of the New York State Employment Service, his words came hesitantly. He had been hunting a job for nearly 5 months, and had found nothing.

John Jones (that's not his real name, of course) had lost his position when a merger swallowed up the drug manufacturing firm for which he had worked for 14 years. He described his record: As an honor student at college, as chief pharmacist at a hospital, as a "detail man" introducing new drugs to physicians, and as supervisor of a dozen other pharmaceutical detailers.

There was more than a hint of desperation in his voice as he named the salary he would accept, a third less than he had earned before. But when he finished, the interviewer smiled encouragingly, and lifted a card from her file. "You've got exactly the experience these people are looking for," she told him as she reached for her telephone.

Seconds later she was-describing him to a personnel director. "Yes, he has his own car," Jones heard her say. "Yes, he lives out on Long Island and knows every physician and druggist in the territory. His age? Let's see. Oh, yes—he was 41 last December."

For a fleeting moment Jones' eyes had been aglow with hope and anticipation. Then he heard the interviewer saying, "But won't you even see him?" And his shoulders drooped as he realized that once again he had been denied the chance to be considered for a job that he knew he could have filled to perfection.

to perfection.
"I'm terribly sorry," the interviewer explained. "I should have remembered that they have an ironclad rule against hiring any new employee who is over 40."

Fantastic? Irrational? Disgraceful? Of course. But shockingly true. What happened to John Jones is happening every day to scores of thousands of men and women. At 45, 40, 35, sometimes at 30, they are discovering that they have become too old to meet the arbitrary hiring-age barriers erected by more than half of all employers.

Mind you, I am not talking about incompetence, not pleading for neurotics who can't get along with supervisors or fellow employees. I am not defending job jumpers who quit whenever a whim strikes them. My concern (and, I hope, yours) is with the innumerable talented, experienced men and women who, in the face of a desperate shortage of skilled personnel, are being routinely refused even an interview, solely because of the accident of their dates of birth.

The age bias could hit you just as disastrously as it hits them, through no fault

of your own, if a merger, business failure, or introduction of automatic machinery suddenly wiped out the job you've held for warrs.

In New York City, for example, changes in shopping habits have compelled three large department stores to close within the last two years. Each time, almost 1,000 employees were thrown out of work. Each time, the younger workers, with but a few years of experience, were quickly offered jobs by other big stores. But almost all the others, men, and women with 15- and 20-year records as star salespeople, found themselves on the scrap heap.

"When the Namm-Loeser Brooklyn store closed, nearly 600 of its older workers registered with us," Janet O. Wolfe, manager of the commercial and sales office of the New York State Employment Service, told me. "In nearly a year we've managed to place only a handful of these skilled people. The rest? Most are still haunting the personnel offices and getting nothing but an occasional part-time job. But a number of them, rebuffed over and over, have completely cracked up."

In Michigan, in 1956, automation enabled one of the big auto makers to boost production in its stamping shops by fully 300 percent. As a result, an independent stamping plant lost its contract and was forced to close down, throwing 5,000 men out of work.

For most of the younger men it meant only a short layoff; other manufacturers bid against one another in a wild scramble to hire them. But the unemployment benefits of most workers between 35 and 50 were exhausted before they could find new positions.

Even then the lucklest of these victims of age discrimination had to accept wage cuts of from 25 to 50 percent to get any work at all. And a full year after the disaster had struck them 1,000 of the older workers were still without employment.

In 1951 an analysis of 4,374 "Help wanted, male" ads in a New York City daily revealed that 38.2 percent carried age restrictions. Last year U.S. Labor Department officials found that the proportion of want ads limiting job opportunities to workers under 45 had skyrocketed to nearly 60 percent.

had skyrocketed to nearly 60 percent.

Often the iron curtain against age descends far sooner than that. A typical Los Angeles advertiser, for example, demands "Researchers on defense project; B.S. degree plus 5 years' minimum experience; age 27-35."

A large manufacturing plant near Chicago seeks "Machinists, experience all phases of setup on planers, millers, shapers; must be under 30."

Thousands of similar ads, casually barring mature workers as if they were doddering has-beens, appear every day. But such open admissions of age bias tell only a part of the whole ugly story. Confidential hiring orders to employment agencies are even more often discriminatory. Last spring, for instance, the U.S. Department of Labor sponsored a study of more than 21,000 such job orders received during a single month by the State employment services in 7 cities. In Detroit, more than two-thirds of all jobs were tagged "older workers needn't apply." In Miami, 73 percent of job orders set rigid age limitations. In Minneapolis and St. Paul, age restrictions accompanied more than three-quarters of all requests for new

In Philadelphia, the City of Brotherly Love, fully 79 percent of all employers were barring men and women in their middle 40's from all hope of employment. In all seven metropolitan districts, one hiring order out of every five set the maximum age for new employees at 35 or lower.

Is there any real excuse for this cruel discrimination? Why does industry, so effi-

cient in everything else, so flagrantly waste skill, talent, and experience?

For more than 4 months I have hunted for a logical answer to these questions. I have interviewed scores of personnel directors, sales managers, production executives, and company presidents. Like everyone else who has studied the problem, I've listened to a host of reasons. But every last one has turned out to be not a reason at all, but merely an excuse based upon myths, old wives' tales, half-truths, and raw, ugly prejudice.

Typical was the answer of the personnel director of a metalworking firm with more than 5,000 employees. "I hate to turn down an older man," he told me. "But you can't get over the fact that after 40 they slow down. If we didn't set a hiring age limit, our production costs would climb sky high."

This same reason was cited by more than 4 out of every 10 employers interviewed by the Department of Labor in its recent sevencity survey. But is it really a fact?

The National Association of Manufacturers tried to find out, 6 years ago, through a study of more than 3,000 companies employing more than 3 million people. And 93 percent of the firms reported that workers 40 and older were equal or superior to younger workers.

More recently, when the Bureau of National Affairs asked the personnel and industrial relations executives of 196 large companies, "Are your older workers less efficient?" three out of every four of these men responded with a loud "No!"

Researchers from Temple University recently queried 97 Pennsylvania companies employing 1,000 or more workers each. On quantity of production, more than 60 percent of the firms rated their older employees as "average or above average." More than 90 percent of the companies said that older men turned out finer work, had far lower spoilage rates, and far fewer rejects.

Another favorite excuse centers about the charge that older workers are inflexible and unimaginative, and have trouble getting along with younger men. But when the Bureau of National Affairs asked executives whether they had any great difficulty supervising the work of older men in their own plants, 81 percent of the officials from large companies replied, "Not at all," and 90 percent of the executives from companies with fewer than 1,000 employees gave the same emphatic answer.

The University of Illinois survey dealt with workers over 60, presumably the crankiest and most inflexible. Yet 59 percent of their supervisors reported that the older men got along just as well with their foremen and their fellow employees as did the majority of younger men.

In fact, study after study has shown that the work attitudes of people over 40 are measurably better than those of youngsters. Prentice-Hall, Inc., a book-publishing concern, surveyed a cross section of companies ranging in size from 100 to 50,000 employees. Seventy-six percent of the firms, reported that general dependability was greater among the older men. Not a single company claimed that younger men deserved a better rating.

One excuse for hiring only youngsters is that absenteeism is far more common among older workers. But what are the facts?

Among women it is predominantly the young, unmarried ones who phone in to plead a "headache" after a too-late date with the boy friend. Among men it is again predominantly the youngsters who turn up on Tuesday or Wednesday after a weekend bender.

In fact, when the Bureau of Labor Statistics studied the timecards of more than 16,000 male employees in 109 manufacturing plants, it found that men over 40 had a 20

percent better attendance record than younger workers. In Chicago, when a leading de-partment store checked its files, it discovered that absenteeism was 35 percent higher among its younger saleswomen than among those over 50.

"We need young trainees who will stay with us for many years," one crewcut personnel man, himself just recently out of the trainee class, told me. "If we hired people over 40, half of them wouldn't stay on the payroll long enough to justify their training costs."

But who are really the job jumpers? To find the truth the Labor Department analyzed nearly 2 million job-separation records. The quit rate of men in their twenties and thirties turned out to be nearly three times higher than that of workers

What about the charge that older workers have more accidents? Bunk again. It's the inexperienced youngsters who leap before they look who end up in the hospital. Workers over 45, a Federal survey of 18,700 employees recently revealed, actually have 2.5 percent fewer disabling injuries and 25 percent fewer nondisabling injuries than those in the younger age brackets.

As for sickness, mature workers have a far better record than their juniors. Visits to plant clinics for headaches, colds, and similar ailments are most common in the 20-34 age group, least frequent among those over 50. In a study of more than 9,000 steelworkers, men with 25 or more years of service were sick enough to be hospitalized only half as often as were the younger men.

No matter what other reasons they recite for denying jobs to mature workers, almost all who practice age discrimination eventually fall back upon the argument that higher insurance and pension costs make it too expensive to hire anyone on the wrong side of 40. But this alibi has been thoroughly exploded by an extensive study conducted for the Department of Labor by a committee of 19 pension and insurance experts.

To provide \$3,500 group life insurance for a worker hired at 55, this committee noted, would cost an employer only 2 cents more per hour than for a man of 30. "Tax deductions and dividend credits," the report added, "would reduce this cost to 1 cent an

hour or less."

Workmen's compensation rates the committee reminded industry, are based upon each employer's accident record, not upon the age of his workers. Health and accident insurance policies likewise are not generally affected by the age of the employee. "Sickness and accident insurance costs," the report declares, "may actually be lower for employees in the older age groups, since their dependents are fewer and maternity is no longer a significant hazard."

When he hires an older worker, the employer is seldom expected to pile up as large a pension for him in 5 or 10 years as would be accumulated for a younger man over a period of 25 to 35 years. The employer makes the same contributions for both-so many cents per hour or per dollar earned. The older man, of course, gets a smaller supplementary pension when he retires. But that is far better than being barred from employment and getting no income at all.

The experts' report was published more than 2 years ago. Yet many an employment manager still uses the old pension cost

argument.

What is the price we all are paying for this callous squandering of precious skills

and trained minds?

For the victims of the process, age barriers spell shattered lives. For millions more of us the threat of finding ourselves all washed up in the prime of life poses a haunting fear for the future.

But for all of us, whether we be employees, the self-employed or employers, the insidious growth of age discrimination involves an even greater threat to our futures. Already

we are all paying higher taxes to provide unemployment benefits and relief payments to the competent workers that industry is

needlessly discarding.
Yet these vast expenses are but the beginning of the toll. For as long as we permit men and women of 45, and even 35, to be barred from employment solely because of their age, we are leaving the way wide open for the rise of an explosive political movement that will make the "ham and eggs," the "\$30 every Thursday," and the Townsend plan of the 1930's seem like Sunday School picnics.

"The older worker," New York State Senator Thomas C. Desmond has warned us, "is tired of hearing about the problem of age discrimination. He wants something done about it. There are millions of people between 40 and 65 whose livelihood is jeopardized by the discriminatory use of the crude, unreliable index of age as a measure of capacity. The frustrations of the older worker can find release in a wild handout movement that will engulf the stability of our entire economic order."

"If economic life becomes too hard for the over-40's," says Secretary of Labor James P. Mitchell, "they will form the most potent pressure group this Nation has ever known and force some kind of public program for their survival. This is a problem industry must face immediately. Will it find places for them-and make profits from their production-or will it wait to be taxed much more heavily than now in order to sustain them as nonworkers?"

Where We Stand in Space

EXTENSION OF REMARKS OF

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 18, 1960

Mr. BOWLES. Mr. Speaker, one of the most effective and hard-working Members of the House is my good friend and distinguished colleague from the First Congressional District of Connecticut, the Honorable Emilio Q. Daddario.

"MIM" DADDARIO long ago acquired a habit of attaining distinction in anything he attempts. From his college days at Wesleyan University in Middletown, Conn., where he became one of Weslevan's alltime star athletes, he proceeded to compile an enviable military record in World War II with the Office of Strategic Services. In the postwar period, he became mayor of Middletown and later judge of the Middletown municipal court. With the outbreak of the Korean conflict, he returned to military service, this time in the Far East, again compiling a distinguished record.

As a member of the Committee on Science and Astronautics, "MIM" DAD-DARIO has made significant contributions to the pioneering work of this group. His grasp of the difficult and complex problems of the exploration and development of outer space are clearly shown in an article he has written for the May 1960 issue of the Wesleyan University Alumnus, entitled "Where We Stand in Under leave to extend my re-Space." marks, I call the article to the earnest attention of my colleagues. The text

WHERE WE STAND IN SPACE (By Hon, EMILIO Q. DADDARIO)

The exploration of space and the development of its use for service to man is a major responsibility of Congress and its Committee on Science and Astronautics. Because we are not the only nation so interested, a race for space has been created with every success or failure tallied on the chart of world public opinion. We cannot ignore so great a challenge. Involving as it does both the military survival of the Nation and its economic well-being, it demands an ultimate effort. This is a capsule report on the outlook as it appears to me after studying reports and listening to statements by our scientists, military leaders, and industrialists as presented to the Committee on Science and Astronautics, of which I am a member.

MAN IN SPACE

There is great public interest in the project to put man himself into space. This represents a new frontier, one without limit, unlike the vanished frontiers of the earth's surface. It is too early to say whether putting man into space in this manner will have immediate economic or military significance, but no one can doubt the psychological impact in the world power struggle, or the ultimate consequences both for military development and for scientific and economic endeavor.

Putting man into space successfully for any length of time is the culmination and synthesis of a great amount of our modern scientific knowledge and technical achievement. It involves reliable propulsion, ma-terials of remarkable qualities, intricate guidance and communications, and a collection of environment controls to overcome the absence of air, the presence of radiation, weightlessness, and the fierce heat of reentry. It also requires a vast system of ground support including tracking and computing facilities and effective recovery means. have all this combined and made to work reliably is a major undertaking resting on the base of billions of dollars of research, development, and testing.

As of this date it is difficult to predict

with certainty whether it will be the United States or the Soviet Union which first achieves the successful orbiting and recovery of a man in a ballistic capsule. It would not be surprising if the Russians do it first. This is because they have had larger rocket powerplants for a longer period of time, and because they early pursued a vigorous and highly successful program of biological experiments in space which have included the successful recovery of living animals from some very ambitious vertical probes into

The U.S. effort is centered in Project Mercury. Although it has its limitations, it represents our first important hope for success. It is well thought out and is proceeding in an orderly way at a very high level of priority.

Particular public interest has centered on the seven chosen astronauts. Having met these young men, I can assure you that they are skilled and dedicated, and that they will bring this country success if it is within the capabilities of man.

No positive timetable can be given on such an experimental program. However, tentative goal is to make the first ballistictype attempt with a modified Redstone carrying the capsule and astronaut some time this year. If all goes well, it may be possible to orbit a man in 1961. It is most likely that he will orbit the earth three times in a period of 4 hours and then skip down from outer space into the upper atmosphere, beginning over the Pacific, crossing the continental limits of the United States, and landing in the Atlantic Ocean.

Follow-on projects at various stages of development or study include Dyna-Soar,

which in advanced versions will orbit a man, and allow some choice as to point of landing through use of a winged glider reentry instead of the straight ballistic fall with blunt nosecone and parachute as intended with Mercury. Farther away but under study are manned space stations and ultimate expeditions to the Moon, Venus, and Mars.

COMMUNICATIONS SATELLITES

One of the earliest and surest payoffs from our space research is in the area of space communications. The most compelling urgency is to have a sure system of worldwide communications. The volume of military messages being far in excess of our commercial traffic illustrates the importance of communications to our national security. We know how vulnerable most of our communication channels are from solar disturbances and how terrible the consequences would be in this missile age if immediate commands could not be passed between headquarters and our strategic forces both on airfields and in the air the world over. and how our defensive tracking and command systems also can falter when communications become difficult. Ordinary communication channels are not only over-Ordinary crowded, but can blank out for days, and yet military requirements call for instantaneous

These are the compelling arguments advanced for putting the first generations of communications satellites called Project Notus under the control of the Defense Department. Project Notus includes several parts: Project Courier will be an improvement of the Project Score Atlas which carried the President's voice and teletypewriter messages around the world in December 1958. It is called a delayed repeater active satellite because its taperecorders pick up messages for delivery on command from the ground at a later time. Project Steer will be somewhat similar, but will relay messages instantane-It offers the opporously by rebroadcast. tunity for developing virtually jamproof, sunstorm-proof line of sight narrow beam signal transmission. Project Decree will come about when we have more powerful launching vehicles to place the real time repeater satellite 22,300 miles over the Equator so that its speed in orbit matches the rotation of the earth exactly enough to hold it with minor corrections in fixed position relative to the surface of the Earth. Three properly spaced equatorial orbit satellites will allow line of sight communication to all except the extreme polar regions. All these devices are practical, but will call for careful design to create reliability of circuits and a durable power supply from either solar cells or a nuclear source of energy whether isotopic battery or a miniature reactor with heat exchanges, turbine, and generator.

While we are waiting for these military projects to reach perfection, the National Aeronautics and Space Administration will be pursuing the passive relay of signals by placing large reflecting objects in orbit against which anyone may bounce signals just as the Navy is bouncing signals off the surface of the Moon. This passive satellite relay is called Project Echo and will include the placing and inflating of exceedingly thin 100-foot-diameter metal-coated plastic balloons into orbit. It is planned that these balloons will stay in orbit for a time before they gradually slow and are destroyed on reentry to the upper atmosphere.

Once urgent military needs have been cared for, and perhaps partly in parallel, we are going to see a commercial use of communications satellites. The research for this is already underway among the big telephone, cable, and radio companies. The reasons are fairly simple. Not only can such links be free from the delays of solar activity, but they offer many more channels through which information can be

poured. Satellites will prove cheaper than laying more ocean cables, will provide many additional channels, and will make intercontinental television a practical thing. As of today pictures sent live across the Atlantic take hours of broadcasting and taping to produce a few minutes of pictures and the results are hardly satisfactory for regular or instantaneous use.

In contrast, the satellite planned for Project Decree will be able to carry 300 voice channels or two television channels through the 8,000 pounds of weight in orbit. This project should be a going thing, in less than 5 years, and will be just the beginning, for one industrial company has plans for an advanced satellite capable of relaying 50,000 voice messages simultaneously. Once the big 1.5 million pound thrust Saturn booster is perfected, stations of this type can be placed in orbit.

The needs for high capacity are very great. The National Aeronautics and Space Administration has shown that there were 1.5 million oversea telephone messages in 1950, that 3 million are expected this year, and that the saturation capacity of slightly over 4 million messages will be reached by 1962. By 1970 the number of messages could rise to 21 million if facilities were provided. Since no cables are planned to keep up with this project demand, communication satellites will be a virtual necessity during the present decade. The present two Atlantic cables carry only 36 voice channels each. Compared with the estimate above as to what satellites will do, one can envision the kind of "quantum jump" which is coming in our contacts with the rest of the world. deed, it was Arthur Clarke, author of "The Exploration of Space," who suggested to my committee that the first nation to achieve a practical television satellite might set the universal language for all the world. will exert a force on the course of history far greater than ever previously experienced.

WEATHER SATELLITES

Although not a commercial project in itself, the weather satellite is likely to exercise a profound influence on the world economy within a decade. Leading weather experts have said that the United States alone may realize benefits from this one type of satellite in excess of \$4 billion a year. Such a saving would be more than enough to pay for the entire space program.

The weather satellite is still an experimental device and is under development by the National Aeronautics and Space Administration under the code Project Tiros. This will be followed by the more sophisticated Project Nimbus. Success here will give continuous reports on cloud cover, heat balance, solar activity, and many other related matters. Weathermen on the ground can then feed the worldwide information into computers and complete studies now based greatly on theory. Only then will we begin to have reliable weather reports useful to agriculture and industry in a definitive way.

The weather satellite will have military uses as well. For example, when reconnaissance military satellites are able to broadcast the immediate position of ships at sea to missile launching pads, these ships will lose some of their present invulnerability. Information from weather satellites relayed to ships will give them cloud cover reports allowing them to keep out of sight much of the time, and thus reduce their vulnerability.

NAVIGATION SATELLITES

The Navy in particular has a very keen interest in a navigation satellite called Project Transit. In effect it will become a manmade radio star which regardless of weather can be sighted through instruments and very exact readings on location can be made through the Doppler shift of signals as it passes. It is expected that these devices will be available within 2 years to guide ships

and Polaris submarines at a cost well below the presently maintained long-distance range stations. Their signals will also have practical commercial value and will be available to other countries as well.

VEHICLE FAMILIES

My discussion above is largely in terms of the important end uses which are coming most immediately. Equally significant is the development of the launching vehicles themselves.

Ballistic missile experience is the foundation of by far the largest part of our space effort. Powered with the H-1 rocket engine, the Atlas, Thor, and Jupiter have put up all but the nominal payloads of the Vanguards and the early Explorer satellites. However, the relatively limited Vanguards and Explorers of the 1958 period have provided components for the upper stages of the more versatile vehicles of the present. Still better is the new Agena second stage for use on either Thor or Atlas. It has been placing 1,700-pound Discoverer engineering test satellites into polar orbit.

The Agena B version which will be ready presently will have a restart capability in space. This development will be essential to attaining the controlled and circular orbits in space needed for the communications and other advanced satellite applications. An additional improvement because of the greater efficiency of hydrogen as a fuel will be the Centaur upper stage. This will have important military assignments and also will provide the first significant capability for lunar soft landings of instruments and interplanetary probes.

However ingenious we are with improved upper stages, our present total lifting capacity will be limited to that possible with our largest launching booster, the Atlas. Atlas has a thrust of 360,000 pounds, only about half that used for the first three sputniks and first three lunik Soviet rockets. This gives a clue to the importance of Saturn, a clustered arrangement of eight H-1 engines of the type used by our present boosters, and expected to give a first stage thrust of close to 1.5 million pounds.

Along with the big booster are to come super upper stages fueled with hydrogen, and delivering in final version 800,000 pounds of thrust for the second stage, tapering to a fifth Centaur stage. This ultimate arrangement is the kind which will carry men around the moon and perhaps support a landing there. Such landings are feasible with our present technology within a decade.

Saturn is not the end of the line in booster development. Some funding has been given the F-1 engine, to deliver from a single chamber 1.5 million pounds of thrust. With clustering in the Nova concept, we may see as many as 12 million pounds of thrust made available, the basis for a manned round trip to Mars.

Many people close to the work also wish we were pushing with more speed on Project Rover. This is a nuclear heat exchanger rocket already ground-tested which will ultimately increase tenfold the payload that can be sent on interplanetary missions. Here is an opportunity for a significant surge ahead in space for the United States.

Another possibility in the nuclear field is Project Orion, a nuclear bomb propulsion system which would propel a spaceship by firing a sequence of modest-sized nuclear weapons. Enthusiasts see the opportunity for lifting literally thousands of tons of payload by this means.

Electrical propulsion development is showing another important gain for interplanetary work. These may include electrostatically accelerated ions or electromagnetically accelerated plasmas.

All of these plans will see much further development and some applications within the next decade or two, the speed being largely a matter of how much support we give to the work.

IMPLICATIONS OF SPACE DEVELOPMENT

There is not room here to develop the full implications of our entry into the space age. I have reviewed in general terms some of the applications which will come in our spacework and the vehicles which will carry out these tasks. We must realize that our needs for scientific discovery are linked with space research and that our success in meeting these challenges affects our status as a world leader in the eyes of people all over the globe. There is no doubt that we have at this moment the technical ability and the industrial skill to accomplish leaps ahead in space. We also have the inherent abilities and skills in government and in the universities. It will all take a combination of time, money, and good management. In the background there must be attention to scientific education and training, and an understanding of the importance of this program extending far beyond the current funding of the particular projects being developed.

My review would not be complete without a clear recognition that however we may wish to dedicate space to peaceful uses and to practical applications which are financially self-supporting, there are some very urgent military aspects as well. Quite aside from the ballistic weapons which are becoming for the immediate future the mainstay of the nuclear deterrent of both the United States and the Soviet Union, space has an immediate and urgent significance of military concern. The Midas infrared detector for satellite observation of any mislaunchings, and the Samos photographic, television, and electronic ferret satellite for advance warning of military activity represent key projects which involve our very survival. They represent a means to have sufficient warning of any sneak attack on this country which may in fact rule out such sneak attack as being a practical strategy to use against us. Civil defense and retaliatory strikes are back in the picture to a worthwhile degree if we could have even a full half hour of warning from Midas. The present hoped for 10 to 15 minutes of warning is almost meaningless. Modern defense involves many complex issues and forces, and space development is inseparable from consideration of our defense.

There remains the very real hope that space activity in some form will eventually rule out the waste of military preparations, and may serve as a unifying force in human endeavors. This is something for which we should all fervently hope. Meanwhile we have no real choice but to do our best to increase our understanding of the space environment and to increase the skill to use this environment. These are goals worthy of man's best efforts and high faculties.

Veterans Life Insurance

EXTENSION OF REMARKS

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 18, 1960

Mr. MADDEN. Mr. Speaker, I have been receiving a number of letters from my district regarding the right of the World War II and Korean veterans to reapply for national service life insurance which was terminated on April 25, 1951. I feel these veterans have a just

cause and hope that favorable action can be secured on pending legislation by the House Veterans Committee and the Congress before adjournment.

The following is a resolution passed by the Hessville Community Service Post 232, the American Legion, Hammond,

Ind.:

RESOLUTION—HESSVILLE COMMUNITY SERVICE POST 232, THE AMERICAN LEGION, HAM-MOND, IND.

Whereas the right of World War II veterans to reapply for national service life insurance ended on April 25, 1951, and Korean veterans had only 120 days after separation from the Armed Forces in which to apply for said insurance; and

to apply for said insurance; and Whereas readjustment and economic problems made it extremely difficult for many worthy veterans to maintain their national service life insurance or to take advantage of early opportunties to secure the insurance, and because now, with advancing age and growing family responsibilities, they desperately need the insurance protection; and

Whereas three bills are now before the House Veterans' Affairs Committee which would accomplish the purpose of providing a limited opportunity for one year for veterans to secure national service life insurance; and

Whereas the three pending bills are described and enumerated as H.R. 4305, H.R. 5437 and H.R. 10407, and said bills should be reported out favorably by the House Veterans' Affairs Committee: Now, therefore, be it

Resolved, That a resolution be passed requesting Congressman Ray J. Madden and Congressman E. Ross Adars, both from the State of Indiana, to do all they can to have the aforementioned House bills reported out favorably from committee, and to support said bills on through final passage; it is further

Resolved, That copies of this resolution be sent to Congressman RAY J. MADDEN and Congressman E. Ross ADAIR, with a letter requesting their cooperation in the passage of this veterans' legislation.

This resolution passed unanimously by the membership of the aforesaid American Le-

gion Post 232, May 10, 1960.

Judge Advocate, Hessville Community
Service Post 232, the American Legion, Department of Indiana.

Letter From Constituent on Post Office Advertising

EXTENSION OF REMARKS

HON. HAMER H. BUDGE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1960

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks in the Record, I include the text of a letter recently received from a constitutent of my congressional district:

In reading newspaper items I notice that Postmaster General Summerfield is screaming to high heaven about the niggardly attitude of Congress toward his appropriations and asking for various and sundry increases,

I ride the bus downtown each day going to work. Having nothing better to do, I look over the advertising signs that are placed in these buses. I am just wondering what these various types of advertising cost if the same ratio prevails over the entire United States. The buses I ride have for the Post Office alone four different types of advertising: (1) "Certified Mail"; (2) "Stamp Containers"; (3) "Wrap Right"; (4) "Air Mail Service." How much does this cost over the United States and what good does it do? The Post Office is not the only one. The Navy, for example, has three different types of ads in these buses. Another one is "Launch Hope"; another is "U.S. Savings Bonds"; another, "World Refugee"; another, "Radio Free Europe." This is just a few of them that appear in the buses alone. I am just wondering who pays for all of these things.

Personally, I think if we cut out all of the public relations departments in these various Government agencies and not let these "squirrel heads" run loose that we could save a lot of money for the taxpayers of the country. I can't understand why these various departments have to have a lot of high-priced public relations departments to carry on an activity at the taxpayers' expense to promote their ideas which may or may not be good. If the Government has a good program on any subject, I am sure it does not take the public long to be apprised of it without the high-priced, long-haired public relations people to try to sell the idea at taxpayers' expense.

Newspapermen Must Warm Themselves by Their Own Fires

EXTENSION OF REMARKS

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Friday, May 6, 1960

Mr. ROBISON. Mr. Speaker, all of us in public life are naturally concerned with the responsibility of our Nation's press. A view of this problem, from the community service aspect is this article, titled "Community Leadership," which was written by Fred W. Stein, editor and general manager of the Binghamton Press and the Sunday Press, at the request of Sigma Delta Chi, national professional journalistic fraternity. The article, herewith condensed, was published in the April issue of "The Quill," the fraternity's publication, and was the fifth in a series on journalistic ethics compiled by the SDX Committee on Ethics.

(By Fred W. Stein)

Every city has its own personality. Every city is a complex, sometimes confusing, blend of virtues and evil, success and failure, hope and despair. The task of portraying this municipal personality is the almost insurmountable job of the newspaper.

Most editors would agree that the only hope of accomplishing this lies in telling the readers the whole story, in illuminating fairly and accurately every situation, every incident that concerns the city. The difficulties and differences arise, however, in the application of this concept.

Where does coverage begin? How deep should the newspaper probe? Are there occasions on which the newspaper performs a greater public service by withholding information than publishing it?

For years newspapers generally have pointed at real and imagined corruption in their cities. Sometimes their motives have been pure. Sometimes not. The role of Jack the Giant Killer comes easily to most newspapermen. Some have filled it with distinction. But many newspapers—perhaps even most—are still regarded with some public suspicion. Often, they are suspected of irresponsibility, bred of a taste for sensationalism and a desire to sell more newspapers.

To some extent, the critics are right. In their desire to catch the reader's roving eye, many newspapers place an inflated value on the flashy, frivolous story at the expense of responsible coverage of their community's

life.

These are the publishers and editors who regard expedience and easy appeals to sentiment and sensationalism as the sure route to success. In their desire to make friends and score high on the profit-and-loss sheet, these editors and publishers are inviting the criticism that their newspapers are creatures of caprice, and without conscience.

A newspaper can be only as good as its publisher and editors demand. They set its tone and its attitudes. Theirs are the

values the newspaper reflects.

True, it is a paradox of the business that a newspaper makes few friends when really doing its best work.

The critics are loudest when a newspaper is chasing down hints of deep corruption or exposing the seamier side of community life. Yet, this is the way a successful and in-

fluential newspaper is created.

A few years ago when my own staff wrote broadly and often of our suspicions of municipal corruption, we were tagged as "carpies." There are those who said we were giving the city a bad name. For a long time we stood alone. It took a few years and a series of gangland murders to awaken the community. And it was only after lengthy official investigation, trial and conviction that the community was convinced.

We are, perhaps, still unloved. But we never have hoped for affection, only respect.

At its best, a newspaperman's life is lonely. As Time Editor Thomas Griffith recently wrote: "Newspapermen must warm themselves by their own fires."

There is probably no newspaper which cannot point with pride to some worthy campaign it carried on, against great odds and in the face of public abuse. But rather than pride themselves on achievements, newspapers might better consider worthy

causes long ignored.

There is a tendency on the part of some editors and publishers to flinch at the cost—in time and money and effort—of pinning down reports of official misbehavior. Instead, they look elsewhere for easier and cheaper tasks. Thus, they pass up their opportunity to perform at their greatest capacity.

It is often worthwhile—though sometimes expensive—to look behind some vague but seemingly unsavory situation, or into the background of some important but little-known individual whose power seems inconsistent with his position. Occasionally, there will be no immediate reward. But the eventual payoff might be a bonanza.

Such was our experience in 1952 when we cut loose a reporter to look into the background of a mysterious man of wealth whose influence in the community was growing. His name was mentioned with awe by the petty racketeers of the city. Yet he wined and dined with people of substance.

Six months of legwork shed some light on the man the whole country came to know as Joseph Barbara, host at the Apalachin convention of the country's most notorious hoodlums. Barbara's record carried only one conviction and that was a petty affair, 22 years old. Our investigation led us to believe beyond doubt that Barbara was high up the the national crime syndicate.

Through our efforts, we built up a portfolio of information and frustration. It appeared on the surface that Barbara had lived down his shadowy past. A threat of libel hung over us if we were to base a series of stories on long-forgotten arrests and notquite-solid evidence of Barbara's close connections with the elite of the underworld.

We never stopped trying to find a way to break the Barbara story without appearing to have viciously dredged up the shady past of an extremely successful businessman who was doing a great job of living down his wild youth.

In 1954, we thought we had found the answer. We persuaded the State liquor authority to look into Barbara's fitness to hold a wholesale beer license. The SLA started a proceeding and we were able to use some of the information we had collected a few years before.

But, as occasionally happens, we had chosen a bad time. The SLA moved slowly and before the proceeding had progressed very far, there was a change in State administrations. The newcomers were not interested in Barbara.

Our day finally came on that fateful November afternoon in 1957 when police broke up Barbara's barbecue. The mystery man was a mystery no longer. His afternoon on the green with his friends of the underworld made him fair game.

Our Barbara investigation was not a complete success insofar as we were unable to tell the story properly until the underworld meeting. But its value atili was great if for no other reason than that it provided us with the background to understand and make the proper judgments of events and individuals connected with Barbara.

In those uncertain hours after the Apalachin convention, our special knowledge was used to orient scores of newspapers throughout the country of the real significance of the underworld gathering.

The Barbara affair, and cases like it, open up an important ethical problem: Should a newspaper, under any circumstances, work with law enforcement agencies as my newspaper worked with the State liquor authority?

Convinced though we were that Barbara should be exposed, libel experts expressed sympathy for our convictions but warned that the lack of solid legal evidence might lead us into an expensive libel suit.

Clearly, the weapon needed to break open the Barbara case was the power of subpena. Our investigation had led us to believe that Barbara had concealed his criminal record in obtaining his wholesale beer distributors' license. If our information was right, Barbara had provided the SLA with the grounds on which to revoke his license. A revocation proceeding by the SLA would provide the newspaper with the opportunity to explore all facets of Barbara's background, with at least a good chance of avoiding a libel suit.

In dealing with any law enforcement agency, a newspaper should exercise great caution. It should work at arm's length and be careful that it is not covering up corruption worse than it is trying to expose. It must avoid commitments that could compromise the newspaper. It is a job that should be assigned a skilled reporter who is mindful of every possible pitfall.

If handled improperly, this newspaperpolice relationship can lead to great embarrassments for the newspaper. But it seems too, that arbitrarily to reject this avenue of action is to accept defeat when success is

It is not only on the big crime stories that newspapers occasionally fumble. And it is certainly true that in the coverage of lesser crime stories, many newspapers encounter the greatest temptation to buckle and withhold a story.

Having decided where coverage begins, a newspaper cannot waver. Everything above the line must be covered. We believe that

coverage of all drunken driving cases in our own community is a greater deterrent than the fines offenders generally receive.

It is, however, in the particular type of case that the greatest pressures are exerted, the strongest pleas to "humaneness" are made. "Why," we are often asked, "do we ruin some otherwise outstanding citizen who made the simple mistake of driving with one too many under his belt?"

Our answer is that we will continue to publish such stories as long as we can walk into a courtroom and hear a defendant say, "I don't mind the fine, but does this have to get into the newspaper?"

The policy, especially in the smaller cities, must be absolute. A single exception convicts the newspaper of favortism and deceit-

fulness.

A similar determined attitude toward cases of sudden death often bring angry charges of crueity.

This is particularly so in suicides. Still, it would seem faithless for a newspaper to provide less than complete coverage of the findings of a public official with the inherently tremendous powers of a coroner.

It would seem preferable to expose the newspaper to occasional harsh charges from an individual or a small group than to supply the environment of silence in which murder could be officially regarded as natural death, and suicide an accident.

Of course, no responsible editor can deny that there are occasions—very rare indeed—when a newspaper should withhold a story. The example that comes to mind is the one involving the parents of a kidnap victim who are in contact with the kidnaper. The parents without exception are warned against contacting police or the newspapers, Also, without exception, the parents do contact police, and it is only a matter of hours until newspapers learn of the kidnaping.

It would appear that in such cases there are times when a newspaper would best serve the public interest and perhaps avoid a murder by a panicky kidnaper—by witholding its information of the case for a time.

There are very few occasions in any editor's life when he properly should withhold a story. Certainly, no inflexible rule could be devised to fit even these few situations. Each incident should be studied carefully, judged on its own merits and the story withheld only when the damage of premature publication is obviously beyond all argument.

As has happened since the first newspaper was printed, requests to withhold or go easy on news stories still come from advertisers, who seek to justify their requests solely on the grounds that they are advertisers.

Few editors would argue with the theory that an advertiser's personal wishes should be ignored and that the story should be judged only on its merits as news.

Sadly, too many newspapers still heed an advertiser's whims, or, worse, an advertiser's warnings of reprisal if a certain story is published.

While requests to withhold a story usually are made to editors and publishers, it is the reporter who generally is the target for suggestions that some unpleasant or untidy situation be overlooked by the newspaper.

Often, these suggestions carry carefully veiled hints that the reporter will be rewarded for his oversight. Reporters, however, are a unique lot, and few succumb. They are a dedicated group who work in a business where the pay is low compared to the qualities of intelligence, experience, energy and judgment they must bring to it.

The proffered "rewards" for things undone usually take some subtle form—the special privilege, the "complimentary pass" to some exclusive group or organization.

Today's would-be donor of special privileges is too cagey to attempt to exact from a newsman any firm commitment on future behavior. Instead, the complimentary pass and special privilege are forms of silent brainwashing that carry with them the implicit hope that the newsman will "go easy" if ever the day comes when the donor finds himself in some embarrassment.

Sometimes the most destructive pressures on a reporter emanate from his own editor

or publisher.

The reporter soon becomes jaundiced who realizes his newspaper's targets are hand-picked. He firts with cynicism when he detects a publisher's reluctance to hold both political parties to the same standards of performance.

The editor or publisher who lets his news evaluation be swayed by the opinions of his country club friends or allows private business interests outside the newspaper to color his editorial judgment, will fill his city room and disillusion and distrust.

In the fields of political and city hall reporting, many otherwise mediocre newspapers do well. In part, this is because so many newspapers—by tradition—concentrate on these fields. It also is true that there are relatively easy areas in which to

do an acceptable job.

The day of the plug-hat, ward-heeling politician is thankfully behind us in most cities. His place has been taken by men of both political parties who, for the most part, are genuinely trying to grapple with the multiplicity of problems confronting the American city—rising juvenile crime, mushrooming slums, oppressive traffic congestion, and the exodus of business to the suburbs.

The newspaper's opportunity to do exceptional work in municipal affairs appears today to be in depth reporting—in learning and reporting the reasons for the problems, the significance of the problems.

Here lies today's overriding question of ethics for newspapermen. Will the publisher and editor try to attract readers by large, whipped-cream servings of frivolity and flash?

Or will they assemble an able staff, and demand the expert and responsible coverage which can bring them prestige, respect and, I believe, the financial success needed to sustain such an operation?

If this is their choice, their communities cannot help but be better for it.

Are There Wholesale and Retail Ethical Standards?

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1960

Mr. MULTER. Mr. Speaker, I have heretofore placed in the Congressional Record the views of Reform Jewry against capital punishment. I am now pleased to commend to the attention of our colleagues the following timely editorial by Rabbi Harry Halpern, former president of the United Synagogues of America, representing conservative Jewry in this country. The editorial appeared in the Bulletin of the East Midwood Jewish Center, May 6, 1960, issue:

FROM WHERE I STAND

No event in the life of the human family is of greater importance than the birth of a baby. Its arrival is awaited for months and its appearance is greeted with unbounded joy. Hope wrapped in a blanket, purpose reclining in a crib—such is the newly born infant, upon which the tenderest care is lavished. The miracle of life is this before which we stand in awe.

If there is anything which religion has taught, it is the sacredness of human life. To preserve it we expend great effort, even if the life involved is that of the humblest person. Yet, with all our concern for life we find nothing contradictory in dropping a poisonous pellet whose fumes wipe out the existence of a fellow creature.

One man in California has been put to death. What is the value of one insignificant human being in the midst of the world's teeming millions? The answer of Judaism is to be found in a rabbinic utterance to the effect that he who destroys one soul is like one who destroys the whole world. It is not a question of how many perish but rather the principle of taking human life which is of tremendous importance.

What makes it right for a State to do that which is illegal and morally wrong if done by an individual? Are there wholesale and re-

tail ethical standards?

But, it may be said, the legal killing of an individual, by the constituted authorities of the State, is justifiable because it achieves a higher end. What does it achieve? It will higher end. What does it accurately deter others from committing crimes, say some. However, experience over a period of time proves beyond a doubt that this is not true. The criminal must be punished, say others. But must punishment take the form of death? Does it achieve anything else but satisfy a lust for the blood of a human being as the only means of atoning for wrongdoing? Do we adequately consider the unfortunate elements which went into making a felon out of a person like ourselves? If the purpose of punishment be rehabilitation, how does one rehabilitate a corpse? Shall we, then, permit wrongdoers to go scot free? By no means. If it is desirable that malefactors be restrained from doing further harm, then we have prisons where, for a longer or shorter term, such persons may be incarcerated.

Does someone say that the Bible itself teaches capital punishment in the injunction to take "an eye for an eye"? But what many, aye, most people do not realize is that this law was so restricted and hemmed in with qualifications as to render it completely inoperative. The Talmud tells us that a court which passed the sentence of death on a person once in 70 years was called a murderous court. Human life was and is too sacred to us to wipe it out in self-righteous indigna-

Chessman is dead: Is our conscience in the same condition?

This Is No Political Issue

EXTENSION OF REMARKS

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1960

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include therein an editorial from the Rochester (N.H.) Courier, of May 5, 1960, entitled "This Is No Political Issue":

THIS IS NO POLITICAL ISSUE

The Committee of One Million (Against the Admission of Communist China to the United Nations) has called upon all Members of Congress to endorse its Red China plank and urge its inclusion in the platforms of both parties.

The proposed text, submitted to all Senators and Representatives by Warren R. Austin, first U.S. Ambassador to the U.N. and Joseph C. Grew, formerly U.S. Ambassador to Japan and Under Secretary of State, reads as follows:

"We continue to oppose the seating of Communist China in the United Nations, thus upholding international morality and keeping faith with the thousands of American youths who gave their lives fighting Communist aggression in Korea. To seat a Communist China which defies, by word and deed, the principles of the U.N. Charter would be to betray the letter, violate the spirit, and subvert the purposes of that Charter. We further continue to oppose U.S. diplomatic recognition or any other steps that would build the power and prestige of the Chinese Communist regime to the detriment of our friends and allies in Asia and of our national security. Any such action would break faith with our dead and the unfortunate Americans still wrongfully imprisoned by Communist China and would dishearten our friends and allies in Asia whose continued will to resist Communist China's pressures and blandishments is so vital to our own security interests in that part of the world."

In submitting this proposal, the two elder statesmen noted that a similar recommendation had been made to the Congress in 1956 and expressed their pleasure that it had been adopted in the national platforms of both parties. This bipartisan action, they said, reflected the sentiment of the overwhelming majority of the American people.

It should also be called to the attention of the Congressmen (and to all concerned with platform writing), however, that in 1956 both parties ducked the issue of diplomatic recognition of Red China by the United States. To repeat this evasion, and to fall again to register opposition to these international bandits, both at the U.N. and in Washington could only be interpreted by Mao and Khrushchev as a further deterioration of the American backbone.

The committee's plank admits of no deletions. It requires no rewriting. If true Americans are standing guard on the Republican and Democratic national platform committees, there will be none.

A Good Example To Follow

EXTENSION OF REMARKS

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. PUCINSKI. Mr. Speaker, last week I had the pleasure of attending what I believe was a historic meeting of Local 1031, International Brotherhood of Electrical Workers Union, in Chicago, whose president is Mr. Frank Darling.

So far as I know, local 1031 is the first union in America to provide for its retired members hospital and surgical insurance, which they otherwise could not afford and which will be paid for out of union dues.

Much has been said in the recent past about the lack of democracy in unions. On the basis of my own personal observations, no such charge could be lodged against local 1031, which used 29 voting machines to conduct a secret election on a proposal to raise the union's dues 50 cents a month with which to provide this insurance for its retired members.

The proposal was approved by an overwhelming vote of approximately 6 to 1, and it is indeed encouraging to see the members of a union show such humane concern for their retired members, who otherwise would be denied surgical and hospital care in their older years.

The membership of this union is fully aware that Congress is now studying various proposals to provide surgical and hospital care for our senior citizens. I think it can be an inspiration to all of us to see that this organization did not wait for the Federal Government to act, but rather until such time as a Federal program is agreed upon, it has undertaken the responsibility of providing for the care of its retired members through its own resources.

In discussing the proposal, Mr. Darling made it eminently clear that many small unions throughout the country are not financially capable of taking similar action and that the action of his own union was in no way intended to serve as a deterrent to the responsibility which rests with Congress to provide a plan for our Nation's senior citizens. But it is refreshing to see this union recognize its responsibility to its older members without waiting for Federal action.

I recall the many assaults against decent unions that were voiced here in this Chamber last year, during the debate on the labor-management reform bill. I wish that every Member of Congress could have seen democracy at work at this meeting of local 1031, when each member's individual right to express himself in a secret ballot on this proposal was respected by the union's leadership.

I believe Mr. Darling is to be congratulated for initiating this action in his union. It was obvious to me in observing the voting on this proposal that the large turnout of members who participated in this meeting reflects the high regard the members of local 1031 have for Mr. Darling and the rest of the officers of his local.

Those who have been so severe in their criticism of the labor movement and who have repeatedly refused to acknowledge the fact that the abuses of the few in no way reflect the decent conduct of the overwhelming majority of unions in this country, could learn a great deal by observing the conduct of local 1031.

Together with my remarks I should like to include an excerpt from a bulletin put out by Harry C. Herman, of New York, entitled "Executive's Labor Report" which is published weekly for the Nation's top industrial executives. This publication caters primarily to the Nation's largest industries and could hardly be called a prolabor publication. Significantly, in this bulletin of May 2, the "Executive's Labor Report" describes Frank Darling as "one of labor's most original innovators."

Here is how this particular publication described the action of Mr. Darling's union regarding surgical and medical care for its senior citizens:

The Darling plan, which is the first to our knowledge in America for a major industrial union, provides hospitalization and medical

care upon retirement for the rest of the members' lives. It starts in 1960.

But this is not the astonishing part. Here is the big twist:

The entire and complete cost of this program will be borne by the union. No dues during this time or any other costs are required.

In order to qualify to receive such hospitalization and medical care, a member must have a total membership period of 10 years or more, be employed in any local 1031 shop after reaching the age of 60, be 65 years old or more, and retire at 65 or more.

The proposed insurance coverage is to be \$15 per day hospital expense, up to \$300 surgical expense, up to \$150 for medicines, X-rays, ambulance, etc., and doctor visits of \$5 for each visit a doctor makes to either the member's home or a hospital, and \$3 for each visit the member makes to a doctor's office starting with the third such visit and with a maximum of 50 visits in any illness.

The plan will apply to any member who has paid dues to local 1031 for 10 years or more, regardless of the number of companies any such member may have worked for

during that period.

It further provides that local 1031 will give any member who otherwise qualifies and retired during 1959, who was 65 or more, such an insurance policy at no cost to the retired member even though the plan does not formally go into effect until 1960.

When checking around the country for the effects of such a plan among labor leaders and industrialists, it was interesting to this observer that reaction was unanimously enthusiastic by both.

The bulletin quite appropriately includes a salute to Frank Darling, "Chicago's most unusual labor man—we need more like him."

This action taken by local 1031, I believe, will undoubtedly inspire other unions to take similar action until such time as Congress recognizes its responsibility and provides an adequate program to care for the Nation's senior citizens.

I should like to add my own warm congratulations to Frank Darling and to his membership, which showed such good judgment in solving a serious problem for its senior members. I feel confident that the action taken by local 1031 will provide a stimulus for other organizations to follow suit.

Law Observance and Enforcement Coordination

EXTENSION OF REMARKS

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1960

Mr. TOLL. Mr. Speaker, I again direct the attention of the Members to a program sponsored by the Philadelphia chapter of the Federal Bar Association in the field of law observance and enforcement, which I feel will get results in our communities as the various agencies gather to participate in the schedule of activities. On May 13 a conference was held in the Philadelphia Quartermaster Depot, which included the leading Federal and local enforcement offi-

cials. The following news release and list of those who attended indicate the scope and interest which have developed in this field:

LAW ENFORCERS GATHER TO COMBAT CRIME AND PROMOTE RESPECT FOR LAW

Members of law enforcement agencies gathered together today at the Philadelphia Quartermaster Depot in what promises to be an historic conference for the purpose of enhancing coordination of their activities and to promote respect for law.

The meeting, sponsored by the Federal Bar Association (Philadelphia chapter) Law Observance Committee under the chairmanship of Harry D. Shargel, brought together representatives of all the law enforcement agencies in this area as well as Hon. Walter E, Allesandroni, the U.S. attorney, Hon. Victor H. Blanc, the district attorney, and Mrs. Lois G. Forer, deputy staff attorney general. Also present, as observers, were Judge Earl Chudoff of the Common Pleas Court, Dr. E. Preston Sharp, executive director of the Youth Study Center, and Dalibor W. Kralovec of the Philadelphia school system. Maj. Gen. Webster Anderson, commanding general of the Philadelphia Quartermaster Depot was host to the conference.

The conferees exchanged information relative to their functions and agreed upon fullest cordination of their activities to improve the effectiveness of the law enforcement agencies in the prevention of crime and the apprehension of criminals. They also agreed to seek the cooperation of the public to promote respect for law and law enforcement agencies. To this end the law enforcement agencies will increase cooperation with the schools and would expand their community relation program to make the public better aware of their capacity and accomplishments.

The consensus of the meeting was that in-adequate facilities were being provided for the correction and detention of juvenile delinquents; that mentally ill children were being improperly treated as legal problems rather than as mental problems; that the mixing of mentally ill children with delinquents complicated the treatment of each to the detriment of both; and that the public should be urged to visit the Youth Study Center so as to become aware of the problems and assist in obtaining corrective action. pamphlet is to be prepared describing the functions of the various law enforcement agencies so that all may be made fully aware of the cooperative services available from each. It was also noted that there is a dearth of college courses concerned with police administration and it was agreed to endeavor to induce colleges to offer a full 4-year course leading to a degree in police administration. As an interim measure the conference agreed to explore the establishment of seminars on the subject.

It was agreed that more coordination con-

It was agreed that more coordination conferences were desirable and that the next meeting should be held soon at the Youth Study Center at which time the problems of dealing with juvenile delinquents would receive special emphasis.

Within the next few weeks new posters urging respect for law will be placed on the rear of Yellow Cabs and in P.T.C. vehicles.

LAW OBSERVANCE AND ENFORCEMENT COORDI-NATION CONFERENCE, PHILADELPHIA QUAR-TERMASTER DEPOT, MAY 13, 1960

SPONSOR

The Law Observance Committee and the Interagency Committee of the Philadelphia Chapter of the Federal Bar Assoication, Harry D. Shargel, chalrman.

HOST

Donnell K. Wolverton, general counsel, Military Clothing and Textile Supply Agency, Philadelphia Quartermaster Depot.

Walter E. Alessandroni, U.S. attorney, eastern district of Pennsylvania.

Alcohol and Tobacco Tax, Internal Revenue Service, Louis DeCarlo, Assistant Reglonal Commissioner.

Anti-Trust Division, U.S. Department of Justice, John E. Sarbaugh, attorney.

Attorney general, Pennsylvania, Lois G.

Forer, deputy attorney general.

Board of education, Philadelphia, Dalibor W. Kralovec, assistant director in charge of safety education.

Coast Guard, Capt. Henry U. Scholl, captain of the port of Philadelphia, Lt. Comdr. Rayner C. Burke, Lt. Comdr. William A. May-

Court of common pleas, Judge Earl Chudoff, Joseph Litvin.

Customs, John Hansell.

District attorney, Philadelphia, Victor Blanc, district attorney; Paul Chalfin, first

assistant district attorney.

Federal Bar Association, Al S. Harzenstein, national vice president; Harry D. Schargel, chairman law observance committee and interagency coordination committee; Herman R. Testan, treasurer; Russell J. Borden, program chairman.

Federal Bureau of Investigation, Fred A. Frohbose, agent in charge; Norris S. Harzenstein, field supervisor.

Federal Bureau of Narcotics, Joseph Bran-

sky, district supervisor.
Immigration and Naturalization Service, Henry T. Kamen, assistant district director. Intelligence Division, Internal Revenue Service, Wesley Craig, assistant regional commissioner.

Philadelphia Quartermaster Depot, Donnell K. Wolverton, general counsel; Lt. Col. Henry Bassetti, provost marshal.

Police Department, Philadelphia, Edward

Schriver, staff inspector.

Police Department, Pennsylvania, Capt. Walter E. Price.

Postal inspector, Wilfred A. Miner, postal inspector in charge.

Secret Service, Joseph P. Jordan, agent in

U.S. attorney, eastern district of Pennsylvania, Walter E. Alessandroni, U.S. attorney; Joseph L. McGlynn, Jr., first assistant U.S. attorney.

Youth study center, Dr. E. Preston Sharp, executive director.

Resolution Regarding the Future of the Mexican Agricultural Worker Importation Program

> EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter and resolution received from Rev. Cameron P. Hall, executive director, National Council of the Churches of Christ in the U.S.A., 475 Riverside Drive, New York:

NATIONAL COUNCIL OF THE CHURCHES OF CHRIST IN THE U.S.A. New York, N.Y., May 17, 1960.

Hon. THOMAS J. LANE, U.S. House of Representatives, Washington, D.C.

Dear Congressman Lane: I enclose a recent action of the general board of the Na-

tional Council of Churches entitled, "Resolution Regarding the Future of the Mexican Agricultural Worker Importatio (Public Law 78, 82d Congress)." Importation Program

This resolution was adopted on February 25 of this year, and reflects the long ex-perience of the National Council of Churches through its ministry to migrants which has led us to the conviction that the Mexican farm worker importation program should not be extended in the form provided under present Public Law 78, but should be gradually eliminated with corrective amendments for the interim period.

I am sending this to you for your infor-mation on a matter of public interest be-fore the Congress at this time. If your busy schedule permits, we would appreciate re ceiving your comment on the principles embodied in this resolution.

Sincerely yours,

CAMERON P HALL

RESOLUTION REGARDING THE FUTURE OF THE MEXICAN AGRICULTURAL WORKER IMPORTA-TION PROGRAM (PUBLIC LAW 78, 82D CONG.). ADOPTED BY THE GENERAL BOARD OF NA-TIONAL COUNCIL OF THE CHURCHES CHRIST IN THE U.S.A., FEBRUARY 25, 1960

Whereas Public Law 78 (82d Cong.) providing for the importation of agricultural workers from the Republic of Mexico will expire on June 30, 1961 unless extended by Congress; and

Whereas the present practice of our Government in authorizing the importation of Mexican nationals for agricultural labor in the United States involves human and ethical issues of grave concern to the conscience of Christian people; namely:

(a) The importation program has injurious effects on the family and community life both of the Mexican nationals who are imported and of the domestic workers who, because of the presence of Mexican nationals, are deprived of employment or find it necessary to migrate in search of employment;

(b) Importation tends to produce a labor surplus thereby depressing wages and labor standards for domestic agricultural workers; and even if the United States has failed to make the necessary adjustments to enable all farmers to secure an equitable share of the national income there is no moral justification for perpetuation of substandard wages for agricultural labor; and

Whereas the general board of the National Council of Churches has, from time to time, adopted policy positions which are relevant to this situation: 1 Therefore be it

Resolved, That the general board of the National Council of the Churches of Christ in the United States of America is opposed to the extension of Public Law 78 (82d Conin its present form; but, to avoid hardships on employers and workers who have come to rely on this program, we ap-

1 Pertinent National Council statements:

"We believe that churches should support measures intended to provide more effective utilization of domestic seasonal labor; the importation of foreign workers only when necessary to supplement the domestic labor supply, with adequate provision made for their welfare; the discouragement of the practices of importing foreign workers from economically depressed areas as a means of their rehabilitation, with emphasis instead on the encouragement of efforts such as the point 4 program." ("The Church and the Agricultural Migrants," Statement by the general board, Sept. 19, 1951.)

"A violation of the Christian concept of justice exists in the fact that wage workers in agriculture are denied most of the legal and economic protections long accorded to wage workers in industry." ("Ethical Goals for Agricultural Policy," statement by the general board, June 4, 1958.)

prove the extension of the farm labor importation program (Public Law 78) in amended form for a temporary period with a specific date of final termination and with definite provisions for annual reductions in volume written into the act:

Furthermore, even for this period of transition, we recommend that amendments be adopted designed to bring about the following improvements in the legislation:

- (a) Limitation of the program to temporary labor shortage situations and to unskilled, nonmachine jobs;
- (b) Assurance that diligent efforts have been made by both employers and the Bureau of Employment Security of the Department of Labor to recruit domestic labor at a wage adequate for health and welfare before any certification of need for Mexican nationals is made by the Department;
- (c) Removal of the "certification of need" procedures as fully as possible from undue local pressure by growers;
- (d) Determination of prevailing wage rates for Mexican nationals by the Depart-ment of Labor at a level that will not depress wages which might be offered to domestic workers or prevent their seeking such employment;
- (e) Inclusion in the law of specific provisions with respect to promulgation of rules and regulations by the Secretary of Labor which will insure observance of the intent of the law; and adequate provision for en-forcement including authorization of suffi-cient inspection and enforcement personnel, and appropriate penalties for violations;
- (f) Establishment of an appeal procedure available to growers or workers where findings of violation are made; be it further

Resolved, That in taking this position we recognize that certain other aspects of our national policy are intertwined with the operation of the Mexican importation program and that we recognize that a responsible policy which provides for early termination of that program must also come to grips with the following related issues:

- (a) The necessity of providing adequate enforcement of the immigration laws on the Mexican border to prevent resurgence of the vast influx of so-called wetbacks of a few years ago and strict interpretation of the provisions of the immigration laws so as to prevent circumvention of the termination of the Mexican importation program;
- (b) The readiness of the U.S. Government develop, with the Mexican Government, such programs of economic and technical aid as may be required at least to offset any injury the Mexican economy may suffer from the termination of the Mexican importation program: be it further

Resolved, That the general board authorize representatives of the National Council of Churches to testify at hearings in respect to Public Law 78 (82d Congress) along lines indicated above.

Critics of Spy Work Not Very Well Informed

EXTENSION OF REMARKS OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 18, 1960

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following article from the Peoria Journal Star, May 16, 1960: WORLD AFFAIRS-CRITICS OF SPY WORK NOT LAWS AND RULES FOR PUBLICATION OF VERY WELL INFORMED

(By David Lawrence)

WASHINGTON .- Some of the comments being made currently on the U.S. plane that went down in Russia are stranger than the incident itself.

Thus, it is being lamented that the incident happened just before the summit conference, as if this were something inopportune. Actually, it would have been most unfortunate if the episode had occurred after the summit conference. For then a long time would have elapsed before the matter could have been disposed of by the governments concerned at a subsequent summit show

It is also being asserted that the President should have known in detail every minute of the day what missions were planned for every pilot in the farflung operations of the United States overseas, so that this particular flight could have been canceled. is precisely what the Communists desireto halt all defense operations by the Allies, including information gathering, while they themselves pursue their customary infiltration and spying projects.

It is obvious that many of the critics either are naive or just don't understand the importance of intelligence work in a period like the present. To say that the President should have known about the Powers' flight or similar projects so as to be able to turn them on or off at will is to attribute to the Presidency superhuman responsibilities. The concept of such flights has, of course, been discussed at the top level and a policy

General authority to carry them on was delegated. The U.S. Government, under this or any other administration, is not likely to be lulled into the dangerous attitude that, while diplomats talk, all weapons must be grounded and America must take the chance of being subjected to surprise attack with missiles that carry nuclear weapons.

Fortunately, criticism from Congress is more restrained and sensible. The administration has again and again briefed members of both parties in secret about intelligence activities. These are delicate operations, but the advantages outweigh the disadvantages, risks must be taken because the

stakes are high-the defense of the United States.

Both sides are engaged in spying. Khrushchev talks in righteous tones as if the Communists do nothing on this score. important revelation, however, has just been made. It is disclosed that the Czechoslovak Embassy in Washington is the center of a ring. The military attaché of the Embassy defected recently and gave the whole story to the House Committee on Un-American Activities. His testimony has just been released by the committee

The Soviet Union undoubtedly uses all of Its satellite embassies for espionage work. If spying is to be abolished, it will be necessary to abolish the satellite legations. The

House committee in a recent report says:
"The facts brought out in this report make it crystal clear that Communist embassies, consulates, U.N. delegations, trade and other missions have been, and are presently, used as legal covers for international Communist spy rings. There is no reason to believe that their use for this purpose will ever be discontinued by the arch conspirators in the Kremlin."

But somehow, when the Communists do the spying and congressional committees expose it, this hasn't been front-page news. Moscow wins propaganda victories primarily because the truth about Soviet espionage and infiltration in the cold war rarely gets attention and is brushed aside by too many Deople here and in Britain as just so much "McCarthyism." THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES .- The Joint Committee on Printing shall have control of the arrangement and style of the Congres-SIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unneces bulk, and shall provide for the publication of an index of the Congressional RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUS-TRATIONS, MAPS, DIAGRAMS .- No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

- 1. Arrangement of the daily Record .- The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: Provided, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered
- 2. Type and style.—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the Congressional Record, in 71/2 -point type; and all matter included in the remarks speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 61/2-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.
- 3. Return of manuscript.-When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.
- 4. Tabular matter.-The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.
- 5. Proof furnished .- Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the Record style of type, and not more than

six sets of proofs may be furnished to Members without charge.

6. Notation of withheld remarks.-If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. - addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

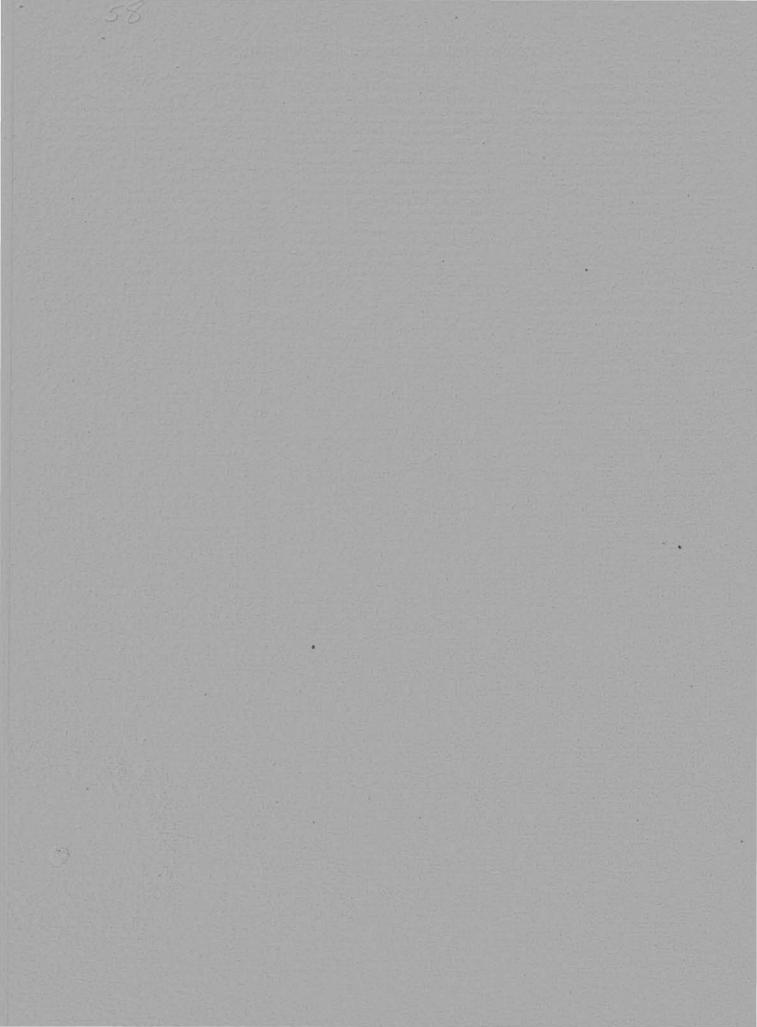

7. Thirty-day limit.-The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. Corrections .- The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days. unless otherwise ordered by the committee: Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the Congressional Record the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to

apply to conference reports.

- 10. Appendix to daily Record.—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.
- 11. Estimate of cost.—No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or with-out individual headings, shall be considered as a single extension and the two-page, rule shall apply. The Public Printer or the Off tak Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the Congressional RECORD which is in contravention of this paragraph.
- 12. Official Reporters .- The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Export Drive Not Enough

EXTENSION OF REMARKS OF

HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

Mr. MOORE. Mr. Speaker, as we move forward in 1960 and watch the trend of our foreign trade, both as to exports and imports, I am not seized with the degree of optimism that seems to pervade the halls of the trade-promoting departments of the Government.

It is true that our exports have increased approximately 21 percent in the first quarter of 1960 compared with a year ago while imports have increased only 10 percent. This no doubt is better than a further decline in exports would have been but the increase is not all of what it appears on the surface to be. A good part of the increase came in raw cotton exports. This increase in turn was attributable in great part if not altogether to the lift in the export subsidy from 6 cents to 8 cents per pound.

To the extent that we look to agricultural exports to bail us out we should not overlook the fact that these exports are heavily susbidized and cannot be used as a gage of our general export situation. In the fiscal year 1958-59 slightly over 57 percent of agricultural exports moved under some sort of governmental assistance program, such as subsidies, sales for foreign currencies, grants and loans. Only 43 percent was sold under straight commercial transactions by private exporters.

As for the greater increase in exports than in imports we should also remember that in 1959 exports were at a point well below the peak while imports were at their highest level in history. In 1959 our imports were higher by nearly \$21/2 billion than in 1957, the previous high. Exports were some \$3 billion below their peak.

The 10 percent increase in imports in the first quarter of this year compared With 1959 therefore means that imports are invading our territory or rising in old territory; whereas the increase in exports represents recapture of lost ground.

Mr. Speaker, on the question of export and import trends, short-term samples may be deceptive. I was interested in seeing these trends traced from the late twenties to the present day as was done recently in a statement in which was reviewed the effects of the trade agreements program.

One of the conclusions of greatest interest was that the dollars we send abroad do not necessarily come back in a short time or soon enough to right our

unbalanced trade situation. This fact has been highlighted not only by the outflow of gold but by the heavy claims on our dollars held abroad. These claims exceed the amount of gold remaining in Fort Knox.

Under leave to extend my remarks I offer this statement at this point in the RECORD. The author of the statement is O. R. Strackbein, who as chairman of the Nation-Wide Committee on Import-Export Policy, has kept in close touch with the foreign trade trends of this country. I commend his analysis and review to all Members who are interested in our foreign trade policy. The statement follows:

OUR FAILING FOREIGN TRADE POLICY

About all that holds our foreign trade program together today is imported baling

This program has been under so much stress and strain and has been patched up so many times that it bears little recemblance to the original model and the original

The present foreign trade policy had its roots in the so-called Reciprocal Trade Agreements Act of 1934. That act came in response to widespread feelings that in order escape the great depression we must rebuild foreign markets for our goods. Our exports had declined from an \$4.7 billion per year in the 1925-30 period to the low level of just under \$2 billion annual average in the 1931-35 period. This was a decline of about 60 percent in dollar value.

We needed desperately to do something that would put people back to work. If we could kick our exports back to their previous levels we would employ more people in the export industries. More workers would go back to their jobs in Detroit (automobiles). Pittsburgh (steel and electrical equipment), Chicago (packing house products), Akron (rubber tires), and other industries centers, We would also sell more cotton, tobacco, wheat, and fruits abroad.

It was argued that the reason for the decline in our exports was to be found in the monstrous Hawley-Smoot Tariff Act of The rates were held to be unconscionably high. The average tariff on dutiable goods during the 1931-35 period was a shade above 50 percent. (This has been reduced to approximately 11 percent at the present time.)

Because the rates were high-it was eagerly pointed out by great seers-other countries found it most difficult to sell in this market. Therefore they could not earn the dollars necessary to buy our exports goods in greater volume. In turn, therefore, our exports could not be revived to give emoployment to more people. It was thought that dollars earned abroad would surely come back to us in the form of demand for our products.

Obviously the thing to do was to reduce our tariffs in return for the reduction of tariffs and other obstructions to trade by other countries. Dismantling of our high tariff wall would permit other countries to ship into this country more freely. They would then have more dollars to use in buying our exports; and that was what we

Such was the philosophy of the Trade Agreements Act of 1934. The President was authorized by Congress to lower our duties on imports up to 50 percent in return for similar concessions by other countries. These exchanges of mutual reduction of trade barriers were to be accomplished by means of foreign trade agreements negotiated by the Department of State. In 1945, after a series of bilateral trade agreements had already been made, Congress authorized the President to make another 50 percent cut on top of the cuts that had already been

made.

By 1947 some 29 trade agreements had been made with individual countries. Our tariff had already been reduced materially; but the Department of State evidently felt that the process was too slow and in that year negotiated the General Agreement on Tariffs and Trade at Geneva with some 21 other countries. This became known as GATT from the initials of the agreement, and went into effect on January 1, 1948. The general agreement was followed by other multilateral conferences, one in Annecy, France, in 1949, one at Torquay, England, in 1950-51 and one in Geneva in 1955 and 1956. Another conference awaits convening later this year under authorization of the President to make an additional cut in tariffs up to 20 percent. The 1955-56 conferences utilized authority for a 15 percent reduc-

As indicated above, these various tariff reductions, together with a rise in prices, has brought the average American duty on dutiable imports down to about 111/2 percent from a level of 50 percent 25 to 30 years

If we keep in mind that the purpose of the Trade Agreements Act was to increase exports by the roundabout process of tariff reductions, it becomes in order to inquire into the success of the program.

Did our drastic tariff reductions lead to a really significant increase in our exports? And where do we stand today in world trade? Did the trade agreements program lead us into a strong position in inter-national trade? Did it lower foreign trade barriers and thus open foreign markets to our exports? Did it furnish other countries with additional dollars as a result of in-creased exports to us; and, if so, have these additional dollars been used to buy more freely of our products?

these results have not been achieved,

what stood in the way or still stands in the way of their achievement? The first question is: Did our exports increase? If so, when, how much, and

From 1931-35 we exported annually an average of only \$15.55 worth of goods per That was low indeed. The rate during the preceding 5-year period (1926-30) had been \$38.50. Imports during the same period were \$33.02 per capita. The decline in exports to \$15 was a measure of the disastrous effect of the depressioon and the sharp decline in prices.

By 1939 per capita exports had gone back up to \$23.44. This increase was accompanied by a rise of 10 percent in wholesale prices; but it did represent an export in-crease of appreciable proportion, although it did not yet reach half way back to the 1926-30 level.

Imports that had slumped to an average of \$13.33 per capita during the 1931-35 period had risen to only \$17.08 per capita in 1939. This rise was not very impressive in view of our tariff reductions. Exports, as seen above, were somewhat more active. War preparations in several parts of the world were already drawing on our goods and accounted for most of the rise.

If the trade agreements program was designed to increase our exports through a stimulation of imports not much could be said for the program in its first 6 years.

Then came World War II and its great demand for our goods from overseas during 1940 and 1941. Our per capita exports jumped to \$29.25 in 1940 and to \$36.94 in 1941, while imports only made it to \$18.89 in 1940 and on up to \$23.71 per capita in 1941. This record would hardly uphold the idea that tariff reductions under the trade agreements program caused the brisk rise in our exports.

After the United States entered the war the lid blew off exports. They went to \$58.17 per capita in 1942 and zoomed to \$91.95 in 1943. In 1944 they hit \$100.08.

\$91.95 in 1943. In 1944 they hit \$100.08. But where were imports? They dropped to \$20.21 in 1942, recovered to \$24.27 in 1943 and then lumbered up to \$27.47 in 1944, at a time when exports had reached \$100. Certainly it was not our increase in imports that accounted for the soaring exports.

Obviously, our trade agreements program could not be credited for this meteoric rise in exports through 1944. In other words, after 10 years the trade agreements had done very little of what was expected of it. In 1945 and 1946 exports dropped back to an average of approximately \$66 per capita, while imports rose to a little above \$30. This was still below the 1926–30 level of \$33.02.

Then began our feverish postwar efforts to supply the war-devastated countries. Exports raced back up to \$97.01 per capita in 1947; and then fell back until the Marshal plan and the Korean outbreak provided another fillip. After dropping to \$65.64 per capita in 1950 exports pushed back up to \$94 in 1951 and 1952.

What was the behavior of imports? In 1946 they stood at \$33.47 per capita. This was very close to the 1926-30 average of \$33.02. Exports ran ahead nearly threefold.

In 1947 the General Agreements on Tariffs and Trade was signed. It represented an extensive reduction in our tariff and went into effect January 1, 1948. In that year (1948) imports rose sharply to \$47.45. Of course, prices were rising and a great part of the increase was no doubt attributable to that fact. Wholesale prices in this country, for example, rose from 121.1 in 1946 to 165.1 in 1948. This was a rise of 36 percent. The rise in per capita imports was 42 percent, or only a little more than the rise in wholesale prices.

Evidently the increase in exports that was recorded in these years also could not be attributed to the trade agreements program. Europe and Japan were not yet rehabilitated and continued to have a strong demand for our materials, equipment and supplies. Moreover, the war-torn countries still left the supplying of Latin American and other areas largely to us. These markets had fallen to us by default during the war. That our exports should have continued at a high level in the early years of the fifties was therefore not surprising. From 1951-55 the average annual per capita exports stood at \$93.40. This figure, while not as high as that reached in 1947, was nevertheless above the 5-year average from 1946-50, when it was \$78.12 per capita.

The Suez crisis in 1956 sent our exports to a new high point per capita in both 1956 and 1957. In 1956 they rose sharply to \$110 per capita and in 1957 to \$118; then dropped back to \$99 in 1958.

It was during these latter years that Europe and Japan regained their feet. They experienced unprecedented prosperity and their industrial expansion fed their demand for our goods. They had maintained a rigid system of protection, in the form of exchange controls, import licenses, import quotas, etc., and clung stubbornly to these devices to hold what they had gained. Meantime they bitterly and persistently denounced protectionism, as if their lips did not know what their hands were doing.

The war-torn countries, now rehabilitated, were coming into a position not only to supply a greater part of their own internal markets but also to export. This could mean lesser demand for American goods from Europe and Japan no less than progressive recapture by these countries of their prewar oversea markets. The latter event in turn would reduce the American share of markets in Latin America and elsewhere; and events confirmed the probability.

confirmed the probability.

From the high level of 1956 and 1957 our exports began to decline despite the continuing rise in prices; meaning that they dropped more than the decline in per capita exports indicate. These dropped from \$118 in 1957 to \$99 in 1958.

Meantime what happened on the import front? Our tariffs had been demolished on a broad front and on the average were but little more than 20 percent of their height of 25 years ago. Foreign countries, once on the road to recovery, and having rebuilt their economy, began looking overseas in earnest as an outlet for their burgeoning production. Our defenses were down. We did not believe in protecting ourselves as did these other countries. While they threw all varieties of restrictions around imports, even as they vilified protectionism, we listened to them and continued to dismantle our tariff; we used no import licenses; resorted to no exchange controls and limited our import quotas to a few agricultural items, such as cotton, wheat, dairy products, peanuts, and two or three other farm products. On national security grounds we recently limited the imports of oil. This is the only industrial product thus limited.

Imports began an almost uninterrupted rise after 1949 when they stood at \$43.36 per capita. In 1950 they went to \$56, in 1951 to \$68 and then subsided to \$61 in 1954. Resuming their rise in 1955 they climbed to \$73 in 1956, to \$74 in 1957, and then in 1959 reached \$85, an all-time high. In terms of total dollar imports this latter (1959) figure was higher by nearly \$2½ billion than the previous high of 1957 while exports in 1959 did well to hold their own at a 4-year low per capita figure.

The evidence here is very disturbing, because there is no visible correlation between our rising imports and the trend in exports. The trends, in fact, are the exact opposite of what economic theory and the hopes of the free-trade advocates call for. From 1949 to 1959, a period during which imports very nearly doubled (i.e., went from \$43 per capita to \$85), exports from a 1947-49 average of \$86.46 went only to \$90.5 per capita in 1959, or an increase of less than 4 percent.

During the whole course of the trade agreements program exports rose independently of imports. Then imports rose independently of exports.

The inevitable conclusion from these contrary trends is that forces far beyond the trade agreements program determined our trade until very recent years. In the early years of the program our exports expanded more rapidly than our imports. Latterly as our imports broke from their moorings and began to soar, our exports have become listless and sickly. Yet if the theory of the trade agreements was to be credited, exports should have risen as our swelling imports

sent new billions of dollars abroad. On the contrary, our exports began to breathe heavily, unable to make the grade back to the summit they had reached in 1957. Instead of employment rising, as it was supposed to do, in Detroit (automobiles). Pittsburgh (steel and electrical equipment), Chicago (packinghouse products), Akron (rubber goods), it rose in England, Germany, Japan, France, Belgium, etc.

The next question is, What stood in the way of achievement of our export goals once our heavy imports overcame the dollar gap of the early postwar years and put money into the hands of our foreign customers?

Evidently there had been a failure of theory. To be sure, our tariff-slashing program did succeed in putting life into our imports, but just as surely the life was drained out of our exports.

Had there been failure of foresight? Of penetrative analysis of competitive realities? In place of realism was there perhaps a mere attachment to the romantic and exciting notion that free and liberal trade would bring lions and lambs to lie down together in global peace?

The trade agreements was then a mere toy of make believe, a mollifier of the people, and a veritable political opiate that prevents them from seeing the facts as they are.

Surely calculations could hardly have gone so wide of the mark if there was not some rather miserable failure to read accurately the economic trends of the world. The blindness of romantic attachment is well known, as is also the stubborn unwillingness in the face of overwhelming evidence to face reality once the romance has been shattered.

The economists who have been overwhelmingly in support of the trade program cannot see reality even today for watching the principles they were taught in the universities. These are generally beside the point or, as the trade trends of the past 20 years have demonstrated, are usually derailed by events. History then goes on without them, leaving the economists to their favorite sport of batting their errors back and forth.

Such is the discomfiture of the liberal trade elements. To save their intellectual faces and their vested interest in being right they seem willing to see industry after industry in this country blood sucked and knee buckled before turning a hand to rescue them from the folly of romantic theory.

The trade agreements program is not only dripping with failure; it has brought American industry, agriculture, and labor to a position of trembling dependence upon the President to save their future.

This was the most natural outcome and should have been foreseen because the trade agreements program went down a road that ran in a diametrically opposite direction from that taken by domestic economic measures. The effect of these latter was to raise this country to an economic plateau in relation to the rest of the world. As a result we became surrounded by the international swamps of lower prices, lower wages, lower production costs, and lower standards of living. The trade program feverishly exposed us more and more by reducing our outward defenses at the very time that we were busy at home climbing the economic plateau.

We did something else to make doubly sure our onsetting discomfiture and distress. We built up our competitors, first by supplying them with many necessities of life and then rebuilding their shattered economy. We furnished them modern machinery and equipment, opened our plants to their production and industrial engineers, and taught them our methods. The high moral purpose of all this action can hardly be questioned; but that is not the point. We must still be ca-

pable of assessing the results of our action and face them. We may say we had to do these things but we must also confront the future.

The final result of our several policies was to increase our competitive vulnerability threefold. As we sharply raised our costs, we reduced our tariffs drastically and we greatly improved foreign productivity without bringing up foreign wages in proportion. This latter lies beyond our power.

Little wonder that our exports are at a standstill and responsive only to governmental stimuli, in the form of subsidies, peptalks and commercial missionaries.

If a program falls to do in 25 years what it was supposed to do, either by way of setting the pattern of commerce or pacifying the world, it is either a fallure or the economists and interpreters have been singing the wrong chorus. If a medicine gave no better account of itself than the economists of the trade program and were responsible for as many casualties, its discoverers would not only be called quacks or criminals but would, if treated tenderly, only be ridden out of town on a rall.

Where are the dollars absorbed by foreign countries, that according to the romantic economic theorists always come back to us in the form of demand for our goods? Yes, where are they? They are lolling about in many foreign balances, in no hurry to get back. Our foreign account has been against us every year but one since 1950 or earlier. Other countries have not only drained away some \$5 billion in gold but have accumulated claims in the amount of some \$18 billion on

the \$19.4 billion of gold left in Fort Knox. Why have these dollars that have been accumulated abroad not been spent in this country if the theories of the romantic economists are true? Of course, the economists always take refuge behind the escape hatch labeled "in the long run." Obviously if "the long run" means over 10 years (which is the length of the vacation already taken by our dollars abroad) the theory is worse than useless since many industries do not need so long a run in order to die or to be crippied for life.

The trade agreements program has not only led us onto an untenable position; it has all but closed the avenues of retreat. It has all but destroyed the powers of Congress to regulate foreign commerce by binding the legislative hands with the chains of international executive agreements, GATT, for example; and it has thrown industry, labor, and agriculture more and more on the mercy of the executive branch. The executive branch and the executive branch alone, meaning principally the Department of State, today regulates our foreign commerce—not Congress.

The final welding process through which it is sought to fasten permanently on Congress the chains that have been so laboriously wrought these last 12 years, is now under way. What was begun with GATT is now about to be finished.

Our negotiating teams will be going once more to Geneva in a few months to level our tariff defenses still more; and efforts will be made to draw us into a rebuilt international trade organization, the charter for which has already been drafted by the "Four Wise Men." The name of this new venture is to be the Organization for Economic Cooperation and Development. This organization is to rise like a phoenix from the bones of the earlier failures, namely, the ITO and the recently interred OTC. More will be heard of this proposal.

If this move succeeds our vulnerable competitive position will become the excuse for permanent eviction of Congress and the permanent dependence of American industry and agriculture and labor on the Federal Government, to be altered, bartered, or slaughtered at the pleasure of the State Department. We are very close to that point now.

Already our domestic economy sits besieged on all sides by a form of competition that holds all the advantages contrived by us for our own undoing. The question is inevitable: Can we now meet this competition or stand it off only by undoing a part of our handiwork of the past 25 years or shall we add to this handiwork and deepen our discomfiture?

Either we stand still in point of wages and costs while other countries come up or we descend or fall part way to meet them.

The only other alternative is to do what the other countries have been doing so successfully in the postwar years, i.e., protect ourselves and our resources against relentless drainaway of blood and substance. This would call for a moratorium on the dismantling of what is left of our tariff, and then, in the form of a rearguard action, instituting the use of limited import restrictions, preferably in the form of combined quotas and tariffs, designed to hold what we have built, while stopping the bleeding at the vulnerable spots. This would permit continued progress in this country while the living standards of other countries catch up as they can or will.

as they can or will.
What else? Let us look about us.

If we continue to build up other countries, the underdeveloped areas of the world, for example, in the naive faith that this upbuilding will rescue us, we court the bitterest disappointment of all. That we may be able to build them up may be conceded, even though grave doubts may assail us; but to hope that they will become markets predominantly for us rather than markets to be supplied by Japan, other rising Far East economies, and Europe, is to forget recent economic history and to expect something that experience cannot support. While it may still be argued that we must build up the retarded countries as a measure against communism, we must be aware of what we are about and not confuse that objective with the expansion of our export trade.

It took us 25 years of doing, including much domestic economic legislation, a world war, a local war and then the cold war to stack up the international competitive situation as we see it today; and here we are as a nation naively bewildered, fumbling for the international solvency against which we have all but foreclosed ourselves, unwilling to give up an aging romanticism that we can no longer afford. All that we know to do has the effect of a "Chinese" truss. The harder we try through subsidies, hawking of our wares in the markets of the world, further tariff reductions and foreign economic buildup, to revive our exports, the tighter we draw the choking cords about us.

Our export subsidies burden our Treasury. Our foreign ald does the same. Already our gold is flowing out. In order to halt this flow we have to offer higher interest rates; and this action raises our total interest burden. Already this has gone from \$7 billion a year to about \$9½ billion on our national debt in a few years' time.

Our production costs are high in relation to those of other countries. In order to bring them down we must automate; but we then face the problem of employing the nearly a million new workers coming on the scene each year. Moreover, other countries have learned how to automate and are doing so. We have lost our technological leadership.

We are on the eve of an earthquake that will shiver us to our economic foundations if we do not soon take thought and reverse some of our romantic policies. If we do not do this the economic waters of the world will inundate us and in the outflow will rend us and swirl us to the common level.

We will no longer reside on a plateau, a beacon to other lands, but will slide indistinguishably into the low waters that now surround us. Our leadership of the free world will dissolve into a sea of impotence and our ideals for building a peaceful world will be of little avail.

Confederate Memorial Day

EXTENSION OF REMARKS

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 19, 1960

Mr. TALMADGE. Mr. President, on April 26, 1960, Confederate Memorial Day was observed in Atlanta, Ga., with traditional services at West View Cemetery. The colorful ceremony of remembrance was held under the joint auspices of the Dorothy Blount Lamar Chapter of the United Daughters of the Confederacy and the John B. Gordon Camp No. 46 of the Sons of Confederate Veterans. both of Atlanta. Wreaths were placed at the base of the Confederate Monument there, and military honors were accorded by a 3d Army honor guard. The principal address was delivered by Gen. Letcher O. Grice-brigadier general, U.S. Army, retired-of Atlanta, commander in chief of the Sons of Confederate Veterans. I ask unanimous consent, Mr. President, that the text of General Grice's stirring remarks on that occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the Record, as follows:

CONFEDERATE MEMORIAL DAY SERVICES

(By Gen. Letcher O. Grice, brigadier general, U.S. Army, retired, commander in chief, Sons of Confederate Veterans, West View Cemetery, April 26, 1960, Atlanta, Ga.)

Compatriots, ladies, and gentlemen, we are assembled here in beautiful West View Cemetery to participate in the annual observance of Confederate Memorial Day. Within a few feet of us are graves of many Confederate soldiers, and we are within the shadow of a striking monument erected in years gone by to honor our heroic dead.

Not only is this a beautiful and sacred spot. Today there are gathered here many dedicated members of the United Daughters of the Confederacy, Sons of Confederate Veterans and other patriotic citizens, including the West End Elementary Band and a contingent of U.S. soldiers, to honor our departed veterans.

This assemblage, this setting, and this observance inspire us to renewed determination to live and carry on in such manner as to be worthy sors and daughters of those whom we eulogize and honor.

We salute and pay tribute to our forefathers—the soldiers of the Confederacy—on this hallowed day. We eulogize those who fought so long against such great odds for principles and causes which they held sacred.

This ceremony is sponsored by the United Daughters of the Confederacy, and the Sons of Confederate Veterans—two great national organizations. I know of no more loyal or patriotic organizations in all America. Meetings are begun by having each member

participate in the Pledge of Allegiance, reading:

"I pledge allegiance to the flag of the United States of America and to the Republic for which it stands, one Nation, under God, indivisible, with liberty and justice for all."

The following excerpts are quoted from the constitution of the Sons of Confederate Veterans:

'We declare an unquestioned allegiance to the Constitution of the United States of America *

The Sons of Confederate Veterans shall be strictly historical and benevolent, nonpolitical and nonsectarian . .

This Confederation shall observe the celebration of Memorial Day."

THE CENTENNIAL

We strongly support the centennial observance of the stirring days of a hundred years ago. But we hasten to point out that we are not celebrating particular events of the past. but are commemorating them.

Prior to my election last year to my present office, I served as chairman of the S.C.V. National Committee, to cooperate with the U.S. Civil War Centennial Commission. Let us remember, it is not for us to judge, or criticize, or engage either in ignoring or celebrating events of the War Between the States, but to commemorate them.

REBELS

We are assembled here to eulogize and honor the patriotic soldiers of the Confederacy, especially those who gave their lives for the cause. But, unfortunately, there are people, especially some who are high placed in the fields of education and journalism, who refer to them as "rebels" and to the "War of the Rebellion" or to the "Civil War," instead of the "War Between the States," or the "War for Southern Inde-pendence."

Some people in England in the days of 1776 regarded George Washington, Benjamin Franklin and other great American leaders as "rebels" or worse. But to southerners and other good Americans, they are patriots, saviors, and heroes,

And so we honor our leaders of the South during the war period—President Jefferson Davis, General Robert E. Lee, General "Stonewall" Jackson, and other leaders and soldiers of the Confederacy-as patriots.

The Government of the United States has honored both Generals Lee and Jackson by the issuance of U.S. postage stamps bearing their images. The Government of the United States some years ago provided pensions for Confederate soldiers. They were not "rebels," but patriots.

TIME MARCHES ON

Time marches on-from Fort Sumter to Appomattox, to the first reunion of the Boys in Gray.

Time marches on—to the establishment of the Sons of Confederate Veterans' national organization by the United Confederate Veterans in their annual national reunion at Richmond, in 1896.

Time marches on-to the great, patriotic joint reunion of the Boys in Blue and the Boys in Gray, on the battlefield at Gettysburg, in the mid-1930's. At that time I was a contracting officer for the U.S. Army, at Philadelphia; and it was my duty, and a pleasant one, to buy several thousand small U.S. flags, and an equal number of Confederate flags. These were installed in pairs on the tent pole of each wall tent. Each tent was occupied by a Boy in Blue and a Boy in Gray. This was the first, and only joint reunion of the Blue and the Gray.

Times marches on—to the passing at Houston, Tex., on December 19, 1959 of the last veteran of the War Between the States, General Williams. It was my sad duty, as

commander in chief, Sons of Confederate Veterans, to attend the memorial and funeral services held in his honor. Governors of the Southern States, or their representatives, were present, as well as members of the U.S. Congress, the judiciary, State officials and representatives of numerous patriotic societies. Messages of condolence were read from the President of the United States and other prominent leaders throughout the

The passing of the last veteran was of great historical significance. It marked the passing of an epoch and the beginning of a new

The memorial, funeral, and burial services of the last Confederate were in keeping with the dignity of the occasion. U.S. Army officials coordinated all services. The services were of national interest, and conducted in a manner befitting the highest official. It was truly a state occasion.

The funeral services were closed by one of the ministers reading from the poem of Frank L. Stanton, of our own Atlanta, entitled, "Going Home," as follows:

"Adieu, sweet friends-I have waited long To hear the message that calls me home, And now it comes like a low, sweet song Of welcome over the river's foam:

And my heart shall ache and my feet shall roam

No more-no more: I am going home. Home. Where no storm-where no tempest

In the light of the calm, eternal day; Where no willows weep over lonely graves And the tears from our eyelids are kissed away.

And my soul shall sigh, and my feet shall roam

No more-no more: I am going home."

Time marches on-to this Confederate Memorial Day of 1960. The last veteran is gone, but the sons, and daughters, remain, and shall ever remain.

And time shall continue to march on. Our story did not end at Appomattox, or with the passing of the last veteran. It shall never end, but continue, on and on, through generations yet to come.

In closing, I should like to leave with you the thoughts of Edwin Markham in his poem, entitled "How We Shall Honor Them."

"How shall we honor them, our fathers dead? With strew of laurel and stately tread? With the blaze of honors brightening over-

head? Nay, not alone these cheaper passes bring: They will not have this easy honoring. How shall we honor them-our fathers

dead? How keep their mighty memories alive? In him who feels their passion, they survive.

Flatter their souls with deeds, and all is said."

Resolution of Appreciation

EXTENSION OF REMARKS OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

Mr. COOLEY. Mr. Speaker, our colleague, the Honorable and beloved CARL T. DURHAM, is retiring at the end of this session of Congress. At the county convention of the Democratic Party of Orange County held on May

14, 1960, a resolution was adopted unanimously by those attending the convention. The resolution is as fol-

RESOLUTION OF APPRECIATION FOR CARL THOMAS DURHAM, "MR. DEMOCRAT" AND "DR. COMMON SENSE" OF ORANGE COUNTY. NO

Because Carl T. Durham has ably and faithfully represented the 6th Congressional District of North Carolina in the Congress of the United States since December, 1938;

Because he recently expressed his heart's desire and his intention to return, after the close of the current session of the Congress, to full-time residence with his family and grandchildren, to daily association with his many relatives and other friends in and near Orange County, and to working with his coon dog and turkey caller;

Because, for 37 consecutive years, as an elected representative of the people in various offices of public trust, without a fanfare of words and dramatics, he has quietly, directly, and honestly studied extensively, worked hard, and served well his neighbors, his constituents, and his country. As a good pharmacist, a devoted husband and father. a wise counselor, a faithful member of and leader in his church, he has, also, labored wisely for his home community and his country, successively, as a member of the Chapel Hill School Board, the Chapel Hill Board of Aldermen, the Orange County Board of Commissioners, the Board of Trustees of his alma mater—the University of North Carolina—and as a Member of the Congress of the United States;

Because, with vision, commonsense, and perseverance, he has distinguished himself by helping establish numerous public benefits, such as-

The breadth and beauty of Chapel Hill's Franklin Street:

The consolidation of public schools; The first publicly owned rural electrifica-tion line in the United States, here in Orange County—the model for what later, under a national Democratic administration, became the great Rural Electrification Authority, etc., including as chairman of the Joint Congressional Committee on Atomic Energy, the development and use of atomic, nuclear energy, under civilian control, for medical and other constructive purposes, and for helping keep the peace among the peoples of the world;

Because a great university, his alma mater, in whose shadows CARL DURHAM, the country boy from Bingham Township, chased rabbits and grew into fine manhood, did, in grateful recognition of his attainments, confer upon him the degree of doctor of laws;

Because Carl Durham's record of public service, with few parallels, has set for his successors a high standard and a challenge;

Because he has stayed on the job and not beat the bushes, working intelligently and successfully for his constituents and for the free peoples of the world; and

Because, in his election and repeated reelections to the Congress, we and the world have witnessed a free people in peaceful action at the secret ballot box choose from among themselves and for themselves a calm, wise, and faithful representative in a democracy: Therefore be it

Resolved by this May 14, 1960, Convention Session of the Democratic Party of Orange County that:

First, CARL T. DURHAM abundantly merits and has our genuine gratitude for his great career of fine public service; and

Second, while we reluctantly concur in his decision to return home from the Halls of Congress we do sincerely say to Congressman and Dr. Durham "Mr. Carl you have long been a good and faithful public servantall the way from Chapel Hill's Town Hall to the International Atomic Energy Agency headquarters in Geneva, Switzerland. Now, come on back home and help us with our pills and whittling."

EDWIN S. LANIER,
Chairman.
ALEXANDER HEARD,
CLYDE C. CARTER,
Committee.

Mr. Speaker, our colleague, Carl T. Durham has served the people of his district, State, and Nation faithfully and well. He is worthy of the confidence of his constituents. He is a devoted and dedicated public servant and he has a right to be proud of the great record he has made.

I have enjoyed CARL DURHAM's friendship for many long years. I shall miss him in the next session of the Congress of our country. By his devotion to duty and his loyalty to the traditions of our great Republic, he has endeared himself to his colleagues and in retirement I hope that he will find happiness and contentment. I am certain that our good wishes will go with him as he returns to the hills of home.

Limit on Earnings of Social Security Recipients Should Be Raised From \$1,200 to \$2,400 Per Year—Dallas News Again Supports Proposal

EXTENSION OF REMARKS

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, May 19, 1960

Mr. YARBOROUGH. Mr. President, the purpose of the great social security program, as I understand it and as I believe most people understand it, is to allow and encourage Americans to prepay money into a retirement plan so they will have income in later life.

Because of inflation and other factors over the past quarter century, the money which Americans put in this savings plan for retirement does not go as far as we would like or as far as we expected that it would when the program was started. For that reason, I have introduced legislation to allow social security recipients to earn more income—to continue work Where they are able and want to work without losing any of the retirement benefits they already have paid for. This proposal would raise the limit on earnings of those receiving social security from the present \$1,200 per year to \$2,400 per year.

Among the newspapers which support this proposal is the Dallas Morning News. I ask unanimous consent to have printed in the Appendix of the Record the editorial from the May 10, 1960, Dallas Morning News entitled "Insurance, Not Dole"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INSURANCE, NOT DOLE

Since its outset more than two decades ago, social security has been pictured by officials as insurance, not a dole on the order of the still-retained old-age assistance. Social security benefits are paid for by the beneficiaries and their employers. Since that is the case, what difference should it make to anyone how much a recipient may be able to earn after he is pensioned?

Senator Ralph Yarborough is on the right track in asking that the present \$1,200 a year limit on the earnings of social security pensioners be doubled. It should be removed entirely. The worker past 65 who has paid for a social security benefit should have it, whether he needs the money or not. It is his money.

Progress on School Aid

EXTENSION OF REMARKS

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 19, 1960

Mr. THOMPSON of New Jersey. Mr. Speaker, today's New York Times contains an interesting editorial in support of Federal school-aid legislation soon to come before the House.

The editorial states:

There can no longer be any reasonable doubt that such Federal assistance is needed; the only reasonable argument now can be over the amounts, the form, and the specific purposes.

It also comments on the failure of the Rules Committee, which the writer calls "that 'black hole' of the House," to act during the past 2 months since H.R. 10128 was approved by the House Education and Labor Committee.

Mr. Speaker, I commend the entire editorial to my colleagues and under leave to extend my remarks, include it at this point:

[From the New York Times, May 17, 1960] PROGRESS ON SCHOOL AM?

On March 15, more than 2 months ago, the House Education and Labor Committee approved a compromise school-construction aid bill vastly scaled down from previous proposals in the hope of avoiding a Presidential veto. More than a month before that, on February 4, the Senate had passed a much broader bill, authorizing Federal assistance for both construction and teachers' salaries.

But despite these important actions on both sides of the Capitol, indicating a serious concern at this session that there at last be definite action on large-scale Federal aid to education, nothing further has happened. Why? Because the Rules Committee, that "black hole" of the House, has not seen fit to act. Until it does, the House, in the normal course of events, would not be able to vote on Federal aid for education. Yet hope has risen that this week things may begin to move.

There are two immediate possibilities. One is that the Rules Committee, recognizing the national need and the political importance of an education bill, may yet give clearance to the pending measure. The other is that the group of young, liberal Democrats who have been spearheading the drive may succeed in employing the little-

used parliamentary device of Calendar Wednesday tomorrow to force the bill out to the floor. This was the means successfully used a couple weeks ago to bring out the depressed areas bill, which was subsequently vetoed by the President.

Getting the education bill to the floor does not, of course, insure its passage, or insure that whatever bill may be passed will be a good one. But it would bring closer than ever before the ultimate adoption of a general aid-to-education law. There can longer be any reasonable doubt that such Federal assistance is needed; the only reasonable argument now can be over the amounts. the form and the specific purposes. We have already expressed our view that a broad-based bill, giving the States the option of using Federal aid on construction or salaries or both, is preferable to a construction bill alone. We also believe that the amounts have to be large enough to make a material dent in what is probably America's greatest weakness in her national defense system: the insufficiency of school plant, the shortage of teachers and the inadequacy of standards. The first two areas can be helped directly by Federal aid, the third indirectly; all of them require immediate, urgent attention in Washington.

Salt Water Conversion Plant Site

EXTENSION OF REMARKS

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, May 19, 1960

Mr. WILLIAMS of New Jersey. Mr. President, all Americans who have given some thought to future water resources of the United States, are, I am sure, interested in present and projected efforts to find a practical sea water conversion demonstration plant. In New Jersey the State department of conservation and economic development has worked closely with municipal officials and individual citizens on one such effort in particular. An editorial in the Atlantic City Press of May 10 gives a summary of the proposal for a conversion demonstration plan and the unique advantages which the Garden State offers for such a project. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SALT WATER CONVERSION PLANT SITE

New Jersey's hopes of getting a sea water conversion demonstration plant which the Federal Government proposes to build on the Atlantic coast rest on the possibility that Atlantic City or Cape May will be chosen as the site.

U.S. Senator Harrison A. Williams, Jr., and Representative Militon W. Glenn report that a Department of Interior sites selection committee has narrowed its choice to these and 11 Atlantic seaboard communities in other States. A preliminary decision was not reached on applications of four other cities pending receipt of additional information. Three of them—Long Branch, Madison, and Perth Amboy—are in New Jersey.

The Department will continue to receive

applications until August 1.

New Jersev's eagerness to be selected was reflected in a resolution recently adopted by the assembly asking the U.S. Department of Interior to locate the installation in the The resolution was sponsored by Assemblymen Paul Salsburg and Albert S. Smith of Atlantic County and William Kurtz of Middlesex.

Although potable water is plentiful in this region, the supply is a critical problem in many parts of the country and throughout large areas of the world. A cheap process for converting salt water into fresh would bring hope to arid areas and help provide for a

rapidly expanding population.

Interior Secretary Fred A. Seaton seems to think the Government is on the verge of a major scientific breakthrough in this respect. One purifying process, which has been tested in a pilot plant in North Carolina for 2 years, utilizes evaporator units in series, so that condensing steam from one heats sea water in the next.

Other methods employ freezing processes which have been undergoing tests in Syracuse, N.Y., and Warren, Pa. The specific freezing process selected will determine the capacity of the east coast plant. It will probably be designed to convert sea water to fresh at a rate of from 100,000 to 350,000 gallons a day.

As a highly developed industrial and research center, New Jersey would provide an ideal climate for the experimentation. And a site in this area would offer the additional advantages of easy access and available labor

supply.

Mock Political Convention Chooses Johnson for Presidential Candidate

EXTENSION OF REMARKS OF

HON. WAYNE L. HAYS

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

Mr. HAYS. Mr. Speaker, I had the honor of keynoting the Ohio University Mock Democratic Convention in Athens, Ohio, on March 4 but, unfortunately, had to return to Washington before the balloting. The following article from the Ohio University Post describes the nominating speeches and the resulting nomination of the distinguished majority leader of the Senate, LYNDON B. JOHNSON, for President and Gov. Robert B. Meyner of New Jersey for Vice President:

[From the Ohio University Post, Mar. 7, 1960] MOCK POLITICAL CONVENTION CHOOSES JOHN-SON FOR PRESIDENTIAL CANDIDATE

LYNDON B. JOHNSON, Senate majority leader, is the mock Democratic candidate for the Presidency of the United States.

The favorite son of Texas was chosen along with Robert B. Meyner, Governor of New Jersey, who won the vice presidential nomination to head the Democratic ticket. The two candidates were chosen Saturday evening at the mock Democratic convention held at Memorial Auditorium.

Wild cheers and sounds of noisemakers filled the poster-filled auditorium as the States presented their nominating speeches and demonstrations Saturday afternoon.

Smiling and firmly rapping the gavel, the Honorable Walter Moeller from Ohio, who acted as convention chairman, requested the delegates to be seated after demonstrations and intermittent outbreaks of wild cheering.

MOELLER commended the delegates on the ways that they resolved their differences in writing their platforms for the convention.

Robb, chairman of the convention Don executive committee, read telegrams from Lyndon B. Johnson, Robert Meyner, and John F. Kennedy to the convention delegates.

Elated delegates wearing derbies, feathers, cowboy hats, clown outfits, and Bermudas continuously yelled, threw confettl, banged on pots, pans, gongs, and drums to display zealous support for their candidates.

A demonstration for Johnson led by a horse wound its way through the noisy political arena. During this jubilant exhibition, wild applause competed with wild screams, noisemakers, songs, and chants.

Senator John F. Kennedy from Massa-chusetts was described as "the man who will lead us in the unpredictable years ahead, a man who will not hesitate or stumble and a man who demands the respect of his fellow Americans and of the world at large."

He was further described as a progressive young man who has the physical vigor to be President and who is a friend of the student.

HUBERT HUMPHREY was described as trying to do more to decrease the gap in the missile gap than to increase his golf score. "He is the man who can beat the Soviet leaders to the punch."

"GEORGE SMATHERS is not a novice in the political ring and he has experience, follow-ing, and leadership," were some of the comments heard for this candidate.

WAYNE MORSE was referred to as the man who will help the farmer and will put the

Republicans out to pasture.

A man from the rough-and-ready West is L. B. JOHNSON. He is an American first, a Senator second, a Democrat third, and the next President." Johnson was described as advocating what is best for the Nation as a whole.

Adlai Stevenson was described as the man who can lead us out of crises and into a life of fulfillment, and the man who will make

America first in technology.

"A stanch supporter of the American way of life, a man who is for the good of labor and management" brought cheers after STUART SYMINGTON'S nomination speech was presented.

Sky Should Be Free to All Nations Until International Rule Established

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Thursday, May 19, 1960

Mr. WILEY. Mr. President, the world has long known that—because flights of planes, as well as satellites—a system, ultimately, of regulations or laws, must be adopted pertaining to airspace.

The U-2 incident over the Soviet Union-the orbiting of United States and Soviet satellites around the earththese, and other, factors, illustrate that sooner or lated the nations of the world must come to an understanding on airspace traffic.

Repeatedly, the United States has stressed that if nations could be discouraged from acts and plans for military aggression, the skies could be free.

As a nation with no aggressive plans, we are ready for adoption of such a program.

Regrettably, the Communist bloc, intent upon global conquest, is against such free flights-including aerial surveillance.

For any nation developing military programs for outright, or sneak, attacks, of course, this would be a dangerous thing.

However, the President-rightly, I believe-is planning to bring before the United Nations a proposal for freedom of airspace.

Recently David Lawrence's column entitled "Sky Should Be Free to all Nations Until International Rule Established" contained some thought-provoking ideas on the involved factors.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SKY SHOULD BE FREE TO ALL NATIONS UNTIL INTERNATIONAL RULE ESTABLISHED

(By David Lawrence)

WASHINGTON .- What's the difference between a Russian aerial apparatus flying 188 miles in the air and taking pictures across the United States, and an American observation plane flying 12 miles above the territory of the Soviet Union also taking pic-

Is the flight of the newest sputnik of the Russians an act of aggression? Is it another spying operation? Certainly it was conducted without advance notice to and without the consent of the U.S. Government

There is no settled basis of international law for either the claim that national sovereignty does extend into outer space, or that it does not. It is an unresolved issue. Under those circumstances, the sky is free to everybody until an agreement of some kind is reached.

That is why a lot of the artificial commotion stirred up by Moscow propaganda in the last several days makes little sense. For the latest exploit of the so-called satellite of the Russians, which contains the dummy of a man, points up how unrealistic have b some of the comments about the American

plane. The Soviet Government does not seem to be worried whether the timing is right. The stunt was arranged to take place at the very moment the summit conference was about to meet. Yet in America, some of the critics have said that the experimental observation flight by Francis Powers should never have been flown at this time. Is the U.S. Air Force to be told hereafter it cannot carry on its airborne alert operations because these might offend Russia, though the Russians, in turn, appear to be flying their planes over Alaskan territory and their satellites across the American Continent whenever they please?

High-altitude flying by the reconnaissance planes of the United States is the direct result of Russia's refusal to open up and let her plane and missile sites and nuclear operations be observed, so that a surprise attack or an accidental attack can be prevented.

The case was dramatically summed up, prior to the Powers incident, in a report on April 29 by the U.S. House Committee on Appropriations, which said:

"In the final analysis, to effectively deter a would-be aggressor, we should maintain our Armed Forces in such a way and with such an understanding that, should it ever become obvious that an attack upon us or our allies is imminent, we can launch an attack before the aggressor has hit either us or our allies. This is an element of deterrence which the United States should not deny itself. No other form of deterrence can be fully relied upon."

This is but another way of saying that, of course, the United States must operate its observation planes so that if it sees a potential enemy getting ready for a surprise attack the American counterattack can be launched before the "first blow" actually strikes us.

The Russians have an advantage—they know they are not going to be attacked first. The Soviet Union would like nothing better than to stop all American observation measures and pick its own time for attack. Unfortunately, there are many naive Americans who trust the words of the Russians and would frustrate our own defensive machinery and reconnaissance measures in order to appease an enemy.

Aerial spying is not new. In the August 5, 1955, issue of U.S. News & World Report, Col. Richard S. Leghorn of the U.S. Air Force Reserve, who helped develop the "open skies" plan which President Eisenhower presented to the Geneva conference 5 years ago, wrote:

"Aerial spying on the Soviet Union—done covertly and without Soviet permission—can be carried out with a very, very small probability of loss and with great gains for the West.

"During World War II, high-flying reconnaissance planes, alone and unarmed, suffered fewer combat losses than any other type. And, since then, the techniques available for reducing the probability of detection and interception have been greatly advanced.

"Any serial reconnaissance that we conduct over the Soviet Union must be extremely difficult or even impossible to detect. I, for one, firmly believe that we can conduct such reconnaissance missions over Soviet territory without their being able to do anything about it—with very rare exceptions.

"Most importantly, knowledge that we can perform aerial inspection regardless of Soviet military opposition will be the most significant factor in bringing the Soviets to eventual acceptance of the President's proposal.

"The President's offer of mutual aerial inspection has at last seized for the West the initiative in the cold war. If we press this advantage hard, we can win a major coldwar battle—perhaps decisive enough to turn the tide truly toward complete, universal, and enforcible disarmament.

"Aerial reconnaissance is particularly needed against the Soviet totalitarian state, because other methods of collecting information and data operate under extreme difficulties."

The West will this week at Paris reiterate its demand for an "open society" and an agreement on measures to eliminate any chance of an unobserved surprise attack. The Powers episode may yet prove to be the turning point in a long struggle to get some safeguards against surprise attack.

Hon. Charles A. Buckley

EXTENSION OF REMARKS

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article which appeared in the New York Times of Thursday, May 12, 1960, with reference to our beloved colleague and distinguished chairman of the Public Works

Committee, Hon. Charles A. Buckley. This is a fitting tribute to the talent and effectiveness of Charle Buckley, both as a Member of this House and as the Democratic leader of Bronx County. He is a devoted public servant who has accomplished much on behalf of the people he represents and has worked long and hard in the best interests of the Democratic Party. It is a pleasure for me to join in this evidence of recognition for our distinguished colleague and my very good friend, Charle Buckley:

Boss in the Bronx—Charles Anthony Buckley

When a man's friends and foes use the same phrases to describe him, the former in praise, the latter in disparagement, the consensus has a persuasive solidity. CHARLES ANTHONY BUCKLEY, the successor to Edward J. Boss Flynn as Democratic leader of Bronx County, is such a man. If there are areas of dispute concerning him, they are in the realm of interpretation. There appears to be no dispute over essential qualities.

A few days ago someone asked who among the Democratic presidential hopefuls the Bronx leaders were likely to support. "They'll go for who CHARLEY BUCKLEY tells them to go for," an observer declared.

Yesterday, Charley told them. He said he was for John F. Kenney, and he declared that he was speaking for the county.

Mr. Buckley runs a taut ship. There are

Mr. Buckler runs a taut ship. There are no leaks and there is swift, long-lasting discipline for anything that has the odor of mutting

When a man goes out of favor with Mr. BUCKLEY he goes equally out of fashion in Bronx politics, and he is about as likely to make a comeback as are tarred braids.

"He's a 100-percent organization man," a friend said—adding, "He's a real organization man from way back," as if to strengthen the characterization by emphatic repetition.

But this organization loyalty works both ways; if he demands it, he usually also extends it.

He clears local issues and appointments with his district leaders and rarely goes over their heads in taking action that affects their sectors.

POWER INHERITED

Mr. Buckley's strong hold on power is an inheritance from his predecessor. Mr. Flynn was much more than the Democratic tactician of the Bronx. He was the de facto leader of the city and a national figure as well, Mr. Buckley, though a member of the House of Representatives, has come into the possession of Mr. Flynn's home powers only.

Mr. Buckley tends to be frank in a few words in conversation and blunt at length in speeches.

His annual appearance as the star of the Bronx County Democratic Dinner—it will be held tonight at the Waldorf-Astoria—is an event reporters look forward to because Mr. Buckley often speaks with barbed sarcasm.

"He has a sort of aversion to eggheads and he doesn't cotton to liberals of any stripe," one man said.

SHUNS LIBERAL PARTY

This indisposition to persons who would make politics a vehicle for the expression of ideals or, far worse, abstract ideas is manifested in Mr. Buckley's refusal to allow Democratic candidates in the Bronx to accept concurrent liberal party nomination.

He has made a couple of exceptions to this, but only to accommodate powerful Democrats, not because he thought it was a

His aversion is further exposed at the \$100-a-plate dinners, which usually come close to filling the baliroom at the Waldorf. In 1957, he said the Democratic National

Committee was in the hands of amateurs who he thought should be replaced by "some old pros."

He called Paul M. Butler, the national chairman, "stupid" and said of Senator

ESTES KEFAUVER, "He's a lulu."

Mr. Buckley, a native New Yorker, is 69 years old. He lives with his wife in the Bronx and commutes to Washington during the legislative season. He was elected to the 74th Congress in 1934, has served continuously since, and is chairman of the House Committee on Public Works.

Though he would prefer to surrender his seat (his pension by now would be nearly equal to his pay), he has agreed to run again, mainly as a favor to other Democrats.

Mr. Buckley got into politics as a young man, served three terms on the board of aldermen, held various other positions and became a close assistant to Mr. Flynn. He became county leader in August 1953.

Mr. Buckley breeds trotting horses on his farm in Rockland County, and likes to watch television at home.

He was in the construction business for

a while, but has been out of it for about 10 years.

His son, Charles, Jr., is a lawyer and a Bronx district captain; his daughter is married and lives in Texas with her husband, John Forshay.

Applause for Mr. Frost

EXTENSION OF REMARKS

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES
Thursday, May 19, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the Senate of the United States was honored last week when Robert Frost, dean of American poets, appeared to testify before one of the Senate subcommittees. We were able to appreciate, firsthand, his wit, dignity, and eloquence. I am sure that Mr. Frost's visit to the Senate will long be remembered.

An editorial in the May 9 issue of the Asbury Park (N.J.) Evening Press describes Mr. Frost's testimony and gives its own arguments in support of his stand. I think we will all agree with its statement that "Mr. Frost has performed a public service."

I ask unanimous consent to have the article printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE APPLAUD MR. FROST

When Robert Frost, dean of American poets, appeared before Congress last week to urge establishment of a National Academy of Culture he dramatized a need which too long has gone unfilled. Perhaps a better word than "culture" might be chosen but surely a National Academy that could pass upon fine distinctions of our language and serve as an inspiration to the arts could serve a useful purpose.

We are a populous country and we are still growing. People of many lands and many origins make up our population. Various sections of our country and divergent groups within those sections have made our language something less than the unified thing it should be. In some parts of the land we say "greezy" in others "greasy" is preferred. Both are correct, yet there is no standard. "Either" is another word that has equally correct variants. Some prefer "eether"; others favor "eyether." There is, of course, a preferred usage, but it is sectional rather than national. Is it "ten minutes to four" or "ten minutes of four"? Educated persons in different areas of the United States use both. And, when new words creep into a growing language such as ours it would be helpful if there were some authoritative Academy to study the origin of the word and give it proper form.

And language is not the only field in which a National Academy might be useful. In all the arts there is need for standards set by the consensus of scholars who are qualified to pass such judgments. Mr. Frost's proposed Academy would stimulate public interest in the fine arts and encourage and honor excellence in that field. Furthermore, he would award lifetime membership in the Academy to those making outstanding contributions to the arts. It would be a body of artists and scholars which would possess great prestige and shortly would assume a place in American cultural life like that of the Academie Francaise in France.

Mr. Frost has performed a public service. We hope that in the press of other matters confronting the Congress his suggestion will not be overlooked. Practical matters cannot be ignored. But neither can man live by bread alone; there is a vital place, as well, for things of the spirit.

Cleveland Editorial Comment Supports President at Summit

EXTENSION OF REMARKS

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

Mrs. BOLTON. Mr. Speaker, the whole world has been shocked and disappointed by Soviet Premier Khrushchev's incredibly arrogant demands at the heads of government meeting in Paris. It is now exceedingly clear that the Soviets came to Paris with the sole intention of wrecking whatever possibility of agreement on outstanding issues that may have existed. Once again they have demonstrated their deepseated hostility to the non-Communist world, and exhibited disdain for seeking peaceful solutions to the divisive problems that confront us.

However much the collapse of the summit talks is to be regretted, we may be encouraged by the unifying effect Mr. Khrushchev's outburst has had upon the NATO alliance and the American people. Although intended to divide, Soviet intransigence has again pointed up the necessity for the closest cooperation by free world nations in security matters.

In their editorial comment, the Cleveland Press and the Cleveland Plain Dealer have forcefully described the need for American unity in this moment of increased danger and tension. Believing that these editorials will be of wide interest, I ask that they be included at this point in the RECORD,

[From the Cleveland Plain Dealer, May 17, 1960]

MR. K. KILLS THE CONFERENCE

Warned and well informed, the American people need not be shocked at the collapse of the summit conference in Parls. We are all, however, disappointed. Not that we ever expected very much from the meeting, but some of us hoped. These hopes are dead now and we are distressed over the manner Nikita S. Khrushchev chose to deal the death blow.

It is now clear that the Soviet Premier acted deliberately, that he came to Paris with the purpose of breaking up the meeting even before it started. He revealed his motive when his opening words took the form of an ultimatum: Give in to us, meet our demands, or there will be no conference.

This was directed at the United States. President Eisenhower, who has repeatedly said he will never negotiate under threat- and who personifies the pride and honor of the United States—acted the only way he could. He rejected the demands. To yield would have been abject surrender, which, of course, is unthinkable.

The President acted magnificently. Despite great provocation, he was dignified and cool and his counterproposals were assuring. This was in marked contrast to the emotional display by Premier Khrushchev and in the exchange, Mr. Eisenhower came out with added prestige.

In a way, the Soviet Premier has relieved the President of an unpleasant chore. Mr. Elsenhower was never enthusiastic about going to Moscow and now he won't have to make the trip.

Withdrawal of the invitation was a display of bad manners, but not unexpected in view of the Premier's behavior since the spy plane incident. What is surprising is the depth of the Khrushchev animosity toward Mr. Elsenhower.

One explanation might lie in opposition reported to have developed within the Kremlin and among the military to the Premier's coexistence policy. If so, he is in a tough spot because he has been humbled and humiliated. He must feel betrayed. His boasts of Soviet invincibility have been exposed as false and it was the United States which brought about the exposé. And political opposition in Russia can be deadly.

American reaction to the wreckage lying around the Paris conference room should be to prepare for anything. Mr. Khrushchev is in a mad, ugly, and vindictive mood. There is Berlin to watch and incidents might occur in the Far East or the Middle East.

Let us all be on guard.

[From the Cleveland Press, May 17, 1960] United Behind Ike

The double-barreled insult flung at President Eisenhower yesterday by Nikita Khrushchev should have all the psychological effects of a Pearl Harbor on the American people.

The bluster of the Soviet warmonger should unite us as external threats always have united us.

First, Khrushchev withdrew his invitation to President Elsenhower to visit Russia, on a mission that might have furthered the cause of peace.

Second, he cast doubt on the good faith of the President by suggesting a Big Four meeting should be delayed until Eisenhower's successor is in office.

Reaction in Congress—even in this political year—already is as spontaneous and non-patrisan as it was in that fateful December of 1941. "The whole country must support the President in whatever action he takes," said the respected Democratic Senator Richard Russell, of Georgia, and his sentiment was echoed almost unanimously in both Houses.

Public reaction should be no less united, no less forceful.

Khrushchev came all the way from Moscow to Paris to deliver his coup de grace, not so much to the summit meeting in itself, but to the United States, through President Eisenhower.

It is clear now that it was a move of calculated malice. He wanted the highest of world rostrums from which to thunder his imprecations over the incident of the U-2. His sabotage of the summit session—to which the world had looked in high hopes—was only secondary to his evil plan of showering all blame on America.

President Eisenhower should stay on in Paris, so long as he thinks any good can come in remaining there. Decisions of the next few hours, could be momentous. And they may be required in consequence of whatever further mischief Khrushchev may have in mind.

In any case, retreat is unthinkable from the verbal firing line the Russians have mounted at the summit.

A good general likes his command post far forward, if he knows his forces are well emplaced, confident and united behind him.

Ike's forces are the American people.

Jamestown

EXTENSION OF REMARKS

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 19, 1960

Mr. ROBERTSON. Mr. President, May 13 was the 353d anniversary of the first settlement at Jamestown, Va., celebrated by commemorative exercises on Jamestown Island last Sunday. I ask unanimous consent to have printed in the Appendix of the Record a poem by a talented Virginia lady, Mrs. Susan McNeil Turner of South Hill, Va., commemorating the anniversary and published first in the May number of the magazine of the National Society, Daughters of the American Revolution and republished in the South Hill Enterprise.

There being no objection, the poem was ordered to be printed in the Record, as follows:

REMEMBRANCE-JAMESTOWN, MAY 13

(By Susan McNeil Turner, historian, Prestwould Chapter, Daughters of the American Revolution)

Lo, three fair ships, with men from far away—

Sons of kings and vagobonds—in harbor on this day!

Hark, as their chants and songs rise on the balmy air, Safe from the stormy sea, they kneel in

Safe from the stormy sea, they kneel in humble prayer:

Saintly priest and yeoman brave, and sons of noble fame,

Venturers bold and mariners, praise their Redeemer's name.

Soon they will dream of homes to be, where happy children play,

Homes like those far o'er the sea, with many gardens, gay

With shining fruits and golden flowers—but evil foes arise;

Then, not for these will dreams come true, in Virginia's Paradise.

Long and bitter was the fight, as Death walked by their side,

That in this happy land, their sons may now abide.

Here, where the present meets the glorious

Hark to the ancient canticle and song, Look on the drama, the immortal cast, The birthgifts of a nation, great and strong. Here, let us warm our hearts at history's flame.

And think on these, who live in deathless fame.

An Appeal for Human Rights

EXTENSION OF REMARKS OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

Mr. DIGGS. Mr. Speaker, I ask unanimous consent to read into the REC-ORD a full page publication of "An Appeal for Human Rights" which appeared in the Atlanta Journal of March 9, 1960. This appeal for human rights was made by students of six affiliated institutions forming the Atlanta University Center. Human relations and political experts across the nation are attempting to interpret to the world the national and international significance—the tremendous significance-of this massive student movement for human rights and human dignity for the Negro citizen here in America.

Here in this statement by students who are part of the movement the import is clear.

The statement follows:

AN APPEAL FOR HUMAN RIGHTS

We, the students of the six affiliated institutions forming the Atlanta University Center—Clark, Morehouse, Morris Brown, and Spelman Colleges, Atlanta University, and the Interdenominational Theological Center-have joined our hearts, minds, and bodies in the cause of gaining those rights which are inherently ours as members of the human race and as citizens of these United

We pledge our unqualified support to those students in this Nation who have recently been engaged in the significant movement to secure certain long-awaited rights and privileges. This protest, like the bus boycott in Montgomery, has shocked many people throughout the world. Why? Because they had not quite realized the unanimity of spirit and purpose which motivates the thinking and action of the great majority of the Negro people. The students who instigate and participate in these sitdown protests are dissatisfied, not only with the existing conditions, but with the snaillike speed at which they are being amelio-Every normal human being wants to walk the earth with dignity and abhors any and all proscriptions placed upon him be-cause of race or color. In essence, this is the meaning of the sitdown protests that are

sweeping this Nation today.

We do not intend to wait placidly for those rights which are already legally and morally ours to be meted out to us one at a time. Today's youth will not sit by submissively, while being denied all of the rights, privileges, and joys of life. We want to state clearly and unequivocally that we cannot tolerate, in a nation professing democracy and among people professing Christianity, the discriminatory conditions under which the Negro is living today in Atlanta, Ga. supposedly one of the most progressive cities in the South.

Atlanta and in Georgia against which we protest, the following are outstanding examples: (1) Education: In the public school sys

tem, facilities for Negroes and whites are separate and unequal. Double sessions continue in about half of the Negro public schools, and many Negro children travel 10 miles a day in order to reach a school that will admit them.

On the university level, the State will pay a Negro to attend a school out of State rather than admit him to the University of Georgia, Georgia Tech, the Georgia Medical and other tax-supported public institutions.

According to a recent publication, in the fiscal year 1958 a total of \$31,632,057.18 was spent in the State institutions of higher education for white only. In the Negro State colleges only \$2,001,177.06 was spent. The publicly supported institutions of higher education are interracial now, except that they deny admission to Negro Americans.

(2) Jobs: Negroes are denied employment in the majority of city, State, and Federal governmental jobs, except in the most menial

(3) Housing: While Negroes constitute 32 percent of the population of Atlanta, they are forced to live within 16 percent of the

area of the city.
Statistics also show that the bulk of Negro population is still: (a) locked into the more undesirable and overcrowded areas of the city; (b) paying a proportionately higher percentage of income for rental and purchase of generally lower quality property; (c) blocked by political and direct or indirect racial restrictions in its efforts to secure better housing.

(4) Voting: Contrary to statements made in Congress recently by several Southern Senators, we know that in many counties in Georgia and other Southern States, Negro college graduates are declared unqualified to

vote and are not permitted to register.

(5) Hospitals: Compared with facilities for other people in Atlanta and Georgia, those for Negroes are unequal and totally inadequate.

Reports show that Atlanta's 14 general hospitals and 9 related institutions provide some 4,000 beds. Except for some 430 beds at Grady Hospital, Negroes are limited to the 250 beds in three private Negro hospitals. Some of the hospitals barring Negroes were built with Federal funds.

restaurants: Movies, concerts, Negroes are barred from most downtown movies and segregated in the rest.

Negroes must even sit in a segregated section of the municipal auditorium.

If a Negro is hungry, his hunger must wait until he comes to a "colored" restaurant, and even his thirst must await its quenching at a "colored" water fountain.

(7) Law enforcement: There are grave inequalities in the area of law enforcement. Too often, Negroes are maltreated by officers of the law. An insufficient number of Negroes is employed in the law-enforcing agencies. They are seldom, if ever promoted. Of 830 policemen in Atlanta only 35 are

We have briefly mentioned only a few situations in which we are discriminated against. We have understated rather than overstated the problems. These social evils are seriously plaguing Georgia, the South, the Nation, and the world.

We hold that:

(1) The practice of racial segregation is not in keeping with the ideals of democracy and Christianity.

(2) Racial segregation is robbing not only the segregated but the segregator of his human dignity. Furthermore, the propagation of racial prejudice is unfair to the generations yet unborn.

(3) In times of war, the Negro has fought and died for his country; yet he still has not been accorded first-class citizenship.

(4) In spite of the fact that the Negro pays his share of taxes, he does not enjoy participation in city, county, and State gov-ernment at the level where laws are enacted.

(5) The social, economic, and political progress of Georgia is retarded by segrega-

tion and prejudices.

(6) America is fast losing the respect of other nations by the poor example which she sets in the area of race relations.

It is unfortunate that the Negro is being forced to fight, in any way, for what is due him and is freely accorded other Americans. It is unfortunate that even today some people should hold to the erroneous idea of racial superiority, despite the fact that the world is fast moving toward an integrated humanity.

The time has come for the people of Atlanta and Georgia to take a good look at what is really happening in this country, and to stop believing those who tell us that everything is fine and equal, and that the Negro is happy and satisfied.

It is to be regretted that there are those who still refuse to recognize the overriding supremacy of the Federal law.

Our churches which are ordained by God and claim to be the houses of all people, foster segregation of the races to the point of making Sunday the most segregated day of the week.

We, the students of the Atlanta University Center, are driven by past and present events to assert our feelings to the citizens of Atlanta and to the world.

We, therefore, call upon all people in authority—State, county, and city officials; all leaders in civic life—ministers, teachers, and businessmen; and all people of good will to assert themselves and abolish these injustices. We must say in all candor that we plan to use every legal and nonviolent means at our disposal to secure full citizenship rights as members of this great democracy of ours.

WILLIE MAYS, President of Dormitory Council for the Students of Atlanta University.

JAMES FELDER,

President of Student Government Association for the Students of Clark Col-

MARION D. BENNETT, President of Student Association for the Students of Interdenominational Theological Center.

DON CLARKE. President of Student Body for the Students of Morehouse College.

MARY ANN SMITH, Secretary of Student Government Association for the Students of Morris

Brown College. ROSLYN POPE, President of Student Government Association for the Students of Spelman

Senator Lyndon Johnson's Support Should Mean Early Approval of Padre Island Project 88 Miles Long

College.

EXTENSION OF REMARKS OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES Thursday, May 19, 1960

Mr. YARBOROUGH. Mr. President. with the exceptionally able and brilliant tactician, the majority leader and senior Senator from Texas, LYNDON B. JOHNson, adding his considerable prestige and strength to the proposal for an 88mile-long Padre Island national recreation area, it seems highly probable that the proposal to establish a national seashore recreation area on Padre Island will be brought out for full Senate consideration at an early date.

In fact, when one considers the number of people in high places who have gone on record as urging approval of this important project, which I have long had the honor of sponsoring, one cannot help but wonder that the project has not already been completed. Senator Johnson has, as they say, laid it on the line in assuring his wholehearted support of the proposed 88-mile-long new national seashore park on America's longest and southernmost natural beach.

President Eisenhower and Secretary of the Interior Fred Seaton have both previously urged approval of the project so there will be no danger of a veto or administration opposition to the measure. The question now seems to be, What are we waiting for?

I ask unanimous consent to have printed in the Appendix of the RECORD two recent excellent editorials on this subject. They are:

From the Dallas Morning News of May 10, 1960, entitled, "Padre Park Boost."

And, from the Corpus Christi Caller-Times of May 15, 1960, entitled, "Eighty-eight-Mile Park."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Dallas Morning News, May 10, 1960]

PADRE PARK BOOST

Lynpon Johnson's backing of a national seashore park on Padre Island brings the project closer to unanimous approval, so far as Texans are concerned. Governor Daniel, the legislature, Congressmen from the area and Senator RALPH YARBOROUGH have all urged it.

Congress has been asked by the Depart-ment of the Interior to set up this and two other seashore parks-one on Cape Cod in New England, the other in Washington State. If they are to be established under the National Park Service, it is more economical to buy the land now than wait until it becomes much more costly.

[From the Corpus Christi Caller-Times, May 15, 1960]

EIGHTY-EIGHT-MILE PARK

Secretary of the Interior Fred Seaton's recommendation that an 88-mile-long national seashore area be established on Padre Island now has the firm support of Senator LYNDON B. JOHNSON. Favorable congressional action on the proposal may not be guaranteed by the Senate majority leader's endorsement, but it does give reasonable assurance that the plan probably will be approved by the Senate.

Earlier, Senator RALPH YARBOROUGH praised Seaton's recommendation and promised his wholehearted support for it. A bill authorizing the seashore area, but not prescribing its limits, is currently awaiting action in a Senate committee.

The apparent agreement of Texas Senators on a seashore plan is in marked contrast to an apparent lack of agreement in the Texas delegation in the House of Representatives.

The two Representatives most directly affected, John Young and Joe Kilgore, have withheld any firm commitment on the area to be included in the seashore plan. Young has suggested that some compromise may be possible between the 88-mile length recommended by the Department of the Interior and the 50-mile limit authorized last year by the Texas Legislature.

The need for a meeting of minds on the subject has become urgent. Without the support of Representatives Young and Km-GORE and without substantial agreement among the 22-Member Texas House delegation there appears to be little prospect to final congressional approval of the plan. Texas Representatives should take immediate steps to reach a consensus on the Padre Island plan, in line with JOHNSON'S favorite quotation from Isaiah: "Come let us reason together.'

Dedicated Service

EXTENSION OF REMARKS OF

HON. JOHN KYL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 19, 1960

Mr. KYL. Mr. Speaker, there are many citizens in this land who make great contributions to our society in a quiet manner-men and women dedicated to promoting a richer life for their communities. One such individual is Elmer L. Hunt, of Creston, Iowa, past grand master of the IOOF.

Mr. Hunt's recent speech, presented to the four-State conclave of IOOF in Lincoln, Nebr., is printed herewith:

DEDICATED SERVICE

(Address delivered at four-State conclave by Elmer L, Hunt, past grand master, Iowa IOOF, at Lincoln, Nebr., May 13, 1960)

Our Order in the State of Iowa right now needs brothers with an ambition to fellowship with the brotherhood of man and not be a recluse.

The dedicated man is one who will be used anytime or anywhere, and he must always be absolutely consistent. The dedicated man must always understand that there are two phases of life and they are: receiving and giving. Stress must be placed on both phases for the giving and the receiving must be reciprocal.

A dedicated life is one that is all-enveloping and all-consuming and relates to family and friends. We are told that to "bring up a child in the way he should go" we must live that way ourselves once in a while. We must all serve an apprenticeship at some time or another, and the apprentice cannot learn without an accomplished master. The measure you give will be the measure you receive.

We are sometimes found to be in the act of stealing from the future. When this is done it exhausts not only our physical life and our family, but our economic life as well. The demands which parents must meet are small indeed when set over against the guarantees of a full life for their children. The same is true when demands are made on us by our other relatives and friends, and in order to guarantee them a full life, we must also make the supreme sacrifice rather than to steal from their

It is an old thing in man-this desire to get something without paying for it—to reap a dividend without an investment. It is a rather strange thing too, when you come to think of it. I never knew a farmer who expected to have a big crop without planting and cultivating his fields—unless it was a crop of weeds.

We are reminded that there is nothing completely stable or changeless in this world. That which we depend upon today may not be available tomorrow. The world in which many of us grew up has changed whether we like it or not. Many of the things we have always taken for granted have been swept aside. Many of the old landmarks are gone.

In the area of transportation, for instance, we have in half a century the change from horse and buggy to automobile and air-plane. Even propeller-driven airplanes are becoming obsolete and we stand on the

threshold of a jet age.

Is there anything left upon which we can continue to depend? Are all the mines in our lives becoming exhausted? The jet age has already made a difference. We are not always sure we want to alter our thinking quite so fast, or give up what we consider to be unshakeable truths. We want something solid and stable to rest our lives upon as we contemplate the changing scene.

We turn to our possessions as something that will not let us down. Our homes and our worldly goods are tangible-something to depend upon when other things seem to be so fluid. Though we live in a world of change, a dedicated life circumscribes faith that is changeless. Anchor your faith in a dedicated life and consummate yourself to the fulfillment of a complete and dedicated mission.

We do not build men and women by abdicating our objectives and disciplines. We cannot lead children into manhood and womanhood by delegating our prerogatives to others. This demands a faith that transcends all other experiences. Conviction is worth very little unless it holds to that which endures. The only faith and dedi-cated life worth having is an honest faith and a complete devotion to the objectives to which the life is dedicated.

In order to perform a dedicated service, it is necessary to deviate from our usual routine of life. Service of this kind is always over and beyond the regular call of duty. Enrich your life by taking time out and performing some service to mankind.

History tells us that our organization was founded in the year 65 A.D. That since the time of its founding to the present time, it has been of service to many nations, kingdoms and countries. Our organization has been commissioned by a number of countries and kings to perform special services in behalf of their kingdoms and empires. During all this time many members of royal families as well as Presidents of our own country and Governors of our States have been members and have participated in our activities.

Dedicate yourself to preserving our heritage for it is the one thing that has endured throughout all these ages. As long as there are men, there will be a place for fraternal brotherhood.

We must build today if there is to be a tomorrow.

Nuclear Age Reaches Rutgers

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Thursday, May 19, 1960

Mr. WILLIAMS of New Jersey. Mr. President, Rutgers, the State university, of New Jersey, has added a new and important activity to its already imposing and diversified array of research projects. It is now participating in joint effort to explore potential uses of electricity from atomic energy. An editorial in the May 4 issue of the Elizabeth (N.J.) Journal discusses this project and expresses the interest and pride felt by New Jersey citizens in this latest experiment with progress at our State university.

I ask unanimous consent to have the article printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NUCLEAR AGE REACHES RUTGERS

Rutgers has become a participant in the Saxton Nuclear Experimental Corp., a combination of Pennsylvania and New Jersey utility companies engaged in the construction and operation of a nuclear-powered generating station at Saxton, Pa. The University of Pennsylvania also is in the compact.

Rutgers enters this project without prospect of assessment or other burden upon either the university or New Jersey taxpayers, except for whatever costs may be entailed in the activities of faculty and students.

The Saxton plant is one of several across the land in which science and utility companies are investigating the feasibility of generating electricity from atomic energy through a steam conversion process. This can be accomplished; in fact, a few plants of this category are in operation, although all admittedly are experimental.

The Rutgers administration has accepted the invitation to participate in the Saxton project as a recognition of the stature of engineering and scientific research at New Brunswick.

The yet-unmeasured power of the atom first was released for its potential in war, but its impact upon and value to peacetime are far greater, a yield that will be attained slowly. The principles involved are only emerging from the laboratory and Rutgers enters upon this research merely a step from the pioneering days.

The knowledge the university can distill from the Saxton venture will be of infinite worth to the students and may lead toward a source of abundant power for New Jersey. This already is important, but as the State progresses in industry this experimentation will reach greater significance. New Jersey residents like to see their university fully abreust of the times.

Hail and Farewell

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. LANE. Mr. Speaker, under the leave to extend my remarks in the RECORD, I wish to include the last editorial of James A. Sheehan, editor of the National Tribune-Stars and Stripes, on the day of his retirement from the paper, which appears in the issue for May 19, 1960.

HAIL AND FAREWELL

Some 10 weeks ago we printed a cartoon with our lead editorial. It showed four hands grasped in friendship. The four hands protruded from four sleeves. One sleeve was labeled American Legion, the second, Veterans of Foreign Wars, the third, Disabled American Veterans of World Wars, and the fourth, AMVETS.

In our editorial we stressed the need for unity among the four major veterans' organizations which grew out of World War I, World War II and the Korean war. (Might we say, in passing, that we understand the Department of the Army has officially designated the action in Korea as a war and may we request all interested groups to stop calling it a conflict in the fear of hurting somebody's feelings. It was a war. Ask the men who fought it.)

Setting aside the digression may we say that this clasp of amity depicted in the cartoon is the way we would like to think of these four veteran groups as we write this, our last editorial for the National Tribunethe Stars and Stripes.

For the past 34 years we have been associated with the affairs of veterans—with the American Legion, where we served our apprenticeship, with the Veterans of Foreign Wars, when we became the first national rehabilitation officer of that organization, and, for the past 26 years with the National Tribune-the Stars and Stripes.

une-the Stars and Stripes.

In view of this long association we have learned to know of the petty jealousies which have sprung up between the various groups. We can recall when one organization refused to have anything to do with another organization because of real or fancied difficulties.

Admitting the reality of the disagreements we have long since believed that time can heal many old wounds and that the only way in which our veteran groups may ever realize the fulfillment of their promise to care for their comrades of all wars is to unite, meet on a common front and present a force that should prove irresistible.

By this we do not mean that the war veterans of our country should take over the Government. That leans toward fascism which we strongly oppose and we would be the last to insist that war veterans are any better qualified in the art of governing our people than the rest of the citizens of this democratic country of ours.

What we have in mind is that down through the years we have seen one veteran group played against another group—too many ambitious people seeking their own advancement by way of national office, and we have been unhappy about it.

Going back through the years we have never found the veteran organizations too grasping or too greedy. On the whole, studying the legislation which has been presented to Congress during the past 30 years or more, we have found that their demands are, as a rule, reasonable—demands which can be met with facts that compel their enactment into legislation.

We have seen national leaders of these organizations come and go. They strut their short time upon the national stage and, but for a few, are soon forgotten.

The most important thing to us is that while the leaders soon take their place in what Grover Cleveland described as "innocuous desuctude," the rank and file still remain the men—and later the women—who make up the most important part of all the veteran organizations.

So much for generalities. In our 26 years of association with this newspaper we find nothing but praise to offer for the leaders of the United Spanish War Veterans. We have seen this fine body of men set aside their own wish for higher pensions in favor of the

widows of their comrades. They are still asking for this benefit and we trust that Congress may see fit to grant it without further delay.

We have seen the American Legion and the Veterans of Foreign Wars at cross purposes and we have seen them united. At odds they achieved nothing but together they could not be denied because their requests of Congress for proper legislation could be backed by sound logic and that logic prevailed because, after all, the Members of Congress are human and realize when something is presented to them with propriety and reason.

As for the Disabled American Veterans of World Wars we could never quarrel with them. They had one goal—the betterment of the service-connected disabled—and they have stood fast by that goal. Little by little they have achieved results and we trust that as time goes on their desire for increased benefits to their group will be achieved.

benefits to their group will be achieved. This brings us down to AMVETS. It stands to reason that we can't be too angry with a group of young men who went to battle at their country's call in World War II and in the Korean war and who covered themselves and their country with everlasting glory.

Our only sorrow is that, in the pride of youth and possible early financial success, they have forgotten those who made their success possible.

As for the Veterans' Administration, we have had our agreements and our disagreements. We have been moved almost to tears at some of their decisions and rejoied in others. On the whole our relationship has been a friendly one and none more friendly than that of the central office contact group, particularly in later years. With past heads of the Veterans Bureau and, later, the VA, we have found friendliness, if not altogether agreement, and we wish for the present head of the agency, Sumner G. Whittier and his staff, the best of everything and, naturally, a little more yielding on the points which we have always considered important.

As we have stated, when the Legion and the VFW got together to see that the young men of the two later wars were properly cared for upon the completion of their duty, there was no question in the minds of the country and the Congress that this group should be given every advantage in order to cope with the problems they would face upon discharge.

Since this is my last editorial I seek the indulgence of our readers for a personal word. May I say to my old comrades of the Spanish-American War and their dear ladies, not "Adios" but "hasta luega" as I hope to read of their activities for many years to come.

To the men with whom I served in the AEF in World War I, I say not "goodby" but "Til be seing you," if God grants me that privilege. To them I say, "Fight the good fight. Winning the last battle is what counts."

To the younger veterans of World War II and the Korean war I would say, "Be not too proud of your achievements. Remember you might never have attained them had it not been for your predecessors of earlier wars who realized the problems you might face and saw to it that these problems were cared for before you left the service."

Quite naturally I could not write this last editorial without a tribute to the officers of the National Tribune and its competent staff. I have worked with them for a long time and, I hope, made lasting friendships. Kindnesses received are not easily forgotten and I shall always remember my association with the Tribune with pride and gratitude.

Last but not least, the members of the composing room—Johnnie, Joe, and Carl and above all their foreman, Harry Swartz-baugh, without whose skill, competency, and cooperation the Tribune might never have gotten out on time.

To all I say: "May God be with you in the future and guide you to the happiness

you so well deserve."

The North Central Association of Colleges and Secondary Schools

EXTENSION OF REMARKS

HON. MARGUERITE STITT CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

Mrs, CHURCH. Mr. Speaker, as one who has long felt that the ultimate attainment of good will among nations must be based on mutual understanding of individual citizens, and that the beginning of such understanding must be early developed in homes, churches, and schools, I would proudly call attention to the effort being made by the North Central Association of Colleges and Secondary Schools to produce a more enlightened citizenry in the field of foreign affairs.

The territory of the North Central Association of Colleges and Secondary Schools consists of 19 Midwestern States with a present membership of almost 4.000 institutions. It is a voluntary organization designed first to develop and maintain high standards of excellence for universities, colleges, and high schools; second, to improve continually the education program on secondary and college levels; third, to establish cooperative relationships between secondary schools, colleges, and universities within the association; and fourth, to maintain effective working relationships with other educational organizations and accrediting agencies.

Officially established in 1895, when representatives from 36 institutions met at Northwestern University to draft a constitution, the North Central Association, since its founding, has examined, discussed, and made recommendations regarding continuing basic problems of education. It has concerned itself with the ever-increasing enrollment and tremendous growth of secondary and higher education; with attendant problems of faculty, facilities, and funds, dealing in addition with interscholastic and intercollegiate athletics; pros and cons of accreditation; the proliferation of courses and the issues of general versus specialized curricular offers; and the questions of standards and criteria.

The work of the North Central Association is carried on by the executive committee and three major commissions—the Commission on Secondary Schools, the Commission on Colleges and Universities, and the Commission on Research and Service. In addition to perennial problems which have been debated through the decades, the North Central Association has also accepted responsibilities in new fields, such as television, programs for superior and

talented students, and the study of international relations. It is this study of international relations under the foreign relations project, instigated and sponsored by the Committee on Experimental Units, a committee on research and service, to which I would pay a significant tribute today in submitting the following report of its activities, prepared by its director, James M. Becker:

NORTH CENTRAL ASSOCIATION FOREIGN RELATIONS PROJECT

The North Central Association of Colleges and Secondary Schools has been keenly aware of the critical need for a more enlightened citizenry in the field of foreign affairs. Cognizant that the Nation's high schools play a key role in preparing young people for citizenship responsibilities, the NCA determined to develop a program in foreign relations education at the secondary level. NCA recognized that curriculum change is evolutionary, not revolutionary; that it cannot without making available materials which can be placed in the hands of boys and girls; that, by their inherent nature, traditional textbooks in social studies cannot suply the kind of up-to-date and constantly revised materials which the study of our international relations demands; and that the introduction of new teaching material would need to be accompanied by an intensive and persistent campaign to acquaint teachers with the new materials and their

Acting on these premises, the North Central Association, early in 1955 approached the Ford Foundation for funds to carry on an experimental program in the Nation's secondary schools. In July 1955, the Ford Foundation made a grant of \$125,000 for 2 years, which it renewed for an additional 2 years in May of 1957 with a second grant of \$250,000. Generous grants and the cooperation of Science Research Associates, Inc., brought into existence the NCA foreign relations project, designed to implement five broad objectives:

 To stimulate interest in foreign affairs and understanding of global problems;

(2) to develop better comprehension of basic American foreign policy problems; (3) to help develop ability to think criti-

(3) to help develop ability to think critically about possible solutions of American foreign policy problems;

(4) to develop techniques, methods, and habits which will help high school students develop and maintain interest in foreign affairs; and

(5) to develop accurate, complete, and objective materials which are interesting and comprehensible and which provide the necessary background for understanding current world problems.

The foreign relations project has carried on a two-phase program: (1) The development of materials; and (2) the sponsorship of conferences, consultant services, and workshops for high school teachers.

(1) Development of materials: There are now six titles in print, pamphlets prepared by competent scholars and carefully edited for high school student use. These are: (a) The United States and World Affairs, (b) The United States and the Soviet Challenge, (c) Chinese Dilemma, (d) America's Stake in Western Europe, (e) America's Role in the Middle East, (f) Southeast Asia and American Polley.

Each of these is accompanied by an extremely helpful teacher's guide, and there are five bulletins called classroom tips, dealing with the analysis of political cartoons, analysis of charts and graphs, a survey of U.S. military alliances, the challenge of southeast Asia, and economic grouping in Western Europe.

Additional pamphlets, Africa and the World Today and The United States in the United Nations will be published later this year. Also, there have been several newsletters and an experimental edition of test materials covering the field of foreign relations.

(2) The sponsorship of conferences, consultant services, and workshops. During the past 4 years, in partial response to a larger demand than could be handled by the staff, the project sponsored more than 250 1- or 2-day teacher conferences all over the Nation. School visits and conferences with local staff members have run into the hundreds since the project was inaugurated. Six summer workshops have been aided and in part staffed by the project and are now self-perpetuating.

Among the most intriguing undertakings, in terms of possible longrun results, are the three assemblies which the project has cosponsored with the American assembly. One was at Michigan State for Michigan teachers and administrators, another at Illinois State Normal University for Illinois high school students, and a third at Allerton Park for Illinois teachers and administrators.

More than 3,500 schools are enrolled in the NCA foreign relations project. A participating school is one which has received and agreed to use a minimum of classroom sets (30 copies) of a title in the foreign relations series. Public, private, and parochial secondary schools are included, as well as 170 colleges and universities which use the foreign relations materials in methods courses, laboratory schools, and in subject matter courses. Some 6,000 teachers are using project materials with more than 600,000 students. More than 500,000 copies of the basic pamphlets have been distributed, some free urgier the terms of the grant, and almost as many sold.

Mr. Speaker, among the valuable reports which the association has issued, none is more significant than the final report of its assembly on Africa for Illinois teachers. This report is striking evidence of the dedication and capacity of this association of colleges and secondary schools in seeking to recognize, analyze, and solve major foreign policy problems of this troubled age:

FINAL REPORT ASSEMBLY ON AFRICA FOR ILLINOIS TEACHERS

At the closing plenary session, the participants in the Illinois Assembly on Africa, at Allerton House, Monticello, February 28—March I, reviewed as a group their discussions of Africa and of U.S. policies pertaining thereto and adopted the following statement. Although there was general agreement on the final report, it must not be assumed that every participant subscribed to every recommendation contained therein.

Preamble: Africa is a continent in ferment. It is undergoing revolutionary change. Throughout the past decade, one after another African territory has achieved statehood and independence. The end is not in sight. With independence, each State is confronted with new problems of major proportions and each finds that it has great need for outside assistance.

Africa is a contingent of great physical diversities. Ethnically, its people are many and varied.

The Illinois assembly concentrated its attention on the sub-Saharan region but it did give some consideration to the area of north Africa as that area intruded into the discussion.

It is our firm belief that the peoples of Africa are well on their way to independence. It will not be long until each African political entity will be in a position to work out its own relationships with non-African States and with other African States. It is important in this formative stage that the United States win the confidence of the peoples and governing regimes in the newly formed states.

We are convinced that the United States should develop policies designed to assist the African peoples to achieve self-government, to build viable economies and enduring political entities. The United States should continue to support the principle of selfdetermination and should welcome each new African State as it achieves independence.

The Illinois assembly believes that as racial relations in the United States improve we indicate to Africa and to the world that

such problems are soluble.

Political problems: The Assembly recognizes that some of the European Allies of the United States have very significant stakes in Africa. Suddenly to sever the ties between those allies and their African territories could seriously weaken our Western allies and could be most destructive of the collective security system we and they have con-structed. On the other hand, if the European allies are too adamant in their resistance to inevitable change, they will be weakened by continuing civil strife.

The United States should continue to ad-Vocate the adoption of the principle of selfdetermination and should press for recognition by its European allies of the necesity of moving toward self-government for the African peoples. At the same time, the U.S. Government should seek to promote, wherever possible, the continued interdependence of the European States and the emerging African States. We should press to preserve the economic ties which make for strength both in the European allies and the new

African States.

Americans must recognize that the emerging forms of African political and economic orders will not be identical to those of the West. Such forms must and should be African in character and should emerge from African cultures. Nevertheless, the United States should encourage the development of institutions which provide for and preserve the widest possible participation in the government of all African states, which protect minorities and preserve the right of dissent. We should also encourage developments Which enlarge the scope for free enterprise in their economies.

Economic problems: The new African states stand in need of economic development. Capital must continue to flow into their economies in order that a rapid development may continue. Wherever and Whenever possible the need should be met from a variety of sources, particularly from private investment. The U.S. Government is urged to develop with the new African governments ways and means for developing attitudes and the building of a climate which

will encourage private investment.

To promote the investment of private capital it is necessary that the U.S. Government guarantee the convertibility of earnings of American investors and to take steps to reduce to a minimum the risk of confiscation

of private property.

Private capital may be expected to support developments in mining, in general industry and even in agriculture, provided the necessary public works are financed by governments. To finance the necessary public works, the new African states will require intergovernmental loans and grants. Such loans and grants will be needed for the building of rallways and other modes of transportation, for the construction of port facilities, for the building of hydroelectric plants, irrigation systems, etc. Unless such Public works are built, private investment could be seriously handicapped and, therefore, not readily available.

It is recognized that Africa needs and requires technical assistance on a wide front. We recommend that the U.S. Government make every effort to see that such assistance is rendered by (a) United Nations agencies; (b) other multilateral efforts; and (c) by the

U.S. Government.

the African states to increase productivity, to build their economies on a sound basis, to produce diversification and generally to promote viable economies. It must be recognized that there are limits beyond which technical assistance cannot go unless development assistance is also given. For this reason we commend an expanded program of financing African development plans.

In some cases, development loans made by an international agency will be more acceptable to African states. We recommend that the United States participate in the formation of an international development loan fund to finance African development plans.

We urge the U.S. Government to promote, whenever it can, the financing of African development plans by our Western allies.

We urge that a larger share of foreign aid appropriations be made available for African

We commend private efforts, such as those of CARE, to utilize excess American produc-

tion to aid African peoples.

Education: We find that the American people, including those in our schools and colleges, know far too little concerning Africa and its people. To better the situation, we urge the expansion of academic programs so as to include more instruction in African subject matter. We recommend the establishment of African area study programs in more American colleges and

It is evident that the expansion of education in the new African states is crucial to their development and their wel-This applies to education at all levels—primary, secondary, and college—but it is particularly important in technical edu-cation. It is our belief that U.S. Govern-ment aid to education should have as its highest priority the strengthening of African institutions which train technicians and teachers for the primary and secondary schools. Our program of technical assistance should provide for expanded programs of (a) aid to African educational institutions, and (b) educational exchange.

Because the new governments desperately need trained administrative personnel, we urge the U.S. Government to expand its technical assistance programs so as to include major programs for assisting the new states to train personnel in public admin-istration and allied fields.

We feel strongly that there is an unfilled need for adequately trained American personnel to serve as field representatives of the United States in the African states. meet this need we urge the establishment of training programs in American universities designed to train for African service a corps of persons competent in language, technical fields, and knowledge of African cultures.

We commend the radio, television, and newspaper industries for the dissemination of information concerning Africa and events transpiring therein and urge that even more

adequate coverage be provided.

We believe that the U.S. Information Service and all African channels of communication should be used by the United States to disseminate information about the United States throughout Africa.

Farm Policy Folly

EXTENSION OF REMARKS OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

Mr. DEROUNIAN. Mr. Speaker, the Technical assistance can do much to assist recent report of the Farm Policy Advi-

sory Committee of the Democratic Party was a real disappointment to all of those deeply concerned about the economic problems facing American farmers to-

The advisory committee, drafting a so-called set of recommendations that may influence the Democratic Party's 1960 election year platform, pointed up the vacuum in which critics of administration farm policies and principles flounder whenever they try to outline alternatives to the sound proposals of President Eisenhower and Secretary Renson

All the advisory committee could offer was the same, old, discredited formula of incentive high price supports and extended Government control over farmer freedom which got us into trouble in the first place.

A recent editorial in the New York Herald Tribune brings the advisory committee's proposals into sharp perspective under the title "Democratic Farm Policy Folly" and I now ask that this editorial be inserted in the RECORD:

[From the New York Herald Tribune, May 16, 1960]

DEMOCRATIC FARM POLICY FOLLY

Unlike the Frenchmen of the ancien régime who returned to Paris after the fall of Napoleon, the farm policy thinkers of the Democratic Party have not only learned nothing: they have forgotten everything they might be expected to remember from the last few years.

The party's advisory council has set a committee drafting a farm plank to be submitted to the convention in Los Angeles. What are its recommendations? Nothing less than the reestablishment of high, rigid price supports and elaborate crop production controls which laid the basis for the painful and ridiculous agricultural situation we find ourselves in today.

It has been made clear beyond a doubt that high price supports, crop regulation, and indeed all routine Government control of farm production are debilitating and unnecessary evils. Anything that artifically stimulates farm output in a country which is producing already far more than it can either consume or sell abroad is obviously

It is a burden on the taxpayer who thus pays twice for what he eats. It is a threat to farmers who see the accumulated surpluses depressing their market. It is a liability to our foreign policy because of the fear of dumping on the international market. It is an iniquitous waste of energy and resources.

Artificial stimulants originated during the depression years and carried through World War II, when it was essential for the country's food production to be maintained or There is no longer any such need, expanded. chiefly because of the fantastic revolution in agricultural technology.

Today, fewer and fewer farmers produce more and more food. Moreover, the farmers subsidies are supposed to help, that is, the marginal or small-acreage farmers, are those who, in truth, are helped least. Why? Because the crops of 56 percent of the farms represent only 9 percent of total farm sales. And if these small farms sell little, subsidized prices will help them correspondingly

None of this seems to make any impres sion on the Democrats, who are after the farm vote. Their promises would, if realized, undo all the progress toward the establishment of a sane relationship between the farmer and the consumer. And they would have the further effect of reducing

the real value of farmers' incomes through inflationary spending.

There is no simple solution to the farm problem. But a solution is certainly not to be found in this direction.

Electoral Vote Can Be a Tie

EXTENSION OF REMARKS OF

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

Mr. AYRES. Mr. Speaker, I believe the following article will be of interest to the readers of the Congressional

ELECTORAL VOTE CAN BE A TIE (By Clyde Mann)

Is it possible for the presidential election to become deadlocked in the electoral college? Has it ever? What must be done to break the tie?

Rabbi Morton M. Applebaum of Temple Israel posed these questions recently. Since then, others have inquired about a possible tie for the Presidency.

It could happen. It did happen once. The House of Representatives decides a tie election for President and the Senate for Vice President.

While voters mark their "X's" for a candidate for President they actually are voting for electors pledged to the candidate.

The Constitution provides that a body of electors choose a President and Vice President. This body is known as the electoral college.

Each State is entitled to as many presidential electors as it has Members in Congress. Ohio, for instance, with 23 Congressmen and 2 Senators, has 25 electoral votes.

The college meets after the election and chooses the President and Vice President. Next year there will be 537 electoral votes with 269 required to elect a President. With a total of 537 votes, how can there

be a tie in the electoral college?

Answer. There is no Federal law and no constitutional provision requiring a presidential elector to vote for the candidate who heads his party's ticket.

The elector is bound only morally to the

candidate heading his ticket.

Five Southern States-Alabama, Arkansas, Mississippi, Georgia, and South Carolinahave laws permitting the election of inde-pendent or uncommitted electors. These States have a total of 47 electoral votes.

Other Southern States have laws permitting write-in candidates for Presidential electors. The Southern States have enough electoral votes to keep any candidate from getting the required 269 votes needed to win.

As a matter of fact, southern politicians are talking of forming a bloc of independent and uncommitted Presidential electors.

They plan to vote for neither of the major party candidates. This would throw the election into the House and give southerners a chance to bargain for policies most important to them.

In the House, each of the 50 States is allowed only one vote. Balloting would continue until a President is elected.

In 1800, Thomas Jefferson and Aaron Burr each received 73 electoral votes. The House balloted from February 11 to February 17, declaring Jefferson the victor after the 37th ballot.

Only once in our history has there been a President of one party and a Vice President of another. That was in 1796, when John Adams, a Federalist, became President, and Jefferson, a Democratic Republican, became Vice President.

This happened because in those days the candidate with highest number of votes became President and the one with the second highest became Vice President.

The 12th amendment, which went into effect in 1804, changed this.

Other interesting facts of American politics:

First party convention was that of the Anti-Masonic Party in 1831. The following year the Democrats held their first convenand nominated Andrew Jackson for President and Martin Van Buren, Vice President.

First Republican convention was held in 1856. It nominated John C. Fremont for President and William L. Dayton for Vice President. Democrat James Buchanan won that year.

Longest convention ever was held by the Democrats in 1924. It lasted 14 days and took 103 ballots to select a candidate-John W. Davis of West Virginia, who was beaten by Republican Calvin Coolidge.

The GOP nominated 13 candidates in Chicago (where it will meet in July) and elected eight of these: Lincoln, Grant, Garfield, Benjamin Harrison, Theodore Roosevelt, Taft, Harding and Elsenhower.

Only two Presidents were public officials most of their lives: Teddy Roosevelt and Andrew Johnson. Twenty-four Presidents were lawyers, one was a newspaperman, one an engineer and five were professional sol-

Harding was the only President elected while serving in the U.S. Senate. James A. Garfield was elected to the Senate January 13, 1880, and President on November 4, 1880. He declined the Senate seat to run for Presidency.

George Washington had to borrow 600 pounds to pay expenses of his first inauguration. He left an estate of \$530,000 when he died 10 years later.

Arthur E. Wullschleger Honored

EXTENSION OF REMARKS OF

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

Mr. DOOLEY. Mr. Speaker, Arthur E. Wullschleger, of the town of Mamaroneck, N.J., one of the bright residential areas of my fine constituency, came to Washington on May 17 to be honored with a special ceremony at the Smithsonian Institution at which he presented to that world famous depository of historical treasures a priceless Jaquard

The loom, invented in the year 1801 by the man whose name it bears, is one of the most ingenious devices ever fashioned by the mind of man in the field of weaving. Thousands of cards, very similar to the IBM cards used today in machines all over the world, constitute an integral part of the loom and through the use of the punch-hole technique guide the design on the frame.

In presenting this century-and-a-halfold treasure to the museum-Mr. Wullschleger had it restored to working condition at great expense-Mr. Wullschleger was merely doing what he has

done often before, namely, giving to his fellow citizens some of the benefits of his wealth and knowledge.

As a citizen of Mamaroneck, Mr. Wullschleger is regarded as one of the most amiable of men and one of the most helpful and considerate people in the community. He has traversed the world many times, his trips to Europe alone totaling more than 100 voyages, but his interests lie with the men and women of his community. He has served as chairman of the zoning board of the town of Mamaroneck and in that capacity has rendered outstanding service.

At the ceremony at the Smithsonian Institution Mr. Wullschleger was presented to the audience by his son-in-law, Arthur "Red" Motley, the distinguished president of the U.S. Chamber of Commerce, well-known publisher and famous after-dinner speaker.

Mr. Motley and Mr. Leonard Carmichael, the master of ceremonies who is the Secretary of the Smithsonian Institution, pointed out to those present that Mr. Wullschleger had come to this country as a young man to seek his fortune. He not only attained his monetary objective but in the process became one of the world's outstanding authorities on colors and fabrics. His impact on his field of operation has been extraordinary.

As his Representative I took pleasure in welcoming him to Washington and showing him every courtesy.

A Compromise Area Redevelopment Bill

EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

Mr. VAN ZANDT. Mr. Speaker, on Wednesday, May 18, there was intro-duced in both Houses of Congress a compromise area redevelopment bill in an effort to meet the objections contained in President Eisenhower's veto message regarding S. 722.

In the Senate S. 3568 was introduced by Senator Hugh Scott, of Pennsylvania while in the House companion measures were introduced by my colleagues, the gentleman from Pennsylvania, Representative Ivor D. Fenton, who introduced H.R. 12291, the gentleman from Pennsylvania, Representative John SAY-LOR, who introduced H.R. 12298, and the number of my own bill is H.R. 12290. All of these bills have been referred to the committees having jurisdiction over this type of legislation and it is hoped that immediate action will be accorded them.

Following is a comparison of House area redevelopment bills including S. 722 vetoed by the President together with H.R. 4878 which I offered as a compromise measure at the first session of this Congress and H.R. 12290, 12291, and 12298 introduced yesterday as the revised version of H.R. 4878 and designed to meet the objections on which the President's veto of S. 722 was based.

Comparison of area redevelopment bills

Subject	S. 722 as passed and vetoed	H.R. 4878, original form	H.R. 12290, H.R. 12291, and H.R. 12208		
OrganizationSeparate Area Redevelopment Administration.		Department of Commerce	Department of Commerce.		
2. Division of redevelopment areas		Only industrial and public facility loans in areas of persistent and substantial unemployment.	Same; removed reference to rural. Note technical assistance can cover.

6. Grants for public facilities	\$35,000,000	\$25,060,000; Federal participation 3335 percent class II areas, 75 percent class III areas.	None.		
7. Retraining subsistence payments 8. Vocational training grants	\$10,000,000 \$1,500,000		\$5,000,000. Same.		
Technical assistance. Criteria of unemployment	\$4,500,000. At least 6 percent at time of application and 12 percent for 12 months preceding, or 9 percent for 15 of 18 months preceding, or 6 percent for 18 of 24 months preceding.	\$3,000,000. An average of 6 percent, excluding seasonal, throughout qualifying period, and 50 percent above national average for 4 out of 5 years preceding in class I areas, or 75 percent above national average for 3 out of 4 years preceding in class II areas, or 100 percent above national average for 2 out of 3 years preceding in class III areas.	\$3,000,000. Same; area classifications removed.		
11. Interest on loans	Maximum permitted, 2 to 7 percent	To be determined by Secretary based on going	Same.		
12. Cost	\$251,000,000	rates. \$158,000,000	\$108,000,000.		

The Nation's Agriculture

EXTENSION OF REMARKS

HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1960

Mr. MOORE. Mr. Speaker, there is increasing evidence that this Nation's agriculture is being more severely hit by politically inspired adverse publicity about the farming business than by the recognized economic pressures which the present administration is striving to ease.

One of the Nation's leading farm magazines, the Farm Journal, is currently conducting an admirable campaign of advertising promotion.

The Farm Journal is attempting to but farm economics into a reasonable perspective by refuting some of the distortions

Taking note of this was the Charleston (W. Va.) Mail which treated the subject editorially in its issue of April 11. Under unanimous consent I insert the editorial in the Record:

THE MYTHS OF THE FARM PROBLEM DO A GREAT INJUSTICE TO MOST FARMERS

The farm situation, as it is called, is bad enough as it is, but it is not so bad as it is generally misrepresented. So says Carroll P. Streeter, editor of the Farm Journal in its current issue.

Take, for example, the myth that all farmers are living on a generous handout from the Government. Livestock farmers, who account for more than all farm income, have never accepted Government supports. And to clarify the picture a little more, less than one-fourth of all agricultural produce gets so much as a cent of 1 cent of price supports.

Well, then, what is all this talk about farm subsidies costing the United States billions of dollars every year? That figure, says Mr. Streeter, is the amount in the Federal Government set aside for all agriculture, including research and education, food grading and inspection, soil conservation, market report-

ing, and the Forestry Service. Of this total, says Mr. Streeter, "probably not more than one-half can be charged to farmers alone, and not all of that to subsidies."

Twice in recent years 55 percent of the farmers polled by the Farm Journal have voted to eliminate subsidies entirely. Who, then, is responsible for maintaining a system which most farmers regard as both unfair and unsuccessful? "Three groups," says Mr. Streeter: "a substantial minority of farmers, politicians who come from subsidy crop area and—surprise—businessmen in the wheat and cotton belts who sell farm supplies, process the crop and market it. This is the combination which makes it so hard for the will of the majority to prevail."

There are other myths which Mr. Streeter

There are other myths which Mr. Streeter disposes of just as factually, but these are a fair sampling and enough to make his point:

Sure there is a farm problem, but at its worst it does not arise with or seriously affect the great majority of American farmers. Most of them, with no subsidy from the Government, go right ahead making their maximum economic and social contribution to the Nation's welfare.

Khrushchev's Behavior at the Summit Does Not Create the World Cleavage; It Only Makes It More Apparent to All—His Tirades Came From His Weaknesses Which U-2 Flights Had Revealed

EXTENSION OF REMARKS

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article by Mr. Edgar Ansel Mowrer:

SUMMIT FAILURE WAS VICTORY FOR WEST (By Edgar Ansel Mowrer)

Paris.—Essentially the summit conference that died aborning was great victory for the West and particularly for Eisenhower. Admittedly he should never have admitted any knowledge of the fateful U-2 whose detection by Moscow started trouble. But since then the President, so irritable in small matters, has revealed statesmanlike dignity and patience that won him the fullest admiration and support of De Gaulle and Macmillan as well as the French people.

The meeting fulfilled my prediction that thanks to the downed plane, this conference would be concerned with situations and not with verbal cobwebs labeled relaxing tension. By torpedoing the conference, once he became sure that he would get no substantial concessions on Berlin or any American scalps, the Soviet boss in an excess of sustained vituperation and insult, simply created the stink behind which he backed out altogether.

But with a bloody nose Mr. K. now knows he can neither blackmail nor intimidate the United States. It was high time he learned it. The lesson won't be lost at the next summit conference after the American election—if there is such summit.

For Khruschchev's policy of political pressure through public tantrums reveals not strength but weakness. The best observers here are convinced that what hurt Nikita most in the Powers affair was the shrieking revelation of Soviet vulnerability. Ever since the first sputnik and the threats to destroy Paris and London by missiles, Nikita has built up a legend of an invincible U.S.S.R. It could—according to the legend—crush any enemies while remaining impervious to their counterattacks. Such a story, endlessly repeated, found credence throughout the world. People accepted Soviet claims, first of parity with, then of superiority over the United States. Such boasts were the basis for Soviet threats against Berlin.

Then what happened? The downed American plane revealed that far from being invulernable, the U.S.S.R. could be penetrated and overflown at any spot away from chief centers. Not only could it be overflown but such flights had been undetected for 4 years. This meant that militarily the Iron Curtain was a myth—that American leaders undoubtedly have the fullest possible list of all necessary Soviet targets in case they were compelled to reply to Soviet sneak attack. Far from being stronger than the United States, the U.S.S.R. was weaker since airplanes and nearby bases would more than cancel out Soviet superiority—if any—in bal-

listic missiles. Moscow's ability to terrorize the world was henceforth severely limited.

This explains the consternation of the Soviet people, officially doped with illusion of superiority. It also explains why other Bolsheviks, especially military, must have become extremely critical of Nikita's management of Soviet affairs. What else could Nikita do but bluster and threaten? But the master spy and liar overplayed his hand. His weakness was not lost upon America's allies.

His threats and his intolerable attempt to humiliate Eisenhower created full allied unity. For if the West yielded to Khrushchev on such points it would never again be able to resist his ultimatums. For the first time since he succeeded Stalin, the wily Mr. K. was caught in his own noose.

Whatever politicians at home say about the failure of the "conference that never happened," officials here, both American and allied, agree that responsibility for failure rests upon Khrushchev. Rather than face a meeting where he could win nothing, he sought to mobilize public opinion against the United States and talk himself out of his embarrassment by insulting Eisenhower. The attempt has completely backfired. Even the eager British who arrived sure that the U.S.S.R. was ready for conciliation are now convinced that Russian Communists are enemies of both the West and real peace. In this sense the Paris summit has been a real success for the West.

Medical Care for the Aged

EXTENSION OF REMARKS

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1960

Mr. CURTIS of Missouri. Mr. Speaker, I ran across an article appearing in the newspaper Labor, dated May 14, 1960, headlined "Says United States Lags in Medical Care." This article purports to quote our colleague Congressman Moss as follows:

The United States is the only large industrialized country in the world where the Government does not, in some form or other, provide medical care for most of its citizens.

All European countries, with the exception of Finland, operate some type of government health and maternity program, and most of the 59 countries of the globe which have such programs provide medical care benefits under some sort of a social insurance program.

I think this article lets the cat out of the bag, just as similar statements made by other proponents of the Forand bill call attention to what these people really have in their bag of wonders.

Our society has the finest health program, and this includes health care for the aged, of any society in history. These other systems have the Government in some form or other provide medical care for most of its citizens. This results in a system of inferior health care for the citizens, as a study of the health programs of these other industrialized societies reveals.

Should that not suggest to these other societies that socialism is the wrong way to achieve success in this area, even if it does not convince some of our own political theorists?

I must add a further statement to try to forestall what the Forand bill proponents usually fall back on to answer their critics. Their critics, they say, are standpatters and want no progress. This is false. Any program, no matter how good it may be, can be improved. There is plenty of room for improvement in the health program our society has, even though it is the best program ever set up. However, to improve it and not damage it, we must first understand what it is. The Forand bill supporters imply that there is no program even though the Federal Government today is spending over \$12 billion a year on care for the aged. Let us first lay the facts of our present program for health care out on the table, then debate the issue of how we can improve it. Is this such an illogical suggestion?

The article follows:

SAYS UNITED STATES LAGS IN MEDICAL CARE

"The United States is the only large industrialized country in the world where the Government does not, in some form or other, provide medical care for most of its citizens," Congressman John E. Moss, Democrat, of California, noted last week.

"All European countries, with the exception of Finland, operate some type of government health and maternity program," he said. "And most of the 59 countries of the globe which have such programs provide medical care benefits under some sort of a social insurance program."

Moss predicted that Congress this year will also enact medical insurance legislation for those over 65 years of age.

Descendants of Israel Surmount Overwhelming Odds

EXTENSION OF REMARKS

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 19, 1960

Mr. DIGGS. Mr. Speaker, the 12th anniversary of the rebirth of Israel, May 2, recalls a saga of a suffering people as potent, fraught with drama as a movie spectacular, and as intensely histrionic as the journey of Moses and his followers to the Promised Land.

Fiction writers would not dare the literary license of depicting the trials and tribulations of the wandering tribes of Israel. It is unbelievable to conceive the perpetuity of the dream of independence for Israel as it has coursed through generations of exiles without loss of one spark of its original fire.

Descendants of Israel, surmounting overwhelming odds in pursuit of their dream of a homeland, have worked to build Jewish pride and world respect, and clung tenaciously to the idea of rebuilding a Jewish commonwealth in the face of international manifestations of anti-Semitism and Nazi cruelty. For 2,000 years the vision of a new Zion has spurred a decimated people, tottering under the yoke of bloodthirsty attacks, yet faithful to the vow that "their hands would lose their cunning and their tongues cleave to the roofs of their mouths" if they forgot Jerusalem.

In the pilgrimage to Israel exiles came from 4 continents and 70 countries singly, in single family groups, and in patriarchal clans; from behind the Iron Curtain; from behind store counters in the United States and Canada; from the remote Atlas Mountains and the bazaars of Casablanca; from the foggy grotesquerie of England and the parched deserts of the east. They came to pool their skills, their knowledge, and their finances, to be the forerunners in the creation of a great country, culled out of barren, acrid land; the earth to be tilled and cajoled into verdancy with loving hands and willing, if not strong, backs.

Exiles seeking the promise of this new frontier taxed the sparse resources to the

bursting point.

Prime Minister Ben-Gurion, on the 10th anniversary of the rebirth of Israel, commended the jews of the world for embodying the sole ally of infant Israel, "when the United Nations and all the nations of the world failed to come to Israel's aid." They sent money, and arms, and fighters, from 60 different countries to suckle and nurture the nestling state.

Israel has met in 12 years every threat to national security and integrity—communism, economic struggle, domestic strife, and the necessity for living within its narrow borders and absorbing all who wanted to come to Israel.

The people of Israel and the Jews of the world have the right to flex their muscles with pride of accomplishment

and tenacity of purpose.

It is our hope that Israel in its struggle will serve as a criterion for African nations, now straining at the leash of colonialism and near to breaking the yoke of servitude.

In a century when man has mastered his physical hospice, and his struggle is pointed toward the human barriers of prejudice, hatred and poverty, ignorance and intolerance, Israel represents a touchstone to the United States from which it may renew its standard of justice, liberty, and the pursuit of happiness for all its citizens.

American Mining Congress Convention

EXTENSION OF REMARKS

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1960

Mr. SAYLOR. Mr. Speaker, last week I had the honor of accompanying the Secretary of Interior on a visit to a coal mine. At the instance of our mutual friend, Stephen F. Dunn, president of the National Coal Association, the Secretary's party toured the Thomas Portal area of Mathies Mine, which is operated by the Pittsburgh Coal Division of Consolidation Coal Co. Other members of the group included Michael J. Widman, assistant to the president, United Mine Workers of America; Marling J. Ankeny. Director of the Bureau of Mines; Royce A. Hardy, Assistant Secretary of the Interior; Consolidation Coal executives George A. Shoemaker, Walter F. Schulten, S. M. Cassidy, and D. L. McElroy; and G. Don Sullivan and Mr. Dunn, of National Coal.

I commend Secretary Seaton for his interest in an industry that is vital to America in peace and war. On our return trip to Washington after the tour of Mathies Mine, he expressed his enthusiasm for the joint efforts of management and labor that have made this Nation's mines by far the most proficient in the world. Mr. Seaton also told me that he is eagerly awaiting Senate passage of the coal research bill so that his office will be able to undertake carrying out the purposes of the legislation as soon as it becomes law.

Mr. Speaker, the visit to the mine took place on the afternoon of May 9, which marked the opening session of the American Mining Congress Coal Convention in Pittsburgh. The morning session was devoted to a national fuels policy, in which I participated at the generous request of Mr. Julian D. Conover, executive vice president of the American Mining Congress. Among the other panelists was the distinguished chairman of the Committee on Interior and Insular Affairs, Mr. ASPINALL.

Because of my colleague's objective analysis of the Nation's fuel situation, I ask unanimous consent to have his statement printed in the Congressional Record. The coal industry is grateful that the Committee on Interior and Insular Affairs has such an energetic and impartial chairman. Without his dedicated effort, coal research legislation would not have reached the floor of the House and carried through to success in the early weeks of this session. His conscientious analysis of the need for a fuels study will determine whether such an investigation will materialize.

Following the reprint of Chairman Aspinall's address to the coal convention, I ask that the brief remarks of Mr. Stephen F. Dunn also be printed. When I discussed the possibility of the need for a continental fuels study, Mr. Dunn referred to points that would have a bearing on the decision. His remarks are brief, but they are poignant.

The address and remarks follow:

NATIONAL FUELS POLICY

(Statement of Hon. WAYNE N. ASPINALL, Chairman, House Committee on Interior and Insular Affairs, before the Coal Convention of the American Mining Congress, Pittsburgh, Pa., May 9, 1960)

It is indeed a pleasure for me to participate in this panel of the American Mining Congress on national fuels policy.

The proposed study of fuels policy is concerned with conservation and development of the fuel resources of the country. It involves the energy requirements and supplies of future generations. It involves the continuing competition that we have between the producers of fuel and energy. I trust that in any policy that we develop we shall have a maximum degree of free competition.

This keen spirit of competition between the fuel industries intrigues me. It seems to be in the true spirit of free enterprise. It might be likened for a moment to the advertising race between cigarettes.

I wonder which is the thinking man's

Each of the fuels, of course, maintains that it is the one that satisfies.

Which fuel would I be justified to "walk a mile for?" Perhaps there is not much these days that anyone walks a mile for.

This question of a national fuels policy is closely related to my duties as chairman of the House Committee on Interior and Insular Affairs. It touches closely in my own congressional district, where all of the major energy sources—coal, oil, gas, waterpower, and atomic energy—are well represented.

The Committee on Interior and Insular Affairs, through its Mines and Mining Subcommittee, has had before it in this Congress some important mining legislation. The first coal research bill passed through Congress last September but was vetoed by the President. The second coal research bill has passed the House and is now awaiting action in the Senate. We are assured of at least \$1 million to get this program started in its first year of operation.

During the past year a resolution was adopted by both Houses stating a national minerals policy, in very general terms. The President was asked to survey the functions of Government agencies and redirect them where feasible to come to the aid of depressed industries and communities. A report to Congress was requested. The report has been promised by the President's office, but has not been received.

The House has passed important legislation affecting mineral leasing on Federal lands. The legislation saves money by simplifying procedures and raises revenues by increasing the minimum rentals for oil and gas leases.

Of closer interest to the coal industry is a measure, passed in the first session of this Congress, raising the acreage of coal leases in Alaska to the same limit that applies in the other States.

I recently attended the first anniversary dinner of the National Coal Policy Conference, in Washington. The operators, owners, workers, railroads, utilities, and consuming industries making up the conference are to be congratulated on their unique organization. Like the American Mining Congress and the National Coal Association, it is doing a fine job keeping the public informed and advising those of us in Congress on legislation.

It is clear, I think, that the three great fuel industries—coal, oil, and gas—are fundamentally in agreement on one thing. That is that the ultimate consumer is really the king. The consumer should have free choice of the fuel that he wants to purchase.

No one could seriously disagree that each of the fuel and energy resources should make their proper contribution toward the public interest. The question is, In which direction is the public interest?

In our rapidly growing economy, the forces of government have become increasingly significant. It is not surprising, I am sure, when I remark that competition between fuels is marked by efforts to influence the course of government. I use the term "influence" in its general sense, with no criticism intended.

Let me give you an example.

In its report to its stockholders, a major oil company states its public relations policy. It says: "During 1959, as in previous years, we reported to the public our views on issues affecting the company's operations." The statement goes on: "We warned of the dangers of a national fuels policy, that, if adopted, would penalize consumers by reducing competition."

The writer of this statement interprets the movement for a study of national fuels policy as an effort to undermine the freedom of choice of the American public. I take it from the information that I have, however, that the Coal Policy Conference and other advocates are not wedded to any preconceived results of a fuels policy study. On the contrary, the resolution now before Congress calls for an objective study taking into consideration conservation measures and efficient uses, rather than a preconceived finding that consumer controls are needed.

My information is that the coal industry, and the industries linked with coal, are merely asking for a study which would look into the possibility of a set of rules whereby each fuel source may have a fair chance to compete with the others, with due regard to the wise use of resources. Insistence merely on the status quo—whatever it may be—sometimes does not lead to the best results.

At the dinner of the National Coal Policy Conference an address on the coal industry was given by Dr. Joseph Fisher, president of the Resources for the Future Foundation. Dr. Fisher praised what he called the objective attitude of the coal industry toward pending legislation. He said, and I agree, that coal people realize that legislative requests should point to a gain for the people generally, not just a private gain for one firm or one industry.

I would hope that this interfuel rivalry

I would hope that this interfuel rivalry will be exhibited to the public on an honest basis. Exeggerated statements building up one fuel or tearing down another should be avoided. Malicious or distorted statements have no place in honest advertising. They usually come back to haunt the one who thought he would gain the advantage.

On April 27 my colleague on this panel, Representative Saylor, addressed the House of Representatives on the recent increase in the quota for residual oil imports, placed in effect by the Department of the Interior. This is an incident that I shall leave for his discussion with you. I will say, however, that I have conferred with coal industry people on the matter, and I have suggested to them that an examination be made of the procedure used in setting the quotas. Frankly, I was surprised to find that the quotas are set without advance notice, without open hearing, and without appeal of any kind within administrative process.

A major inconsistency in the economic policy of our Government is evident. Reports received from Government departments consistently oppose financial relief to domestic mines and mining industries. The grounds cited are that financial aid is uneconomic since it would prolong or create submarginal industry. Yet tremendous sums have been spent to aid foreign minerals production, and these same departments strongly advocate a new system of financial aid to exporters to make their financing problems simpler.

It has been truthfully said that our country has deliberately exported its know-how to other lands, and has given away or loaned these countries the funds to establish great raw material exporting industries. We have lowered our tariffs to these countries. The number of U.S. industries that are being hurt or ruined is mounting yearly. The mining industry is not alone in its plight or in its plea for readjustment of the policy.

The revised version of the fuels policy resolution makes it clear that the objective of the study is to determine whether there is a need for an overall national fuels policy, and if so, whether there is a need for legislation to adopt or implement a policy. The joint congressional committee to be set up under the resolution would submit its report and recommendations within 2 years to Congress. Thereafter any proposed legislation would have to be considered by the Congress in the usual manner.

This seems to me to be a fair procedure. I do not think that it would be unfair to any particular industry or group.

These considerations have convinced me of the need for the study, and I think that the method of conducting it is feasible. Accordingly, I have joined with my colleague from Pennsylvania in introducing the revised resolution. The numbers of the Aspinall-Saylor bills are House Concurrent Resolution 661 and House Concurrent Resolution 662.

I am advised that the Chairman of the House Rules Committee, Judge Smith of Virginia, has promised an early hearing on the Aspinall-Saylor resolutions. This is favorable to the outlook for adoption of the resolution in the present session.

A source of some competition concerning the resolution is the existence of a measure to do a rather similar job as part of a larger venture. I refer here to the bill to authorize "Resources and Conservation Act of 1960." This bill is pending before the Committees on Interior and Insular Affairs of both Houses. It provides for the creation of two new permanent agencies-a Joint Congressional Committee on Resources and Conservation, and a Council of Resources and Conservation Advisers in the Office of the President. The resources and conservation bill covers a broader scope than fuel or energy resources. The advisory council contemplated in the resources and conservation bill is similar to the agency that was recommended in 1952 by the Materials Policy Commission as a means of correlating information and policy concerning materials re-

The coal industry and the coal organizations have done a good job of presenting a case for a study of national fuels policy. Industry spokesmen are prepared to document their case further at the appropriate time. You have many friends who will come to your support in committee and on the House floor. You are assured of my continued interest and support in this and other matters affecting the welfare of mines, mine workers, their families, and dependent industries and communities of America.

STATEMENT BY STEPHEN F. DUNN, PRESIDENT, NATIONAL COAL ASSOCIATION

I congratulate the distinguished panel members on their most interesting statements. The National Coal Association fully supports the view that Congress should initiate a comprehensive study of the fuel requirements of the United States. We are working closely with Joe Moody and his policy conference on this and other matters which we feel are essential to the national economy and security, and which, at the same time, would tend to correct inequities harmful to the coal linguistry.

ful to the coal industry.

It is no secret that chief opposition to the proposed fuels study has come from those fearing prohibition or restriction of dump gas sales. Numerous official pronouncements have been made against the practice of dumping gas into industrial markets at prices far below those charged residential customers. I should like to quote from just one of these documents. I think it is important to recall this statement from the report—issued in February 1955—of the Presidential Advisory Committee on Energy Supplies and Resources Policy. It is excerpted from the recommendation on sales below cost by interstate pipeline companies:

"Sales either for resale or direct consumption below actual cost plus a fair proportion of fixed charges which drive out competing fuels constitute unfair competition and are injuried to a sound fixed constitute."

inimical to a sound fuels economy.

"The committee recommends, therefore, that appropriate action be taken that will prohibit sales by interstate pipelines either for resale or for direct consumption, which drive out competing fuels because the charges are below actual cost plus a fair proportion of fixed charges."

Gentlomen, we believe that the proposed study would further emphasize the need for stopping this practice which is patently unfair which illicitly usurps coal markets.

I might add that I was extremely interested in Congressman Saylon's remarks about a continental fuels policy. In attempting to acquaint myself with the history of the Canadian gas cases, I observed that some 5 or 6

years ago—I believe that it was in 1954—the Federal Power Commission issued an opinion to the effect that Canadian natural gas should not be permitted to enter this country unless the American people were assured of supplies through an intergovernmental agreement. This observation seems to illustrate the possible need for a continental fuels policy so far as natural gas is concerned.

Current developments in the oil industry also seem to point up the need for such a policy. A member of the national coal staff spoke in Minneapolis this week. He sent me a copy of a current Minneapolis Tribune containing an article on plans for a series of pipelines to carry crude oil from Saskatchewan to the Midwest. The plans are most ambitious and would unquestionably have a heavy impact on U.S. energy supplies and resources. I shall send the article to Congressman Saylor for whatever use he might be able to make of it. Everything considered, a continental fuels policy may be necessary.

In closing, let me congratulate Julian Conover for arranging this important discussion as a part of an outstanding coal convention.

Historic Underwater Round-the-World Cruice of U.S.S. "Triton" Made Possible by Scientists and Engineers of the Knolls Atomic Power Laboratory in Schenectady, N.Y.

EXTENSION OF REMARKS

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1960

Mr. STRATTON. Mr. Speaker, all of us were thrilled last week when the news of the history making submerged cruise of U.S.S. Triton around the world, was made public. This event demonstrated more dramatically than anything else could do the great progress that has been made in our nuclear submarine fleet and the tremendous power which the American Navy still continues to exert in patrolling the oceans of the world for peaceful purposes.

As the representative of the 32d Congressional District of New York, which includes the city and county of Schenectady, this news had special significance for me and a special thrill because of the fact that the twin nuclear reactors for the Triton were originally developed in my congressional district by scientists and engineers and other employees of the Knolls Atomic Power Laboratory of the Atomic Energy Commission, located in Schenectady, N.Y., and operated for the Atomic Energy Commission by the General Electric Co. The achievement of the Triton is not merely a great achievement from the point of view of military power; it is also a great achievement for American scientific development. For this progress all of the fine people at the Knolls deserve a major share of the overall credit.

In fact, there still is located at West Milton, N.Y., directly associated with the Knolls Atomic Power Laboratory although actually located a short distance outside the geographical borders of my own district, the prototype of the original *Triton* reactor. Last year, in company with Admiral Rickover and Navy Secretary Franke, it was my privilege to visit this installation and to try my own hand at the controls of the original *Triton* powerplant developed by the engineers and scientists and employees whom I have the honor to represent in this body.

On this occasion, therefore, as we extend our congratulations to the officers and men of *Triton*, I hope we will also remember to extend our congratulations and appreciation to the splendid individuals at the Knolls Atomic Power Laboratory from the General Manager, Mr. B. H. Caldwell on down through the whole fine list, since each and every one of them played an important and major part in this historic development.

Under leave to extend my remarks, I include articles from the Schenectady Union-Star the Schenectady Gazette of last week detailing more fully the role played by these individuals:

[From the Schenectady Union Star]

KAPL WORKERS SHARE IN TRITON FEAT

Credit for the successful globe circling voyage of the U.S.S. *Triton* was shared today by scientists and engineers at the Knolls Atomic Power Laboratory, who designed and developed the prototype propulsion plant for the atomic powered submarine.

The twin reactors were developed at KAPL's test site at West Milton, where the propulsion system for the original U.S.S. Sea Wolf also was designed and developed, using a prototype system.

The nuclear propulsion system for the Triton is the first twin-reactor propulsion system built for any submarine. The Triton reactors, designated S-3G, are pressurized water cooled units.

In this system, heat produced by nuclear fisson inside a reactor is carried by water to an exchange system where it in turn produces steam in another water system. The steam then operates a turbine, which turns the propellor shaft.

The new system embodies several outstanding advances in the nuclear propulsion field: (1) A higher shaft horsepower development by each of the two reactors than any other submarine propulsion unit; (2) a lower weight per shaft horsepower than any other nuclear unit; (3) a choice of using one or both reactors for operating the ship; and (4) a unit cell core construction system which permits refueling inside the ship's hull.

Refueling at sea figures to save at least 4 to 5 weeks of refueling time that would be required of earlier nuclear subs, thus providing the equivalent of at least one additional submarine in service per year.

[From the Schenectady Gazette]
SUB SKIPPER CONGRATULATED BY CALDWELL

B. H. Caldwell, general manager of Knolls Atomic Power Laboratory, yesterday telegraphed congratulations to Capt. Edward L. Beach, commander of the *Triton* submarine and his crew on the announcement the nuclear ship had made an underwater cruise around the world.

Caldwell sent the congratulations from local scientists, engineers, and other employees at KAPL who designed and developed the Triton's nuclear propulsion system and also cited the fact that the ship's crew was trained in Schenectady.

KAPL also is designing and developing a twin reactor power plant for the world's first nuclear powered destroyer-class ship—the guided missile frigate Bainbridge.

International Understanding Fostered by International Crossroads Breakfast

EXTENSION OF REMARKS

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1960

Mr. SCHWENGEL. Mr. Speaker, under leave to extend my remarks, I wish to comment on one of the most unique and practical examples of citizen activities achieving person-to-person communication and developing greater friendship and understanding among peoples of the free world. I speak of the International Crossroads Sunday Morning Breakfast meetings, held in Washington, D.C.'s Central YMCA for students and other visitors from abroad. These are of especial interest to Members of the Congress, since about 100 Senators and House Members have appeared as speakers on this program during the past 14 years.

On Sunday, May 1, which was the 731st consecutive Sunday that this gathering has been held, its 14th anniversary was observed with a special program. This was devoted to a narration of over 100 letters and messages of appreciation and congratulations from former members of the Crossroads from nations all over the world. Each had attended one or more of the meetings and had been impressed by the fellowship and opportunity to reaffirm their faith in God, and in the free world and its free institutions, which are characteristic of these Sunday morning gatherings.

Speaker and narrator was Mr. W. L. Robinson, associate director, Traffic

Engineering and Safety Department of the American Automobile Association.

On that occasion, Mr. Robinson said:

It is a pleasure to have a part in this celebration of the 14th anniversary of this unique and practical demonstration of friendship and world brotherhood which is maintained on such a high order. The importance of these breakfast sessions in their person-to-person communication with forward-looking young men from all over the free world cannot be overestimated. It is noteworthy that during the 731 consecutive weekly sessions, 12,035 persons from 116 countries and geographical areas have signed the guest register and received life membership cards in this program. Of the many who have passed at the crossroads during the years, periodic contact has been maintained with hundreds of life members who have returned to their homes abroad.

When the 1959 activities report was mailed to these life members, they were invited to send a letter to be read at this anniversary session.

It is an honor to speak from the same platform as have so many distinguished and brilliant speakers and to be asked to narrate these delightful and cordial expressions of appreciation, congratulations, and well wishes for the continuation of this inspiring program. On the whole, they spell a glowing tribute to our chairman, Mr. Paul L. Brindle, who has, in addition to being the organizer and chairman during these long 14 years, managed to keep in contact with innumerable friendships around the world.

These letters literally shine with appreciation and good will, not only to the chairman and this committee in particular, but to the American people as well and indicate the depth of interest which the attention and hopes of those in the free world are fixed on Washington.

It would be nice, if it were possible, to present all of the many interesting homelles so affectionately and beautifully expressed in these letters, but necessity requires that this presentation be confined to those aspects of general interest, selecting and quoting only parts thereof as are fairly representative of the more than 100 received from abroad.

Excerpts from some of the letters fol-

Hugh Kimber, district engineer of water supply at Kent Town, Australia, writes:

"I wish to express my thanks to you and the YMCA in Washington, D.C., for the unique experience of several Sunday morning breakfasts when I was stationed in Washington. It was a joy for me, a man far from home, to share with other men of other nations, equally as far removed from their homes, the fellowship which existed around the International Crossroads Sunday morning breakfast talk. I trust that these breakfasts will be continued and will continue to

grow for many years to come."

Lt. C. H. Karamat Uliah, Pinddadankhan,
Pakistan, said:

"The fine opportunity provided by your organization to meet great people from all over the world is unique in its nature. Whenever I am reminded of that homely, informal, cordial atmosphere of May 5, 1956, when I was made a member, I am filled with a pleasure and joy which is at once complete and reassuring in itself. Here in this room people from all free nations meet and exchange their views and get to know better ways of life, and thus reaffirm their faith in the free world and its free institutions."

Borje Brannstrom, detective lieutenant, Bromma, Sweden, recalls:

"Yours is a very good idea, well formed through the years. In 1951 I stayed at the YMCA hotel as a U.N. fellow, and one day I saw a message about a special breakfast. Heartlly welcomed, I very soon found myself in the middle of new friends from all over the world. Long live the Crossroads."

Bangalore K. Shivalingappa, of Mysore, India, who did graduate work in engineering at the University of Connecticut, states:

"I am delighted to hear about the 14th anniversary of your organization on May 1, 1960. How I wish I could take part in your celebration. My heart and mind are with the activities and celebrations that take place on this memorable day. In India it is customary to use incense sticks on such occasions—social gatherings, worship of the Almighty. So I am herewith enclosing two incense sticks, especially gotten from my home in Mysore State, India. I hope you will use these incense sticks, each of which will burn for about 15 to 20 minutes. Its fragrance and delightful fumes will fill the hearts of the people with peace, friendship, and cordiality." (Including a message in sanskrit, "May humanity be blessed with happiness," and a sandalwood letter opener, which is known for its fragrance and is a rarity, even in India.)

Dr. P. N. Mehra, dean of the faculty of science and head of the botany department of Panjab University, writes:

"I visited the YMCA in May 1957 when I visited the States as a visiting professor under the educational exchange program. The second time I had the opportunity to visit again in 1959, when I was invited to preside over a section of the International Botannical Congress, held at Montreal and was on my way home. Let me assure you that I enjoyed both these occasions.

You have left on me a deep impression of your hospitality, humanity of mind, and deep understanding in the human affairs. One or two meetings I had the opportunity to attend, gave me an idea that there was a true world fellowship existing. I was very much impressed with the functions arranged in the YMCA.

Dr. Manuel G. Magboo, a physician and surgeon, and intercontinental vice president of the International Association of Y's Men's Clubs, Manila, Philippines, says:

"Greetings from the Philippines. Congratulations on the 14th anniversary of the International Crossroads Sunday Morning Breakfast, a pioneering organization that brings together men from different parts of the world to share with each other mutual traditions, experiences, and a better understanding of each other's country. Yours may be just a 'cry in the wilderness' in trying to make people understand each other and ultimately bring about permanent peace, but it is something which could be a start toward the right goal of making all peoples on earth brothers under the Fatherhood of God. I hope there will be more communications from you."

David Morrish, Exeter, United Kingdom, comments:

"I am delighted to share in your 14th anniversary celebration and forward my best wishes for the continuation of fellowship at the International Sunday Morning Breakfasts. Your International Breakfast is a splendid idea. It is even more encouraging to know that you have the concern to keep contact with your oversea friends. Your report is an annual reminder of the Christian care and hospitality of the American YMCA movement."

Walter Hanming Chen, former assistant editor of North China Daily News, editor of the Hong Kong Daily Press, editor-publisher of the Far Eastern Journal (now retired): "I often recall my world tour of 2 years ago and my visit to America's wonderful Capital, as well as the many friends I was

Totten recall my world tour of 2 years ago and my visit to America's wonderful Capital, as well as the many friends I was privileged to meet, including the members of your Sunday Breakfasts in 1958. Please convey my greetings to my fellow members of the Sunday Breakfasts and accept the same yourself. May God bless you and your work."

Georg Overkamp, Bonn, Germany, relates: "The most important thing from my last visit was to see how people in your country are living. This gives a much better understanding than to study books and newspapers. I think if it would be allowed for the population of all countries to go free to any other country they like, it would be the best way to understand each other and the best way for peace. I was very much impressed by the Sunday morning breakfast in 1956."

Dr. Sydney Chapman from England, formerly professor of mathematics at London and Oxford Universities, now visiting professor of geophysics, University of Alaska, member of the research staff, High Altitude Observatory, Boulder, Colo., senior research scientist, Institute of Science and Technology, University of Michigan, and was for nearly 7 years (1953–59) Chairman of the International Geophysical Year, and is the recipient of the T. A. Edison Foundation award (1959) for his book, "IGY Year of Discovery," states:

"My best wishes to your 14th Anniversary Crossroads Breakfast on May 1, 1960, which I cannot attend, as at that time I shall be at Fairbanks, Alaska. I renew my visit to the friendly "Y" at Washington occasionally, and I am sometimes there over Sunday and able to join you."

W. Verriest, Brussels, Belgium, recalls:
"I only once was so happy to attend the Crossroads, but I still have in memory this wonderful international atmosphere. Best wishes."

Capt. Luck Chang, Seoul, Korea, says:

"I have received with great delight the good news of your achievement of Crossroads activities for 1959 successfully, and also delighted to hear that Crossroads is prosperous year by year, increasing more life members from as many as 115 county of the county of tries, and thus promoting international friendship and understanding."

Pablo Fong, Mexico, D. F. writes:

"I sincerely appreciate your kindness and congratulate you. At this time it is luck to find a person like you, kind, Christian, trying always to help all fellow creatures, and so polite.

Roy Palmer of the Southwestern Electricity Board-Administration, Bristol, England (sent a 31-page report of his American trip) re-

calls:

"I well recollect the morning of June 1958 when I crept into the breakfast room, trying not to be observed. Needless to say, I didn't succeed. This meeting did make an impression on me, and I think it is very worthwhile, particularly for strangers like myself. I vividly remember some of the points which the speaker, Dr. Gopel Naidu, of Andhra University made. * * I shall not forget my meeting at the Crossroads, the pleasant memory of which will always re-

Don Jefferies, a young world traveler from Brisbane, Queensland, Australia, comments: "It is over 12 months since I was with you at International Crossroads. * * * But if Don Jefferies is forgotten, that doesn't really matter. What does matter is that the meet ing of my country with so many other countries is not forgotten, and it is your effort at the International Crossroads that has preserved that meeting. * * In India, they have a town called Varanasi, which means the meeting of the waters. In Washington, they have a place called Inter-national Crossroads, the meeting of the nations. As the waters meet and mingle at Varanasi, so may the nations meet and mingle at the Crossroads.

C. Gunter Merle, assistant professor in engineering, Technical University, Berlin,

Germany, writes:

"I like to remember the time I spent in the States. I saw so many interesting things and found very many friends * * * Friends for life wherever I was * * * Give my best regards to all the friends who meet at the Crossroads."

Hector L. D. Selvaratnam, head, Employees Provident Fund Department, Bank of

Ceylon, Colombo, Ceylon, states:

"There is something very unique about the U.S.A. and United Kingdom, and that is their respect of law and order, and the determination of the authorities to come to the rescue of the victim against the aggressor. If more firmness and justice is shown, things will be brighter.

"My memories of the States are those of the YMCA's, in particular of the Crossroads, and particularly of you (Paul Brindle), who always went out of your way to make visitors from the East feel at home. I wish the Crossroads every success. It goes out of its way to make visitors feel at home." (Mr. Selvaratnam also wrote about the un-happy conditions in Colombo, following assassination of the Prime Minister last fall on the eve of his departure to America).

Dr. K. H. Voss, lawyer and former diplomat, formerly mayor of Bad Nauheim, Germany, says:

"On the occasion of the 14th anniversary of your International Crossroads Sunday morning breakfasts, I cannot wish anything better than the uninterrupted continuation of this marvelous service you have rendered and still render to so many foreign guests. I still recollect most vividly my happy feeling during my visits with you in 1950 and 1954, to be included in such a community of so many people, meeting each other, mostly

for the first and this only time, but being privileged to share in prayer and in their outlook in and beyond this world. Wherever we come from and wherever we go, there is nothing more reassuring than meet other people striving for the same final goal. This, in my view, is the unique and so valuable service of your Crossroads.

"I am just sitting in an office in the Harz Mountains with the Iron Curtain facing my window across the street. In face of this frontier, dividing not only Germany but the whole world, it is good to know of some point in the world where people meet in united reverence to our Lord from so many countries. In this sense, go on with good

Robert M. H. Chen, an industrial personnel manager, of Taipei, Taiwan, recalls:

"Your hospitality always keeps me fresh in the memory of the wonderful trip I made in your country. There are two YMCA buildings in Taipei, and our church is located in one of the buildings. Our church, even not belonging to any denomination, is a Protestant church * * * We have more than 300 members."

Dr. Florencio Z. Cruz, M.D., and "Y" leader,

Manila, Philippines, writes:

"I still remember on October 20, 1957was a Sunday-when you invited me to the regular breakfast meeting of the Y.M.C.A. and even seated me next to the guest speaker, Professor Koenig. I am really very thankful that you can still remember a friend from a country 10,000 miles away. This is just to show how the 'Y' spirit binds men of all nations, irrespective of color, creed, religion, or political affiliation. We always love each other as brothers and sons of one Almighty

Gerhard Leckel, a native German with the U.S. Consulate General, Hamburg, Germany, states:

"Looking back to the personal experiences I had the opportunity to gain when I stayed in Washington during my visit to the United States, I can frankly say that the Interna-tional Crossroads Sunday Morning Breakfast is a marvelous, and I think unique chance to meet outstanding people of various fields. I wished I had the opportunity to attend regularly."

Pierce, Boy Scout Association,

England, recalls:

"It is my profound pleasure to have been in Washington on the morning of August 17, 1958, and to be invited to join such a friendly group as the International Cross-roads Sunday Morning Breakfast. On that particular morning, it was pleasing to listen to His Excellent, Henrik de Kauffmann, the Danish Ambassador, whose subject was 'Have We Improved Our World During the Last 50 years?' * * * Should the opportunity arise, I will certainly join you at the International

Crossroads Breakfast."
Chris Roechling, Vierson, Germany (student in mechanical engineering) comments:

"Being a member of the German YMCA, I spoke in quite a few YMCA locals about the way of living in Canada and the USA; about the way of getting things done; about the way they manage things in America; about the traditional American hospitality toward their own and foreign people, and last, not least, about the International Crossroads Sunday Morning Breakfast. It would be a good idea if that could be practiced in all big cities of the world: New York, London,

Paris, Berlin, New Delhi, Moscow, etc." Maj. G. M. Safdar, Pakistan, recalls:

"I, Maj. G. M. Safdar, a Pakistani Muslin, had the honor of attending the International Crossroads Sunday Morning Breakfast at the YMCA on March 9, 1958, and the honor of becoming a life member. My 6 months of duty and sojourn in your country are among the best months of my life. I am fortunate in leaving behind numbers of friends in United States of America with whom I am in

regular correspondence. As a Muslin, I believe in universal brotherhood for humanity. I am proud that I am a life member of this association which is striving for the same

Atie C. den Dulk, The Hague, Netherlands, writes:

"In 1951, I found my way to the Cross-roads Breakfast in Washington, D.C., as a member of a study group from the Netherlands to your country, and after that morning I had the pleasure of being your guest on many Sunday mornings before going to Church. Always I will remember the hearty and 'brindling' way of introductions by Mr. Paul Brindle. I felt home from the first moment, and you don't know what that meant for a man (44) far from home on a Sunday morning. The fine conversation (and a good meal) with your people and people from all over the world, the speeches of distinguished speakers, the community singing, and the prayer made a deep impression and were unforgetable.

"I hope you will have a fine session and I pray my God your work will be blessed. In our country, there are no such institutions like the Crossroads, but in thankful remembering of your hospitality for foreigners, my wife and I open our home and our hearts for everyone on Sunday morning after church. You know perhaps that our coffee-afterchurch is served in our homes in the family." R. N. Chawla, Deputy Director, Ministry of

Irrigation and Power, New Delhi, India, says: "How little the United States of America is understood in India. Believing and accepting a democratic way of life, how different our world is than life in the States where all aspects of life and business are so highly organized, where human dignity stands supreme, and where there is dignity of human labor. I am proud of the country in which I live, and enjoy what I am doing—working on the development of a hydroelectric project-but I am restless because I would like to spend more time helping India understand the United States of America. I would be happy devoting all my time to that which I am at present unable to do. God willing, I will be doing that a few years hence. that, I will need your blessing and the blessing of my other American friends. Wishing all the best to my friends that meet at the Crossroads."

Top-Ranking Newspaper Views Kennedy Prospects

EXTENSION OF REMARKS OF

HON. NEWELL A. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

Mr. GEORGE. Mr. Speaker, many articles and editorials have been written with respect to the results of the West Virginia presidential primary on May 10. In that particular race Senator JOHN F. KENNEDY not only defeated an outstanding U.S. Senator in the person of HUBERT H. HUMPHREY, but won by a large majority over all of his opponents for the Democratic presidential nomination. It was admitted that the supporters of each were attempting to defeat Senator KENNEDY.

Because there are now but few narrowminded people in America, as demonstrated by the West Virginia election, it appears certain that Senator KENNEDY will be nominated by the Democratic National Convention in Los Angeles and that his victory in November will be of landslide proportions.

The absolute failure of the Republican policies and programs, both foreign and domestic, has made the American people aware of the necessity for again placing a man in the White House who possesses courage, foresight, wisdom, and integrity. Senator KENNEDY has all these qualities and would provide this country with the strong and fearless leadership which is so vital to our continued existence as a free Nation.

An editorial appeared in the Kansas City Star, an outstanding Midwest newspaper that, from habit or otherwise, frequently supports Republican candidates for public office. I ask, Mr. Speaker, that this editorial be included in the ex-

tension of my remarks:

FOR KENNEDY, GREEN LIGHT TO LOS ANGELES West Virginia may have been the big one. It's going to be tough to stop Senator John KENNEDY after the tremendous national buildup for this test of pulling power. The Other hopefuls who have been watching from the rail can see that he is clearly running strong on a fast track.

Of course it is easy to make too much of preferential primaries. Kennepy didn't win a single delegate vote yesterday. That is ironic. But he did prove that he can draw votes in a State with one of the smallest

Catholic populations.

KENNEDY has made his position on the separation of church and state perfectly clear. Undoubtedly the religious issue cut both ways. While there was no question of many votes being against Kennery because of his religion, many others voted for him With an evident sense of fairness. Aside from personalities, the vote was a slap at the political injection of the religious issue and should bury it. Of course, there is no way to know how much of the vote went to KENNEDY on principle and how much responded to his unusual personal appeal.

West Virginia seemed to be the natural spot for Senator HUBERT H. HUMPHREY. Of all the States, it has been hit the hardest economically. Both HUMPHREY and KEN-NEDY went all out with about the same extreme promises to the voters. But Hum-PHREY was a professional bleeder for the unfortunate pitted against a more reserved man of wealth. The poor man psychology may have kicked back. In the closing days of the campaign some observers suspected that West Virginia was beginning to resent all the talk about a downtrodden, backward area. Moreover, Kennedy was aided by the support of Representative Franklin D. ROOSEVELT, JR., who helped cast him in the F.D.R. image.

Throughout the campaign, John Kennedy played it smart. His supporters encouraged the role of Kenneuv as the underdog. In Wisconsin, the Kenneuv people started with the cautious line but overoptimism got out of control. KENNEDY became the one-sided betting favorite and his substantial Wisconsin victory was a psychological letdown. In West Virginia the Kennedy supporters continued their prophecies of gloom right up until election day. And they had plenty of help from the political analysts. Paradoxically, the one man who predicted the outcome was Vice President Nixon.

The result is a stunning upset and a psy chological victory. Kennedy's claims gain momentum by the evidence that other candidates ganged up on him by backing Hum-Phrey. This may have been the most im-portant issue of all. The people of West Virginia of their own Virginia are mavericks who go their own

So HURERT HUMPHREY is a former candidate for the nomination and can now return to the Senate floor. Supporters of Senators Johnson and Symington and Adlai Stevenson have new cause for concern. No one expects them to give up and the men who control big blocks of delegates are still very much in the picture.

But as of now it is apparent that for young JOHN KENNEDY, of Massachusetts, all signs point encouragingly to Los Angeles. From here on out the hills can't be any higher.

Unemployment Problems

EXTENSION OF REMARKS OF

HON. JOSEPH S. CLARK

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES. Thursday, May 19, 1960

Mr. CLARK. Mr. President, I ask unanimous consent that a statement by William D. Patton, attorney at law, Johnstown, Pa., before the Special Committee on Unemployment Problems, of the U.S. Senate in Altoona, Pa., on October 26, 1959, be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

PREPARED STATEMENT OF WILLIAM D. PATTON

Mr. Chairman, I appreciate the opportunity to present this statement to the com-

My name is William D. Patton. I am an attorney at law from Johnstown, Pa., and a native and lifelong resident of Pennsylvania. I am presently employed as counsel to the Senate Subcommittee on Constitutional Rights, in Washington, D.C., but I would like to emphasize that I speak here only as a private citizen who is seriously conwith the chronic unemployment cerned which has beset my home community of Johnstown and other similar areas in Pennsylvania for a number of years, despite the fact that the country as a whole has been enjoying a period of relative prosperity.

My remarks today will be brief, and therefore necessarily of a general nature. I will not attempt to present any detailed statistics about the economic picture in the Johnstown area. The committee undoubtedly will receive these from the U.S. Department of Labor, the Department of Labor and Industry of the Commonwealth of Pennsylvania, and other appropriate Federal, State, and local agencies.

First, I would like to commend all of the members of this committee for undertaking this study of unemployment problems in the United States. Aside from the valuable information and data you will collect about unemployment, its causes, and how it might be prevented, I believe the committee can perform an invaluable service by awakening the American people and Congress to the urgent need for an effective Federal program to combat chronic unemployment in scattered areas throughout the country.

The need for such a Federal program is demonstrated, I believe, by the conditions which exist in the Johnstown, Pa., area The analysis of chronic labor surplus areas, published in July 1959 by the U.S. Department of Labor shows that the Johnstown area has been classified by the Department of Labor as an area of substantial labor surplus continuously since May 1953. The area's principal industrial activities are steel and bituminous coal production. The persistent unemployment suffered by the area has been due primarily to long-term declines, coupled with growing mechanization in coal mining.

Many communities in the area which once were thriving and prosperous now are practically ghost towns. Many people have simply packed up and left for more prosperous localities, literally abandoning their homes. Among those who remain, a few are able to find local employment. Others commute to jobs in larger communities, upward of 30 or 40 miles away. An appreciable number, as the statistics show, simply are withjobs and must eke out a substandard living, depending on public assistance and. the charity of others.

Perhaps one of the best ways this committee could dramatize some of the conditions which now exist in parts of the Johnstown area would be to obtain actual pictures of some of those ghost towns and include them in the record of these hear-

It should be emphasized, Mr. Chairman, that the people in the Johnstown area have not just sat back and waited for someone else to solve their unemployment problem for them. While this is a depressed area, and funds for redevelopment resultingly are limited, the people have done what they could to attempt to alleviate their unemployment plight. A number of local communities in the area have established industrial development groups, and in some cases have been successful in attracting new industry and business to their communities. Just recently a development organization called the Greater Johnstown Committee, Inc., was formed by a group of top-level in-dustrial and business leaders to serve as an action group in the field of community development.

But while these efforts by the people of the Johnstown area are helpful, they are not enough to solve the area's chronic unemployment problem. Outside help, at least in the form of loaned capital, is needed if the blight of chronic unemployment is to be eliminated in the foreseeable future.

There are a number of steps which the Federal Government could take to help all areas of chronic unemployment in the United States, including the Johnstown area. In addition, there are several other steps which would help particular areas such as Johnstown where chronic unemployment may be traced primarily to the declining coal industry. I would like to enumerate some of these steps for the record and urge the committee to give serious consideration to all of them when you formulate the recommendations you will make in your report to the Senate next January.

Among the steps which would help all depressed areas in the United States are:

(1) Speedy enactment into law of an area redevelopment bill providing for loans, grants, information, and technical assistance to depressed areas to enable such areas to plan and finance their development so as to create new jobs and thereby eliminate unemployment.

(2) Establishment of a uniform unemployment insurance benefits program providing for coverage of the entire period of unemployment at 75 percent of the average weekly wage.

(3) Reduction of the minimum age for social security to 60. This would give some workers the opportunity to retire several years earlier, and should to some extent les-

sen competition for existing jobs.

(4) Allocation of defense contracts to areas of chronic unemployment,

(5) Location of new Federal offices and

installations in areas of chronic unemploy-

(6) Allocation of Federal procurement, including purchasers under the foreign aid program, to areas of chronic unemployment. In addition to these steps, which would help alleviate and eliminate unemployment in all depressed areas, the following steps would help many areas, such as the Johnstown area, where unemployment stems mainly from the long-term decline of the coal industry:

(1) Establishment of a national fuel pol-

 Establishment of a national fuel policy with the aim of achieving the efficient utilization of all the Nation's fuel supplies,

including coal.

(2) Establishment of a Federal coal research program to develop and promote new

and wider uses for coal.

(3) Elimination of the competitive advantage the oil and gas industries now enjoy over the coal industry under the Federal tax laws. Either the 27½ percent depletion allowance now given to oil and gas should be eliminated altogether, or else the law should be amended to give this same allowance to coal.

Mr. Chairman, admittedly these steps, taken as a whole, constitute an ambitious program which might be difficult to achieve immediately. Chief among the hurdles such a program now faces is public and congressional apathy toward the problem of "spot" unemployment. When employment nationwide is at a high level, it is all too easy to forget or ignore scattered areas of chronic unemployment, despite the poverty, and hardships the people in such areas may be suffering. It is for this reason I think of the most constructive and helpful things this committee could do would be-to us the words of Senator Clark—to "shelter the national complacency" about unemployment and provide the basis for a "concerted national attack" upon the problem. Only if the American people, as well as their representatives in Congress and the White House, become fully aware of the tragic plight and problems facing many of our citizens who live in areas of chronic unemployment, can legislation aimed at alleviating and eventually eliminating such conditions be enacted into law.

Earlier this year the Senate passed a bill (S. 722) which would set up a program to alleviate chronic unemployment in economically depressed areas. The program of loans, grants, and assistance proposed in that bill would go far toward solving the problems of chronically depressed areas. However, unless public opinion is mobilized behind it, the bill's future looks dim indeed. Not only must the bill still move through the House of Representatives, but it must escape a veto when it reaches the White House.

In 1958, a similar bill was passed by both Houses of Congress, but was vetoed by the President.

Under these circumstances it seems safe to predict that the current Senate bill if and when it reaches the White House, will meet with a similar fate.

The bill's only salvation seems to be the force of public opinion. If the public and Congress become sufficiently aroused to the urgent need for legislation adequately dealing with the problems of chronic unemployment, not only will the probability of a veto be lessened, but the possibility of Congress overriding such a veto, if it does occur, will be materially increased.

Mr. Chairman, in closing let me say that in referring to a Presidential veto of depressed area legislation, I am not attempting to interject partisan politics into the work of this committee. That would be a disservice not only to the committee but to the people of my community as well. It is simply a fact that depressed area legislation was vetoed in 1958. As a result, a similar veto in the future is a possibility which must be taken into account in any realistic consideration of this subject.

Partisan politics already have played too big a part in the general treatment of the subject of aid-to-depressed areas. Not only has this been harmful to the chances of final enactment of effective legislation, but in many cases it has demonstrated considerable shortsightedness on the part of those who have played such a game.

The shortsightedness of the partisan approach was well illustrated, I believe, by an incident that occurred in my own community of Johnstown just last year. Early in the year, a local newspaper, referring to depressed area legislation then pending before the Congress, headlined an article "Democrats Must Act, Saylor Says." Representative Saylor is, as you know, a Republican. The five short words in that headline reduced depressed area legislation to a partisan political issue, and apparently sought to place the burden for failure to enact such legislation on the Democratic leadership in Congress. Yet, it was only a few months later that depressed area legislation was passed by Congress only to be vetoed by the President.

The record shows that both major political parties endorsed the principle of aid-to-depresesd areas in their 1956 platforms. Thus, in principle at least, this subject should be outside the realm of partisan politics. Of course, differences have arisen as to what kind of aid should be given and how much, but in many cases these seem to be differences in degree, not in kind.

Surely, under these circumstances it should not be unreasonable to hope for ultimate enactment into law of an effective legislative program to alleviate and prevent chronic unemployment. If the work of this committee can become the stimulus toward the realization of such a program, you will have rendered a great service not only to the unemployed but to the Nation as a whole.

Polish Constitution Day Marks Thousand Years of Travail

EXTENSION OF REMARKS

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 19, 1960

Mr. DIGGS. Mr. Speaker, the commemoration of Poland's Constitution Day, May 3, 1960, proffers an opportunity for introspective thinking as well as a chance to join other Members of Congress in giving accolades to the valiant, patiently courageous people of what might now well be called re-Stalinized Poland.

Some of us, who in dark moments of frustration decry the absence of light shining upon our own personal freedoms, civil rights and liberties, can then look to the bloody history of Poland for hope; and to its heroes for faith.

We can take heart in the dying words of the great Polish patriot, Ignace Jan Paderewski, whose 100th anniversary of birth coincides with Poland's millennium, in 1966. His words, as life slipped away were: "Polska powstanie." Acclaimed by the American public as the "King of pianists," Paderewski's greatest happiness came in contributing his time, his talents, and his resources, to the needy of his own and other lands. He will take his place in history with all the heroic sons of Poland. Significant then were his dying words, translated: "Poland will rise again."

These words give solace to the people of Poland, though now compelled to endure Soviet oppression and to live in the vacuum of Eastern tyranny and the insecurity and uncertainty of moral and economic aid from the West. The situation in Poland today remains fluid only because of the vigorous anti-Communist

resistance by intrepid Poles.

In keeping with a tradition of the past 20 years, the U.S. Congress has solemnized Poland's May 3 Constitution of 1791 with a twofold purpose: First, to remind the Polish people that Americans have not forgotten their pledge to help Poland restore her freedom and independence and to facilitate her return to the Western family of nations; second, to review and place in proper perspective Poland's contribution in the development of Western civilization and culture.

The 1960 convocation of Poland's Constitution is of special importance to the Polish people in my home State, Michigan, as well as to the 7 million Americans of Polish ancestry and those still fighting communism in the homeland.

Bearing as it does an analogy to our own celebration of July 4, the date of May 3, means more than a calendar date to the people of Poland and others of the free world—it draws foci to the indomitable spirit of the people of Poland; underscores the travail of a near-thousand years of glorious, though sometimes bloody history; namely, the valorous but sanguine insurrections of 1830 and 1848, as well as the millennium of the founding of Christianity by the Polish State.

The Polish May Constitution convocation might well serve as a rededicatory process for these compatriots who through no fault of their own have been forced to endure Communist enslavement. It might also remind those of us in America, of the consequence of rededicating our own lives to the kind of freedoms engendered by the signing of that famous companion document—the American Constitution.

The Polish Constitution was patterned after our own American Constitution and its creators were motivated by the same principles that fired the fighters for the independence of the United States. Now in 1960, the people of Poland have placed their entire hope and sympathy with the United States

The Poles were magnificent in defending Christendom against the onslaught of the barbarian East; in creating the first Commonwealth of Nations in Europe; in contributing to American freedom through the services of Pulaski and Kosciuszko, and other Polish immigrants.

To these dauntless people whose history has been stalked by tragedy due largely to geographic position, predatory and aggressive neighbors, we add our hope and our prayerful wish for full freedom in our time.

Medical Care for the Aged

EXTENSION OF REMARKS OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 18, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the Congressional Record, I wish to include the following column of Mr. Elmer Miller which appeared in the Journal of Commerce:

INSURANCE PERSPECTIVE-POLITICIANS CON-TINUE TO RIDE THE COATTAILS OF MEDICAL CARE FOR AGED

(By Elmer Miller)

Sorry to keep on bringing this up-about the little man who is there and won't go away. But before he can be dismissed from our consciences, it is important to understand the nature of certain needs. These are the needs for votes by politicos, in this the year of election, and the continuing needs thereafter of our little man, who could be you or me. Their needs are quite different

The issue, as you must have guessed, centers around medical care for the aged. This Was a dead duck, even in the House Ways and Means Committee of a Congress controlled by Democrats, until its vote-getting possibilities broke like a small dawn over Democrats and Republicans alike.

No less than six plans, plus variations, have been concocted to separate the older age voter from his vote. Not one of them gets at the heart of the inescapable problem of providing medical care for the aged in terms of the needs of the individual.

HAVE NO MEANING

The portion of our population 65 and over somehow has been lumped as deserving of special consideration, regardless of the individual's circumstances. Some roundhouse statistics have been drummed up in support and these are completely meaningless, except in terms of votes.

Distribution of health care involves the problem of cost, especially in relation to personal budgets—a complicated affair. But there it is, and no amount of scattershot legislation is going to kill this economic reality. In recognition of this, Congressman Tom Curris, of Missouri, makes more sense than anybody else when, from the personal budget standpoint, he separates the aged into several groups:

1. The indigent aged, which the Forand bill does nothing about because they are not covered by social security, to which the bill is is anchored.

2. The nonindigent aged retired group who have no unique budget problem.

3. The nonindigent group who are able and want to work and who, if they do work to some and who, if they do work to some and who, if they do work to some and the to supplement their social security payments, may solve potential budgetary problems.

4. The nonindigent group who might become indigent if confronted with the cost of a prolonged illness.

5. The near-indigent group who cannot fit the cost of the annual premium for their health insurance into their budget.

CANCEL OUT

A fair approach to the problem would in-volve determination of the consistency of these these groups, how best to protect them and at what cost.

At this point, Democratic and Republican proposals pretty well cancel out. So it would seem appropriate to drop them as campaign issues. They would have a better chance for impartial study at the White House Conference on Aging scheduled for next January. Is this likely to happen? Not at all.

Continental Fuels Policy

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. ASPINALL. Mr. Speaker, last week the American Mining Congress at its coal convention in Pittsburgh featured a panel discussion on a national fuels policy. My observation is that the series of presentations provided emphatic evidence of the urgent necessity for a study to determine whether a national fuels policy is needed. If the answer is yes, then it must also be determined whether legislation is needed to adopt or implement a policy.

As one of the participants in the discussion, I was especially interested in the remarks of the gentleman from Pennsylvania [Mr. SAYLOR], who suggested that the possibility of a continental fuels policy should be considered. With the development of Canada's rich mineral resources, and with increasing fuels traffic between the Dominion and the United States, I feel that the point raised by the ranking minority member of the Committee on Interior and Insular Affairs should receive careful at-

From a selfish position, I might be inclined to stand pat on my resolution to confine the study to this Nation's energy resources, supplies, and requirements. Although already more than half a billion tons of bituminous coal have been extracted from Colorado's mines, at least 49 billion tons of minable reserves remain within our borders-enough to supply the entire Nation for more than a century at present rates of production. We have enough oil shale to provide through synthesis all the liquid and gaseous fuels that America could use in many, many years. Petroleum, natural gas, water power, and atomic energy are well represented in Colorado's soil.

Canada, and Mexico as well, have important fuel reserves. They are our good neighbors and we all want to encourage commerce among these great nations to whatever extent is mutually beneficial. I am interested in the idea of a continental fuels policy. I believe that it should be explored assiduously. I ask that Congressman Saylor's remarks to the American Mining Congress be inserted at this point:

AN ADDRESS TO THE AMERICAN MINING CON-GRESS, MAY 9, 1960, BY HON. JOHN P. SAY-

At the start I should like to congratulate Mr. Julian Conover and the American Mining Congress for making this forum possible. Discussions of this kind can go a long way toward developing a public awareness to the need for a fuels policy. Perhaps the idea will

also appeal to the oil and gas industries when they hold association meetings. When all considerations-pro and con-have been thoroughly threshed out, maybe we will find that we have a common meeting ground on this issue.

I will say at the start that I have no particular pride of authorship with respect to the fuels policy study that I have introduced in the House. If someone has a better approach to the problem-be he a Democrat or Republican—from Texas, Louisiana, West Virginia, or anywhere else—you may be sure that I will go along with it. Just keep religion out of it—that's all anyone can ask.

The first mention of a national fuels policy study produced tumultuous repercussions. I was reminded of the minister describing the Day of Judgment.

"Thunder will boom," he boomed. "Lightning will strike. Rivers will overflow. Flames will shoot down from the heavens. There will be storms, floods, earthquakes.

A little girl looked up eagerly at her parent. "Mommy," she whispered, "will we get out of school?

A representative of a competing fuels industry rushed up to my office protesting violently the idea of a fuels policy study. "We already have a fuels policy," he insisted. When I asked him if there was anything wrong in studying existing Government pro grams, he hesitated, then merely said that there was no necessity for it.

Acknowledging that we have a semblance of a fuels policy in the form of the various of a fuels pointy in the form to the same and agencies that effect energy production and supply, it appears that opposition to a study would come exclusively from industries, companies, or individuals fearful that the results of an investigation might serve to discomfort their own particular interests. There are three sound reasons why the proposed study should be under-taken as soon as possible. Any one of the reasons is enough to justify the project; in reasons is enough to justify the project; in the aggregate they make it a mandatory undertaking. Let us examine them, al-though the order in which they are listed does not necessarily indicate their degree of importance.

(1) Conservation: As an admirer of Ted-Roosevelt and Gifford Pinchot for many years, I have devoted considerable time in Congress to the matter of proper use of all natural resources. God was very generous in filling our cupboards with ample supplies of the raw materials that a people must have in order to make the most of human resources, inventiveness, and ambition. use our natural resources extravagantly without considering the needs of the generations to follow is immoral.

Is America exercising proper frugality in the production and utilization of energy deposits? I think it is time that we find Fight years ago the Preseident's Material Policy Commission, known as the Paley Commission, warned against extravagant use of natural gas. I have repeated this warning numerous times, because I believe that it would be unfair for us to deprive unnecessarily our children and their children of a supply of this special fuel.

Natural gas spokesmen raise a hue and cry when the suggestion is made that the principles of conservation should be applied to their relatively scarce product—natural gas. However, the Federal Government has alreday taken legislative steps to conserve the extremely scarce and valuable product, hellum, and this has been done without any implication of undue imposition of Federal controls * * * and without any allegations of damage to the free enterprise system. Natural gas is disappearing and should not be wasted. It is valuable and the same principles of conservation will eventuallywhy not now-have to be applied. It is my view that conservation should be exercised now, to use a metaphor, rather than in the future attempt to lock the distribution door when the natural gas horse has already been stolen.

(2) National security: Last Tuesday morning newspapers contained an item, "Dateline Tokyo," stating that Russia has 100 submarines operating in the Pacific. On many occasions we have been alerted to the fact that Red underwater craft infest Atlantic waters. Naval experts have warned us that major ports on both coasts could be demolished through coordinate enemy submarine action in the event of a major war. For that matter, ocean-going tankers would have little need for port facilities in an age when Russia has 400 submarines. Germany started World War II with only 60, yet was able to disrupt completely tanker traffic in the Gulf of Mexico as well as along the Atlantic seaboard.

So, in an emergency we could not depend upon foreign oil to help our domestic mobilization activities. To what extent the country can lean upon foreign fuel in peacetime merits close study. A Cabinet Committee looked into this phase of the defense structure and recommended the import restrictions that were the basis for the mandatory control program established by the President last year. This control order could be regarded as a phase of a national fuels policy. I see no reason why it should remain apart from the general study which we proceed.

(3) The general economy: The Natural Gas Act, another of the many Federal laws affecting the oil and gas industries, was adopted 22 years ago when the Nation was using just 20 percent of the amount of natural gas that is being consumed at the present time. Quite a few of us in Congress have asked repeatedly that this obsolete legislation be updated. From what has been appearing in the newspapers of late, a growing number of Americans agree that the Natural Gas Act should be revised to meet present day requirements.

The natural gas industry is protected by public utility status. Under present condi-tions, a gas transmission line may make its product available to industrial consumers at less than half the cost that residential patrons are charged. Pittsburghers are complaining about constantly increasing rates. I have some figures here which may be of interest. The last available tables are for 1958, but they are sufficiently recent to spotlight a despicable situation. The average cost of natural gas to homeowners in Pennsylvania was a little more than \$1 per thousand cubic feet in 1958. In the same year the same product was being sold to electric utilities in Pennsylvania for 31.2 cents-or less than one-third of what householders had to pay for it. Mainline industrial users were charged a little more * * * they paid 47.1 cent per thousand cubic feet, but still less that half of what we the people were charged.

This discrimination is reprehensible. I think that a national fuels study could result in its elimination.

Needless to say, the practice of dumping gas into industrial markets at whatever price is necessary to undersell coal is costing the bituminous coal industry many millions of tons per year. Although we have enough coal in America to last for more than 1,000 years, at present rates of production, and though the natural gas life index is set at less than a quarter of a century, this valuable product is flowing freely into whatever industrial and utility markets will take it. As a consequence, many mines are closed, mineworkers are idled, railroaders who depend upon coal traffic for a livelihood are laid off, and economic stagnation extends in communities up and down the line. Certainly we need a fuels study.

Gentlemen, I could cite 101 cases to support my proposal for a fuels study. I assure you that I shall continue to exert every effort to induce Congress to undertake this work. I repeat that I will not stand by my own resolution if a more logical one is advanced.

As a matter of fact, I have been giving serious thought to the possibility of recommending that the fuels study be extended so that it will be continental in scope rather than limited to our own boundary. For a number of years I protested the proposal to import natural gas from Canada into the Midwest. Among other reasons, I feel that it would place our consumers at the mercy of international gas interests. Within the past several months both the Canadian Energy Board and the U.S. Federal Power Commission have issued the necessary certificates for the line from the Dominion into and through Minnesota. I noticed about 10 days ago that the National Coal Association has asked that the case be reopened, so as yet the final decision must be considered uncertain.

Unless Congress or the tariffmaking authorities in the State Department do an abrupt about-face, any gas entering this country from Canada would be duty free. In contrast, Canada imposes a 50-cent-perton tariff on all U.S. coal that moves northward across the border.

If there is any reciprocity in this arrangement, I do not detect it. Perhaps a continental fuels policy could also bring about a solution to this inequity.

Gus S. Blankinship

EXTENSION OF REMARKS

HON. JOHN DOWDY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1960

Mr. DOWDY. Mr. Speaker, I have received sad news of the passing of a dear friend of mine, Mr. Gus Blankinship, of Jacksonville, Tex. He was loved by everyone, and affectionately known in all circles, and over a wide area as Mr. Gus.

To Mrs. Blankinship and other survivors I join with his multitude of friends is extending deepest sympathy.

I request that the accompanying news story and editorial appearing in the Monday, May 16, 1960, Jacksonville (Tex.) Daily Progress, be incorporated in the Appendix of the Record:

Beloved Mr. Gus Dies From Illness Jacksonville's beloved Mr. Gus died at 4:30 this morning, after a lingering illness.

Gus S. Blankinship, 71-year-old banker, Sunday school teacher, civic worker, and friend to thousands, breathed his last in the early hours Monday. Although his passing had been anticipated for more than a month, the death saddened the community and all east Texas, for he was known to so many, active so long, and loved so much.

President and board chairman of the First National Bank, Mr. Blankinship was the dean of east Texas bankers. Besides his family, his three great loves were the bank, the Goodfellows Bible class of the Central Baptist Church, which always had him as teacher, and the Nan Travis Memorial Hospital, which he served as board member and constant advocate. It was in this hospital he helped found and direct that his last days were spent.

Born September 4, 1888, at Attoyac, in Nacogdoches County, he was the son of the Reverend E. B. Blankinship and Elizabeth Stephens Blankinship. He attended A. W. Orr's Summer Hill Select School for 3 years, moved to Troup in 1902, and was graduated from Troup High School in 1904. He attended Jacksonville Baptist College for years, graduating in 1907 to teach school for 2 years. After working in a Troup drugstore for 5 years, he started his banking career with the First National Bank of Troup in September 1913, moving to Jacksonville 5 years later to begin his career with the First National Bank on January 1, 1918. He was made vice president in 1920, and president in 1922. He remained the bank's chief executive officer since.

In his 42 years in Jacksonville, Gus Blankinship contributed much to east Texas and the banking business. He served as secretary and chairman of the road district committee for several years, an early advocate of improved highways.

Mr. Blankinship helped organize the Nan Travis Memorial Hospital, served as its president and has been continually a member of its board of directors since. He helped organize the Jacksonville Chamber of Commerce and served 2 years as its president. He has been active in its work since.

For the past 25 years Mr. Blankinship has served as a director of the Overton State Bank. One of his last business activities was attending that bank's board meeting.

Mr. Blankinship about 30 years ago organized the Goodfellows Bible Class of the Central Baptist Church and remained its teacher since. He served as a member of the board of deacons of the church.

During World War II, Mr. Gus, the late W. Y. Forrest and Sam A. Cobb served on the draft board, and Mr. Blankinship attended every meeting and was a member through the war.

Among organizations which felt the impact of Mr. Blankinship's leadership or association were the Jacksonville Building & Loan Association, of which he was a vice president and a director; the East Texas Chamber of Commerce, which he served as vice president and treasurer; the East Texas Area Girl Scouts, which he served as treasurer.

He was a member of the East Texas Tender Board for several years; served as chairman of the Cherokee County Savings Bond Committee; was district chairman of the USO during the war; and served on the board of trustees of the East Texas Boy Scout Founda-

In June 1949, the East Texas Chamber of Commerce magazine pictured Mr. Gus as "Man of the Month." He helped to organize and was the first president of the Jackson-ville Rotary Club.

The Rev. Dr. Marvin Vance, of Austin, and Dr. Bradford Curry, pastor of Central Baptist church, will conduct funeral services Tuesday at 2 p.m. at the church. The Rev. C. R. Meadows will assist. The body will lie in state in the sanctuary of the church from 10 a.m. until 2 p.m. Holmes Brothers Funeral Home will have charge of interment in Resthaven Cemetery.

Active pallbearers will be officers and employees of the First National Bank: F. D. Newton, Jeff Austin, John T. Lewis, Lee Ragsdale, Philip Bolton, J. P. Dixon, Frank Waggoner III, Ralph Toland, and Dexter Bloodworth.

Honorary pallbearers named by the family include directors of the bank, directors of the Building and Loan Association, A. B. Childs, and directors of the Overton State Bank; members of the board of deacons of Central Baptist Church; doctors and directors of Nan Travis Memorial Hospital; members of the Goodfellows Bible Class; close

friends of the family and banking fraternity throughout Texas.

Surviving are his wife, Louise Bolton Blankinship; one daughter, Mrs. Ray Ward; two grandchildren, Catharine and Stephens Ward; two sisters, Mrs. A. W. Riter, of Terrell; and Mrs. A. E. Garner, of Austin; several nieces and nephews.

The family requested memorials be made to the Gus Blankinship Memorial Fund at

Nan Travis Hospital.

The First National Bank announced that it would be closed Tuesday out of respect to the memory of its late president. The Texas Bank & Trust Co. will close at noon.

JACKSONVILLE A BETTER PLACE BECAUSE GUS BLANKINSHIP LIVED

Scores are honored, many men are respected but no man in Jacksonville's history was more beloved than Gus S. Blankinship. The very title, "Mr. Gus," so universally given the banker and civic leader, was a symbol of the affection in which he was held.

When Mr. Gus came to Jacksonville on January 1, 1918, he set about building a bank, a community and a friendship. He attained a high degree of success in every endeavor, and has left his mark for good in the community.

Mr. Gus once said he had three great loves in addition to his family: The bank, the Goodfellows Bible Class, and the Nan Travis Hospital. These, to him, were his outstanding contributions to the community.

The beloved Mr. Gus could go through a gathering of Jacksonville people, shake hands with both hands at the same time, calling nearly everybody by name. He was an institution himself, for in all of his activities he sought to take the kindly, neighborly attitude in everything. In his beloved Goodfellows Bible Class at the Central Baptist Church he enjoyed the fellowship, radiated brotherly love and kindness.

He loved his church without prejudice against any other; he radiated and promoted the kind of fellowship which makes all men brothers. In business he was firm but friendly, liberal with his money, his time, his energy, and his judgment in every walk of life. Mr. Gus was a builder of business, men, institutions, communities, and friendships. He was a lover of all mankind, beloved by all who knew him.

Jacksonville is a better place in which to live because Gus Blankinship lived here. He will live forever in the memory of his associates.

Secretary of Defense Thomas S. Gates, Jr., Makes Another Important Step Forward Toward Unification of Defense Department Procedures and the Reassertion of Civilian Control Over Our Military Establishment

EXTENSION OF REMARKS

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1960

Mr. STRATTON. Mr. Speaker, the Secretary of Defense issued orders on May 12 that our long-range defense communications are to be integrated into a single communication system. The organization of this worldwide system to replace those of several agencies which now all operate over the same area is a great step forward in increasing efficiency in our Defense Department. This personal action by the Secretary of Defense, Hon. Thomas S. Gates, Jr., will most certainly improve the security and safety of this Nation.

Again, Tom Gates has given us another example of the fact that there is no substitute for decisive action applied where and when it is required. The tremendous responsibility of the Secretary of Defense has made it even more imperative that problems be resolved with wisdom and dispatch. Thomas S. Gates, Jr., since his appointment, has given new meaning to the Office of the Secretary of Defense and has restored real luster to the constitutional principle of civilian control—giving it meaning and reality—by his willing acceptance of the tremendous responsibilities which are part of his office.

His order, issued shortly after becoming Secretary of Defense, which directed that possible divergencies of opinion between the several members of the Joint Chiefs of Staff be promptly brought to his attention, was in complete agreement with the words and intent of the Constitution and the laws passed by Congress for the direction and organization of our vast defense effort. No organization can work and survive on form alone—it takes competence and courage on the part of the responsible leaders to make any organization function properly—and Mr. Gates has shown this leadership.

I understand that he has not stopped with this development, but has made it practice to meet regularly with the Joint Chiefs so that he, as the civilian head of our Defense Establishment, will have an intimate and up-to-the-minute knowledge of the major problems of defense direction and, most important, the facts behind these issues.

The directives recently issued by Secretary Gates providing for an integrated communication system is a perfect example of actual, meaningful implementation of the earlier steps taken by him.

Almost since the invention of the telegraph, the military problem of duplicating and parallel communications systems has been evident. It has been increased in magnitude by the technological advancements and tremendous increases in volume brought about by the demands of modern war. Mr. Gates, by his action, is the first Secretary of Defense who has both recognized this problem and provided a solution.

By his action, we will at once save money and resources and acquire a communication system responsible to the needs of modern war far beyond anything we have had in the past. The United States is fortunate in having a man of such competence as Thomas S. Gates, Jr., at the head of the Department of Defense.

Watts New in Sussex

EXTENSION OF REMARKS

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES
Thursday, May 19, 1960

Mr. WILLIAMS of New Jersey. Mr. President, we have heard much in recent months about the 25th anniversary of the Rural Electrification Administration. Representatives of many of our Western and Southern States have been eloquent in their descriptions of the effect that the REA has had on their home States. A writer for a New Jersey newspaper, John T. Cunningham, of the Newark Evening News, has written an article which reminds us that the REA has had its impact in the Garden State, too. In an article written in the May 8 issue of the Newark (N.J.) Sunday News he proves that rural electrification is "a very live wire in northwestern Sussex County."

The article vividly describes the positive good which can result from a well-planned Federal program. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WATTS NEW IN SUSSEX—CURRENT EVENTS— OR WHAT POWER MEANS TO FARMLANDS ON REA'S 25TH ANNIVERSARY

(By John T. Cunningham)

Rural electrification, sponsored by Federal funds, is not alone something of the Midwestern plains or the Tennessee Valley. It is a very live wire in northwestern Sussex County, where farmers and nonfarmers alike join with delight in celebrating the 25th anniversary of the Rural Electrification Administration.

Twenty-five years ago the lot of most farmers in Sussex County (and elsewhere in the United States) was miserable at worst and hard at best. Those who lived in the seven townships north of Newton didn't even dream of electricity—and private companies showed little or no inclination to extend lines outside of well-populated towns and villages or main highways.

and villages or main highways.

Unable to summon electrical servants at the flick of a switch, farmers worked from dawn to dusk, and well into the night by the light of kerosene lanterns and worked on. Inside their homes, wives cooked on wood stoves, pumped water by hand, pressed clothes with irons heated on the kitchen range, scrubbed clothes in tin tubs and cooled butter and milk in the cold cellar or spring house.

The REA became a reality on May 11, 1935, the day President Franklin D. Roosevelt signed the establishing bill. Quickly the lights began to go on in rural areas and within less than 2 years the power-bearing lines stretched over the Sussex hills, bringing not only power but an economic and social revolution as well.

Sussex County's participation in the REA remains vigorous. The first Sussex loan, approved February 1, 1937, has grown to the extent that the Sussex Rural Electric Co-Op, Inc., has now borrowed \$760,000 (with another \$260,000 approved). Lest it be thought

that this is a gift, \$147,734 has been paid back plus \$100,240 interest. All of it will be repaid eventually.

Every one of the Sussex Co-Op's 2,600 customers is a stockholder. Horace I. Brink, co-op manager, expresses this stockholder-customer relationship simply: "This company is owned by those it serves."

Among those it serves is Judson Vaughan

Among those it serves is Judson Vaughan of Lafayette, one of the original movers who brought REA to Sussex and currently co-op president. He serves his fellow stockholders without salary, as do all directors.

Before REA, Mr. Vaughan used kerosene lanterns in his barn and his wife used a wood stove and oil lamps in the house. Today Mr. Vaughan's dairy barn is completely electrified. His cows are milked by electricity and the milk is cooled and refrig-

erated by electricity.

Across the street from the barn, Mrs.

Vaughan works in a completely electrified home. She is surrounded by an electric washer, drier, stove, freezer and refrigerator.

Her water is pumped and heated by electricity for kitchen and bathrooms. She has an electric frying pan, sewing machine, iron, toaster, heating pad, television set and radios.

"I have everything electric, I guess," says Mrs. Vaughan. "Just recently I even acquired an electric can opener."

Mr. Vaughan, who has lived in Sussex County all of his 77 years (except for a brief period in his youth when he worked in New York City), vividly remembers the pre-electric days. And, he says, "now if the current goes off we still use lanterns—but we wonder how we ever were able to see in those days."

The woman's view is Mrs. Vaughan's: "If I'd had electricity when I was raising my eight children, life would have been easier."

Rural electrification aided the farmer spectacularly but in the area served by the Sussex Co-op much of the demand now is from nonfarmers. These include hundreds of summer cottagers along the Sussex lakes and hundreds of year-round residents who have come to Sussex County not to farm but to enjoy the good life to be found on those highlands.

Sussex Rural Electric Co-op buys its power wholesale from the New Jersey Power & Light Co. and feeds it to rural users from a substation set on a farm hillside southeast of Sussex. The lines swing out over the countryside, swerving back and forth across roads and fields to serve the greatest possible number of consumers.

No electrical company stands still, and the Sussex Co-op is today energetically expanding and modernizing its 240 miles of lines. Many people remember the first lines—and bear in mind that a man who can remember back 23 years is not an ancient.

Albert Post of Hopkins Corner was 45 years old in 1937 when the lines first came through the rear of his property. He gladly put up the \$5 fee for membership in the Co-op.

"Sure I was pleased to join," he says.
"New Jersey Power & Light Co. wanted \$500 to bring power to me. For that I gladly went on reading by kerosene lamp."

He also willingly let the new cooperative venture place poles on his land. Not all farmers agreed so willingly. Some had Delco gas-operated home-power systems and couldn't see the value of the electrical line. Some feared giving up land for poles. But the opponents were few and work went on rapidly—and soon the auxiliary powerplants rusted on junk piles.

The first lines served well. However, poles were spaced as much as 300 feet apart and the two-wire system (one wire hot, the other neutral) sometimes caused trouble.

Mr. Post remembers bird trouble. "They would sit on the bottom line and make it sag way down," he says. "Then, most would fly away. The bottom line would snap up, hit the top line and we'd be shorted out. The birds that didn't get off were fried."

Electricity revolutionized the rural areas. Frank Davenport, who lives on the Wantage Township farm owned by his family since 1732, says, "We couldn't get along without electricity; we live so much busier now."

Mr. Davenport installed Sussex County's first Delco home electric plant in 1915 and put in a gasoline-powered milking machine in 1928, but he immediately backed the cooperative electric venture when proposed in 1936.

He was stimulated by three farmers who lived in Mt. Salem. "The light company asked \$10,000 to extend the line to their farms," recollects Mr. Davenport. "I was a township committeeman so they came to me in protest. We went right down to Sussex and called Washington long distance. REA people told us to organize.

"Then the county agricultural agent helped us get a meeting started—even though he felt we couldn't buck the light company. We went ahead and on meeting night we all filled up our cars and went down to Newton Courthouse to hear about the REA. Only one man opposed it. We made our surveys and signed up co-op members and we got our electricity."

Mr. Davenport firmly believes that "many a farmer, even right here in Sussex County, would be without electrical power today if it hadn't been for REA."

The Davenport farm is completely electrified and living is visibly enriched by the electrical servants in both house and barn. "We even have an electric hot water heater out in the barn," says Mr. Davenport matter-of-factly.

Elsewhere in the county, the nonfarm users rise. Mr. Brink reports the largest single users to be the consolidated elementary school in Vernon Township. Incidentally, the consolidated school might well be traced to the vastly stimulated standard of living in Sussex County. Twenty-five years ago the one-room or two-room school was good enough. Today, with the world brought into northwest Sussex living rooms by radio and TV, Sussex educational standards are rising rapidly.

To meet demands from new residents the work of straightening and remodernizing lines goes on. For example, on one windswept slope northeast of Sussex town new homes are rising on 1-acre plots. Off to the west are the handsome Kittatinny Mountains, topped by High Point's monument. People building these homes aren't farmers—but they want comfort to go along with the view.

Thus, Sussex Rural Electric Co-Op supplies them. It has had to move many poles to accommodate such new customers. In one case three poles had to be moved forward to the road; six new homes are to be built in the fields where poles were put 23 years ago.

"We've had more expansion of our company in the last 5 years than in the 18 years before," says Mr. Brink. "We must double the capacity of our substation in the next 2 years"

The rapid acceptance of electricity as a many-faced necessity is summed up by Mr. Brink:

"Then years ago, if the power went out, we worried about the milking machine. Now, if we should lose power when the Perry Mason TV program is on, we'd be in real trouble."

Are Farmers Getting Rich Off the High Cost of Food?

EXTENSION OF REMARKS

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the Con-GRESSIONAL RECORD, I want to point out and have inserted an article from the South Carolina Electric Co-Op News, the May 1960 edition, an article written by Joe B. Earle and Kirby Able and entitled "Are Farmers Getting Rich Off the High Cost of Food." I put this in because I have seen a growing concern over the high cost of food. Many of the Members of Congress from the big cities think the farmers are causing the prices to go up. I know better, and I know that the farmer is being squeezed tighter and gets less and less. I also know that certain rich warehousemen and friends of the administration have been given bonanzas in surplus storage, another form of payola.

I enclose this article and commend these people for their presentation:

ARE FARMERS GETTING RICH OFF THE HIGH COST OF FOOD?

(By Joe B. Earle and Kirby Able)

In this day of upward spiraling living costs, open season has been declared on the farmer and he has been blamed for much of the higher cost of living. Many well-intentioned but poorly informed people honestly believe that farmers are waxing wealthy at the cost of the household budget.

Very few things could be farther from the truth. Farmers are caught in a cost-price squeeze that is merciless in its pressure.

And to top that off, the great increase in your food bill in the past 10 or 12 years has gone to other sources than the farmer.

In 1945, the farmer received 53 cents of every retail dollar spent for food. But in 1958, the farmer was receiving only 40 cents of your retail food dollar. The difference has gone to pay for fancy packages, for freezing, for pre-preparation of foods, for increased transportation costs. Truth is, housewives today demand built-in maid service with their load of groceries from the swank supermarket.

To nail it down even closer, in 1946 the average family spent \$767 for food. By 1958 that food cost had soared to \$1,065. That's an increase of \$298. Out of that increase, the farmer got only \$30. Nonfarm produce handlers and processers got \$268.

Now who says the farmer is getting rich at the consumer's expense?

Again harking back to 1958 we find that labor received almost as much of the consumer's food dollar as did the farmer. In that year Americans spent \$57.7 billion for food. The farmer received \$20.8 billion; labor got \$17.5 billion. The remainder went for processing, transportation, taxes, and other costs.

Most all American homes today buy bread by the loaf. In 1958, you paid an overage of 19.3 cents for a loaf of bread. The retailer took 3.1 cents for his markup. The baker-wholesaler raked off 11.2 cents; the farmer got 3 cents. The other 2 cents went to transportation, handling, and processing-

Actually, the production record of American farmers is a modern miracle. And only because of this miracle can America maintain its high level of living. Farmers haven't just lucked up on the miracle that makes him the highest per capita producer in the world. It has taken work, science, conservation, education.

It means that food for the American worker is the best buy in the world. Only 7 years ago a factory employee had to work 51 hours to feed an average size family for a month. Today, he works less than 40 hours

to do the same.

Farmers are providing America's food at costs actually lower than 30 years ago. For instance, in 1958, 1 hour's factory work would buy 2 pounds of steak, 11 loaves of bread, 16.8 pints of milk, 2.9 pounds of butter, 2.7 pounds of bacon, 3.5 dozen eggs, or 2.8 dozen oranges.

Twenty-nine years ago, that same hour's factory work would only buy 1.2 pounds of steak, 6.4 loaves of bread, 7.8 pints of milk, 1 pound of butter, 1.3 pounds of bacon, 1.1

dozen eggs, or 1.3 dozen oranges.

If American farmers were no more efficient and productive than those of India or China, three out of every four workers in this Nation would be out in the field working for the first essential-food.

Today's American homemaker is no longer concerned with buy seasonal foods. Thanks to improved farming methods and better marketing, perishable fruits and vegetables are available from the neighborhood supermarket year-round.

To maintain America's high standard diet, our farmers by 1975 must produce 36 percent more eggs, 61 percent more brollers, 56 percent more meat animals, 60 percent more fruit and vegetables, 48 percent more dairy products, and 26 percent more grain and

All this means is that your food dollar is probably the best dollar you spend in your budget—food is a good buy—and will con-tinue that way so long as America's farmers continue their economical, high rate of production.

In our modern America, each farmer provides food for himself and 22 others, thus freeing that 22 for production of autos, refrigerators, TV sets, and other goods and services of today's life. Less than 80 years ago, half the population was required on farms to feed themselves and the other half.

Thank about these things when you fuss about your food budget being out of balance. The farmer gets the minor share of your food dollar.

Christian Endeavor's Citizenship Contest for 1960

EXTENSION OF REMARKS OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

Mr. DAGUE. Mr. Speaker, it is with great pride and satisfaction that I am able to report to the Congress that the first place winner in the society division of Christian Endeavor's citizenship contest for 1960 comes from my congressional district.

The high school youth vespers group of the Trinity Evangelical Congregational Church, Lititz, Pa., will receive an award of \$150 to be presented at Christian Endeavor's Citizenship Convocation in Ottawa, Ontario, Canada, on July 1-3,

In this connection it seems appropriate to point out that the international society has conducted this contest for 9 years in which hundreds of young people have taken part, and the contests have inspired much interest in Christian citizenship. It is also noted that the society winners are decided on the basis of sponsoring and reporting a significant Christian citizenship project.

The high school youth vespers group of Trinity Evangelical Congregational Church includes 28 endeavorers between 12 and 17 years of age. Their winning citizenship project, under the direction of Doris Hess, began February 4 and concluded February 28, with 27 members participating. As a result of the project, about 10 new avenues of service were suggested and 6 have been officially adopted by the society. The Christian testimony through the window displays and essays made an impression upon the community and the society itself has recognized the importance of demonstrating Christian citizenship in every area of life. Rev. James K. Rapp is minister of the church.

REPORT OF CITIZENSHIP PROJECT SPONSORED BY WINNING SOCIETY

(This report describes the Christian citizenship project of the high school youth vespers group. Trinity Evangelical Congregational Church, Lititz, Pa., which won for them first place.)

Our project, Christian Citizenship-Unlimited was chosen to give opportunity to emphasize the meaning and importance of Christian citizenship to as many citizens in

as many ways as possible.

The 4 weeks' project was planned by a Christian citizenship committee of the so-ciety. The members were divided into four groups, each assigned to arrange a 1 week window display on an assigned theme in a prominent store, and a corresponding slogan on the outside church bulletin board. The president was assigned to write four essays for the local newspaper emphasizing the display themes.

The project began on February 4 with the simultaneous appearance of a window display, newspaper essay, and bulletin board slogan.

Note.—Each week's procedure follows this outline:

1. Evil combated.

- 2. Display theme, always prefaced-We Stand For: 3. Objects used.
 - 4. Newspaper essay.
 - 5. Slogan.

 - 6. Special.

FIRST WEEK

Juvenile delinquency.
 "Virtue That Builds the Soul."

- 3. Twenty-four 10-inch dolls depicting 10 virtues: "Faith"—family reading Bible; "Obedience"—driver stopping at red light; and so forth.
- 4. "Our Spiritual Heritage"-urging youth to reevaluate, maintain and propagate it.
- 5. "Reputation Is Precious But Character Is Priceless." 6. Pastor's Christian Citizenship, sermon.

SECOND WEEK

1. Obscene literature.

- 2. "Reading That Builds the Mind."
- 3. Library-"Open Bible," books on Christian life, biography, travel, arts, and so forth.
- 4. "Our Literary Heritage"—emphasizing compensations of good reading; urging youth to read only the best.

- 5. "Good Citizens Read Good Books."
- 6. Distributed several hundred tracts, "The Satisfied Life," by Governor Hatfield.

THIRD WEEK

1. Liquor traffic.

2. "Beverage that builds the body."

3. Gardencart, patio table, milk, fruit and vegetable drinks, fountain, lifesize doll holding glass of juice, open Bible, plaque—"Daniel purposed in his heart."

4. "Our Social Heritage"—appraisal of modern society; urging youth to drink only

that which builds the body.

5. "Alcoholism Destroys Patriotism."

6. Signed "Proud To Abstain" roll.

1. Communism.

2. "Citizenship That Builds the Nation."
3. Community depicting 10 aspects of Christian citizenship; "Church"—freedom of

FOURTH WEEK

worship; "Voting booth"-vote wisely; "Revenue office"-pay taxes, etc.

4. "Our National Heritage"-urging youth to maintain Christian principles upon which Nation was founded.

5. "Want a Better Nation? Be a Better Christian '

6. Twenty-seven youth interviewed presidents of community organizations and clubs; to gather information on their citizenship activities, to solicit suggestions for service, and to impress the importance of Christian citizenshin.

After we evaluated the interview reports, 35 letters were written, commending good citizenship activities and volunteering our services. We urged the recreation center to consider a library and reading lounge in their current expansion program.

Our project cost approximately \$35.

As a result of our findings the society presented a citation to an "outstanding Christian citizen" and adopted the following projects:

1. Fifteen dollar membership to International Society of Christian Endeavor.

- 2. Picnic and gifts for "fresh air children." 3. Spiritual program for "senior citizens"
- 4. Special feature for "aged folks home."
- 5. Volunteer reading and writing for "lonely shut-ins."
- 6. Custodianship of chancel paraments and outside bulletin board.

Our project brought commendation from the clergymen, businessmen, educators, and organizations. The society has been challenged and inspired to Christian citizenship—unlimited.

In supplementing this detailed description of a truly outstanding program I fell that I can speak for the Members of this body by expressing great satisfaction in the emphasis that is thus placed on Christian citizenship and the duties devolving upon all those who feel called upon to meet the challenge of this materialistic age and this threat of godless communism. Atheistic ideologies are predicated on the philosophy that given a nation's youth in the formative years their adult life will invariably follow the tortuous pain of disbelief in a Supreme Being. Indeed, it is both reassuring and refreshing to discover that here is a great group of young people, under inspired leadership, who are determined to lend new significance to the phrase "this Nation under God" and then to go on to apply it in practical fashion to the day-to-day call of public responsibility. My warmest congratulations to the Lititz vespers group and all those who have had part in this program.

Preliminary Tabulation of Replies From Questionnaire in the 32d Congressional District of New York

EXTENSION OF REMARKS

HON, SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 19, 1960

Mr. STRATTON. Mr. Speaker, last nonth I sent out to some 55,000 residents of my congressional district, embracing five upstate counties in New York State, a questionnaire dealing with some of the major items of legislation pending before this 2d session of the 86th Congress. These questionnaires were sent out on a purely random basis to telephone subscribers within these five counties. By way of background in interpreting the results I might add that these five counties are traditionally recognized as a conservative area. Republican Party enrollment outnumbers Democratic enrollment by 3 to 1. President Eisenhower carried the district over Governor Stevenson in 1956 by 119,000 to 44,000; Governor Rockefeller carried the district in 1958

by 37,000. As Members are aware, I am

the first member of my party to have the honor to serve this district in the House of Representatives in 42 years.

I mention these facts only by way of background for a tabulation of the answers I have received. Out of 55,000 questionnaires mailed out we have received 9,337 replies, or a return of 17 percent, which, I am told, is an amazingly high percentage. In addition I have also had the privilege of receiving a great number of letters and communications expanding on the yes-or-no replies provided by the tabulated questionnaire itself.

While a Congressman must, of course, make up his mind on legislation on the basis of many factors, certainly the desires and wishes of his constituents, expressed in many ways, particularly through the means of a questionnaire like this, should be a most important factor in his final decision.

I want to express to all of the people of my district who took the trouble to answer our questionnaire and particularly to those who went to the added trouble of sending me their amplified comments, my sincere appreciation for all the great help which they have given to me in my effort to be an effective and responsive representative of their wishes and interests in this body. I am hopeful

that those who have written to me will forgive me, incidentally, for the delay that has been encountered in replying to their letters. So many individual letters have been received with these questionnaires that it has been physically impossible for my office staff to answer all of them as yet and still keep up with our other work. However, we do anticipate answering all of them soon, and in the meantime all are being read and pondered carefully.

In general, the replies we have received seem to indicate that our district overwhelmingly supports restrictions on foreign imports, Federal assistance for unemployment areas, elimination of the telephone tax, civil rights, the Forand approach to health insurance for retired citizens, a youth conservation corps, and a balanced budget. Aid to education and an increase in the minimum wage are also supported, though by less substantial majorities. Legislation to promote milk consumption loses by a small edge. The soil bank and a ban on nuclear weapons testing which does not include effective inspection and control procedures are opposed by substantial majorities.

The detailed results are summarized below:

[In percent]

Question	Yes	No	No opinion	Question	Yes	No	No opinion
Do you favor legislation to protect American job op- portunities by increased restrictions on foreign im- ports? Would you oppose President Fisenhower's preposal	74. 6	19.3	6.1	9. 1 Write-in.

"Jobs for the Handicapped—Passports to Dignity" Essay by Allen Slusher, Lexington, Mo.

EXTENSION OF REMARKS

HON. WILLIAM J. RANDALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1960

Mr. RANDALL. Mr. Speaker, it is my pleasure to be able to offer for inclusion in the Record the prize-winning essay for the State of Missouri on the subject "Jobs for the Handicapped—Passports to Dignity."

This contest came about following reports on the President's committee on employment of the physically handicapped. Both the AFL-CIO and the Disabled American Veterans—DAV—thought that interest could be increased by an essay contest. It was left to the AFL-CIO to set up the conditions of such a contest throughout the high schools of the United States and to provide the prizes for the winners. The prize for the winner in each State was a trip to the Nation's Capital with all expenses paid. Thirty-seven winners were visitors in the city of Washington from May 4 through May 8, 1960.

The winner for the State of Missouri was Allen Slusher, a senior at Lexington High School in Lafayette County, which is one of the counties comprising the Fourth Missouri Congressional District. As the State winner, Allen has brought distinction to himself, his teachers, his school his home city, and his congressional district. The quality of his win-

ning essay proves the value of this project so generously sponsored by the AFL-CIO. The essay in full is as follows:

The past 50 years have marked a period of enormous scientific and technological advancement in the United States. Yet, surrounded by all this progress, our concepts of human relations remain woefully outmoded. Nowhere is the problem of human understanding more clearly evident than in the status accorded the handicapped individual. Today, through birth, war, and accidents, there are thousands of persons in the United States who suffer physical impairment.

Public attitude toward the handicapped ranges from sympathetic assistance to utter disregard. While these views represent two distinct poles of thought, they have one important aspect in common. They are equally at fault in their approach toward relationship with the handicapped.

The person possessing a physical defect does not desire the pity of others. Rather,

he wishes the respect accorded any human being and the opportunity to achieve a happy, useful existence. He realizes, how-ever, that his goal in life cannot be accom-plished entirely through personal effort. The handicapped individual needs and welcomes the type of constructive aid that will enable

him to become self-sufficient.

Our country was founded on basic principles of moral responsibility and duty to the people. Consistent with the American creed professed by our Founding Fathers, it is the clear-cut duty of the U.S. Government and all the people in these 50 States to strive for the welfare of each and every citizen. This is doubly true in the case of the handicapped, since many physical injuries were incurred in defense of our Nation and its tenets.

Government ald to the handicapped would produce no additional cost to the taxpayer. Rather, it would be a relief of this load, since Government assistance would enable the handicapped person to support himself and his family when otherwise they might have become public burdens. The augmentation of productive citizens would also enhance our efforts to retain world leadership.

To enable the handlcapped person to become self-dependent, aid must culminate in employment at a job within the intellectual and physical limitations of that particular individual. Therefore, preliminary help should be directed toward this objective. Because the handicapped person will have a smaller field of occupations from which to choose than does the normal worker, it is necessary that proper facilities be offered in which physically handicapped persons may obtain counseling and training in a job best suited to their needs and qualifications. These training centers could be provided by the Government much as other public service offices are operated. Private organiza-tions functioning under the same spirit of constructive help can also exert tremendous influence for improving the lives of the handicapped.

Within the training centers themselves we must deal with two types of handicapped persons. One is the individual who has been afflicted from birth or childhood. For this person early guidance, in most cases, is desirable. The other subject is the man who is injured later in life. This person must be shown that his ability to lead a useful life has not been terminated, and he should be trained to resume his earning duties as soon as possible. These ideas are necessarily very general, and, while they will apply in a great number of cases, they are by no means offered as methods of treating the rehabilitation of all handicapped. The problem is largely an individual one and should be con-

sidered as such. The handicapped person with public sup-Port has prepared himself to become a productive citizen. It is now in the hands of a relatively small group to determine whether these efforts have been to any avail. The employer must now hire the handicapped worker.

A man retaining the service of an employee must do so from a business point of view. He must consider the ability, conscientiousness, and productivity of the pros-Pective worker. Through the years employ-ers have been constantly impressed by the almost perfect record of handicapped workers, whose ranking is high in all these requirements. The absentee percentage rate for handicapped workers is the smallest for any group of employees in the country.

The handicapped person has often trudged a long and difficult road in preparing himself to become a capable worker in his field. The desire to attain a purposeful life has become a conscious motivating factor in determining the path of existence a handi-capped person follows. He is aware of the huge part a job plays in accomplishing his goals and would seldom risk his position by careless work.

Campaigns to advise employers about handicapped workers are good because they help dispel doubts as to the performance of the handicapped by providing authoritative and enlightening statistics concerning the physically disabled.

Achievements of notable handicapped people should serve to illustrate the heights to which the physically impaired can rise. Franklin D. Roosevelt was stricken in middle age by a crippling disease, yet he overcame his handicap to become President of the United States. Helen Keller conquered seemingly insurmountable obstacles from birth become one of the most loved and respected women in our age. More recently Roy Campanella has ignored paralysis to engage in inspirational public appearances. The list is great and lengthens with each passing year.

Although we distinguish people at first glance by their physical characteristics, the body is not a determining factor in evaluating an individual. Rather it is the indom-itable human spirit, the mind, the immortal soul, that sets each human being apart from another. Even though a man's body be crippled, his mind still functions. Man's ability to be useful and productive is limited only by his own will to succeed. Give the handicapped a chance, they will meet the challenge.

The Impact of Foreign Competition

EXTENSION OF REMARKS OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following text of testimony presented by Mr. Walter J. Campbell, editor of Steel, the Metalworking Weekly, before the House Appropriations Subcommittee on Foreign Operations on April 25. Due to the seriousness of this situation, I would recommend that all Members of the Congress study carefully Mr. Campbell's excellent analysis of this grave problem:

THE IMPACT OF FOREIGN COMPETITION

(Walter J. Campbell, editor of Steel, the Metalworking Weekly, testified before the House Appropriations Subcommittee on Foreign Operations, April 25. Mr. Campbell's testimony was requested by the Citizens For-eign Aid Committee, Washington, and was prompted by this magazine's recognition of the growing threat of low wage foreign competition to the metalworking industries. Because the editors believe foreign competition is now and will continue to be one of metalworking's gravest problems, we reproduce Mr. Campbell's testimony below.)

There is a deep and growing concern among metalworking managers over the inroads being made in the metalworking and metal producing industries by foreign manufacturers in the last decade and par-ticularly within the last several years.

Not only are we importing much larger quantities of metalworking products into this country, but our manufacturers are losing export sales which formerly constituted a substantial part of their market.

The result is not only a serious loss in business for our manufacturers, but a loss

of employment possibilities for our workers and a loss of taxes to our Government.

UNITED STATES A "HAS BEEN" NATION?

We believe the problem is the gravest yet faced by American industry. We believe that, unless checked, the rising tide of imports and loss of exports can make the United States a "have not" and a "has been" Nation. We believe this country could experience a decline comparable to that of Spain in the 17th century and that of Eng-land in the early part of the 20th century. The enormity of the problem is not yet

fully recognized, even by the companies and

industries most affected.

For example, much has been said about the increase in imports of finished steel products. Finished steel products are the most important raw materials of the metalworking industries. Traditionally, we have exported much more than we have imported.

That tide has turned.

Three years ago, in 1957, we imported 1.1 million tons of steel mill products. Last year, 1959, we imported 4.4 million tons. just 3 years, our imports increased by 3.3 million tons.

But looking at the steel import figures is like watching a baseball game through a knothole, where your view is limited to the pitcher's mound and the pitcher's activities. You don't know what's going on unless you can see the batsman, the catcher, the infield, and the outfield.

Let's glance at homeplate.

In 1957, we exported 5.2 million tons of steel mill products. Last year, our exports dropped to 1.5 million tons, a decline of 3.7 million tons in 2 years.

That increase in imports and decrease in exports means that 7 million tons of finished steel products were not produced in American mills, or by American labor. Seven mil-lion tons of finished steel products are equal to 10 million tons of steel ingots, or about 11 percent of our 1959 production.

STEELWORKERS LOSE

Had that 7 million tons of steel been produced in this country, it would have provided employment for 56,000 more people in the steel industry. That calculation is based on the industry experience of 16 manhours required to produce a ton of finished

But the increased imports and decreased exports of steel mill products still represent only a knothole view of what is happening to the steel producing industry.

Let's look at first base.

There are important further losses to the steel producing industry in the increase in imports and decrease in exports of end products which are made of steel.

For example, last year we imported 625,000 foreign-built passenger cars. That was 580,-000 more than we brought in in 1955. At the same time, our exports of Americanbuilt passenger cars dropped to only 115,000, less than half what they were in 1955. In other words, we are losing the production of more than 700,000 passenger cars annually. That production is being lost to foreign competitors.

Now the average automobile requires 134 tons of finished steel in its manufacture. The automobiles lost to foreign competitors would have required an additional 14 mil-lion tons of finished steel annually.

That amount of steel production would have provided employment in the steel industry for an additional 10,000 workers.

Statisticians in the American automobile industry figure that 187 man-hours in direct labor go into the production of each passenger car. Thus, the loss of 700,000 automo-biles to foreign competitors means that job opportunities were denied to 65,000 AmeriGONE: 130,000 JOBS

Those computations are based on direct labor only. Such direct job losses in steel mills and auto plants alone total more than 130,000.

If it were possible to compute such job losses among all the suppliers of goods and services to the steel and automotive industries, the employment loss would be much more frightening.

Now let's take a look at fasteners bolts, nuts, rivets, screws.

Back in 1953, we imported 16 million pounds of fasteners.

By 1957, imports had more than doubled

to about 34 million pounds.

By 1959, imports again had doubled to nearly 70 million pounds, and throughout the year there was a sharp and steady

increase in imports.

Statistics available for the early part of 1960 show that we are importing fasteners at an annual rate of 218 million pounds. Mr. William E. Ward, president of Russell, Burdsall & Ward, Bolt & Nut Co. of Port Chester, N.Y., believes 1960 imports will be at least that high. That would be triple the 1959 imports and would be three times the output of the largest independent fastener company in the United States, according to Mr. Ward.

Now bolts, nuts, screws, and rivets use steel as their raw material. The indicated imports in 1960 would require more than 130,000 tons of steel to produce. That amount of steel, lost to American mills, would provide jobs for another 1,000 workers.

The loss of jobs to American workers in fastener plants will be between 2,500 and 3,000 since the production of fasteners requires 45 to 50 man-hours per ton.

SCORES OF INDUSTRIES DAMAGED

I wish that statistics were available to permit a similar detailed analysis and tabulation of the total amount of steel that is lost to American mills and the number of jobs that are denied Americans by the increased imports and lowered exports of such end products as machine tools, sewing machines, typewriters, bicycles, tableware, electrical generating equipment, electronic components, radios, optical equipment, twist drills, hand tools, surgical instruments, and scores of other products of the metalworking industry.

However, statistics on imports and exports of those products are not amenable to such analysis—at least not in the time and to the facilities I have available.

But market analysts for steel producers tell me they are much more concerned over the loss of steel markets resulting from the inroads of foreign competitors on metalworking end products than they are with the direct loss of steel mill products to foreign steelmakers.

But, of course, the big pinch comes in the particular segment of the metalworking industry involved.

Let's take a look at what is happening in sewing machines. In 1949, we imported 37,-800 according to the Singer Manufacturing Co. In 1950, imports more than quadrupled to 153,000 units. Last year, we imported 1,229,400 units, Japan alone now ships more than a million units a year to this country.

This development is rough on the people who are, or who were, in the domestic sewing machine industry. It is rough on the workers in the domestic sewing machine industry, just as it is rough on the auto workers, the steel workers, the workers in fastener plants.

PINCH IN MACHINE TOOLS

Let's turn now to an industry that has not only economic but national security implications. I refer, or course, to the machine tool industry.

Machine tools often are called the "master tools of industry." They are the basic machines which cut and form metal and without which nothing made of metal could be manufactured in significant quantities. Our standard of living and the defense posture of the country rest on machine tools.

In the reconstruction that followed World War II, western European countries, often with American financial aid, built many modern machine tool plants. As the capacity of those new and modern plants grew, they filled the demand from their own industries and then started looking abroad for markets. They made terriffic inroads on markets formerly held by American machine tool builders, in foreign lands and here in America.

In the thirties and forties, 25 to 30 percent of the output of U.S. machine tool plants was sold abroad. Some years, it ran as high as 40 percent of total output.

In the last few years, only about 10 percent of American machine tool production has been sold abroad. Markets formerly held by the U.S. builders have been taken over by Germany, England, France, Italy, and other European countries.

Foreign machine tools are invading our domestic market in ever increasing numbers. The National Machine Tool Builders' Association, a trade association representing 90 percent of the American industry, estimates that the percentage of the domestic market for general purpose machine tools increased from 6.3 percent in 1955 to 17.5 percent in 1959.

BUILDERS MOVE OVERSEAS

In an attempt at self-preservation, many machine tool builders have built, bought, or otherwise acquired manufacturing capacity in Europe to take advantage of the much cheaper labor available there. Added incentives to having manufacturing capacity abroad are supplied in more favorable tax policies in some cases and in avoiding restrictions which European countries place on imports of machine tools built in America.

Surveys by our editors and by the National Machine Tool Builders' Association indicate that half of all the companies building machine tools now have or are in process of acquiring manufacturing facilities abroad.

Gentlemen, as I watch the exodus of machine tool builders to foreign lands, I have to shudder at the thought of what would happen to us in a national emergency such as we faced in 1941 and 1942, or in 1950. I shudder to think what would happen if Russia should decide to send her armies out over Europe to the Atlantic.

To say that the move of U.S. capacity to Europe represents a serious threat to national security is an understatement.

BRASS MILLS HURT

What has been happening in steel mill products and end products made of ferrous materials has also been happening to non-ferrous metals.

Imports of brass mill products increased from 21 million pounds in 1949 to 199 million pounds in 1959—an almost tenfold increase.

Those imports are cutting into a market already sorely hit by a decline in demand for some of their products and by competition from other materials.

Domestic brass mill shipments dropped from 3.6 billion pounds in 1943 to 1.9 billion pounds in 1959. A mild increase is expected this year but that is small comfort to domestic brass people who are sitting on more than 2 billion pounds of idle capacity while their overseas competitors are operating at capacity.

Domestic brass mill products people find they just can't compete in price with foreign producers. They are underbid by as much

as 20 cents a pound. Lately, American companies have been trying to beat overseas competitors by cutting domestic prices. But they are unable to reduce their costs as much as they cut prices. Price cutting without cost reduction is no solution to their problem.

I could outline the problems of other segments of the metalworking and metal producing industries as a result of the rising tide of foreign competition. But the facts would be much the same.

WHY WE'RE VULNERABLE

Let me turn now to some observations as to why we are so vulnerable to competition from foreign manufacturers.

1. We have aided financially the establishment of modern industrial plants in our foreign-aid programs.

We have shared our technological knowhow with the politically friendly countries that now are our industrial competitors.

3. In our preoccupation with foreign aid, we have neglected domestic aid which other governments have granted their industries. For example, the U.S. depreciation rules and regulations are among the most archaic in the world. The countries which are offering us strong competition have modernized their depreciation regulations to encourage modernization and efficiency of industry. Too often, our depreciation rules penalize the company that wants to modernize.

And, as you know, many foreign governments have aided their industries seeking export markets by extending or guaranteeing credit. They have protected their home markets through various devices we have abandoned—import quotas and restrictions, subsidies.

4. Our industries pay wage rates which are fantastically higher than those paid by our foreign competitors.

The last reason—the disparity in labor costs—is the most important. I am confident that American metalworking and metal producing companies could hold their own against any competition in the world were wage raises more nearly comparable. I believe we could even pay our workers a substantial premium and still compete.

WE'RE "SITTING DUCKS"

But the differential in wage rates has grown so great that we are just "sitting ducks" for foreign competitors, and some other means of equalizing the situation will have to be found.

A few minutes ago we were talking about the machine tool industry. Generally speaking, half the cost of a machine tool is in direct wages.

The average rate for production workers in the American machine tool industry, exclusive of fringe benefits, is \$2.40 an hour. That compares with Western European rates as follows: England, 85 cents an hour; Germany, 60 cents an hour; Italy, 35 cents an hour. Our labor costs in the machine tool industry are four times greater than those in Germany, seven times greater than those in Italy, and three times greater than those in England.

This means that in a machine tool costing \$10,000 in the United States the labor cost is \$5,000. The labor cost on the same machine in Germany is only \$1,250.

The German manufacturer has other cost

The German manufacturer has other cost advantages arising from the difference in wage scales. A considerable portion of the cost of the machine tool is represented by components such as motors and electrical systems. The lower wage scales in Germany mean that those components also cost less than they do in this country.

THEY UNDERSELL US

That explains why Western European machine tool builders can manufacture products in their modern plants, ship them to this country, paying freight, insurance, and tariff, and still undersell domestic builders

In some other categories of metalworking, the disparity in wage costs is even more pronounced.

During the 1959 steel strike we collected the best data available on average hourly earnings in the leading steel-producing countries. To get comparable figures we had to use the year 1957, because data were not available from some countries for more recent years. The American Iron & Steel Institute had the same experience we had and came up with almost identical figures.

Our figures show average hourly earnings In the United States were \$2.92 an hour.

In Germany they were 67 cents.

In the United Kingdom they were 80 cents an hour

In Belgium, they were 77½ cents an hour. And in Japan, they were 41 cents an hour.

In other words, gentlemen, American steel producers were paying their workers more than seven times as much as were Japanese steelmakers, more than four times as much as German steelmakers, and more than three and a half times as much as British steelmakers.

NO END IN SIGHT

The disparity in wage rates, of course, has been increased by the wage contract signed by American steelmakers and the United Steelworkers in January. That contract will raise the employment costs for American steelmakers by 10 cents an hour over the term of the contract. Meanwhile, foreign steelworkers are glad to settle for increases approximating 5 cents an hour.

It takes about 16 man-hours to produce a ton of finished steel. Under present wage rates, that means the cost of labor input per ton of steel in this country now is about \$60 a ton. In Western Europe, the labor input cost is around \$12 to \$14 a ton, and in Japan, it is in the neighborhood of \$7 to \$8.

The steelmaking facilities of those countries are just as modern, and in some cases more modern, than the facilities in this country. With a labor saving of \$50 a ton, it is no wonder that foreign steelmakers can flood world and American markets with material at prices \$30 to \$40 a ton under the costs of American mills.

The narrowing margin of American technological superiority can no longer overcome

so enormous a cost disadvantage.

What we have said about wages in the machine tool and the steel industries is, of course, true of other segments of metalworking with only minor variations. In France, a year ago, I visited an extremely modern modern auto plant in which a substantial share of output was earmarked for export to America. The workers in this plant received the equivalent of \$90 a month, less than what a Detroit autoworker gets for 1 week.

OUR GRAVEST PRODLEM

The rising tide of metalworking imports into this country and the diminution of our metals metalworking exports pose one of the gravest problems our metalworking industry ever est problems our metalworking industry even has faced. And metalworking has made possible the standard of living which made us the envy of the world. If it is weakened, so our standard of living will be lowered. Our world leadership will be impossible to maintain

We think the problem is exceedingly grave day. We think it will get worse before it

gets better.

Some of our people say hopefully that in time the standard of living among our political. ically friendly competitors will rise and that their wage rates will be forced up. I hope that is true. But to date, our wage costs have been rising much more rapidly than in any other country.

WHAT WE MUST DO

I believe that foreign competition's inroads on the metalworking industries have

become a national problem and should be recognized as such.

I believe that we must modernize our depreciation system to encourage increasing our production efficiency.

I believe that our Government must take all proper steps to help American industry maintain a position in world trade.

I personally dislike artificial restraints on trade and doubt that they can prove effective in a world grown suddenly small.

But I also dislike the idea of handicapping American industry through artificial restraints and through policies which give an unfair advantage to foreign competitors.

Export Markets

EXTENSION OF REMARKS OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

THOMPSON of Texas. Mr. Speaker, one of the principal objectives of the Agricultural Trade and Development Act. Public Law 480, was the creation and building of export markets for American agricultural commodities. From time to time I have been informed that an effective job was being done. Recently the administration announced an export promotion campaign and called on industry and agriculture for their complete cooperation. This, too, seemed like a good idea.

However, one of our Texas rice mills has anticipated the administration's program by at least 4 years. They produce and market a high-quality parboiled rice, which is not generally available in foreign markets. In one country, Greecetruly one of our real friends among nations-they had developed a business of approximately 2,000 tons annually, or less than 5 percent of the Greek domestic production. In so doing they expended approximately \$100,000 in advertising and promotion. Their sales do not interfere with sales of Greek rice, having been largely to hotels, tourist resorts, and the carriage trade. Greece does not produce a parboiled rice and their rice is hardly of comparable quality. Pricewise, U.S. rice in Greece sells far better than 50 percent more than Greek rice.

Last November all imports of rice were embargoed by the Greek Government. After a protest by our State Department, a clarifying regulation was promised. Late in February one was issued permitting imports on license where the importer could show he had exported twice the quantity of Greek rice for currency acceptable to the Greek Government. This tied things up tighter than ever.

Among such good friends as the Greeks and ourselves, such a situation will undoubtedly be straightened out without undue delay. The tonnage and exchange is small, but the impact can be great. I trust that the State Department, through the exercise of a high order of sound, practical diplomacy, will resolve the differences of opinion in ample time so that it will not sound a

sour note just as the administration's export promotion program is about to get underway.

Foreign Aid and Mr. K.

EXTENSION OF REMARKS OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 19, 1960

Mr. WIDNALL. Mr. Speaker, the free world stands in shock and in anger at the recent developments in Paris. Now unmasked for all to behold and ponder is the shameless cynicism of Mr. Khrushchev who sought to lull the world into accepting his allegedly peaceful blandishments as a sincere effort to ease East-West tensions.

The free world-whether it be France or England or the smaller countries of Laos, Korea, and Pakistan on the periphery of the Soviet Union-have their eyes on the United States-its Government and its people. Will calm consideration of all these developments in our foreign policy give way in anger to rash acts by the Congress-the consequences of which may contribute to a further deterioration of this unfortunate situation?

The free world will soon have an opportunity to gage the reaction of the Congress to these serious developments. I refer to the approaching debate on appropriations for the vital mutual security program. I am sure that the Members of the House must appreciate the fateful consequences of indiscriminate wielding of the pruning knife for the sole purpose of reducing the amount which our President feels is necessary to support our collective security arrangements throughout the free world.

A slash in appropriations below the level requested by the President will be construed as a lack of united and popular support of the President at a most difficult time in our history. A slash in appropriations will be construed as a lack of confidence in our military and civilian leaders, our Secretary of State, our Secretary of Defense, and the Joint Chiefs of Staff, all of whom have endorsed the President's request for the mutual security program, as representing the minimum requirements of our national defense.

Now is the time for both parties-for all the people-to close ranks and show the free world as well as the slave world that we are 100 percent behind the President-and that we accept his leadership and his estimate of our needs for this vital adjunct of our defense effort—the mutual security program.

Let us prepare now for any eventuality. Let us in the debate which will soon be on us to raise a standard that will be an inspiration to the free world-and a bulwark for our President in these diffi-

I ask unanimous consent to insert in the Record at this point an editorial from

today's issue of the Washington Post entitled "Foregin Aid and Mr. K." I commend it to the careful reading of the Members of the House:

FOREIGN AID AND MR. K.

Almost to a man, the leadership and rankand-file of Congress have rallied to President Eisenhower's support in the face of Nikita Khrushchev's incredibly arrogant attacks. If the Congress wishes now to demonstrate that it means what its Members have been saying, there is a perfect opportunity in the pending mutual security appropriation bill. Not only are foreign economic and military assistance keystones of the Eisenhower program, they are also a means of demonstrating to the Soviet Union that this country and its allies cannot be divided by bluster and threat and that American purposes overseas are not the selfish or aggressive ones that Mr. Khrushchev says they are.

When Congress recently passed the foreign ald authorization bill it seemed little more than the annual gesture of general consent usually afforded to the program. Now these measures are cloaked with a grave new urgency, and in passing upon the actual appropriations Congress has a chance to recognize this. No doubt the House Appropriations Committee may still wish to report on the inadequacies, the waste and the miscalculations which its subcommittee claims to have found. No doubt there are opportunities for legislative improvements—even in an appropriation bill. But if Congress allowed the emphasis to become mainly or entirely negative, carping and critical, it would be giving Mr. Khrushchev more fuel for his campaign. It would undercut the President grievously at a time of serious crisis.

If, however, Congress seizes its opportunity, it can express through an adequately funded assistance program a national resolve not to be intimidated by the prospect of new danger and tension in the months ahead. It can say to the world in a concrete and meaningful way that this Nation is fully prepared to help sustain the free world alliance for as long as the Soviet threat remains. It can say that the Nation is ready to help underdeveloped countries find their way in freedom to material progress and stable independence. It can show again that American purposes in the world are more than self-serving and that the Nation's strength has its roots deep in the abiding idealism of the American people.

Oldest Inhabitants, Inc., Laud "Sit-In Students"

EXTENSION OF REMARKS

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1960

Mr. DIGGS. Mr. Speaker, under leave to extend my remarks, I wish to include a timely resolution proposed by the Oldest Inhabitants, Inc., of Washington, D.C.

As you know Negro students all over the South are engaging in peaceful demonstrations, now labeled "Sit-In."

These young people emerging with militance from family situations steeped of necessity in the fears and ugly traditions of the rabid South, are the voice and protest of the new Negro. The Negro is no longer satisfied to be separate but equal, even if perchance such status were a reality.

These students have not "winced nor cried aloud," but patiently and ploddingly pursued the ideal of full equality under the law, and have vowed they will continue to do so until the bastions of bigotry and intolerance diminish, fade, and die.

They have been beaten, jailed, sprayed with water hose, herded into restricted areas and humiliated, but they have not relented, nor will they until human dignity and equal opportunity has been achieved.

I would like to put in the RECORD the resolution by the Oldest Inhabitants, Inc., of Washington, D.C.

The resolution follows:

We the Oldest Inhabitants, Inc., believing in the dignity of man to aspire to achieve the highest ideals of citizenship, commend the peaceful manner in which the southern college students have conducted themselves in their effort to obtain the rights due every American citizen.

We endorse and applaud these young men and women willing to endure scholastic, financial hardships, mental and physical anguish suffered as the result of their courageous fight for full citizenship for Americans all.

We submit to the public for its appraisal, the spectacle of law enforcement officers and judges seemingly using their authority as a club to browbeat, humiliate and punish those who seek to walk with dignity and security along the American way of life in a free world.

The unreasonable jail sentences and fines far in excess of the alleged offenses committed are plainly intended to crush the spirit of youth whose only desire is to aspire to become first-class citizens in a land where equal rights should be guaranteed to all of its citizens.

Then and only then will the wavering nations of the world have confidence in this great country of ours and be willing to accept our form of democracy as a symbol of justice, peace, and equality for all in a free, united, happy world.

WILLIAM D. NIXON,
President, Oldest Inhabitants, Inc.

Elimination of Foreign Restrictions Against U.S. Exports

EXTENSION OF REMARKS

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1960

Mr. BOGGS. Mr. Speaker, I have recently received a press release, issued jointly by the Departments of State, Commerce, and Agriculture, giving a detailed report on the good progress that has been made in the elimination of foreign restrictions against U.S. exports. This release and the important information that it contains deserve the most careful attention of the Members of the U.S. Congress.

In the past few years our Government has been actively engaged in working for the elimination of the restrictions against U.S. exports that had been imposed during the war and postwar period. These restrictions were imposed to conserve scarce dollar exchange and to protect the balance of payments; they are no longer justified today.

Our Government deserves a vote of thanks for the excellent progress that has been made. In particular, I want to offer my compliments for the conscientious and effective work of the Under Secretary of State, the Honorable C. Douglas Dillon, and the former Assistant Secretary of Commerce, the Honorable Henry A. Kearns.

We have seen profound changes take place in the postwar period, and particularly in the last decade, in the world trade situation. Due in no small part to the Marshall plan, as well as to their own efforts, the major industrial countries of the world have enjoyed a dramatic improvement in their economies. With economic growth has come the expansion of their foreign trade and an improvement in their balance of payments and foreign reserve positions. This new and healthy condition that characterizes the trade and general economic circumstances of these countries has permitted a widening of the area of freedom in trade and international financial transactions. This is a result that we in the United States have long sought. We have worked for this result in the general agreements on tariffs and trade, in the international monetary fund, through the Organization for European Economic Cooperation and in our bilateral discussions with these countries.

We have emphasized in particular the importance of eliminating discriminatory restrictions against dollar imports into these countries and, in addition, we have sought to eliminate all quotas that had been imposed to protect the balance of payments. For a large part of world trade, excepting the situation of the underdeveloped countries, balance has been restored and there is no longer the justification of balance of payments disequilibrium for the maintenance of restrictions that have been imposed on trade.

On September 8 last year I inserted into the Congressional Record a statement strongly urging the elimination of restrictions against U.S. exports and providing detailed information on the restrictions that then existed. At the 15th session of the GATT which took place in October-November of last year the subject of trade liberalization occupied the center of the discussions. think it is fair to say that the work of the 15th session of the GATT marked a major breakthrough in trade liberalization. The GATT adopted a report which concluded that discrimination in trade on balance of payments grounds should be quickly ended. A number of countries that are members of the GATT announced important steps toward further liberalization at the 15th session. Prior to the GATT session the International Monetary Fund on October 23 adopted a decision that there was no further balance of payments justification for trade

discrimination and, indeed, that there was need for progress in the elimination of all quantitative restrictions—quotas—including nondiscriminatory restrictions.

The Organization for European Economic Cooperation, in its 11th annual report which was recently issued, pointedly advised the western European nations that are its members that they were duty bound to reduce trade barriers and to stop discriminating against United States and Canadian imports.

These decisions and statements along with the hard work of our governmental officials has produced important results. Discrimination against United States exports have been, to a large extent, eliminated. New markets have been opened up for U.S. exports and the press release notes that "since 1958 the removal of quantitative restrictions which discriminated against the United States increased the potential market for American goods in western Europe alone by an estimated half billion dollars per year."

Progress in trade liberalization means greater reciprocity for the United States. We have heard complaints that the trade agreements program was not sufficiently reciprocal because the tariff concessions that we got in return for our tariff cuts were not permitted to operate because of the existence of quota restrictions. This was true and was bound to be the case so long as our trade partners were be-deviled by balance-of-payments problems and inconvertible currencies. The improvements that I described earlier have not only made possible, but also have made essential, the elimination of such restrictions. This has been done to a large extent. Even more needs to be done and the prospects for complete success are very heartening.

Through progress in trade liberalization, by increased sharing with our western European partners of the responsibilities for economic assistance to the less-developed countries, through eco-nomic growth generally, the free world nations can make tangible progress to ward the development of the kind of economic system in the free world that has been the goal of the U.S. foreign trade policy for a quarter of a century. The advantages of expanding and liberalizing trade and of increased investment accrue to all free world countries. It is through these instruments that we can grow and prosper together and succeed in proving that free societies operating in an atmosphere of economic freedom are superior to the regimented economic system of the Sino-Soviet bloc.

The text of the joint State, Commerce, Agriculture press release on trade liberalization follows:

JOINT STATE, COMMERCE, AGRICULTURE PRESS
RELEASE ON TRADE LIBERALIZATION

The liquidation of many of the restrictions on foreign trade which have persisted since World War II has been accelerating in the past 2 years. More specifically, foreign countries have been dropping those quantitative import controls which discriminate against goods from the United States. The major exception has been a number of agricultural commodities. This year we expect to see the virtual elimination of discriminatory treatment including that affecting agricultural products. We also expect that

there will continue to be a sharp reduction in the use of quantitative controls over trade generally.

The immediate spark of the current movement toward trade liberalization was the establishment of external currency convertibility in December 1958, by the major trading countries of Western Europe. This removed the financial basis for the application of discriminatory controls over imports from the doilar area. The International Monetary Fund and the contracting parties to the General Agreement on Tariffs and Trade (GATT) have called upon member countries generally to eliminate discriminatory restrictions with all feasible speed. In addition, a number of important countries have reached a point where they no longer require quantitative restrictions previously justified on financial grounds.

The basic reason for the return to conditions of greater freedom in world trade is to be found in the health and vigor of the world economy. The postwar economic recovery and growth of Western Europe and Japan have been phenomenal. The vigor which these economies have shown could not have been foreseen a decade ago. Many factors, including Marshall plan aid, have contributed to this. But the resourcefulness, imagination and vitality of the people was the essential ingredient for success.

The U.S. balance-of-payments deficit, which has been the subject of much recent attention, has been in large part the reverse side of this picture. The recovery of Western Europe and Japan has made them stronger competitors at home as well as abroad. This strength has been reflected in increases in their gold and dollar holdings. These increases provided the basis for the movement we are now witnessing—a return to a healthler and freer world economy. As American producers take advantage of trade liberalization abroad, added exports will tend to reduce the balance-of-payments deficit.

Since 1958 the removal of quantitative restrictions which discriminated against the United States increased the potential market for American goods in Western Europe alone by an estimated half billion dollars per year. If American exporters perform only as well as they have in recent years, they should be able to enlarge their exports to Western Europe by roughly this amount. Similar measures taken by the overseas sterling area countries, Japan and elsewhere have also improved U.S. export prospects in those areas. As_U.S. exporters improve their efforts and as oversea markets grow, U.S. exports will also grow.

With government licensing of imports (except in the case of a number of farm products) rapidly disappearing as a major factor in limiting U.S. business opportunities abroad, tariffs are becoming the most important barriers to our export trade. Concessions which have been granted by forcign countries in the form of tariff reductions or bindings on products imported from the United States are achieving enhanced significance. We hope to see these tariff barriers reduced further through the multi-lateral tariff conference beginning in September 1960, in which the United States will again be negotiating for reductions in forcign tariffs in return for reductions in U.S. tariffs.

Attached is a detailed statement of the trade liberalization actions taken by foreign countries during the past year. The high-lights of these movements are as follows:

The United Kingdom announced liberalization moves in August and November, 1959, and in January 1960, freeing such commodities as butter, textiles and clothing, tobacco. machinery, and photographic equipment from controls. By these actions the United Kingdom has eliminated

discriminatory restrictions on most commodities and has greatly reduced the number of commodities under quantitative restrictions.

During 1959 France freed more goods from quantitative import restrictions than at any time since the war. With liberalization announcements in September, November, and December, 1959, and April, 1960, France reduced the gap between the OEEC and dollar liberalization lists to 21 items. Such U.S. commodities as outboard motors, cotton textiles, nylon, and synthetic fabrics, and automobiles may now be exported to France more easily as a result of these moves.

The following other countries have taken steps in recent months to remove some quantitative and other restrictions which have hampered the flow of U.S. exports: the Netherlands, Sweden, Denmark, Norway, Germany, Italy, Finland, Austria, Portugal, Spain, Tunisla, Australia, New Zealand, India, the Federation of Rhodesia and Nyasaland, the Union of South Africa, Kenya, Malaya, Singapore, British East Africa, Japan, Argentina, Brazil, Chile, Peru, and Uruguay. Many of these countries have either eliminated discrimination or have reduced it to a small number of commodities,

In general the restrictions which are still applied by European countries have their most restrictive effect on imports of agricultural products. Such important U.S. products as fresh and processed fruit, wheat, tobacco, canned meats, poultry, barley, and corn are still under import controls in many European countries. Quantitative restrictions are also still applied by many countries in Africa, Asia and South America on a wide variety of "luxury" products in order to conserve foreign exchange for most essential imports; however, most of these restrictions are applied on a nondiscriminatory basis.

In the coming months the U.S. Government will, through such forums as those provided by the General Agreement on Tariffs and Trade and the International Monetary Fund and through bilateral discussions, continue its vigorous efforts to bring about the rapid elimination of quantitative restrictions still in force and thus to increase the potential foreign market for U.S. exports.

RECLAMATION OF QUANTITATIVE RESTRICTIONS
AGAINST UNITED STATES EXPORTS COUNTRY
SUMMARIES

Argentina 1

Until the end of 1958, Argentina maintained a rigid import control system. Effective December 30, 1958, a new foreign trade and exchange system was inaugurated which abolished the prohibitions and area discriminations formerly in force.

Under the new arrangement, imports were made subject to exchange surcharges ranging from 20 to 300 percent of their c. & f. value, and advance deposits ranging from 50 to 500 percent were required. Toward the end of 1959, however, Argentina took steps to relax this system, eliminating the high surcharges on certain agricultural machinery and equipment, drastically reducing certain other surcharges and entirely abolishing the prior deposit requirement. This section is expected to result in a moderate increase in the volume of imports into Argentina.

Australia 2

A series of trade liberalization measures introduced by Australia on April 1, August 1 and December 1, 1959, and February 23, 1960, removed import licensing discrimination on all dollar imports except motor vehicles. The Australian Minister of Trade stated on November 29, 1959, that discriminations

Pootnotes at end of speech.

nation on motor vehicles would be ended by October 1, 1960.

While Australia in 1959 continued to exercise control over the general level of Imports by the use of global quotas for some products and of nondiscriminatory individual licensing for others, later in the year many raw materials, components and equipment for industry were either exempted from licensing or were placed under an import replacement system whereby licenses are obtainable up to the level of current consumption. On February 23, 1960, all goods imported into Australia, except motor vehicles of dollar origin and about 200 other items, mainly consumer goods, were exempted from import licensing. Licensing controls and global quotas were continued temporarily on these 200 items, and quotas were increased by 20 percent.

At the beginning of 1959, controls were designed to limit global imports to an annual level equivalent to \$1.8 billion. However, on August 1, 1959, the annual global program was raised by \$112 million and on December 1, 1959, by an additional \$56 million, so that at the beginning of 1960, global imports were being programed at an annual rate of about \$2 billion. With the further liberalization of February 23, 1960, total imports are expected to increase to an annual rate of about \$2.2 billion.

Austria

Austrian imports fall into three general categories: (1) goods not requiring individ-ually validated import licenses, including all commodities which enter duty free or which are not listed in annexes to the foreign exchange law; (2) goods listed in an appendix to the exchange law which requires an individually validated import license regardless of source; and (3) commodities listed in annexes to the exchange law which are liberalized, depending on source, and which may be imported with a few exceptions, under a general license. There is discrimination in the Austrian system, since in the latter category the list of "liberalized" commodities applicable to the dollar area is smaller than that applicable to the OEEC.

In the first liberalization move since 1956, the Austrian Government on October 15, 1959, put into effect an expanded dollar liberalization list which eliminated virtually all discrimination in the liberalized sector between the licensing of industral imports from the OEEC area on one hand and the United States and Canada on the other. Certain textiles, however, still remain subject to licensing when imported from the United States and Canada, though liberalized for OEEC countries. In the agricultural sector, discrimination in import licensing remains for corn (maize), barley, rye and poultry.

Among the more important items added to the liberalization list by the October 15 action are figs, legumes, dehydrated vegetables, oil fruits and seeds, marine fish, beer, liqueurs, cocoa butter and powder, chocolate, canned fruit, cheese sponges, motor vehicles, vehicle motors, pneumatic tools, perfumes, mirror and plate glass, wax cloth, unexposed films, cotton linters, hemp, jute, felt, silk, yarns, velvet fabrics and ribbons, tulle, lace curtains, bituminous coal, coke, bituminous coal and lignite briquettes, certain wood products, a variety of chemicals, glycerin, X-ray barium and synthetic tanning extracts.

Belgian Congo

The Congo has a single column tariff, and although licenses are required, imports enter freely regardless of country of origin. Exchange control is a mere formality and dollar exchange is readily available.

Footnotes at end of speech.

Belgium-Luxembourg *

Most commodities imported into Belgium-Luxembourg (BLEU) are subject only to ordinary customs documentation. BLEU controls over imports from both dollar and nondollar sources are identical. At present only 160 tariff classifications out of several thousand tariff positions and subpositions are wholly or partly subject to import licensing including the items under the so-called Benelux global quotas and the commodities included in the GATT waivers for these two countries. Except in the case of a number of agricultural commodities, requests for licenses are usually granted.

Global quotas for the whole of Benelux—i.e., Belgium, Netherlands, and Luxembourg—exist on a small number of items. These quotas are subdivided into two parts, one applying to imports from the other Common Market countries and the other to imports from third countries, including the United States. The commodities concerned are: Castor oil other than crude, certain fatty acids, methyl chloride, penicillin, wooden packing cases, fish nets, and new and used automobiles. The United States has a trade interest in several of these commodities but the quotas apparently have no appreciable restrictive effect on U.S. goods.

Import quotas on some agricultural products are maintained by the BLEU countries under the waivers granted by the contracting parties to the General Agreement on Tariffs and Trade (GATT) in 1955. These products include: Fruits and vegetables (subject to seasonal controls), meat and meat products, dairy products and eggs, potatoes, and seed grain. In the 1959-60 season, Belgium opened its market to apples and pears almost 4 months earlier than usual. Wheat is effectively controlled by a requirement that imports be only a stated percentage of domestic production.

Brazil 1

With a few limited exceptions, Brazil does not impose quantitative restrictions, as such, on imports. Imported goods, however, are subject to control through an exchange mechanism under which importers are required to bid at public auctions for the foreign exchange required to pay for imports. For this purpose merchandise imports are classified into two categories: "General" covering raw materials, industrial equipment, and essential consumer goods, and "Special"—covering nonessential or luxury goods. Only a small percentage of available exchange is allocated for auction in the "Special" category. Purchases for the account of the Government and its agencies, as well as certain imports considered essential, such as wheat, newsprint, oil-well equipment, petroleum and derivatives, rubber, aviation equipment, and equipment for electric power development, fall outside of these categories and are granted foreign exchange at preferential rates.

Exchange auctions for imports in the private sector are held in 10 commercial exchanges. Amounts of foreign exchange allocated for auction are based upon a foreign exchange budget, prepared on the basis of anticipated exchange receipts and the needs of the Government and other sectors not required to purchase exchange at the auction.

Exchange certificates supplied on the basis of auction are valid for imports from specified sources, that is, (1) countries having convertible currencies, and (2) those with nonconvertible currencies, the latter including a number of countries with which Brazil has negotiated bilateral trade and payments agreements. Under this system imports from the United States compete on an equal basis with those from other countries with convertible currencies. However, in some cases the United States is at a disadvantage when competing against countries which

have bilateral trade agreements with Brazil. Dried fruit and fresh deciduous fruit are United States exports which are at a disadvantage under this system.

Burmuda *

The only import controls employed by Bermuda in 1959 were on 13 commodities, whose importation from the dollar area was prohibited. On November 21, 1959, this list was reduced to two items, motorcycles and bicycle propulsion units. The Government of Bermuda has announced that even these prohibitions will be lifted and that, from May 1, 1960, no import controls will be imposed.

Burma 1

Burma's import licensing policy continues to be highly restrictive in view of the country's continuing adverse balance of payments. Many categories of goods require specific import licenses and the importation of less essential goods is severely limited or prohibited.

During 1959, Burma liberalized considerably its treatment of dollar imports by making the dollar area a permissible source of many commodities under open general license. Some of the remaining discrimination against the dollar area arises from the reservation of certain types of imports for procurement under the Japanese reparations program. Since Burma is now tending to abandon barter sales, prospects for further liberalization of dollar imports in the near future may improve.

Cambodia

Cambodia restricts imports mainly through licensing and exchange controls. The Ministry of National Economy prepares an import budget each year, earmarking specific amounts for various categories of imports, including both those financed by the International Cooperation Administration (under the commercial import program) and by Cambodia from its own foreign exchange reserves. Foreign exchange is allocated semi-annually by the National Bank of Cambodia to the Ministry of National Economy. The latter delegates authority to process applications for import licenses and for exchange to the Committee for Foreign Exchange Allocation (Commission de Repartition des Devises).

Some imports are financed outside the import budget, principally those financed under the so-called EFAC system. Under this arrangement, an exporter of selected products is allowed to retain a certain percentage of exchange proceeds from exportseither 10 or 13 percent for most commodities—which he may sell or use himself for importing approved imports. The retention of 13 percent is allowed for exports in dollars and other currencies freely convertible into dollars; the added premium is designed to encourage sales in hard currencies. Imports involving no allocation of foreign exchange, with minor exceptions, are no longer permitted.

With respect to imports financed from Cambodia's own foreign exchange holdings, more French francs than dollars are allocated. The French franc-riel rate (10 French francs equals 1 riel) fosters Cambodian exports to France, but tends to discourage Cambodian imports from France. Cambodian earnings from exports to France are in resident francs which are not convertible and therefore ordinarily must be used to purchase French goods.

There was no significant tightening or relaxing of Cambodian import controls during the year.

Canada *

Canada eliminated foreign exchange licensing in 1951 and has only a few items subject to quantitative controls. Some of these controls are associated with Canadian subsidies on domestic production; some are imposed for strategic purposes; while others represent permanent statutory prohibitions under the tariff and customs law to protect Canadian production of certain products.

The Export and Import Permits Act provides for the control of imports for specified purposes. The most important of these is authority to control imports of any commodity which is under price support in Can-ada. At the present time this applies to butter, butter fat, cheddar cheese, dried skim milk, and turkeys. These require special import permits. An import quota of 1 million pounds per quarter was established in 1959 for U.S. turkeys, but this total of 4 million pounds a year is considerably below the 13 million pounds imported from the United States in 1956, the last complete year during which imports were unrestricted. The restrictions affect only the United States as the United States has been Canada's sole foreign supplier of turkeys. Canada's import prohibition on swine and uncooked pork and pork products from the United States in effect since 1953 was removed in January 1960 following notifica-tion from the U.S. Government that the United States is now free of vesicular exanthema.

Under the Canadian Wheat Board Act, wheat, wheat flour, and wheat starch; oats, including ground, crimped, crushed, rolled, and meal; and barley, including ground, crimped meal, and flour, are subject to import licensing by the Canadian Wheat Board which is the government marketing agency. Imports are small. Despite the competitive strength of Canadian production, there are some years when the restriction directly reduces imports from the United States. In 1959, for example, oats from the United States would have entered Canada in substantial quantities because of the price relationship, had not Canada maintained control over imports.

Under the Export and Import Permits Act Canada can also control imports (1) of a commodity by arrangement with the supplying country and (2) of a commodity which is subject to international allocation. The import control on tin, effective from October 1, 1958 in order to prevent importation of that commodity from the Soviet Bloc was removed effective March 12, 1959 after Russia reached an agreement with the International Tin Council in January to limit its exports to tin.

The Customs Tariff Act prohibits the import of oleomargarine, butterine, and other butter substitutes, although the ingredients of butter substitutes, may be imported. This is a long-standing restriction antedating GATT and handicaps imports even into those provinces where the manufacture and sale of oleomargarine is permitted.

The Customs Tariff Act also prohibits the importation of used motor vehicles of all kinds manufactured prior to the year in which importation is sought. Second-hand aircraft imports regardless of the year of manufacture, are also embargoed. This control also antedates GATT.

Under Canada's Atomic Energy Control Act, import permits are required for the importation of fissionable materials and radioactive isotopes or any equipment which may be used for the production, use, or application of atomic energy. This control is for strategic rather than for commercial purposes.

During 1959 control over import and export of gas in Canada, including hydrocarbons and export of electric power, passed to the National Energy Board, a new advisory and regulatory body. The Board took over the gas and power controls formerly vested in the Minister of Trade and Commerce and the Board of Transport Commissioners. The Board has reserve power to regulate oil import and export. This authority will not be exercised until an order-in-council is issued, placing the trade under control.

The Provinces have a monopoly of the sale of alcoholic beverages, and Provincial licenses are necessary to admit shipments. Most Provinces are willing to give hotels and clubs permits to import for private stock but will not carry U.S. products in the government-operated liquor stores. This Provincial licensing antedates GATT.

Ceylon 2

While most commodities may be imported freely without an individual import license, a substantial number of consumer goods still require an individual license when imported from the dollar area. In October 1959, the Government of Ceylon relaxed restrictions on imports of some goods from the dollar area.

All commodities under individual license from the dollar area may now be imported freely by registered Ceylonese traders or indent agents. For non-Ceylonese firms, the license quota on textiles was raised from 10 percent to 20 percent of their 1951 imports, and the quota for all other items under license from the dollar area raised from 50 percent to 100 percent of their 1951 imports.

Chile 2

Chile took steps in 1959 further to liberalize imports. On April 29, 1959, a decree was promulgated that permitted the importation of all merchandise into Chile. Previously only goods appearing on the list of permitted imports were allowed entry.

The significance of the step was diminished, however, because of institution of a requirement of high prior import deposits made the cost of import some consumer goods, and some goods produced in sufficient quantities domestically, virtually prohibi-tive. Prior import deposit system, under which importers were required to deposit from 5 to 5,000 percent of the c.i.f. value (depending on the essentiality of the import) with an authorized bank in Chile. The deposit was returned to the importer 30 to 90 days (also depending on the essentiality of the import) after the date of deposit. The Government later announced its intention to replace the prior import deposit system with surcharges on imports ranging from 10 to 200 percent of c.i.f. value. In June 1959 Chile took a first major step in implementing this plan when it reduced substantially the prior import deposits on a large list of merchandise to the levels of newly established surcharges. The reduced deposit is applied against the surcharge so this system amounts to the collection of surcharges in advance of importation of the goods. Subsequent decrees have broadened the amount of merchandise now subject to import duty surcharges and the prior deposits have accordingly been reduced to the levels of the new surcharges for many items. However, there remain many goods that are still subject to the

old prior import deposit system.

On December 30, 1959, the 5,000 percent prior import deposit category was reduced to 3,500 percent, and the Government has again stated that it intends to eliminate the prior deposit system in 1961.

Colombia

Colombia maintained its import austerity program during 1959 through a system of import licensing and prohibitions. This program was initiated in mid-1956 when it became evident that measures would have to be taken to conserve foreign exchange.

Colombia maintains a list of commodities the importation of which is prohibited and a list of products subject to quantitative import licensing restrictions. All imports into Colombia require prior registration which, except in the case of books, magazines, and shipments valued at \$20 or less, must be applied for by the importer prior to placing

Footnotes at end of speech.

the order abroad. Import licenses are issued subject in each instance to the discretionary approval of the National Superintendency of Imports. These imports are also subject to advance deposit requirements. In July 1959 these advance deposits were increased, for the largest group of imports, from 100 to 130 percent of the value of the order and at the same time the period for which these advance deposits are retained was extended from 60 to 90 days after clearance of commodities through customs.

Coffee, from which Colombia receives about 80 percent of her foreign exchange, fell almost 45 percent in price in the 2 years 1957 and 1958. However, under the recent coffee agreement with other Latin American and African producers Colombia now has an export quota equivalent to about 90 percent of her exportable coffee production. Barring any further drastic decline in the price of coffee, Colombia's payments situation is not expected to deteriorate further in 1960. Imports may even be allowed to increase as much as 20 percent from the 1959 level of \$31.4 million per month, to permit imports of capital goods and raw materials needed by industry.

Cuba

Cuba, which had previously employed import restrictions only in a few cases, intensified the control system during 1959. Import licensing controls on some 200 nonessential commodities were established in early February 1959. While licensing requirements were not a restrictive factor in limiting imports during the first 5 or 6 months, the mandatory mode of payment for the controlled items (letter of credit) had a restrictive effect on imports of those specific commodities. Exchange registration procedures estab-

Exchange registration procedures established in late August in connection with the payment for all imports had a restrictive effect. Foreign suppliers tightened credit terms and many importers found it difficult to finance peso deposit requirements.

Exchange surcharges, ranging from 30 to 100 percent, were imposed in September on the 200 nonessential commodities then requiring import licenses.

In mid-December, a new regulation placed most remaining imports under licensing control. This regulation was supplemental to the import control regulation of early February, and the two together now cover all mechandise trade.

In summary, virtually all commercial imports now require prior import licenses from the Cuban Monetary Stabilization Fund. All foreign exchange transfers in payment for imports also must be approved by the fund. There is no evidence that the Cuban Government discriminated against imports from the United States in 1959.

Indirect trade restrictions included the imposition of internal taxes on such imported foodstuffs as potatoes, flour, and rice. In addition to the internal taxes, the Cuban Government established tle-in conditions on imports of rice and flour, requiring importers to purchase one bag of domestic rice for each two bags imported and one bag of domestic flour for each bag imported. The tle-in requirement on domestic flour purchases was abolished in early 1960. Packaged rice in containers weighing less than 100 pounds is now prohibited.

Denmark 1

Denmark maintains import controls on a very limited number of consumer goods and agricultural products. Except in the case of agricultural products, licenses are granted freely, depending upon the availability of foreign exchange and needs of the national economy.

On January 1, 1959, Denmark increased its dollar liberalization from 66 to 70 percent (based on 1953 imports). On April 1, 1959 the Danish Government removed licensing controls on a further substantial number of

dollar imports. This move brought the dollar liberalization percentage to 86 percent and eliminated all discrimination against dollar goods in the liberalized sector of Danish import trade. On November 10, 1959 the Danish Government proposed an extensive liberalization of imports from the OEEC and dollar area to take effect simultaneously with a proposed tariff revision; this was effected on March 1, 1960. This step increases the percentage of goods which may be imported freely from the OEEC and dollar area from 86 to 96 percent of 1948 imports. Among the items of interest to the United States liberalized on March 1, 1960 are films, tobacco products, canned pineapple, citrus fruits, apricots and peaches, tolletries and cosmetics, textile goods, glassware, metal products, special machinery including agri-cultural and electrical, vehicles, musical instruments, and leather goods.

Effective December 15, 1959, Danish regional import quotas were made applicable to imports from the dollar area. This extension applied also to import licenses already issued but not yet utilized. With this step Denmark has erased the last significant area of dollar discrimination.

Dominican Republic

Import licenses are not required except for wheat, wheat flour and several other commodities whose import value is not significant.

In January 1959 the Dominican Government removed several commodities from Import licensing requirements, including: glass bottles, empty sacks, barbed wire, staples and treated wood posts. Later in the year, import licensing requirements were established for heavy highway construction machinery, milk and milk products, and centrifugal cast iron pipe, and were reestablished on barbed wire. Imports of automobiles are being limited to 50 percent of the value of a past representative period.

a past representative period.

Technically, formal exchange permits have not been required but each individual foreign exchange transfer requires the administrative approval of the Central Bank. Informally, deferrals of exchange remittances have been effected, and in the last quarter of 1959, approvals for exchange transfers in payment of imports were being granted with considerable delay; however there was some improvement in early 1960.

Internal consumption taxes on 58 import commodities, ranging from 5 to 15 percent ad valorem, and some specific taxes were established in June 1959.

There was no discrimination against U.S. imports in 1959.

El Salvador 1

El Salvador ordinarily does not impose quantitative restrictions on imports from any source.

Finland 2

Under present Finnish import control procedures, which were announced on December 31, 1959, goods subject to import licensing requirements may be divided into two main categories: (1) imports which are licensed automatically or without quantitative restrictions, (2) goods which are licensed under a global quota system.

Import licenses are issued automatically

Import licenses are issued automatically for certain specified goods which may be imported from: (1) countries with which Finland still has bilateral trade agreements, (2) the dollar area, (3) those sterling area countries which remain outside the free list system. Under global quota licensing participation is open to all except bilateral agreement countries.

Restrictions on dollar imports were progressively liberalized in 1959. On April 10, 1959, additional quotas were opened to dollar area imports and licensing of dollar area

goods without quantitative restrictions was administratively extended to a broad range of commodities. According to the Finnish Government calculations, in April 1959 73 percent of dollar imports (based on 1954 imports) were automatically licensed or licensed without quantitative restrictions as compared with 40-42 percent previously.

Imports from the United States and Canada were put on the same basis as those from Western Europe effective January 1, 1960. With this move the list of goods which could be imported without license from Western European countries participating in multilateral trade arrangements with Finland was applied to the United States and Canada and the global import quotas available to the participating countries were made fully available to the whole dollar area. The automatic licensing list previously applicable to the dollar area remains applicable to the dollar area other than the United States and Canada. Under this most recent liberalization the Finnish authorities state that the free list constitutes an 82 percent liberalization calculated on the basis of 1954 imports.

France 2

During 1959 France made significant progress in the liberalization of its dollar imports and in narrowing the difference in treatment of imports from the dollar area and the OEEC. Since December 28, 1958, when dollar liberalization stood at zero, about 88 percent of French imports from the United States (based on 1953 trade) have been freed from quantitative import restrictions. In addition, French authorities have taken a series of measures to remove the differences between the dollar and the OEEC liberalization lists. At present liberalization of only about 20 items has been limited to the OEEC area, and most of these are expected to be liberalized for the dollar area within the next 18 months.

Commodities liberalized for the United States cover a wide range of American products, the most important of which include, in addition to raw materials and semimanufactured products, cotton textiles, wool and rayon clothing, nylon and other synthetic fabrics, acrylic fibers and threads, tires, many chemicals, certain machine tools, all automobiles, wheeled tractors, whisky, honey, low-alcohol-content beer, dried and smoked fish, fatty acids, etc. The removal of quantitative restrictions has also improved the market opportunities for other American goods such as washing machines, hand tools, absorption refrigerating equipment, electric water heaters, space-heating electric apparatus, electric irons and numerous other goods. However, many agricultural commodities are still under quantitative restrictions, regardless of the area of origin.

Further trade liberalization measures are expected, and the French Government has emphasized that henceforth such measures will automatically apply both to the dollar and OEEC areas. The French authorities have stated they intend to abolish all quota restrictions on industrial imports by the end of 1961.

French Caribbean Territories :

A long list of commodities freed from import licensing control by France on July 23, 1959 (with the exceptions of beer, most types of heavy timber and sawn lumber) were also freed by French Guiana, Guadeloupe and Martinique on August 5, 1959. Many products that could be imported only from European suppliers, or which could be obtained from North America only under strict licensing control may now be imported from the United States and Canada without such controls.

Liberalization actions taken by France on July 30, September 26, November 5 and December 24, 1959 are not yet in effect for the French Caribbean. Issuance of licenses for nonliberalized goods depends upon internal considerations and the availability of exchange allotments.

Federal Republic of Germany

The Federal Republic by January 1958 had liberalized 95 percent of private dollar imports (based on such imports in 1953), reimposed some restrictions in late 1958, but freed further commodities from restrictions during 1959.

During 1958, excessive accumulation of unmarketed coal in the Federal Republic threatened to cause serious unemployment in the domestic mining industry, and in September the Government placed coal under import restrictions from all countries except members of the European Coal and Steel Community. In February 1959, a \$4.78 per ton tariff with provision for a duty-free quota, was imposed on all imports of coal. This arrangement is scheduled to run through 1980, although the Federal Government can increase the duty-free quota (which is based on average annual coal imports from non-ECSC countries during the period 1955 through 1958) by 20 percent if overall economic conditions warrant such action. The temporary reimposition of licensing of coal imports reduced the German dollar liberalization percentage from 95 to 86.7 at the end of 1958.

In May 1959, the entire problem of remaining German import restrictions was reviewed by the contracting parties to the GATT. The GATT decision arising from this review sets forth the Federal Republic's commitment to liberalize about half by value of those commodities then subject to quantitative restrictions; commodities not specifically scheduled for liberalization by certain dates during the following 3 years were made subject to continuing consultations, with a full review of the problem scheduled to take place at the end of the 3-year period. Germany was permitted, however, to continue restrictions on imports of jute fabrics, imitation pearls and neat leather for a 5-year period, with progressively increased import quotas to become effective each year during that period.

Under the terms of the 1959 GATT decision, 160 industrial and agricultural items were liberalized on July 1, 1959 for importation from all currency areas. Effective January 1, 1960, an additional 77 industrial and agricultural items were added to the liberalization list. There still remains, however, some discrimination on imports from the dollar area. Licensing controls still applied by Germany on imports from the dollar area weigh most heavily on agricultural imports.

Among the more important items added to the dollar liberalization list during 1959 were various seeds, fruit juices, various vegetable products, chemicals and chemical products, some machinery items and parts, plastic household articles, tubes and tires for bicycles, motor scooters and motor cars, several types of leather, kraft paper and cardboard, some types of textiles, eyeglasses and buttons. Also included were poultry (except chicken), fish, plants, fresh vegetables, fresh fruits (except apples and pears) milling products, edible oils, sugar and chocolate confectionery, milk albumen, bakery products and flax.

Products not specifically scheduled for liberalization in the near future under the 1959 GATT decision are the subject of continuing consultations with the Federal Republic. These are mainly products subject to German agricultural marketing laws.

Ghana

The Government of Ghana maintains a system of import and exchange controls which requires the issuance of a specific import license for a few dollar goods. Such licenses are freely issued, however, and generally do not prevent the importation of any U.S. goods.

Effective March 19, 1960, the Government of Ghana removed licensing requirements for all dollar goods except motion picture films, petroleum products, gold, unmanufactured tobacco, tobacco manufactures, arms and ammunition, and explosives.

Greece :

From April 1953 through 1958, imports into Greece were generally free of import restrictions. Except for nine items of a luxury nature and certain tools and machinery subject to licensing controls, and for a few items under State Trading programs (chiefly wheat, flour, fertilizers, and kerosene), applications to the Bank of Greece to import were approved automatically—provided importers made the necessary deposits of local currency when filing applications. The amounts of the deposits varied with the commodity and were increased generally from a level ranging from 15 to 100 percent to a level ranging from 70 to 140 percent of the estimated cost of foreign purchase in 1958.

In 1957 and 1958, reserves dropped by about 25 percent. To halt this decline, Greece in April 1959 established global quotas, not applicable to imports from bilateral trading partners (and therefore discriminatory against the United States and many other nations) on imports of frozen meat, lumber, coal, iron and steel products, sewing machines, electrical equipment, woodpulp, and tires and tubes. At the same time, imports of textiles, passenger cars, trucks, buses, and chassis were subjected to licensing controls. Previously, the list of machinery and tool items subject to licensing had been increased from 38 to 54 groups items in January. Sugar was subjected to licensing in July and in August the deposit on applications for licenses to import textiles was increased to 280 percent. In September eight more types of agricultural machines were added to licensing controls and imports of kerosene for all areas placed under State trading.

On October 1, a regulation limiting the size of replacements or additions to the taxicab fleet in the Athens-Piraeus area to vehicles of not more than 4.5 meters in length and 13 statutory horsepower became effective, thereby prohibiting use of any American-made car as a taxi. This removed the chief market for U.S. cars in Greece. Later in October, rice, which had been embargoed in September, was placed under licensing controls. Quota control on frozen meat was lifted in October because of the inability of Greek importers to purchase required supplies from Soviet bloc nations.

In January 1980 Greece announced import quotas for the first 6 months of 1980 for the items under quota control, reserving a special quota of \$175,000 for U.S. pitch pine and Oregon pine lumber. Quotas for tires and tubes, coal and lumber are to be allocated on a historical import basis while other quotas will be distributed on a first-come first-served basis. The latter system applied to all quotas in 1959.

Haiti 2

No general system of import licensing has been established in Haiti. A Presidential decree, imposing sweeping restrictions on imports and dated January 27, 1959, was made public on February 23, 1959, and set aside on March 12, 1959, never having gone into effect. The original action was taken to improve Haiti's dangerously low exchange reserves position due to the fall in world coffee prices and the substantial reduction in domestic coffee production. In view of a subsequent \$6 million emergency grant by the International Cooperation Administration for balance-of-payments and budget support, the restrictive measures were no longer necessary and set aside.

Indonesia
Imports are under strict control and may be effected only by officially recognized importers. All commercial imports require prior licenses from the Government's Exchange Bureau in the form of combined

Shortly after the foregoing restrictions were recalled, the Haitian authorities became concerned by reports that there might be difficulties in marketing the full crop of indigenous rice. The Ministry of Commerce and Industry informally notified rice importers that, pending further measures, they should obtain authorization from the Minister of Commerce and Industry for each import shipment. These authorizations have been issued in the form of brief typewritten letters signed by the Minister of Commerce and Industry. On December 16, 1959, the Haitian Government issued a communique warning importers to fulfill certain formalities at the Department of Commerce and Industry before placing any import orders for fertilizer. The Haitian authorities state that the current informal import controls are provisional pending further study.

Honduras 2

Honduras ordinarily does not impose quantitative restrictions on imports from any source.

Iceland 1

Under the Icelandic system of import restrictions all items not included in free lists are subject to import licensing requirements. Before any imports, whether liberalized or not, may be effected, importers must have exchange coverage from a government authorized foreign exchange bank.

The import free list (list A) for the OEEC countries and dollar area covers approximately 33 percent of Iceland's imports from the countries concerned, based on 1953 statistics. Another and overlapping list (list B) covers items freely importable from countries with which Iceland has both trade and payments agreements.

No measures to relax import restrictions were taken in 1959.

India 3

India's import licensing policy continues to be highly restrictive, reflecting an adverse balance of payments. Quota limitations are placed on a wide range of goods, with less essential goods severely limited or prohibited. Special considerations such as credit or investment arrangements govern the import of capital goods costing more than \$42,000.

A change in import licensing policy was announced on December 17, 1959, removing discrimination against imports from the dollar area. Importers in India may now select any country as the source of an ap-proved import (other than more expensive capital goods) where foreign exchange freely usable by India is involved. Under the new policy, oustanding licenses issued for imports from the soft-currency area also will be valid for imports from the dollar area up to the full amount of the value of the license. Movement in the direction of removal of discrimination had been noted for more than a year prior to the December announcement. During that period, licenses for imports from the soft-currency area were valid for imports from the dollar area up to 50 percent of their face value or 5,000 rupees (about \$1,000), whichever was more, licenses up to 5,000 rupees were usable to the full extent from soft-currency or dollar areas.

The new policy will permit U.S. products to compete more effectively on an equitable basis with products from other countries for the market in India. It removes the element of discrimination that existed because of the distinction between dollar and soft-currency licenses.

import-exchange permits, License applications must be accompanied by evidence that the required amount of prior deposit has been deposited with an authorized foreign exchange bank. Since mid-September 1959 this requirement, which for private, non-Government agencies has amounted to 100 percent of the import's entrepot C. & F. value, has been waived entirely for imports by Government agencies. (Between April and August 1959 it had amounted to 230 percent for all imports, both Government and non-Government, and from January to April 1959 to 133½ percent.) In addition, imports are classified into six categories according to essentiality and are subject to exchange surcharges ranging from nil to 200 percent.

Although Indonesia's licensing controls do not provide for formal discrimination, license applications are screened with a view toward fulfilling bilateral trade agreement aims and toward limiting the overall expenditure of foreign exchange.

A definite trend toward increased state trading picked up momentum in 1959. In June 1959 monopoly responsibility for importing nine of the country's most essential and largest import commodities (i.e., newsprint, tin plate, raw cotton, cotton and rayon yarns, textiles, flour, cement, jute bags, and reinforcing steel) was given to a group of Government-owned and/or controlled trading houses. As of September 1959 these "Big Ten" trade agencies reportedly carried on 70 to 80 percent of the country's entire import trade, with indications that this portion has since further increased. This trade is in no way restricted as to origin of commodities.

Some of the factors which made 1958 Indonesia's poorest year in export earnings since independence were still present throughout 1959 and are continuing into 1960. The 1959 trade balance was considerably improved over that of 1958 and exchange holdings have risen quite steadily since September 1959. This improvement has resulted from an increase in the value of exports (largely due to the high price of rubber on the world market) and from a low level of imports continuing from 1958.

Iran

Except for a variety of items included on a prohibited import list and for a few commodities subject to special regulations, importation of goods into Iran is free of import restrictions. Exchange transfer and import authority are granted automatically and on a nondiscriminatory basis for all nonrestricted imports upon application. This liberal import system has been renewed each year since its adoption in 1957 with the issuance each March of new import regulations for the year beginning that month. Though the annual import regulations prescribe a total import quota for the year in accordance with law, the quota can be increased if necessary by the Minister of Commerce and is therefore administrative in nature. Iranian imports from the U.S.S.R. and several other countries are regulated through provisions of bilateral trade agreements. Special regulations apply to imports from Japan.

Imports are limited to some extent, however, by the commercial profits taxes applied to items removed from the prohibited import list in 1957 and subsequent years. These taxes are applied mostly to types of goods made in Iran and to luxury goods and range from very small amounts to over \$1 per pound for some textiles and to 100 percent for such items as metal furniture, cigarette holders, and canes.

In December 1959 the Bank Melli Iran, which has authority over exchange transfers, decreed that imports of nine categories of goods shipped after January 15, 1960, can be made only against procurement authorization of the International Cooperation Administration. Imports of these goods will be

Footnotes at end of speech.

financed, at least until new regulations are issued for the fiscal year beginning in March, from a recent ICA grant of over \$30 million in defense support funds. Affected goods include motor vehicles, tires and tubes, tractors, iron and steel, yarns and piece goods, refrigerators, radios, TV sets and drugs and medicines.

Imports from Soviet bloc nations were exempted from the regulation.

Israel 2

Israel controls all foreign trade through foreign exchange and import and export licensing arrangements. The controls are designed primarily to conserve foreign exchange for essential expenditures and to prevent the export of items in short supply.

Import licenses normally are issued in accordance with a system of priorities in which imports under the reparations agreement with Western Germany or imports carried out under bilateral trade agreements are given first priority. Next in priority are imports financed by loans. Imports to be financed from other sources generally are licensed only if it is impossible or impracticable to obtain imports from the above sources. The needs of the prospective importer, the prices of the commodities from alternative sources of supply, their availability from local resources, size of stocks, and the like are taken into consideration in the issuance of licenses.

Since October 1957, a large number of items have been subject to an open import license system under which licenses are issued to private importers provided they undertake to import certain minimum quantities of the commodity concerned. Under this license system, each commodity is subject to a surcharge to keep the internal price at an established level.

Italy 2

Quantitative restrictions on imports from the dollar area were reduced in 1959. Effective June 9 the number of Italian tariff items or subitems liberalized was increased to 3,779 or 55 percent of the 6,785 separate tariff positions under the new schedule. Prior to that date only 20 percent of the classifications were on the free list, which consisted of certain basic raw materials, a carefully selected group of capital goods, and virtually no consumer goods.

Products liberalized in the 1959 action include numerous organic and inorganic chemicals, certain chemical industry products, rubber goods, hides, tanned leather, cosmetics, iron and steel products, industrial equipment and many additional types of machinery as well as measuring and control equipment. Discrimination against dollar goods was further lessened in January 1960 when some 200 products were removed from quantitative restrictions. Items freed include dried prunes, meat extracts, and juices, brandies, and liquors, some natural and synthetic rubber products, various paper and cardboard products, paints, varnishes, and transmission shafts and gears. However, at the same time controls were reimposed on some commodities.

After allowing for the most recent measures, there remain 2,070 statistical tariff classifications subject to license when imported from the dollar area, whereas the comparable list for the OEEC area includes only 133 tariff classifications. Among the principal dollar items remaining subject to license are almost all agricultural products and foodstuffs, explosives, film, paper and paper products, textiles, copper, aluminum, lead, and zinc products, many consumer goods, unassembled machine parts, motor vehicles, spark plugs and all other automobile parts.

Footnotes at end of speech.

Japan

All commercial imports are subject to license. Two basic systems of import licensing are in general use-the automatic approval system and the fund allocation system. Approximatley one-third of the semiannual foreign exchange budget is set aside for import of specified items on the automatic approval list and licenses are granted automatically on a first-come-first-served basis. Under the fund allocation system, the Ministry of International Trade and Industry (MITI) issues import notices announcing opening and closing dates for filing import license applications, currency to be used in payment, and other matters in regard to delivery prices, etc. MITI may not necessarily allocate the amount of foreign exchange applied for and may designate source of supply.

Japan continued in 1959 to liberalize its import trade. The most important development came in November during the 15th session of the GATT in Tokyo when the Japanese Government announced (a) removal of discrimination against the dollar area on certain items; (b) expansion of the list of items under the automatic approval system; (c) the establishment of a new more liberal system for certain machinery imports; and (d) the liberalization of certain consumer goods.

This announcement followed other actions earlier in the year by the Japanese Government which included an increase in the amount of foreign exchange made available for imports and, under this, the larger portion set aside for purchases under the automatic approval system, an increase in the number of commodities placed on the automatic approval list, the abolition in most cases of the distinction between dollars and most other currencies; the reduction in the number of bilateral open-account agreements, and the significant reduction in the amount of deposit required of importers and in the use of the retention and link systems

In early January another liberalization step was announced. Effective April 1, 1960, more items were transferred to both the automatic approval list and the newly established automatic exchange allocation system, and there was a further reduction in discrimination against the dollar area. Concurrent with the announcement of these measures, the Japanese Government stated that additional action further reducing discrimination may be expected late in 1960 and at some unspecified date there will take place various relaxations on foreign ex-In this connection it was worthy that during 1959 a special Cabinet level group was established to review the country's trade and exchange control sys-tem with the announced purpose of setting up a program for liberalization of the control mechanism.

Federation of Malaya *

Previous discriminatory regulations of the Federation against dollar area goods (involving restrictions on direct imports, the requirement of specific import licenses when direct import was permissible, the necessity of importing via Hong Kong, etc.) were almost entirely abolished by liberalization measures of August 1, 1959. Under present regulations almost all dollar goods can be imported into the Federation under open general license. Even in the case of a limited number of items, particularly motor vehicles, watches, and radios, which still require specific import licenses, dollar exchange is made freely available.

Mexico

Slightly over one-third of Mexico's import classifications, accounting for about one-half of its annual imports, are subject to import control by the Ministry of In-

dustry and Commerce. To import these items, the importer must obtain a permit from the Ministry before placing firm orders. All agricultural, livestock and forestry products, whether or not requiring a license from the Ministry of Industry and Commerce, are subject to prior import licensing by the Ministry of Agriculture.

Though intended primarily to protect national producers, import control has balance-of-payments aspects. The control system does not discriminate against dollar goods. The trend in Mexico in 1959, as in earlier years, was toward expansion of the list of items subject to control by the Ministry of Industry and Commerce. Import controls were also more stringently applied during the year. A minor relaxation occurred at mid-year, when the maximum value of any controlled commodity which can be imported without a prior permit from the Ministry of Industry and Commerce was raised from US\$8.00 to US\$16.00 to facilitate clearance of small imports by individuals.

Netherlands 2

The Netherlands requires import licenses for only about 120 products out of several thousand tariff items. This requirement is applicable to all countries including the United States. Import licenses, where still required, are usually granted liberally. Wheat imports are effectively controlled by mixing regulations, which specify the amount of domestic wheat to be used in the production of flour.

Most of the products for which import licenses are required are subject to Netherlands or Beneiux global quotas. The quotas appear sufficient to accommodate U.S. ex-

porters of most products.

In February 1959 the Netherlands extended to all GATT countries, including the United States, the same degree of trade liberalization that existed for imports from OEEC countries. Effective July 15, 1959, the Netherlands removed the import licensing requirements for the overwhelming majority of products imported from most sources, including the United States. Previously, import licenses had been required for all goods imported from most sources outside the OEEC, although these documents were issued automatically for most products from the dollar area.

The Netherlands employs seasonal restrictions on apples and pears, permitting entry of these fruits only after a certain date each year. In the 1959-60 season the Netherlands opened their market to apples and pears from all sources almost 4 months earli-

er than customary.

In December 1959 it was announced that quantitative restrictions would be removed from the following products as of January I, 1960: Seed rye, rice; margarine, beet, cane, and like sugars, invert sugars and artificial sugar, hydrochloric acid, certain salts of hypochlorous acid; various soaps; various coopers' wares, and certain types of blown or pressed glassware.

New Zealand 1

Because of an improving balance-of-payments situation. New Zealand in 1959 changed its import licensing policy and relaxed import controls. In April and June 1959, many quotas were increased and a number of commodities, for which licensing applications are considered individually, are now licensed more liberally. The New Zealand Import Licensing Schedule for 1960 released in October calls for the virtual elimination of discriminatory licensing of dollar goods. On March 10, 1960, the schedule was amended to liberalize global import licensing and to remove timber from discriminatory control. Only motor vehicles and timber are still subject to discriminatory licensing. The 1960 schedule as amended also provides for additional licensing categories and new

procedures which introduce more flexibility in the licensing system.

Nicaragua 2

While Nicaragua has an import licensing system in connection with its exchange controls, licenses are granted for any and all products, provided importers meet deposit requirements. There is no discrimination against dollar imports.

Briefly, Nicaragua classifies imports into three categories or lists: list 1—essentials; list 2-lesser essentials; and list 3-nonessentials. There is no deposit requirement for items in list 1. In order to obtain necessary permits for commodities on lists 2 and 3, importers must deposit in a Nicaraguan

bank 100 percent of the c.i.f. value of the proposed import. In the case of list 2 goods, licenses are issued within 48 hours of making the deposits; for list 3 items, licenses are issued 30 days after deposit is made.

An effort was made during 1959 to liberalize exchange restrictions. On April 20, the Government placed 21 items on list 1, thus freeing them from deposit requirements. Items affected included certain tires, sandpaper, microscopes and other scientific instruments, special sands, barrels and casks, laminated foil, electrical parts for aircraft, and electrical equipment for repairing aircraft. On the other hand, restrictions tightened on cotton gin imports. In August this item, formerly on list 1, was placed on

Norway 2

Norway continued its progressive liberalization of imports during 1959 and, following action taken at the middle of the year, 91.7 percent of Norway's import (base-1953 private import trade) with the United States was exempt from import license.

On November 19, 1959, the Norwegian Ministry of Commerce announced that the passenger automobile quota for the first half of 1960 would be opened to automobiles from the United States and Canada. This removed the only remaining significant discrimination against imports from the dollar area. At the same time the Ministry announced that import controls and rationing of automobiles would be removed October 1, 1960.

Among the products of interest of American exporters still subject to import controls are: fresh and canned fruit, coal and coke, cosmetics, paints, synthetic resins, refrigerators, certain machinery, television sets, phonographs, and phonograph records.

In operating the license control system the Norwegian authorities have tended to license goods liberally.

Pakistan 3

All imports into Pakistan, other than government purchases, are subject to licensing. However, since 1955, Pakistan has followed a nondiscriminatory import policy, licenses with few exceptions being valid for

any country in the world.

As a result of a deteriorating balance of payments, a severely restricted import pro-gram for the January-June 1959 shipping period was instituted by the Government of Pakistan. Exchange allocations were reduced and the number of items permitted to be imported was cut from 207 to 174. However, with the improvement in the payments position, there was a relaxation of restrictions for the July-December 1959 period. The number of items which could be imported was increased during the period from 174 to 201 and quotas were raised. While the number of items to be licensed in the January-June 1960 period remained practically the same as in the previous perlod, quotas were increased as a result of

continued improvement in the country's foreign earnings, for the following items: iron, steel, and other metals, tools and workshop equipment, machinery and parts, wood and timber, hardware, chemicals, dyes, raw rub-ber and tires, motor vehicles and parts, cycles and parts, vessels and equipment, scientific instruments, books and magazines, milk food for infants, coconut oil, and finecount cotton yarn. In addition, restrictions on imports of drugs and medicines and of raw materials for their local production have been very substantially relaxed.

Paraguay 1

No quantitative licensing restrictions are maintained on imports. However, most imports require advance deposits ranging from 10 to 400 percent. Deposits are retained for a minimum of 120 days.

Peru 2

On October 1, 1959, Peru abolished its quota limitation on imports of automobiles, thus removing the only quantitative restrictions on imports into Peru. The automobile quota, which limited imports of automobiles for the year beginning October 1, 1958, to 4,500 units, was originally established in 1954 in an effort to conserve the nation's reserves of foreign exchange. High import duty surcharges and internal consumption taxes (collected at the custom houses) established in the interval are now relied upon to keep automobile imports within the nation's capacity to import.

At the present time, apart from the usual documentation, consular fees, import duties and surcharges, there are no restrictions on the importation of goods into Peru.

Philippines a

The Republic of the Philippines has employed import restrictions, primarily for balance-of-payments reasons, since 1949. Import restrictions are effected through a Central Bank foreign exchange licensing system. This system imposes an embargo on trade with the Soviet bloc, including Communist China, but does not discriminate among other exporting countries.

Allocations of foreign exchange from the Central Bank are made either through regular quarterly recurring quotas or through special nonrecurring quotas on a case-bycase basis.

The regular quarterly quota allocations are apportioned by commodity categories and by types of importers (government entities, producers and other qualified im-The seven categories of controlled items and the one category of "decontrolled" items, denoting the degree of essentiality accorded each commodity by the Ceneral Bank, are used in determining the amount of exchange for imports under the regular quar-

terly recurring quotas.

Because of large balance-of-payments Because of large balance-of-payments deficits in 1957 and 1958, and a low level of foreign exchange reserves, imports severely restricted in 1959. Individual quota allocations for importers were held considerably below their 1957 levels, and allocations for manufacturers were limited to their 1957 quarterly participation. Nonrecurring or special allocations of foreign exchange for imports to establish new enterprises or to expand existing facilities were also curtailed.

Many imports previously exempted from the special import tax (levied at 15.3 percent of c.i.f. value in 1959, at 10.2 percent in 1960) were during 1959 made subject to this charge, and small shipments and goods accompanying returning residents were made subject to compensating taxes (similar to sales taxes).

In addition, since July 16, 1959, a margin fee of 25 percent has been levied on sales of foreign exchange for most purposes, including payment for the great majority of import items.

Federation of Rhodesia and Nyasaland

Imports from the sterling area are freely permitted without licensing restrictions or requirements. Excepted from this general rule are a few items which require a specific license regardless of country of origin.

Almost all U.S. nonagricultural goods may now be imported freely under open general license. However, there are several for which exchange quotas are provided and one item, industrial fish nets, which is under of administrative licensing. For the majority of agricultural products, import permits must be obtained from the Ministry of Agriculture. These are issued usually on the basis of the availability of local supplies.

Prior to 1959 a "prohibited list" of over 100 items was maintained. This was a list of products for which licenses to import from the dollar area were not ordinarily granted. In late 1959, however, the Federation reduced the list to 10 items and established exchange quotas for several of these.

In January 1960, the "prohibited list" was further reduced to only five items. month exchange quotas were established for four of these: clothing (£100,000); piece goods-cotton (£200,000); television receiving sets, electrical record players, (£10,000); gramophones (£40,000). The fifth item for which no exchange quotas was set is nets and netting, except sporting goods.

Spain

The Spanish Government maintained import license requirements for imports from

all sources up until July 1959.

On July 20, 1959, Spain became a full member of the Organization for European Economic Cooperation (OEEC). At the same time, Spain freed from license control a list of products which accounted for approximately 50 percent of private imports, based on 1950 statistics. This liberalization list applies to all countries with convertible currencies which do not have bilateral trade and payment agreements with Spain. As a part of a trade liberalization program, Spain is planning to discontinue bilateral agreements with the OEEC countries. For an important part of the remainder of Spain's private trade, global quotas are to replace bilateral quotas. Imports under these global quotas remain subject to license, but licenses are issued on a nondiscriminatory basis, The first list of global quotas for a total amount of \$75 million was announced in August 1959. Early in 1960 global quotas totaling \$225 million were announced for the year 1960.

State of Singapore *

In 1959 Singapore took steps identical with those described in the section on the Federation of Malaya toward relaxation of import restrictions applicable to dollar-area goods.

Sweden 2

Sweden requires import licenses for a relatively small group of commodities. In general these commodities are licensed liberally. During 1959 Sweden simplified import control procedures and took further steps to liberalize imports of dollar goods. There is now little discrimination between imports from the dollar area and from other countries.

The major action in 1959 was the removal from the import license list of coal, synthetic and natural fibers, textile fabrics, except cotton fabrics, and certain textile products. License requirements were removed for cotton textiles and a few other commodities on April 1, 1960.

Goods still subject to license which are of significance to U.S. trade are certain agricultural products such as apples and pears (which are seasonally controlled), passenger automobiles, chassis, and special motor vehicles such as fire trucks and crane trucks.

Footnotes at end of speech.

and ships. These goods are licensed on a nondiscriminatory basis. However, some agricultural commodities, such as poultry, only require a license when imported from the dollar area.

Switzerland 4

Traditionally Switzerland has held to a free nondiscriminatory import policy with generally low customs duties. There have The importabeen no currency restrictions. tion of dollar goods into Switzerland is almost entirely free and in the great majority of cases imports take place without the formality of import licenses.

A few commodities (mostly agricultural products and special trucks) are subject to import licenses and quota limitations. In practice, except for some agricultural commodities, import licenses have been granted

automatically as requested.

At the end of 1959 Swiss imports of cereals, feed, and bread grains, previously handled by a state monopoly, were returned to the private sector. This change in import policy improved prospects for higher wheat imports from the United States.

Thailand

Thailand in 1959 introduced a complete ban against imports from Communist China. Imports from all other sources, including the United States, are free from quantitative import restrictions, with the exception of certain goods of types manufactured in Thailand. About 70 types of goods are subject to individual import license because their importation is considered unduly competitive with locally produced items. None of the items so restricted is of significance in U.S.-None of the Thai trade.

Thailand's exchange rate is free and stable, and importers may freely convert local currency into foreign exchange, including U.S. dollars, for the settlement of bona fide commitments.

Tunisia 2

All goods imported into Tunisia are subject to import licenses or import permits. Prior to 1959 import licenses were granted on an individual basis for goods deemed necessary for the economic development of the country, and for other goods which could be obtained from France or other countries where exchange was readily avail-

able. In October 1959 Tunisia published a long list of commodities, mostly capital goods, for which all quantitative restrictions, if imported from specified countries (includthe United States) were removed. All such imports are now covered by automatic import permits though in some cases spare parts remain subject to license.

Automatic import permits also cover im-ports paid by EFAC accounts (specified per-centages of traders' export proceeds which

can be used for imports).

Some products, not covered by the liberalization measure, can be imported under the system of global quotas, which was expanded in 1959. These quotas were previ-ously reserved for the former EPU countries, but are now open to all suppliers.

Other commodities are licensed in accordance with bilateral trade agreements concluded by Tunisia with a number of Western and Soviet bloc countries. While no such agreement exists between the United States and Tunisia, the Tunisian Government announced the establishment of a dollar import quota program which is now being implemented.

Turkey 2

Turkey's import system established as a part of the economic stabilization and exchange rate reform programs of August 1958 provides for regulation if imports by global

import quotas issued in accordance with available exchange resources and priority

Four import quota programs have been announced since August 1958. quota released in September 1958 provided for \$150 million of imports of raw materials, essential goods, machinery and spares, with a specific quota for each item. Each individual importer was limited to a maximum of 15 percent of each commodity quota and imports were subject to price controls. The second quota, also of \$150 million, announced in February 1959 and was similar to the first except that applications to import from clearing agreement countries (i.e., mainly U.S.S.R. and eastern Europe) were not limited to 15 percent of commodity quotas and received priority treatment. Turkey thus hoped to use its large balances with clearing countries. Pricing regulations were eased by requiring price registration of imported goods rather than advance approval. In May 1959, 160 items, mostly raw materials and spare parts, on the second quota list were freed from quota control making import procedure virtually automatic. The third quota of August 1959 provided for \$240 million of goods consisting of \$170 million of goods subject to quotas, \$45 million of essential goods under an automatic allocation system, and \$25 million of liberalized items which were expanded from 160 to 270 commodity groups. The \$170 million of quota items was subdivided into \$115 million for dollar and west European countries and \$55 million for clearing countries. The third quota included many items of a consumer nature not on previous lists, including about \$3 million for automobiles, the first authorized auto imports in a very long time. The fourth 6-month quota, issued in March 1960, further increased the automatic and liberalized lists.

Turkey controls imports almost entirely for balance-of-payments reasons and is expected to free many items from controls when exchange reserves permit. Items controlled for other than balance-of-payments reasons are mostly those under traditional State monopoly control (chiefly tobacco and some alcoholic beverages) and those reserved to State trading, mainly grains and sugar. In general quota controls are administered on a nondiscriminatory basis, though imports from the clearing countries where Turkey has funds receive special attention and a

specific allocation.

United Kingdom 1

The United Kingdom made further substantial progress in 1959 in carrying out its program of progressively relaxing restrictions on its dollar trade, and with the latest dollar liberalization move on January 18, 1960, virtually eliminated all its remaining controls on dollar area goods. More than 90 percent of Britain's dollar trade, based on 1953 import patterns, has now been freed of restrictions.

By the end of 1958, controls had been removed on nearly all raw materials and foodstuffs, industrial chemicals and allied products, most industrial, office, and agricultural machinery, and other equipment for industry. During 1959, two major moves were made which substantially lessened the scope of discrimination against dollar imports. Licensing restrictions on a wide range of dollar goods were removed in June and the import quotas which had been open only to goods from Western Europe were increased and opened to dollar goods beginning in 1960. In November a further large group of consumer goods, including foodstuffs, was liberalized. In January 1960 import con-trols on tobacco and manufactures, syn-thetic rubber, and transistors were removed.

As a result of these measures the following goods are subject to control when imported from the dollar area, but have been liberalized from other areas: Large aircraft; alcoholic beverages other than whisky; canned fruit; bananas, fresh grapefruit; orange and grapefruit juice; pharmaceutical products; pork and pork products; and

While imports of these items continue to be restricted, quotas are available for most of them and licenses are freely issued within the total quantities permitted under the quotas. There is, for example, a yearly quota of more than \$15 million for imports of canned fruit from North America, as well as a dollar allocation for 25,000 tons of fresh, chilled, or frozen pork, and a dollar quota of \$560,000 for pharmaceuticals.

In addition to the discriminatory controls applied only to dollar imports, the following restrictions remain on United Kingdom imports from sources other than the Sino-Soviet bloc and Japan (to which more ex-

tensive restrictions apply):
(a) On imports from all areas, including the sterling area: Dyes and dyestuffs, potatoes, seeds, sugar, jute manufactures, arms and ammunition, radioactive substances, and feathers.

(b) On imports from all areas, except the sterling area: Baskets and basketware, coal and coke, apples and pears, whole hams, and milk and milk products. Out of this group. U.S. exporters are permitted to participate in quotas for Northern Hemisphere fresh apples valued at about \$20 million, and for quotas of over \$5 million for fresh pears.

Union of South Africa :

Since 1954 import restrictions in most cases have been applied in a nondiscriminatory manner. The South African import control system has been progressively liberalized since 1954, although a temporary balance-of-payments setback in 1958 caused the Government to retrench somewhat during 1958-59. A moderate relaxation of the restrictions was promulgated for 1960.

Under the revised regulations issued in May 1958, assembled passenger cars with an f.o.b. cost of over £800 (\$2,240) continue to be prohibited and certain less essential consumer goods are subject to stricter exchange licensing quotas. Otherwise, the South African import system is relatively liberal. Many goods are decontrolled entirely, while other classes of goods used in industry are licensed on a basis of meeting "full reason-able requirements." Automobiles and parts (except for assembled passenger cars over £800) are licensed freely on a basis of re-placement of retail sales. Most consumer goods, however, remain under import quota-

Uruguay 2

Uruguay's austerity program, the con-sequence of a serious foreign exchange shortage, was initiated by a decree on March 28, Considered at the time a temporary expedient, the program continued in effect until December 1959. All through this period Uruguayan imports were limited to the barest essentials and preferential treatment was accorded to nations having bilateral trade agreements with Uruguay. This did not include the United States. During 1959 the Uruguayan Export-Import Office was permitted to grant exchange permits for goods from hard currency areas only upon written proof that the same article was not available from other markets.

Uruguay established a new exchange and monetary reform law effective December 21, 1959. Under this law the buying and selling rates of foreign currency are to be determined by the supply and demand of the market. Further, the law states that re-strictions are removed on all imports except nonessentials, luxuries, or products competiwith certain domestically produced articles. According to government circles, it is intended to free foreign trade as rapidly

Footnotes at end of speech.

as possible from all artificial restrictions and in particular to remove quantitative controls on trade.

Although Uruguay, at least for the present, maintains bilateral payments agreements with certain European and Latin American countries, these are expected to play a diminishing role in Uruguay's trade relations.

The West Indies and other British Caribbean territories =

In the early part of 1959, and again from July to October, the Federation of the West Indies and other British territories in the Caribbean approved measures liberalizing trade with United States and other dollar area countries. These steps were in keeping With the decisions made at the Common-Wealth Conference at Montreal in September 1958, and followed similar actions taken by the United Kingdom throughout 1959.

The liberalization measures permit all goods from the United States and other dollar area countries to be imported under open general license, unless they are among the few items that appear in schedules of exceptions. Bahamian importers must still obtain individually validated import licenses for all shipments, but their issuance is now a formality, except for those goods still subject to quota restrictions. For most of those goods still under quotas, however, im-Port licenses will be made available liberally on an ad hoc basis, according to the Bahamas Import Control Office.

The Federation, composed of 10 major island groups, has not yet formed a customs union, therefore, the island governments at varying times individually approved the liberalization measures, which differ in content from island to island, depending on the need to protect local industry. Included in the schedules of exception of all of the unit territories of the Federation (except Barbados, Jamaica and St. Kitts, Nevis and Anguilla) is a group of commodities on Which discriminatory restrictions, imposed earlier at the request of the United Kingdom, have not been removed as yet. This group includes such products as air-conditioning and refrigerating equipment, lifting, hauling and transporting equipment, steel tubes, oil mining machinery and pumps, taps, traps and valves. Prospects for removal in 1960 of these items from the islands' schedules of exceptions should be good, in view of their liberalization by the United Kingdom on November 9, 1959. additional items, rice and fats and oils, remain under control in all of the islands because of regional agreements between the West Indies and British Guiana that prohibit the importation of these items from Outside the area unless local supplies are insufficient to meet needs.

Progress in liberalization during 1959 removed the need for continued operation of the British West Indies trade liberalization plan (token import plan), under which, since 1950, a number of imports from the United States and Canada had been admitted on a token basis and a few other imports under open general license by British Caribbean territories. In October 1959 the Governments of the United Kingdom, Canada and the United States agreed to termination of the plan on January 1, 1960, and consultation "about licensing are rangements for products previously covered by the plan which are not yet liberalized on the understanding that access generally to West Indian markets for Canadian and United States exports of these products will be on terms no less favorable than in the past."

Subsequent liberalization actions were cubsequent liberalization actions taken on January 2, 1960, by Jamaica and on January 9, 1960 by British Honduras. The Jamaica measure reduces to 43 the number of commodity groups for which

issuance of specific import licenses are required and substitutes a single open general license for the 2 licenses—one applicable to imports from the sterling area and the other to the nonsterling area—that were in effect prior to this action. The British Honduras measure removed import controls from goods in all but 10 commodity groups.

Venezuela 1

Venezuelan import controls are effected through import duties and import licensing. The licensing system was limited to a mod-erate list of items until new regulations were issued on July 7, 1959 adding several agricultural items and certain goods covered the United States-Venezuela bilateral trade agreement, including cigarettes, wheat flour, hams, prepared milk, dietetic foods, podded vegetables, fruit juices and copper

On November 20, 1959, the Venezuelan Government added an extensive list of manufactured commodities, considered to be luxury or semiluxury goods, to the pre-licensing requirement, including several additional items which were covered by the trade agreement with the United States (including whisky, radios, television sets, pas-senger automobiles, cameras, unexposed films, phonographs, and records). Venezuela is presently experiencing an unusual balance-of-payments deficit, and the Government has announced that import licensing is necessary for the better use of national income, to further economic development, and to limit the excessive expenditures on nonessential products that have been draining dollar reserves.

On December 10, 1959 the Venezuelan Government decreed heavy increases in import duties, as high as 100 bolivares (US \$30) per gross kilogram plus 100 percent ad valorem for some items, on a large number of luxury and semiluxury goods. The greater part of this list consisted of the same items that had been placed under license on July 7 and November 20, and it was announced that the increased duties replaced the licensing requirement. The items covered in the U.S.-Venezuela Trade Agreement were not included in this tariff increase, and remain subject to the prelicensing requirement previously imposed by the resolutions of July 7 and November 20.

Since September 1959, the Venezuelan Government has implemented drastic restrictions on the importation of cigarettes, in support of the local industry. Imports of this commodity, which is covered by the trade agreement with the United States, are being progressively reduced so that imports are expected to cease in the near future. Wheat flour importation is subject to licenses, and this has been justified by Venezuela as necessary for adherence to the International Wheat Agreement. However, in a move to protect the growing domestic industry, flour imports into Venezuela have been drastically reduced through a syste-matic reduction of the number of licenses granted. The views of the U.S. Government with respect to restrictive measures affecting commodities covered by the U.S.-Venezuelan Trade Agreement have been made known to the Government of Venezuela. Consultations were held in Caracas during the latter part of March 1960. The consultations did not involve any revision or modification of the existing bilateral trade agreement, but were limited to discussion of the possibilities of relaxing Venezuelan import restrictions on goods traditionally exported by the United States to Venezuela.

* A special trade agreement governs U.S. trade with the Philippines.

⁴ Switzerland has provisionally acceded to the GATT: the United States also maintains a bilateral agreement with Switzerland.

Birmingham's National Counterattack

EXTENSION OF REMARKS

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1960

Mr. HUDDLESTON. Mr. Speaker, I am sure my colleagues are aware of the efforts of many individual citizens and public officials of the State of Alabama and my city of Birmingham to counteract the harmful efforts of recent slanderous articles and advertisements appearing in the New York Times about our community and State. These efforts by our citizens were not, as an editorial of the Birmingham News of May 17, 1960, correctly points out, directed toward any other cause than that of truthful journalism and the reporting of all the facts.

I am pleased to call the attention of my colleagues to this fine editorial, which reports on the considerable success of our work in this connection, and insert it herewith in the RECORD under leave heretofore granted:

BIRMINGHAM'S NATIONAL COUNTERATTACK

Protests emanating from Birmingham in connection with the Harrison Salisbury articles and the official State protests about an advertisement in the New York Times in connection with a "defense" of Martin Luther King, have signally paid off.

The New York Times is by no means "in full retreat." You cannot expect a major national daily to tuck tail; it just isn't done.

But Turner Catledge, managing editor of the Times, and the paper's publishers have, we think, made an honorable effort to provide some redress, at least.

is not everything Birmingham and Alabama people wanted. But it has been no inconsiderable concession which has been made. The Times, as it had promised, printed a Birmingham statement which, although it was less than detailed in refutation, was a clear expression of Birmingham resentment.

Further, the Times in a public statement yesterday retracted two paragraphs from the full-page King advertisement. Said a Times

statement, in part:

"Since publication of the advertisement. the Times has made an investigation, and consistent with its policy of retracting and correcting any errors which may appear in its columns, herewith retracts the two paragraphs complained of by the (Alabama) Governor (Mr. Patterson)."

Time magazine, notoriously critical of much in the South, in the May 16 issue re-ported on "The Birmingham Story." It reported as a preface the extreme estimate of Birmingham as offered by Harrison Salisbury of the Times, gave reasonable attention to the Birmingham reaction, stated without qualification that many in Birmingham, who presumably might have been inter-viewed, didn't know Mr. Salisbury was moving about in their city, and noted that Tur-Catledge's two published statements about the story were rare.

The Time magazine article, further, reported that moderate business leaders of

¹ Countries not adhering to the General Agreement on Tariffs and Trade (GATT), but with which the United States maintains bilateral trade agreements.

² Countries adhering to the GATT.

this community pointed up omission in the Times' story, and the magazine said "these were precisely the omissions which disturbed Birmingham."

The Salisbury reference to Admiral Crommelin was adequately dealt with as Time quoted the small number of votes Crommelin got in his most recent gubernatorial

campaign.

These are concrete evidences of tangible benefit obtained from prompt protest which the Birmingham News was quick to help develop through its immediate coverage of the Salisbury original reports and its further detailed outlining of half-truths and distortions contained in the New York writer's report on Birmingham.

The News is pleased to see such results and commends all who have participated in the effort, not to claim complete purity, but to call for facts and accuracy in summarizing conditions in our city. To have won such reaction from the New York Times and from Time magazine represents a very unusual accomplishment for any southern community.

Consultation With TV Booster Communities

EXTENSION OF REMARKS

HON. DON MAGNUSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1960

Mr. MAGNUSON. Mr. Speaker, today I have introduced a bill, H.R. 12297, to make a very small addition to the Federal Communications Act directing the Federal Communications Commission to consult with interested persons in small communities and rural and isolated areas on the technical and other problems involved in bringing television programs to these areas at a reasonable cost.

For 5 years now I have been endeavoring to assist the small and isolated communities of our country, particularly in the West, in their efforts to provide themselves with even a part of the television service which those of us in the large metropolitan areas take so much for granted.

The residents of these communities first turned to the FCC for assistance, but were given no help. Undaunted, in typical American fashion, they set about to solve the problem for themselves by designing and installing the relatively simple television booster stations or repeater stations. These facilities, installed and maintained at a very reasonable cost through voluntary community action, have provided a decent television service to thousands of families.

At every stage of the game the local people have had to contend with the stubborn opposition of most of the members of the Federal Communications Commission and its staff. It is my firm conviction that much of this opposition stemmed from some of the worst features of the bureaucratic mind-redtape, lack of imagination, more concern for the administrator's problems than those of the people, insufficient information, delay, and timidity.

But above all, I have felt that the long and needless struggle could have been avoided if there were better communication between the residents of the isolated areas and the agency staff in Washington, D.C., a greater mutual understanding of each other's problems and points of view.

I feel that this communications gap could be bridged if the Commission would appoint five, or even three, field consultants on the television problems of the isolated communities. These specialists could operate out of scattered field offices at, for example, Denver, Colo.; Spokane, Wash.; Douglas, Ariz.; Grand Island, Nebr.; and Fairbanks, Alaska. They could travel around to the small towns to meet with the community leaders interested in television, inspect the terrain, look over the local television repeater facilities and pass on information on what other communities and the FCC itself are doing.

From time to time the field specialists would report back to Washington, D.C., on what they had learned, could pass on suggestions for improvements in the equipment or for changes in licensing procedures, and also could submit recommendations on specific license application.

With these field specialists doing their job conscientiously, I am confident that almost overnight the present feelings of mutual suspicion and mutual antagonism would dissolve.

Heretofore, with but few exceptions, every representative of the FCC who has visited these small towns has done so as an enforcement officer, a policeman, seeking only to find law violations and to close down the community-sponsored television repeater facility which offers the only means the residents have to enjoy television.

By contrast, the field specialists I envision would be welcomed as friends, not antagonists, who are trying to help, not hinder. They would work in mutual cooperation with the local residents to help work out a system for providing good television service within the framework of the administrative responsibilities of the Commission. The local people are more than ready and willing to cooperate with the Commission if only the Commission, in turn, will demonstrate it is willing to cooperate with them. I believe the field consultants quickly can bring about this much desired spirit of mutual cooperation.

There is no doubt in my mind that the Federal Communications Commission could employ these field consultants now, without any nudge from Congress, if only it decided to do so. But when I informally have suggested this course in the past, the response has consisted of a series of typical bureaucratic reasons why it can't be done: They do not have the money, they do not have the authority, they already are studying the problem and there is no need for these additional personnel, anyway. So unless the new chairman of the Commission and the men he has brought with him are motivated by the desire to solve problems and accomplish results rather than

to spend their time thinking up reasons why something cannot be done, then I am afraid that some congressional action is necessary.

Last year I introduced a bill, H.R. 3737, designed to spur the Commission through creating a Community Television Bureau. Both the Commission and the Bureau of the Budget have filed the ex-

pected adverse reports.

The principal objection raised to that bill is a procedural one, namely, that it is unwise from an administrative point of view for Congress by law to create a specific bureau with statutory powers within a larger agency. Recognizing that this argument has some validity, I have taken a new approach in the bill introduced today, H.R. 12297, which consists of adding to the list of powers and duties of the Commission under section 303 of the Communication Act the simple statement that it-

(s) Consult with interested persons in small communities and in rural and isolated areas on the technical and other problems involved in providing adequate television service at a reasonable cost.

I hope that action can be taken on this simplified bill before adjournment.

Jobs After 40

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 12, 1960

Mr. HOSMER. Mr. Speaker, Columnist Roscoe Drummond one time dispelled many of the myths which are responsible for the unwarranted discrimination by employers against hiring older workers. His excellent article read as follows:

WASTING OUR WORKERS (By Roscoe Drummond)

Is there any valid reason why industry should instinctively turn from employing older workers? The answer is to be found in a study by the Labor Department, which provides the first unbiased, comprehensive research into the skills, education, capabilities, performance, stability, adaptability, and health of workers 40 and over. Here are the principal findings:

Myth: The hiring of older workers unduly

increases pension costs.

Fact: It is not true that employment of older workers unduly increases the costs of private pension plans. These pension plans are mostly based on a percentage of average earnings multiplied by the number of years of service. Under this system, a man hired when young automatically qualifies for a bigger pension because of longer service.

Myth: That older workers are unskilled.

Fact: The opposite is the truth. Of the workers sampled in seven cities, twice as many older jobseekers had held skilled jobs.

Myth: That older workers are not as flexi-

ble, won't accept change. Fact: This is theory, not experience. Research shows that one in four older job applicants changed jobs in order to get work.

Myth: That they are unstable, or they wouldn't be unemployed that late in life.

Fact: This is misinformation. The fact is that more than one-half of the older jobseekers had held the same job for the previous 3 years, compared with one-third of the younger applicants.

Myth: That older workers are less produc-

tive than younger workers.

Fact: In eight clothing and shoe plants studied by the Bureau of Labor Statistics, average output per man-hour of piece-rate Workers remained stable through age 54.

Myth: Older workers are absent more

often than younger workers.

Fact: There is no visible difference in regu-

larity on the job.

Conclusion: Most of the unfavorable things we've heard so long about older workers simply have no basis in fact and experience. A healthy industry and an expanding economy urgently need their skills.

The Fraternal Order of Eagles has, for some time, conducted an effective national campaign to educate employers and eradicate the scourge of discrimination against older workers. Its campaign has brought much favorable comment from persons prominent in public life. Here are samples:

George M. Leader, Governor of Pennsyl-

"I am more than happy to have this oppor-tunity to participate in the Eagles jobs after 40 program. Countless men and women who are qualified are rejected for jobs simply because they have reached an arbitary age limit that steadily becomes lower."

CHARLES E. POTTER, U.S. Senator from

Michigan:

"May I commend the Fraternal Order of Eagles for its vision in undertaking its jobs after 40 campaign looking toward ending job discrimination based on age. I consider arbitrary hiring-age barriers now put up by many employers in the United States as un-Wise and economically unsound."

Abraham Ribicoff, Governor of Connecti-

"Concerning the jobs after 40 campaign of the Fraternal Order of Eagles, Connecticut will make every effort to increase the employment opportunities for our older people so they can be productive and self-support-

Robert E. Smylle, Governor of Idaho:
"I wish to take this opportunity to commend the Fraternal Order of Eagles in their undertaking of the jobs after 40 campaign and to lend my wholehearted support to this worthwhile cause. It is work that gives life meaning. Work gives a sense of personal worth and status among fellow men. The denial of work pulls the pin out of living and the structure of living collapses in a

JOHN SPARKMAN, U.S. Senator from

Alabama:

"I am continually amazed that many employers throughout the Nation still tend to refuse to hire people who are over 40 years old. I want to congratulate the Fraternal Order of Eagles on the order's jobs after 40 campaign. I hope and I pray that the publicity accompanying this program will help turn the tide of employer opinion toward taking advantage of those fruitful years

Joe Foss, Governor of South Dakota: "I certainly can heartly endorse the jobs after 40' campaign, which has been undertaken by the Fraternal Order of Eagles. The over-40 Worker who is willing and able to learn should be given an opportunity to do so. Discrimination based on age is not sensible nor practical."

CHARLES RAPER JONAS, Member of Con-

gress, 10th District, North Carolina:

"You are to be commended upon this worthwhile undertaking, the 'jobs after 40' campaign which the Eagles are undertaking as a project. I have a dep interest in this subject and feel very strongly about this

Lane Dwinell, Governor of New Hampshire:

"To summarize my attitude toward the Eagles 'jobs after 40' campaign to end job discrimination based on age, I heartily agree that the problem of providing useful employment on a nationwide basis for our older citizens is a most important one, deserving of our best efforts at the Federal, State, and local level."

GORDON H. SCHERER, Member of Congress, First District, Ohio:

"As a member of the Fraternal Order of Eagles, I was pleased to learn of the Eagles Jobs after 40' campaign. The Eagles are giving the cogent arguments in favor of this fine program.

G. Mennen Williams, Governor of Michi-

gan:

"The Eagles are doing a great and needed work in getting behind the movement to provide jobs for older workers, and use their skills and experience to the utmost. The Nation needs the services of these experienced men and women, and it cannot be economically healthy as long as those over 40 suffer discrimination in finding jobs."

WINFIELD K. DENTON, Member of Congress,

Eighth District, State of Indiana:

"It seems to me that we have reached a point where investigation and education about the value of older workers is not enough. For that reason, I introduced a bill to prohibit discrimination against older workers by employers who operate or produce goods in Interstate commerce."

Address by Carl Fenichel

EXTENSION OF REMARKS OF

HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. DORN of New York. Mr. Speaker, I wish to call the attention of my colleagues to the excellent address given by Carl Fenichel, Ed. D., director of the League School, at the annual luncheon commemorating the seventh anniversary of the League School for Seriously Disturbed Children.

ANNUAL LUNCHEON COMMEMORATING SEVENTH ANNIVERSARY, LEAGUE SCHOOL FOR SERIOUSLY DISTURBED CHILDREN, SATURDAY, APRIL 30, 1960, NEW YORK CITY

(By Carl Fenichel, Ed. D., director of League School)

Dr. Rees, our guest speaker, comes to us today as director of a world federation that is trying to mobilize every sector of the globe for total war against mental illness. League School in Brooklyn, whose seventh birthday we celebrate today, is proud to be recognized as one small beachhead on that global battlefield.

In fitting prelude to World Mental Health Year, the United Nations General Assembly on November 20, 1959, unanimously adopted and proclaimed the Declaration of the Rights of the Child. The preamble of that declaration affirms that "mankind owes to the child the best it has to give." I know of no human being anywhere in the world who would take issue with this declaration and its sentiments. And yet, parents of seriously dis-turbed children learned long ago that all that boards of education owe their sick children is a medical discharge, and that, with few

exceptions, the best mankind has to give these children is an uncertain diagnosis that excludes them from school and community as uneducable, untreatable, and untouchable.

Here is one of the painful paradoxes of our time. Although we live in an age of streamlined and supersonic superlatives—an age of supermarkets, superthroughways and supermissiles-we still carry a sad and shabby pack of 18th century legends on our backs and in our minds.

True, we have emerged from the dark centuries when society insisted that all handicapped children be destroyed. We have removed the chains and the dungeons that once contained our mentally sick. But we still treat mental illness with all the stigma, horror, and fear of contagion attached to leprosy and insist that those who suffer from it be isolated in hospitals far removed from our consciousness and our conscience.

The League School grew out of a big need and a simple idea—the idea that a State hospital is not the only place that can help a mentally sick child. True, our State hos-pitals today are losing their snake-pit repu-tation and becoming effective treatment centers rather than custodial storage bins. But our parents, like all parents, want the best for their children and, rightly or wrongly, they couldn't accept the State hospital as always the best answer.

And so, in the spring of 1953, a school was born in Brooklyn, a school that swept away legend and superstition by starting a new kind of treatment program—one that didn't involve the drastic surgery of separation of

child and family.

The League School was the first attempt to keep deeply disturbed children in the community by substituting the day school and the home for the mental hospital.

The prognosis for survival was certainly not a very good one when we started in 1953 in a shabby four-room brownstone furnished only with a heavy mortgage, a debt of \$5,000, two mentally sick children, and no funds, no fanfare, no resources, and no community support. Any sane and sound businessman assessing a project which lacked everything fiscal but debts and deficits would have recommended immediate liquidation of this mad venture and wild dream.

And yet we did have some hidden capital that no balance sheet could reveal-not money, unfortunately-but people and atti-We were rich in nothing but hope, and the deep desire of a handful of people to break through some of the doom and despair that surrounded mental illness.

When we take annual inventory at this time it is heartening to recall how far we have come. Although so much of our efforts must still go into the long hard struggle for existence, our growth has been impressive when charted graphically in terms of number of students, size of staff, expan-sion of services, and a budget that has jumped from \$19,000 to \$152,000.

The significance of these statistics, however, would have to be multiplied many times by the pioneering power and historical impact of our project, our demonstration through the day school idea-of what can be done to break some of the barriers that separate the mentally ill from life itself.

When the League School started 7 years ago, we didn't know that we had powerful allies building another beachhead thousands of miles away. Within the past few years, a psychiatric trend has moved across the Atlantic from Dr. Rees' homeland, England, bringing with it the day hospital and the open hospital idea—both closely linked to our day school idea.

These demonstrations, here and abroad, are beginning to teach us a few simple truths. We are learning that locking the mentally ill out of society, while often necessary, is not the best way to resocialize and restore them to society. We are learning that while restraints of the human spirit are not as cruel as straitjackets and iron bars, they can be almost as degrading and damaging. We are finding out that much of the disability of mental illness is not part of the illness but is the result of the isolated way of life imposed by society on the mentally sick.

We now recognize that segregation of the mentally ill cuts off opportunities to develop and use skills and capacities for growth and thus perpetuates the disability. This is certainly true of our children. A mentally ill child—excluded from school—the only organized learning experience open to children—is bound to be more disabled than he might otherwise be.

Today our demonstration project—the day school idea—is beginning to win acceptance as a new and vitally important treatment facility. During the past 2 years a number of studies have been completed of children's in-patient services in New York State. These studies condemn the inadequate and disorganized attempts to treat the seriously disturbed child. They call for the return of most of these children to the community through a wide range of services—the core of which would be day treatment centers like the League School.

With each year that passes, the school's historical role becomes more evident. Since last year's luncheon, phychiatrists and educators, eager to observe and study the day school idea—have come to us from England, Portugal, Canada, Italy, Spain, France, and Sweden as well as from California, Texas, Oregon, Tennessee, Utah, and other points east, west, north, and south.

Judging by our visitor's book, World Mental Health Year began long before 1960. Of even greater value than our ploneering role has been our faith and belief in the worth of every mentally ill child—no matter how sick. Over the years, the League School has won admiration and respect for its unique policy of accepting children who have been turned down by every school, agency, and institution except the State hospital.

In a study of the State's outpatient services completed in 1959 for the New York State Interdepartmental Health Resources Board it is revealed that "only one of the day services studied, the League School, deliberately addresses itself to children who would otherwise have to be institutionalized. It cannot be emphasized too much that the children at the League School are as sick as those at any hospital. The League School is the most conspicuous instance of seriously disturbed children being maintained in the community by dint of outpatient service."

There are those who take issue with this policy. They tell us that ours is too costly a program for children whose illness is so severe and whose prognosis is so grim. It has been suggested that we concentrate on the less disturbed whose chances for improvement are surer and faster. All this is certainly true if success is measured by merchandising standards of fast turnover and price tags.

We at the League School believe that every child—no matter how sick, is entitled to a chance. At our school is a core of people who treat these children not as a foreign species of life—but as human beings suffering from an illness that is as real, as painful and as crippling as pollo—an illness diagnosed by most psychiatrists as childhood schizophrenia.

Let us for a few moments forget the diagnosis with all the confusion and controversy it arouses. Let us instead take a look at our children who have lost identity with themselves, their parents and the world. What are they like? How do they behave?

There are the gentle, tender and quiet ones, and the wild, explosive ones; the chlidren who have never spoken and those who never stop talking. There are children who once had speech but who have returned to the babbling of infancy.

There are some who have the coordination and agility of a mountain goat and others whose awkward and helpless fingers can't turn a door knob or hold a pencil.

There are those who wander aimlessly back and forth in perpetual motion, making strange and inappropriate laughing or moaning sounds.

There are the children who relate to no one and those who try to relate to everyone in a strange, indiscriminate sort of way.

There are those who try to break through their lonely lives and to find in it some order and meaning, and others who curl up, in remote corners or on empty shelves, to hide from life.

There are the children whose only hold on life is to clutch a key, suck a piece of string or twirl a stick. Others seek safety in a faraway world of fantasy, complicated numbers and strange rituals.

There are those who hide their eyes or bury their faces to blot out the world and others whose contact with the world is so frantic and disorganized that they can't shut any of the confusion out.

There are some who try desperately hard to make contact but who fall time and again because they are weak, disorganized and afraid—children who have had big doses of failure and of frustration that cuts deep because of failure.

There are those who function like helpless little infants and others whose weaknesses and strengths are blended in such strange and baffling proportions—children who show amazing skills, phenomenal memories and superior intelligence in some areas, and defective functioning in others.

Although all of our children suffer from supposedly the same illness, we must never forget that each of them is a unique human being with a mind, a body, an intelligence, and a personality affecting and affected by that illness.

We at the school must live with the tortured behavior, the unpredictability and the terrible confusion of these children. Like any pioneering project we live not only with the uncertainty born of deficits and insufficient funds but with the greater deficit of insufficient knowledge.

After all, we are dealing with the most elusive thing in all the world—the human mind. We still know very little about childhood schizophrenia. We don't know whether it is one illness or a wastebasket variety of illnesses all lumped together. We aren't sure of the relationship between childhood and adult schizophrenia. And we don't have the answer to the biggest mystery of all—how and why it happens. Is is psychological, organic, or both?

Unfortunately, the whole field of mental disorders is still cluttered with an overabundance of untested theories, dogma and speculation supported more strongly by emotions than by evidence. What we need desperately are new facts and approaches in the field of psychiatry, pediatrics, biochemistry, genetics, psychology, and special education that will bring answers and solutions to the mysteries of mental illness.

At the League School we recognize that all the dedication in the world is no substitute for knowledge. We live with the humility that comes from knowing how little we really know. We know that our wish to help each child will always be greater than our skill and wisdom in how to help. We know that as yet we cannot cure schizophrenia. But we do know that we can break through to many of our children, reduce the inten-

sity of their illness and help them return to a world in which they can live more comfortably and effectively.

Unfortunately, we don't always succeed. No matter how hard we try and what we do, we can't always reach a child. Techniques and theories that work with some fall with others.

This year we have the agonizing job of trying to learn why six of our children are making no progress at all. Out of their tragic failure is born the challenge to find new answers.

We also live with the little pleasures that come from small victories and break-throughs. After an infinite amount of work and patience we have our moments of triumph watching a child's first gesture toward avoiding loneliness when he begins to emerge from his twilight existence and dares to explore a tiny fragment of our world—playing with clay—working a peg board—building with blocks—banging a drum—or coming close and touching the face of a teacher or the hand of another child.

We live with the gratification that comes from scores of heartening experiences watching the small victories grow bigger.

There are the disorganized, incoherent children of last year who now speak and use language to communicate.

The once completely dependent and helpless ones, now proud in the discovery of their own powers of achievement in toileting, feeding, and dressing themselves.

The wild, explosive children who are now beginning to know the quiet, the peace, and the comfort of controlling their own bodies. The timid, fragile, and remote children who once flew wildly across a room when anyone came close and who now find safety in people.

The growing appetite for life of children who have given up part of their autistic, unreal world and who now enjoy playing with other children, skating, swimming, dancing, baseball, going on trips, and taking their first big steps to meet the world.

And then there are the children whose awakened interest in the world around them has made it possible for them to master the magic world of symbols and learn to read.

This year we had the satisfaction of watching four more of our children begin to read. This brings to 16 the number of children now in the school, once labeled "uneducable," who are reading and doing some form of academic work.

Since last year's luncheon, three more of our children made sufficient progress to graduate from our school. Two of them are now in Brooklyn public schools and one in a good private day school in Queens. Four days ago we learned that another child, still at our school, was interviewed and accepted by the public schools.

And now, our alumni are beginning to enter the adult world of work. Within the past few months, two of the school's first graduates, once disorganized and uncontrollable, have been accepted in the New York State Vocational Rehabilitation Program, and are on their way to become productive wage earners and functioning members of society.

bers of society.

Experiences like these give us the glow of fulfillment that helps us live through the heartbreak of failure. They impel us to go on trying to find the infinite possibilities that may be locked within each of our children.

And now, a few closing words of gratitude to all of you who made this possible—all the wonderful organizations and friends represented here and on our Honor Roll who are helping to give our children a chance to make the most of their lives. Thanks to you and to the devotion of our staff and parents, these 7 years have been years of achievement and promise.

You here today have watched the League School grow up during the fevered fiftlesa decade in which mankind fought hot and cold wars, conquered polio and TB, gave us and our children better "gadgets," bigger bombs, smaller cars, and the questionable heritage of living within 10 minutes of world destruction.

World Mental Health Year 1960 marks the start of a new decade. It is a decade of de-cision for all of us—one that can be dedicated to the dignity of human life or to its doom. Let us here today dedicate it to life. Let us use our energies and the splendor of our capacities to make life kinder, more livable, and more meaningful for all the world's children. And when mankind is ready to give each child the best it has to give, let us make certain that some of that best goes to our troubled and tormented, mentally ill children, the voiceless, lonely, and disin-herited ones who have lost their own child-

A Thoughtful Proposal for Shorter Cam-

EXTENSION OF REMARKS

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 18, 1960

Mr. BOWLES. Mr. Speaker, my good friend and able colleague from Connecticut, the Honorable John S. Monagan, has advanced a proposal to shorten our national election campaigns. I think his suggestion makes excellent sense. I commend to the careful attention of my colleagues his article from the May 8, 1960, issue of the New York Times magazine, entitled "Campaign for Short Campaigns."

The text of the article follows:

CAMPAIGN FOR SHORT CAMPAIGNS—A CON-GRESSMAN CONTENDS THAT MANY ILLS OF OUR PRESIDENTIAL ELECTION SYSTEM COULD BE REMEDIED SIMPLY BY CUTTING THE TIME BETWEEN CONVENTIONS AND ELECTION DAY

(By JOHN S. MONAGAN)

Washington.—Any thoughtful American must admit that our presidential campaigns have got completely out of hand. When it comes to the method of choosing our principal administrative officer, we rank at the bottom of the list of democratic coun-

I find myself looking enviously at the efficient, brief, and effective maner in which England and Israel, for example, select their national governments. The contrast with our quadrennial Roman circus is no compliment to our political maturity.

Our campaigns are objectionable for many reasons.

They are overelaborate. Is there any real need for the pageantry and pomp? Do they really contribute to our understanding of the basic requirements of the country? it necessary that we have not only buttons and posters and newspaper advertising but also the live elephants and the prancing donkeys, the squads of winsome models and the helicopter rides? Is the apathy of the voting public so abject that it can be dissipated only by this sort of emotional shock treatment?

Our campaigns generate more heat than What begins as a sober discussion of national problems degenerates into an exchange of epithets and limping, laboratory-created catch phrases. Frenetic politicians shout about "glave-labor laws" and "red herrings" and "traitors to democratic principles," and "20 years of treason,"

In the "give 'em hell" slambang campaign, candidates of stature often are pressed into positions that are not representative of their real thinking and that are not at all conducive to the enlightenment of the public, the objective of any campaign. One thinks, as an example, of the subsequent rueful apology of the late Wendell Willkie for his assurances during the 1940 campaign of American nonintervention in the European war. He justified his promises as campaign exuberance.

Campaigns are unduly expensive. No one can say how much is really spent for a presi-dential election, but estimates run as high as \$33 million. Democrats and Republicans spent over \$7 million for radio and television alone in 1956. The Democratic National Committee as of this date is still \$250,000 in debt as a result of the 1956 contest, and no one who has read of the pathetic weekend hat passing to which the Truman emissaries were forced by opposition expenditures in the 1948 campaign can be happy about a custom which requires this unseemly scramble for funds.

Inevitably, too, as the devices become more elaborate and the demands more extreme, the fundraising becomes more dubious and the resort to questionable sources and means becomes more common. The temptations inherent in this helter-skelter collection and distribution of vast sums have led to legislation like the imperfectly enforced Hatch Act and to laws limiting contributions.

They have also resulted in various sugges tions—that private campaign contributions be eliminated entirely, that reasonable election expenses be paid for by the Government, or even that radio and TV networks, as public monopolies, be required to allocate regu-lar program time to presidential hopefuls. Senator Hubert H. Humphrey, always fertile in ideas, has come up with the suggestion that we inaugurate what I have called a "political community chest" which would finance campaigns by donations from millions of small contributors.

Our campaigns emphasize the unimportant. They consume time and energy with silly ceremonies—with donning Indian headdress, milking cows and laying wreaths. They require candidates to perform end-lessly before audience after audience of sworn supporters instead of allowing them to preach to the unconverted or to persuade the unconvinced.

They also interrupt our dealing with the problems of the country and of the world. Once the election machinery starts grinding, the chancelleries of other nations lock up their files on American affairs and declare an unwilling recess in the discussion of vitally important international issues.

The most regrettable aspect of our campaigns is their physical effect upon the candidates themselves. Most of us can recall Wendell Willkie stumbling through the final days of the 1940 contest, his eyes heavy with fatigue and his voice reduced to a hoarse croak. And I well remember seeing Adlai Stevenson, in New Haven in 1956, so tired that he could not have said whether he was in Connecticut or Illinois, losing his train of thought during his speech through sheer fatigue, and then, after the meeting, being stood up against a wall by party wheelhorses to pump the hands of the faithful.

In spite of improved communications, the trend today is toward more traveling and more speaking, instead of less. In Franklin Roosevelt traveled about 15,000 miles and made about 100 speeches. In 1956, Adlai Stevenson traveled 75,000 miles and made 300 speeches.

It is obvious, therefore, that there are many ways in whch our campaigns can be made more effective and I suggest that it would be a distinct public service to provide some measure of improvement.

I believe that the principal place to attack the abuses which I have described is on the point that can most easily be adjusted—the length of our campaigns. If the campaigns could be shortened, I am confident that many of the other objectionable features

would be reduced and possibly eliminated.
Under our present system, the Democratic convention will open at Los Angeles on July 11 with the nomination coming on or about July 14, while the Republican convention will open at Chicago on July 25 with the nomination coming on or about July 29.

Since election day will be November 8, there will be nearly 4 full months between nomination and balloting for the Democrats and almost 31/2 for the Republicans. And, candidates being competitive, and campaign managers being insistent, this means that the candidates will begin peddling their wares as soon as they decently can after the close of the convention.

Surely, these contests are now too long; undoubtedly their prolongation beyond a certain stage yields no dividends for the country or for the candidates themselves. What that stage is no one can say exactly, but that it exists is certain.

My own boiling point may be abnormally low, but I feel that all the amenities and necessities of an election debate could easily be satisfied in 2 months. The British, whose campaigns used to run on for several months now hold them to approximately 20 days from the time of the issuance of the original writ to the day of election. (Churchill posted a 17-day period in the crucial postwar election of 1945). No one has ever suggested that English candidates suffer as a result

Certainly I would not want to choke off any presidential aspirant so long as his labor served a good purpose, but when he begins to talk more and more to himself. and his audience resolutely switches to "What's My Line?" or "Gun Smoke" through sheer boredom, I submit that the time has come to ring the bell.

(It should be noted that the deadening

effect of too much campaigning upon the candidate and upon the public results in part from the time involved in primaries, which must be added to the presidential campaign itself. But primaries are regu-lated by State law and their limitation on a national basis would run into technical and practical difficulties that would not be involved in the regulation of national elec-

As a start toward solving critical campaign problem, therefore, I have introduced two bills in Congress to limit our presiden-tial campaigns to 60 days from nomination to election.

House Resolution 9584 provides that no erson nominated over 60 days before the election date shall run for the office of President. House Joint Resolution 547, which is calculated to eliminate constitutional objections, proposes an amendment to the Constitution that would place in the qualifications for the Presidency a requirement that the presidential candidate be named within 60 days of election day. These bills would have no effect on the 1960 campaign.

There is, of course, no magic in the 60-day It simply seems to be a reasonable period. outside limit. (Laos nominates 45 days be-fore the actual balloting date; the Israelis average 60 days for their canvass.) A short-er period than 60 days would be perfectly acceptable to me and I believe that 6 or 7 weeks would be entirely adequate.

In considering the advisability of shorter campaigns, it is illuminating to hear what the experts have to say. Surely no more reliable testimony could be elicited than that from men who have been through the campaign mill themselves.

Senator THOMAS J. Dodd, who in 1958 battled his way through a combined primary and election campaign in Connecticut, wholeheartedly agrees that presidential campaigns should be shortened.

"Campaigns are much too long," he says, "and also much too costly. The British have real controls and enforce them and I think we've got to come to it here, too. It's the only way it can be fairly done because nowadays the amount of money spent is just shocking and unnecessary."

Senator Dopp adds his opinion that the campaign should really not be of more than

4 weeks' duration.

Representative CHESTER Bowles, who was Dopp's main opponent in the Connecticut senatorial primary contest, not only would limit Presidential campaigns to 60 days but would extend the limitation to all contests involving candidates for Congress and State

"This is not a question merely of ever-growing financial costs, many of which are far greater than our political parties, the candidates or their supporters can be ex-"It is also pected to meet," Bowles says. a serious question of the wear and tear on the candidates themselves, the nervous exhaustion, the endless speechmaking and the sleepless nights of travel and talk.'

Senator Hubber Humphrey, when he paused temporarily in the midst of the recent Wisconsin primary, expressed the fer-vent hope that the limitation might be extended to primary campaigns as well as regu-

lar elections.

Senator Estes Kefauver, who slogged his lonely way through mile after mile of primary contests and then went through a Presidential campaign as candidate for second place on the ticket in 1956, believes that some restriction is advisable.

"I certainly can understand," he says, "how a long campaign can be a drain on the physical and emotional resources of candidates. No one knows this better than I and I would be in favor of doing anything possible, within constitutional limits, to shorten the campaign period."

Jim Farley, not unacquainted with Presidential campaigns, agrees with the objectives of shortening them, as does Paul Butler, chairman of the Democratic National Committee. Senator Thauston B. Morton, chairman of the Republican National Committee, also approves the purpose of the

All three, however, have some reserva-tions—natural enough in those concerned with the mechanics of campaigns and bound

by tradition.

Farley feels that "the idea is all right," but that there might be a time problem in getting the national campaign machinery underway in a shorter period. Butler says that "long campaigns impose an unconscionable physical drain on the candidates," but he is chary of any limitation "that might prevent the American public from fully knowing the candidates or understanding the issues."

Morton says, "I certainly agree that a long campaign is tough on the physical and emotional resources of the candidates and party managers." He would move warily, however, on any limitation of the time which might be available to establish customary campaign apparatus. He has some feeling that the size of our country makes our problem different from that of the British. He also believes that the primary is a greater drain on candidates than final election, but he asserts that these qualifications in no way lessen his sympathy for the "end objective" of limitation.

I concur with everything that these professionals say, but I submit that the 2-month period, properly used, provides adequate time to accomplish the purposes they

set forth.

Of course, there have been objections to my proposal. It is pointed out that the presidential nominee is the head of a ticket on which many others, including Senators and Representatives are running, and that their demands for a personal appearance by him to help them necessarily make for a long and grueling campaign. It is my opin-ion that the value of such appearances is overrated and that they can be largely eliminated with profit to the candidates and without injury to the ticket. Even now, offyear and special electons do not enjoy the presence of presidential candidates they have adequately served their traditional purpose.

Some also feel that my proposal flies in the face of the American tradition of giving free rein to political discussion. Others bethat any such limitation would prove beneficial to the party that was better financed. Still others point to specific campaigns-such as the Truman 1948 electionand argue that they would have resulted otherwise but for the length of the canvass.

I find none of these arguments convincing. Proper organization can adjust itself to a different time schedule. To the Trumanites I would say that a 12-month campaign would probably have several shifts of voter sentiment depending on economic or political developments, but that is no reason to make our campaigns longer than they are.

Apathy and an unwarranted regard for tradition will suggest reasons against change. But the full realization of our democratic potentialities requires that we suppress our native exuberance, cut out the unnecessary horseplay, and get back to the real purpose of campaigns-the discussion of the issues affecting our national destiny and the selection of the candidate offering the greater evidence that he will meet those issues with courage and vision.

Members of the Schenectady County Board of Supervisors, a Governmental Body With a Sizable Republican Majority, Unanimously Act To Urge the President of the United States To Sign the Distressed Areas Bill, S. 722

EXTENSION OF REMARKS

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 18, 1960

Mr. STRATTON. Mr. Speaker, one of the most tragic aspects of the President's decision last week to veto the distressed areas bill was that in so doing he not only ignored the urgent needs of hundreds of thousands of Americans who are out of work in isolated pockets of unemployment across the land, but, as the leader of the Republican Party, also acted directly contrary to the wishes of those responsible members of his own party who are most directly concerned with these unemployment conditions and who are best situated to appreciate most fully the need for corrective legislation.

One of these bodies is the board of supervisors of the county of Schenectady, a community included in my congressional district and a community, which, as I had occasion to point out on

the floor in connection with the debate on this bill, holds the dubious distinction of having lost more factory-type jobs-18,000 in the past 6 years-than any other community in the whole United States. This board, in spite of an overwhelming majority of Republican members, exhibited the same kind of nonpartisanship on this vital issue that has been exhibited by so many of us who have fought so hard in this body to get this bill enacted into law. Although their resolution failed to carry any weight with the President, I believe it should be incorporated into the Rec-ORD so that the Members of this body may realize the depth of feeling of the people in my congressional district, without regard to narrow partisan considerations, in support of this legislation.

Under leave to extend my remarks, the resolution follows:

RESOLUTION 84—SUPPORT OF FEDERAL LEGISLA-TION AID TO DISTRESSED AREAS

Supervisor Rogowicz offered and moved the adoption of the following resolution: seconded by Supervisor McGrath:

Whereas Schenectady County is one of the areas in the Nation still suffering from chronic unemployment with all the attendant influences on the economic life, stability, and future growth of our community: Now, therefore, be it

Resolved, That the Schenectady County Board of Supervisors urge the President of the United States to sign the \$251 million aid to distressed areas bill approved by the U.S. Senate and House of Representatives; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, Senators Kenneth B. Keating, and JACOB K. JAVITS, and Congressman SAMUEL S. STRATTON.

Farm Bureaus of 11 States Urge Soil Bank

EXTENSION OF REMARKS OF

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

Mr. ADAIR. Mr. Speaker, before we decide what is to be done about our crisis in wheat at this session of the Congress-and I join with the President and Secretary Benson in saying that I certainly hope a sound and economic wheat bill is passed shortly—we should not overlook the fact that good wheat legislation should be coupled with an expansion of our conservation reserve.

A reminder is provided by an article from the Kansas City Star which reports on a recent meeting held in Indianapolis and, under leave to extend my remarks, I include it herewith:

[From the Kansas City (Mo.) Star, Apr. 13, 1960]

FARM BUREAUS IN 11 STATES URGE SOIL BANK-MIDWEST PRESIDENTS INSIST PRO-DUCTION MUST BE ADJUSTED

Indianapolis.—Farm Bureau officials of 11 Midwestern States last week demanded that Congress take swift action to abolish crop surpluses which have reached "near-scandal proportions."

Charles B. Shuman, president of the Amer-Ican Farm Bureau Federation, said farmers today are being threatened "by the same Public attitude that has been aroused by certain labor practices."

FOUR WAYS TO GO

A third of the \$9 billion in Governmentheld farm surplus is wheat, Shuman said, and there are only four ways to get rid of it-eat it, feed it, export it and store it.

"We've about reached the end of the rope in storing it," he said. "We're eating about all we can eat, we're forcing all we can into

exports.

The only alternative is to find a way to bring about an adjustment in production." Shuman said Congress will feel Farm Bureau pressure within the next month or two

to adopt a wheat program which would: Eliminate all Government controls on wheat-production and marketing.

Base the 1961 wheat-support price on the

corn-support level.

Prohibit the Government from selling stored wheat at less than 150 percent of the support price, plus carrying charges.

Expand the soil bank program to idle more

farm acreage.

LOOK TO SOIL BANK

A joint statement issued by the Mid-Western Farm Bureau chiefs urged placing 60 million acres in the soil bank's conservation reserve by 1963. About 28 million acres is in the reserve now, taking the land out of crop production for a 5-year period.

Asked whether he thought Congress would enact major farm legislation in an election

year, Shuman replied:

"The situation in wheat is so bad I don't believe the farmers can afford to wait 1 more year. Nor will the general public be happy to wait 1 more year."

The 11 State farm bureau executives here

claimed to represent more than 780,000 farm

families,

State organizations on hand were Indiana, Illinois, Michigan, Ohio, Missouri, Iowa, Minnesota, Wisconsin, Kansas, North Dakota and Nebraska.

It's Your Government

EXTENSION OF REMARKS OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. PATMAN. Mr. Speaker, there came to me this morning a most timely pamphlet dealing with the meaning of representative government and our individual responsibilities under representative government.

Those people who find the writings of Tom Paine exciting will also, I think,

find this pamphlet exciting.

In saying that the pamphlet is timely, I am not overlooking the fact that it deals with a fundamental problem which is timeless. It deals with problems which have been with us from the beginning of our Republic and before,

It does seem to me, however, that mistrust of representative government is more widespread and is expressed in many implicit ways more today than at previous times. Hardly a day goes by without an editorial in some prominent newspaper or magazine pleading for government by some uncontrolled bureaucracy, some allegedly independent board or commission, or some private commission of prominent citizens. The bureaus of the Federal Government keep more and more secrets from the public, and more and more assume the attitude that the public has no right to know what goes on in their own Government. Over the years, more and more of the powers and responsibilities assigned to the Congress by the Constitution are transferred to the executive branch of the Government. Yet, as we know, the framers of our Constitution made a very careful division of the powers and duties for the very purpose of providing the checks and balances which would prevent any usurpation of the powers of the people.

The pamphlet to which I wish to call attention is published by The Christo-phers, Inc., and was written by Father James Keller, M.M., director of this organization. The pamphlet states that organization. the aim of the Christophers is to encourage individuals to apply divine values to the running of human affairs, especially the great spheres of influence. It is further stated that this organization has no meetings, no membership, and no dues. All expenses are met by voluntary donations.

The Christopher pamphlet, titled "Christophers Notes No. 105," dated May 1960, is as follows:

CHRISTOPHER NOTES No. 105-IT'S YOUR GOVERNMENT

Do you remember the story of the Paris housewife who helped bring out a recordbreaking vote in France a few years ago by coining this dynamic slogan: "You are the State, Prove it."

Her simple challenge reminded countless apathetic people that in the last analysis the very survival of free government depends on how each of them fulfills their individual

responsibilities as citizens.

Once enough persons like you also realize that good government is your responsibility as much as anyone's, your God-given imagi-nation and initiative are bound to find ways to promote efficient, honest and economic policies in government.

Just remember "To whom much has been given, much will be required." (Luke 12:48)
Part of the answer to the great problems of running government-local, State, and

Federal, is in your hands.

The following considerations may help you assume the role that you alone can play in renewing and refreshing every facet of government.

1. GOVERNMENT IS YOUR BUSINESS

Self-government necessitates self-participation. William Penn emphasized this point nearly 150 years ago when he said:

"Governments, like clocks, go from the motion men give them, and governments are made and moved by men, so by them they are ruled also. Therefore, governments depend upon men rather than men upon governments."

At home, at work, in school, and every other place, keep emphasizing this simple fact: either you run your government, or government runs you.

2. PENALTY OF NEGLECT

"The punishment of wise men who refuse to take part in the affairs of government is to live under the government of unwise

This terse warning, made by Plato 2,400 years ago, carries a strong lesson today when hundreds of millions have been deprived of the precious blessings of freedom.

When those who enjoy the benefits of freedom tire of governing themselves and abandon their duties as free citizens to the incompetent or malicious, they become unwitting accomplices in promoting the very tyranny they dread.

A cursory glance at history reveals over and over again that free governments have been weakened or eliminated because of

neglect.

3. POLITICS-GOOD OR BAD? YOU HELP DECIDE

A young lawyer in the Philippines recently wrote: "Many well-intentioned individuals warn us young aspirants to stay away from politics. 'Politics are dirty,' they say and we should not soil our hands."

But he went on to say that the Christopher emphasis on personal responsibility was "my principal reason for going into politics and trying to raise the tone of public life."

Another young man in Connecticut ran

into much of the same reaction.

"I have been told I'm being naive in thinking that politics can be run by decent, moral men and women," he said. "My father, my friends and especially my wife are against 1t."

It is a strange paradox that often those who might be best fitted to right the wrongs in public life simply bemoan inefficiency, graft or corruption-yet fail to do anything constructive themselves.

4. POPULARIZE THE TRUE MEANING OF POLITICS

The dictionary defines "politics" as "the science dealing with the organization, regulation and administration of a state in both its internal and external affairs."

Three centuries before Christ, Aristotle stressed its high aim when he said: "The good of man must be the purpose of the science of politics."

However, politics by its very nature, presents many temptations for those who would use it as a selfish steppingstone to power, prestige, or worse still, as a means of fraud and corruption.

Yet it invariably falters and decays when deprived of the moral and spiritual force that only persons like you can inject.

John Morley, the great English statesman, wisely said: "Those who would treat politics and morality apart will never understand the one or the other."

5. EXAMINE YOUR OWN CONSCIENCE

Because the strength or weakness of government is partly in your hands, you might care to do a little soul-searching on these points:

1. Are you a registered voter? Do you vote in every election? Primaries, too? Do you encourage others to do the same?

2. Do you study issues? Candidates?

3. Do you know the names and voting records of the Congressmen, Senators and other officials who represent you? Do you let them know your convictions?

4. Do you support loyal and honest public servants? Do you remind them that the higher their dedication and purpose, the greater good they will accomplish? Or do you focus attention only on the few who betray the trust placed in them?

5. Do you serve on a jury when called? (At one important criminal trial not long ago, 637 men and women asked to be ex-

cused.)

6. Do you help the party of your choice to "get out the vote" by ringing doorbells, typing, distributing literature, giving talks, correcting misunderstandings, or raising funds?

7. What are you doing to improve the methods of selecting candidates? To correct outmoded election laws? To insure efficiency and honesty at the polls?

8. Do you impress on young people that they should prepare for a practical participation in self-government by discussing present issues and helping to get out the vote?

9. Are you doing anything to correct the false impression that, as Robert Louis Stevenson well put it: "Politics is perhaps the only profession for which no preparation is thought necessary."

10. How many persons with high ideals and competence have you encouraged to take up

a career in government?

11. Are you highlighting the true and noble meaning of politics and thus offsetting the harm caused by those who take a despairing, cynical attitude?

12. Do you promote a respect for just laws on the principle that "there is no power but

from God." (Romans 13: 1.)

13. Do you know the important distinction between State and Federal government and what steps can be taken to maintain a balance that will prevent extremes on either

14. Could you explain to others why the Founding Fathers put four references to God in the Declaration of Independence?

15. Do you pray for those in low or high government positions? If they are already doing a good job, they need your prayers. If not, they need them all the more.

6. RECOGNIZE THE PRIVILEGE OF VOTING

The word "vote" comes from the Latin term "votum" signifying "vow, wish, or will." The dictionary defines it as "a formal ex-

pression of will or opinion in regard to some question submitted for decision.

It took centuries of tireless effort to make it possible for individuals like you to exercise the human right to vote.

Your conscientious, intelligent, and continued use of this blessing will show that you appreciate it and are anxious to protect it for others.

Hundreds of millions now deprived of the freedom of choice would be the first to urge you never to miss an opportunity to vote.

7. STIR UP OTHERS TO VOTE

You can do a valuable missionary service in the following ways:

1. Remind individuals that they have a God-given power to exercise their freedom of choice, wisely and in every election.

- 2. Point out what a mighty howl would go up if only 1 out of every 10 eligible voters were allowed to vote at primary elections. This is the actual numerical proportion who do.
- 3. Impress on everybody that bad politicians are elected by good people who don't vote.
- 4. Stimulate one and all to put true welfare of the country above the interest of a particular party, group, or individual.

B. ONE IN SIX HAS GOVERNMENT JOB

Nearly 11 million men and women (or 1 in 6 employed Americans) staff all phases of local, State, and Federal Government, including the Armed Forces.

Take an intelligent, sympathetic interest in both the number and quality of the people who staff your government. Make sure they are neither too many nor too few. Support those intent on doing a capable, conscientious job.

9. YOU PAY FOR EVERY SERVICE

The average citizen constantly demands bigger and better services from government. It seldom occurs to him that sooner or later he and others like him must pay for those advantages.

When members of a school board proposed building a swimming pool on the grounds of a new school, only one woman was against the project.

"But why," they asked her. "After all the State will pay for it."

"And who is the State?" she demanded.

"Everybody, of course." "And that everybody includes you and the woman retorted. "And I for one will not be able to afford the additional individual citizen either makes his contributaxes.

She won her point. The idea was dropped. 10. TAKE AN INTEREST IN COSTS

The following considerations may remind you why the spending practices in all aspects of government should be a concern for you:

1. Enormous bill: It's costing taxpayers over \$130 billion a year (or about \$11 billion a month) to run the Federal, State, and local government. Equally divided, it would cost every man, woman, and child \$722 annually.

2. Quarter of your earnings: The average taxpayer earns \$5,183 a year. About onefourth or \$1,296 goes to the Government. In 40 working years, this would total over \$50,000—or 10 years of a worker's earnings.

3. It's your debt: It is now nearing the \$300 billion mark. This means a debt of \$1,700 hangs over the head of yourself and every other individual in the U.S.A.

4. It's your money: Government has no inexhaustible bank account. The money comes out of your pockets just as sure as the butcher's or milkman's bills.

In making government finance your business, avoid extremes. Seek sensible ways to keep costs down, but take care not to advocate superficial economies which can cripple, instead of strengthen essential functions.

11. KEEP IT "THIS NATION UNDER GOD"

In the Declaration of Independence, our Founding Fathers deliberately specified why

we, as individuals, have rights:

We hold these truths to be self-evident. that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness."

Based on the concept that rights of every individual man, woman, and child over the earth come from God, not from the state, they enunciated that the purpose of government is to protect the God-given rights of the human being.

The totalitarian theory is diametrically opposed to this. It claims that the individual has no rights except those parceled out by the state. And even these few can be revoked at the slightest nod of a tyrant.

The Hebrew Psalmist still reminds us: "Unless the Lord keep the city, he watcheth in vain that keepeth it." (Psalms 126:1)

12. YOU HAVE PART OF THE ANSWER

Shortly after the Constitution was signed in Independence Hall, Philadelphia, on September 17, 1787, a woman asked Benjamin Franklin:

"What have we got, Dr. Franklin?"
"Madame," he replied, "we have a repub-

lic, if we can keep it."

Nearly a hundred years later a somewhat similar question was put to James Russell Lowell, then American Minister in Great Britain:

"How long," Lowell was asked, "will the

American Republic endure?"

Lowell's answer, like Franklin's, was crisp and to the point: "As long as the ideas of the men who made it continue to be dominant.

The very survival of our Nation depends on what you personally do to see that those "ideas" are respected in theory and prac-

START WHERE YOU ARE

No matter who or where you are, you are in one of the 145.723 election districts or precincts in the United States.

Yes, one of them is yours. It belongs to you and you belong to it.

These divisions are purposely kept small so that individuals like yourself can participate in the running of your government.

The roots of freedom reach into the tiniest community in the same proportion as the tion to good government or withholds it.

As a country grows and prospers there is a human tendency to show less and less interest in local affairs. Slowly but surely this neglect opens the way to the abuse and consequent loss of freedom on an ever larger

Wherever and whenever good citizens abdicate their responsibilities, there are always numerous others of evil intent ready to jump into the gap.

CONSCIENTIOUS WORKERS CAN DO GREAT GOOD

On July 11, 1958, the Congress of the United States adopted this 10-point code for all Government employees, both elected and appointed.

It emphasizes how each of them can apply the principles of conscience to their work and thus contribute to the advantage of everyone.

The code reads as follows: "Any person in Government service should:

"Put loyalty to the highest moral principles and to country above loyalty to per-

sons, party, or Government department.
2. "Uphold the Constitution, laws, and legal regulations of the United States and of all governments therein and never be a

party to their evasion.
3. "Give a full day's labor for a full day's pay, giving to the performance of his duties his earnest effort and best thought.

4. "Seek to find and employ more efficient and economical ways of getting tasks accomplished.

5. "Never discriminate unfairly dispensing of special favors or privileges to anyone, whether for remuneration or not; and never accept for himself or his family. favors or benefits under circumstances which might be construed by reasonable persons as influencing the performance of his governmental duties.

6. "Make no private promises of any kind binding upon the duties of office, since a Government employee has no private word which can be binding upon public duty.

7. "Engage in no business with the Government, either directly or indifectly, which is inconsistent with the conscientious performance of his governmental duties.

8. "Never use any information coming to him confidentially in the performance governmental duties as a means for making private profit.

9. "Expose corruption wherever covered.

10. "Uphold these principles, ever conscious that public office is a public trust."

Subsidizing Health

EXTENSION OF REMARKS OF

HON, JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congressional RECORD an editorial appearing in the Washington (D.C.) Post of May 7, 1960:

SUBSIDIZING HEALTH

The most significant fact about the administration's plan to provide health and medical care for the aged is that it fully acknowledges the need for such care recognizes Federal responsibility for helping to provide it. The difference between the administration approach to the problem and the approach made by Democrats in Congress is, therefore, a difference of route, not of destination.

The difference in route is, nevertheless, great. It is difficult to see how the destination can be reached by choosing the direction indicated on Wednesday by Secretary Flemming in his closed-door testimony before the House Ways and Means Committee. The Secretary stipulated that any old-age health program undertaken by the Federal Government should make individual participation voluntary and should provide for a Federal-State partnership in dealing with the problem.

The voluntariness of the administration plan strikes us somewhat illusory. Participation in the benefits would be optional, of course; but this would also be optional under the Forand or McNamara bills. The costs of the Forand or McNamara bills would be paid through enlargement of the social security tax and would fall exclusively and involuntarily on those who would, in old age, become eligible for health benefits. The costs of the administration program would be paid in small part by an annual \$24 charge to participants and in large part out of general Federal and State revenues obtained, as usual, through taxes levied involuntarily upon the general public.

The Federal-State partnership proposed by Secretary Flemming strikes us as cumbersome, perhaps unworkable. It would take a long time for the 50 States of the Union to develop and legislate health programs making them eligible for Federal grants; some of the States might not participate at all. It would be a great deal simpler and more effective, it seems to us, for the Federal Government directly to enable all Americans to provide for the care of their health in old age just as they now provide for retirement income and survivors' benefits—through a uniformly levied social security tax. Payments of insurance costs through such a tax seems to us at once more equitable, more consonant with fiscal responsibility and more conducive to budget balancing than payment through general taxes levied by Federal and State governments.

The benefits provided under the administration proposal look larger than those that would be provided by the Forand or Mc-Namara bills. It must be remembered, however, that they would be avaliable, under the terms outlined by Secretary Flemming, only to persons 65 years of age and over who paid no income tax and whose adjusted gross income did not exceed \$2,500 (\$3,800 for a couple). And they would be subject, as Senator McNamara has pointed out, to a "double deductible clause." The first \$250 of medical expenses would have to be borne by the beneficiary; and he would also have to pay 20 percent of the remainder of his expenses—in addition to the annual \$24 enrollment fee. Voluntariness may be a virtue but in this situation the enrollment fee might keep out of the program many who greatly need its protection.

The most serious defect of the administration plan lies, we think, in its imposition of an income test for participation. Coverage would be free for public assistance recipients—who would receive charitable care anyway. It would be available at a price for those under the \$2,500-a-year cutoff. But it would be wholly lacking for all those retired workers who, through energy and thrift, managed to provide for their declining years an income in excess of \$2,500. For most of these people, the medical care and hospitalization involved in the inevitable ilinesses of old age would still impose a crushing burden, falling upon their children if not upon themselves.

Why should a Federal health insurance plan not enable such people to provide for their health needs in old age through prepayment during their working years—so that

in retirement they can claim the care they require as a matter of earned right, without proof of poverty? This is an essential element of social security.

National Science Foundation: 10th Anniversary

EXTENSION OF REMARKS

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1960

BROOKS of Louisiana. Mr. Speaker, 10 years ago, the Congress took cognizance of the increasing importance of science and technology to the national interest and established the National Science Foundation as the successor to the emergency World War II Office of Scientific Research and Development. Seldom has there been a more important action taken by the Congress. In the intervening years, advances in science and technology have run the whole gamut of our national lives and throughout all this time, the National Science Foundation has played a fundamental role in our scientific effort. As the importance of the work increases year by year, the Foundation, in my opinion, merits the full cooperation of the Congress to the extent that when necessary, encouragement should be given by increases in needed funds.

The Foundation is meeting the challenge of the scientific and technologic revolution through which we are passing by supporting programs designed to stimulate improved scientific training and by encouraging young men and women to choose careers in science. It supports basic scientific research without which our country would soon reach an impasse in new scientific discoveries. The scholarship and fellowship grants each year to high school and college students promote interest in an area vital to our national security. Equally important are the institutes the Foundation sponsors for the training of teachers in science and mathematics. Under its jurisdiction, also, are made research grants in all the fields of science with which the Foundation deals-biology, medicine, physics, mathematics and engineering, as well as the social sciences. Abroad, National Science Foundation activities are directed toward general purpose basic research and the support of those programs which strengthen the scientific effort of the United States.

Much of the credit for the magnificent work the Foundation is doing must go to Dr. Alan T. Waterman who has been its director since its establishment. Those who have followed the hearings of the Committee on Science and Astronautics have heard witnesses testify many times in praise of the competence, the vision and the high level of leadership displayed by Dr. Waterman and his staff.

In this age of space, we have become acutely aware of how important to our very existence are the developments in

the field of science. To the National Science Foundation—one of the most important Federal agencies to contribute to our progress in this field—on its 10th birthday, I want to add my congratulations for a job well done and to voice my confidence that the accomplishments of the next 10 years will be equally praiseworthy.

Address by Gen. W. B. Palmer

EXTENSION OF REMARKS

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1960

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include therein an address by Williston B. Palmer, general, U.S. Army, Director of Military Assistance, Department of Defense, before the Daughters of the American Revolution in Washington, D.C., on April 21, 1960:

Address by Gen. W. B. Palmer, U.S. Army, Director of Military Assistance, Before THE DAUGHTERS OF THE AMERICAN REVOLU-TION, CONSTITUTION HALL, WASHINGTON, D.C., THURSDAY, APRIL 21, 1960

Madam President General, honored guests, Daughters of the 69th Continental Congress, this opportunity to address the Continental Congress of the Daughters of the American Revolution I regard as a great honor. The singlehearted dedication of your organization to the preservation and protection of our great American heritage is known and respected throughout the Nation. I welcome this opportunity to discuss the military assistance program in a forum of such commanding prestige.

Everybody recognizes that this is not a popular program; and yet, as Sentor Fulbrich Program; and yet, as Sentor Fulbrich Program; and yet, as Sentor Fulbrich Program; and Democratic Program and Democratic, every President, Republican and Democratic, every Chairman of the Joint Chiefs of Staff, and every Congress has endorsed (it) as essential to the national interests of this Nation * * *." Senator Fulbrich observed that despite this non-partisan support "many Americans believe that these programs are a waste of money."

So it is my purpose here—and my conviction—to support the case which has proven convincing to both Republican and Democratic administations, and to the last seven Congresses of the United States—the side of the hard-facts.

PART OF OUR DEFENSE COST

The first fact I want to emphasize is that the funds appropriated for military assistance are just as much a part of our national defense expenditures as are those appropriated for our Army, Navy, and Air Force, the Central Intelligence Agency, and the Atomic Energy Commission. Every penny of our national defense expenditures is directed toward a single purpose: that the United States and its allies my deter Communist aggression, contain Soviet-Communist expansion, and lead from strength in negotiations with the Soviet-Communist bloc. The military assistance program is not an end in itself; it is a tool, a means to deter Communist aggression and contain Communist expansion.

The second fact I want to emphasize is this: The considered professional opinion of those who direct the national defense is that as long as it is necessary to maintain overall defense expenditures at approximately their present level we should plan to devote at least \$2 billion per year to military assistance. The Joint Chiefs of Staff, speaking of the budget request now before the Congress, have said that they would not take one dollar away from military assistance in order to augment the appropriations for their own services. They said the same thing last year. Can you imagine stronger or more convincing evidence that the military assistance program is an integral part of our total national defense effort?

WHAT SHOULD WE SPEND FOR MILITARY ASSISTANCE?

For the past 6 years the military assistance appropriations granted annually by the Congress have averaged \$1.4 billion. This year the Executive requested in the budget an appropriation of \$2 billion, which appears to be requesting a huge increase in an election year. The real facts are quite different than they look.

Back in the Korean war days very large appropriations were made for military assistance, which built up a huge backlog of unexpended funds. At the end of the war it was decided to spread these expenditures over a number of years, and so it results that over these 6 years in which the annual appropriation has averaged \$1.4 billion the expenditure from the U.S. Treasury has been \$2.3 billion annually, the difference having been drawn from that barrelful of old appropriations. All of this has been explained to the Congress year by year-there were no tricks about it. But the point is that now the barrel of old appropriations has just about gone dry. To keep up the program we have been pursuing for years would take an annual appropriation of \$2.3 billion, and what the administration actually proposes is to decrease the program of recent years by \$300 million.

WHERE WOULD WE USE ALL THAT MONEY?

Probably three-quarters of it would go to strengthen NATO, Korea, and Nationalist China.

Another 10 percent would go to strengthen and hold steadfast certain other countries which are right under the Communist gun-Iran, Pakistan, Thailand, and Vietnam and some others. None of this last group has great military strength, although all are developing greater combat potential as our training takes hold; and in the meantime, they are defending themselves against Communist subversion, and exerting a stabilzing influence throughout their region. These are countries which are strong against communism. They want to keep their inde-pendence. In short, they are on our side. The very people who accuse us of wasting money when we give military assistance to countries like these would be the first to demand our heads if any of them should be lost to communism.

When we add this group to NATO, Korea, and Nationalist China, we have accounted for 85 percent of our military assistance program in 15 countries.

Still another very important use for military assistance is to obtain satisfactory arrangements regarding bases and other military advantages we want for ourselves. There are certain countries where we get in this way indispensable military facilities which we could not possibly get otherwise. Spain, for example, has granted us base rights of tremendous value. I know you will understand why I do not publicly advertise them all.

Probably the greatest return on our military assistance investment dollar for dollar comes from the training of selected officers and key specialists at our U.S. military schools and training centers. These men are handpicked by their own countries to become instructors when they return home. They are the coming leaders, the men that will have the know-how and impart it to their own forces. I need not dwell upon the immeasurable value of having in positions of leadership men who have firsthand knowledge of how Americans do things, and how they think about things.

WE CHOSE A FORWARD STRATEGY YEARS AGO

How did all this begin? It was soon after World War II that the United States—the people of the United States—had to choose between a forward strategy, in which we would join our allies in drawing the line at which the Soviet-Communist expansion must stop, or alternatively a Fortress America strategy, in which we would have taken our first stand in the last ditch while abandoning the other free countries to be taken over one by one by communism.

It would be convenient right here to consider where we would be had we adopted the Fortess America strategy in the beginning.

Of course the Russians would have occupied West Berlin at once. Italy and Greece would unquestionably have gone to the Communists. The Russians would unquestionably have taken the Turkish Straits. The Russians would certainly have converted Iran into a puppet state, establishing themselves on the Persian Gulf and controlling the Middle East oil fields. The Communists would have complete possession of all of Indochina, including the present states of Vietnam, Cambodia, and Laos.
